6517. Will you favour the Commission with a slight sketch of the nature of that establishment?—The establishment at Chatham combines in itself two functions; first and foremost it is the headquarters of the corps of Royal Engineers; and, secondly, it is a school of engineering for the instruction both of officers and men in the duties of the particular branch of the army to which they belong. As the headquarters of the corps, all recruits, both officers and men, on joining it are sent there for instruction, there being a stated course of instruction and certain limits of time within which the various studies should be completed. The time allowed for the proper training of a recruit soldier is four months to obtain his drill and instruction as a soldier, and after that about 13 months to give him the necessary instruction to convert him into a sapper. A young officer during the time that he is at the establishment has to acquire a knowledge of his military duties, and before leaving he has to pass the examination which is required by the Queen's Regulations for all officers in the junior ranks of the army before they can be promoted to be lieutenants. That examination is held by a garrison board appointed by the general commanding the district, the board being composed of officers who do not belong to the corps to which the officer under examination himself belongs. In addition to that which comprises the military part of the education of the officers, they have to go through courses of study, —comprising construction, which includes buildings of various characters, such as permanent fortifications, bridges, barracks, and hospitals, and the principles of the supply of water, and of drainage, and various other things; there is then a course of surveying, including astronomical observations, the measurement of a base, and all that is necessary for conducting a trigonometrical survey, filling it in with the utmost detail. In addition to these they have to go through a course of field works, which includes a great portion of the practical duties of officers of the Royal Engineers in the field, such as pontooning, mining, and works incidental to the attack of a fortress, the making of bridges with spars, and with any rough materials which are likely to be obtained in the field, and various other subjects of like nature. They have also to go through a short course of telegraphy, including a knowledge of electricity, and its application to the firing of mines, both on land and for submarine purposes, such as submarine defences and torpedoes, which are now occupying a great deal of attention at that establishment. They have also to go through an instruction in army signalling by other means than by the electric telegraph; field sketching, and military reconnaissance are included in the course of surveying, being an application in a less scientific way of the principles in which the officers are instructed in the survey course.

Course of instruction.

Appendix, p. ciii.

6518. (*Lord de Ros.*) Are languages included in the instruction?—Languages are not taught there.

6519. (*Sir D. Cameron.*) Is chemistry taught there?—No, at least only to a slight extent. The young officers also attend courses of lectures by eminent civilians or officers, or any persons in fact who can be got to give lectures on subjects of high interest to them in their profession.

6520. (*Chairman.*) How long does that course last?—That course lasts altogether 22 working months, exclusive of leave.

6521. And it is immediately consecutive upon their passing out of the Royal Military Academy?—Yes; that is to say, after they have had a short recess, which is about equal to the ordinary vacation of the Academy.

6522. It is in fact a continuation of their education after they become officers of Her Majesty's army?—Yes, and during that time they only hold temporary commissions; they are only gazetted to permanent commissions after the completion of that course.

6523. (*Lord de Ros.*) Does the time count in the army?—Yes; the commissions are ante-dated.

6524. (*Chairman.*) How many young officers have you at a time?—I have had as many as 80; the number fluctuates considerably, because it depends upon the wants of the corps. I left about six months ago, but at the present moment I believe that there are a great many more, because there has been a great demand for officers in India; calls have been made upon the Academy during the last two terms to supply those demands, and consequently the number at the establishment has increased, and will probably increase, or remain at its present amount, until that demand for India has been supplied; afterwards it will depend upon the requirements of the service whether that number will not diminish.

6525. Can you state what is the average number of engineer commissions issued?—I was on a committee appointed by the Secretary of State for War in 1865, before becoming director of that establishment, to report upon it and upon its constitution, and whatever might be necessary for the improvement of its efficiency; and at that time our estimate was that the establishment should provide for the instruction of about 50 young officers, as we then thought that the course would take two and a half years, about 20 per annum being the number necessary to keep up the corps to its full strength. The corps has been very much enlarged of late years, in consequence of the absorption of the Indian army into the Queen's army.

6526. How is discipline maintained among the Di- young officers?—Discipline is maintained by the rules of the service, and by the officers who are

placed over them in the same way as throughout the whole army.

6527. As I understand, there is not a regimental organization within the precincts of this establishment?—There is a military organization not absolutely in accordance with the regimental organization of infantry regiments, but it is in accordance with the rules of the service. The manner in which these officers are dealt with is that the officers are told off to each course of instruction, and whilst they are at that course of instruction they attend to nothing else; they are told off to it as a duty, and are expected to do that duty, and what is more they do it without trouble and without difficulty.

6528. In order to convey a good idea to the minds of the unlearned, I will ask you whether this establishment partakes more of the character of a military school than of a regiment?—It is a school of engineering.

6529. I refer to the mode in which discipline is maintained?—It would be entirely as a regiment as regards discipline.

6530. (*Lord de Ros.*) There is no sort of punishment?—There is no sort of punishment whatever.

6531. (*Chairman.*) Are there separate rooms?—Each officer has his separate room, the same as in the rest of the army.

6532. Do they mess together?—Yes. In addition to the young officers under instruction, there are occasionally senior officers, who come there to freshen themselves up in their knowledge; and also occasionally officers from other branches of the service have come to the establishment to go through a course of field works and military engineering. There was a proposition before I left, which I believe is now being carried out, of sending there a considerable number of officers and soldiers from other corps for instruction in one particular duty which has been lately adopted into the service, namely, a system of signalling and telegraphy such as was found very useful in Abyssinia, having been applied there by some officers and men who had been instructed at Chatham.

6533. How long does the course last for officers of that description?—About two months.

6534. Are officers entitled to receive leave who wish to come to this establishment?—There has never been any difficulty thrown in their way. I have had several officers of marines there. All that is necessary is that they apply through their own commanding officers to the Horse Guards for permission, when the Commander-in-Chief would, I have no doubt, grant it to them. There has been no difficulty that I am aware of, but, on the contrary, every application, so far as I know, has been at once acceded to.

6535. Commanding officers have raised no objection to parting with their officers for this limited period?—It has not been carried to any very great extent; only occasional officers have come there; when they have come it has been with the full sanction of their commanding officers.

6536. Why did those officers go there, rather than to the Staff College?—Perhaps they were not admissible to the Staff College; it might have been that the full *quantum* of officers from their particular regiments were already in the Staff College; or perhaps they were not qualified for the Staff College. They might have come there with the idea of taking up particular branches of study without going into the higher branches of mathematics, for instance, and without studying other subjects which are required at the Staff College.

6537. Does an officer who has passed these studies at the Royal Engineer Establishment become entitled to any advantage further than what accident may afford him?—No.

6538. What is the instructing staff at the establishment?—The instructing staff is all under the director, who is the head of the establishment. He is assisted by a brigade major who carries on the correspondence for him and examines reports and has charge of all the details of his office.

Maj.-Gen. J. L. A. Simmons, C.B.

20 April 1869.

Royal Engineer Establishment, Chatham.

6539. (*Lord de Ros.*) What is the amount of leave during the year at Chatham?—Two months long leave are allowed during the course; in addition to that there is other leave. In order to encourage them in their studies I adopted the system of allowing every officer to have as much short leave as he could obtain by economizing his time, or, in other words, by working hard at any particular study, so as to finish his course within the time allotted for it; I found this a very strong stimulus to work, and that it also assisted me very much in maintaining discipline. I think that it is impossible for there to be a higher order of discipline in an establishment of that sort than there was at Chatham. I never had any complaint of any serious nature to make of any young man, except on the occasion to which I have alluded.

Staff.

6540. (*Chairman.*) What is the exact composition of the instructing staff at the establishment?—There are five chief instructors, including the superintendent of military discipline, and each of them has an assistant, so that there are five instructors and five assistants, including the superintendent of military discipline, who carries on the military duties both with officers and men. I should say that not only are the instructors necessary for the officers, but that the men under instruction are far more numerous than the officers; in addition to the officer instructors there are 14 serjeant instructors who are of the rank of staff serjeants, and whose duties are specially to take charge of squads of men under instruction.

6541. How many men had you?—My morning state generally showed about 1,200. The number varied very much, but I should think that on the average from 500 to 600 out of those 1,200 were always under instruction. The numbers have gone up to 1,800, but the average was about 1,200, they were seldom much under 1,200; and of that number there were about 600 under instruction.

6542. In what were the others employed?—There were 600 recruits, I should have said, under instruction. In addition to those there was a company or two frequently going through a shorter course of instruction and being freshened up in the knowledge which they formerly acquired as recruits. What has been tried to be followed out (although the exigencies of the service have sometimes prevented it) has been to send a company on arrival from foreign service to Chatham to go through a short course of instruction, and also previously to going on foreign service. The numbers which I have given include all ranks.

6543. You have stated that the entire course amounted to 22 months, exclusive of leave?—Yes, for officers.

6544. Inclusive of leave, how much would it amount to?—24 months.

Examinations.

6545. After the course is completed, how do you test the efficiency of the students?—They are examined by the officers who superintend their instruction, and who give them a certain number of written questions, which are of the nature of test questions. Those examinations have not been so good as I should have liked. I wished to see what remained imprinted on the officers' minds rather than that they should get up and cram themselves for the examination; and in consequence I had those examinations held before each young officer left the establishment, and after he had completed all his courses; and I found as the result that although the young officers possessed very good ideas the examinations were not so satisfactory as I should have liked; taking, for example, the subject of surveying, which they generally go through on first joining, and have not therefore had under their review probably for a twelvemonth, the examination was not so brilliant or so satisfactory as desirable, although it evinced an amount of knowledge which, with the assistance of the notes they take away with them, would enable them to perform their duties as officers in a proper manner.

6546. I suppose that no one would like to face any

Maj.-Gen. J. L. A Simmons, C.B.

20 April 1869.

Royal Engineer Establishment, Chatham.

examination without a certain amount of preliminary preparation?—As it had no practical effect upon them as regards their position in the corps, and as they neither rose nor fell from the result of the examination, the object of it was rather for the satisfaction of my own mind, as on their leaving the establishment I was required by the Commander-in-Chief to report to him on the qualifications of each officer, and the manner in which he had gone through his course, and also to state whether he possessed any special qualifications, so that they might be availed of.

6547. Were the affiliated officers from line regiments subjected to a similar examination?—Yes, but not quite so hard an examination.

6548. Did the examination imply the reception of a certificate?—No, no certificates are given to the officers.

6549. Did you report on them to any authority?—Yes, I reported upon them to the Horse Guards on their leaving; this report would remain as a sort of voucher for what the officer had done.

Instruction of line officers.

6550. Do you think that it would be possible so to enlarge this establishment as that a greater proportion of the officers of the army should pass through it?—I think that it might be attended with great advantage if a few selected officers from regiments were sent there for study in the practical parts of the course, but I do not think that it would be advisable to send young officers of other corps there, because I apprehend that such a proceeding would throw great difficulties in the way of discipline. A few officers selected from other corps might be managed because they would be selected for their qualifications, but I think that to attempt to send a large number of officers there promiscuously from other corps would be fatal to discipline and to the proper carrying on of the duties of the establishment. The greater portion of the course of study there is not adapted for officers of other regiments, because the greater part of them have not been prepared for it by the higher education at Woolwich. For instance, take the course of construction, it involves high mathematical attainments to solve questions of an intricate nature in mechanics, and it requires a very superior education to enable a man to enter upon those questions, and as the greater part of the officers going there from other corps would only be occupied in the practical part, I think there would be a great objection as regards discipline to send any except a few selected officers. One of the great means of maintaining discipline is to keep the young officers fully occupied, and I fear that the presence of a few men who did not work hard, and who had not the same objects in view, would tend to inconvenience an establishment of that sort very seriously.

6551. I suppose that you would consider it an advantage if even the officers of line regiments were admitted to instruction in some of the more elementary subjects which are taught at that establishment, such as field fortification?—The studies may be divided into practical and theoretical. I think that it would be attended with very great advantage if all the officers of the army went through the practical course, by that I mean field-works, such as mining, pontooning, and the throwing up of redoubts, or field works, and making rough bridges and so on; I think that would be attended with great advantage to any officer in the service.

6552. Although such a plan might not readily be grafted upon the system which now exists, without the disadvantage to which you have alluded being incurred, would it not be possible so to modify the organization of this establishment as to render it susceptible of expansion in the direction to which I have alluded?—I think that a better plan for the instruction of the army generally in subjects of that nature would be to establish a system of instruction at our large camps, as, for instance, Aldershot, where I have been stationed for several years; the engineer officers there with very little assistance beyond a thorough recognition of their position as "instructors to the army in engineering duties" could instruct officers with every facility. In that case the question of discipline would be easily got over, because the officers would be with their own regiments in the camp, or if officers from other stations were sent there, one officer might be attached to one regiment, and another to another during the time of instruction. If such a plan as that was adopted, which I think would be far better than inundating Chatham with officers, it would be necessary to appoint an engineer officer or officers specially for that duty, and not to allow him to be a chance man who happened to be there for other duties. A system of instruction at our camps I think would be far preferable to inundating our establishment at Chatham.

6553. (*Lord E. Cecil.*) Have you any opinion with regard to shortening the time which the cadets pass at the Royal Military Academy at Woolwich?—I decidedly think that it would not be advantageous to shorten the time. If one may judge from the results at Sandhurst, where I think the result of shortening the time has been so bad, I should be very sorry to see any attempt to shorten the time at Woolwich. I think that you lose one of the best means of maintaining discipline by not having a body of older cadets to assist, as is the case in the large schools in England.

6554. Would you be in favour during the first year at Woolwich of separating those cadets who were intended for the engineers and those who were intended for the artillery, and of placing them in different classes?—I think that it would be attended with disastrous results to both services. Having been thrown a great deal with the artillery, and in fact having been brought up in it in my boyhood, my father having been in it, and having mixed with its officers all my life, I am of opinion that there is scarcely a single thing taught at the Academy, at present, which an artillery officer should not know, and which is superfluous to him, and in the same way there is nothing taught there which is not necessary for an engineer officer. Therefore, the education of those two branches of the service goes together during the time that they are at the Academy, and I think that it would be disastrous if a separation took place. It is absolutely necessary that an engineer officer for the due performance of his duties should have a very fair knowledge of gunnery and of the practice of artillery. It is equally necessary that an artillery officer should have a very fair knowledge of fortification. I consider that that amount of knowledge is scarcely even now fully attained in either case at the Academy; engineer officers after leaving the Academy have to pursue one class of studies such as fortification and construction, and subjects of that sort, while artillery officers pursue the higher branches of their profession in the science of gunnery, and the practical part of it in the discipline and management of men, and in the management of horses, and in the movement of heavy weights, such as guns under various and difficult circumstances.

6555. With regard to one class of study which is taught at the Academy, do you think that the same amount of mathematics is required for an artillery officer as for an engineer officer?—Quite so, up to the point to which they both learn. As far as I know the course of mathematics, I do not think that anything superfluous is taught there. If an officer is to pursue his profession to the higher scientific questions connected with artillery, he certainly requires a very high knowledge of mathematics, and I do not think that anything which the officers learn there is superfluous for their purpose. They apply this knowledge in the practice of gunnery and in the mechanical appliances necessary for moving heavy weights, which they daily meet with in the course of their duties.

6556. Then you would not be at all favourable to diminishing in any way the amount of mathematics taught at the Academy?—Certainly not. I do not know how much of the mathematics acquired by a young officer is due to his studies at the Academy and how much he may have acquired before going there.

In some few cases I fancy, from what I have heard from young officers, that the knowledge of mathematics acquired at the Academy is not great. If a young man had read very high in mathematics previous to his examination for admission, he would not require particularly to improve himself in it whilst at the Academy.

6557. There has been some idea that too much time is devoted to mathematical study in the first part of the course, and complaints upon that point have now and then appeared. Do you think that that is the case?—The mathematical knowledge acquired is not too great. I do not know the interior economy of the Academy, but I know that, even in olden times when I was a master there myself, cadets occasionally came to the Academy whose peculiar taste was mathematical, with high mathematical acquirements, and went out with very little more than when they came in. But those are exceptional cases, and in those cases, I think that a cadet might employ his time very much more usefully in something else than mathematics.

6558. How many officers can you accommodate at the Engineer Establishment at Chatham?—The number which we can accommodate fluctuates, because it depends in some measure upon the number of other officers of the corps who are there for military duties, and who are not under instruction. The accommodation is limited, and of course if there are officers who are entitled to quarters, who are senior to those under instruction, they must be accommodated first. Thus whilst I was there, with 80 officers under instruction, some of them were driven to lodgings in the town, which is very objectionable; this was however only for a short period.

6559. Supposing that any such scheme as has been shadowed forth by the Chairman, of Chatham being made a large school for all the officers of the army, was carried out, I suppose that it would be necessary largely to increase the barrack accommodation?—Yes, very much, and I do not think that the place itself is one in which it is desirable to establish a large body of officers of different regiments; the constitution of the garrison, and the nature of the town itself, are objectionable for bringing a large establishment together, unless you can keep a very tight hand over them.

6560. You mentioned that the whole of the instruction was conducted by five officer instructors and five assistants?—Yes. I should say that that includes one officer and his assistant, who are almost entirely connected with the military discipline of the large body of men who are there.

6561. What is the mode of instruction, is it by lectures or by classes?—It is by both. The officers are divided among the different studies in classes. For instance, a number, say 20 officers, are sent to the constructional course under the instructor in construction. Those officers pass through a course under that instructor, composed partly of lectures and partly of work which they do by themselves; they are required to make copious notes of the lectures, and to write them out fair, and these are afterwards bound into a book, which they carry away with them as a book of reference to assist them afterwards in the practice of their profession. These lectures comprise the practical details of construction, and also mathematical questions of mechanics, with which they are likely to meet in the practice of their profession. In addition to this, they go through a short course of chemistry, not sufficient to make them good chemists, but sufficient to enable them to test the quality of different building materials, such as paint, stones, lime, cement, and so on. They also go through a short practical course in the workshops, where the men are employed in carrying on the ordinary work of the barracks, so as to give them an insight into the management and interior economy of a workshop. The course of surveying involves lectures to small classes; the instruction is given to six or eight at a time, and then they are broken up into parties, and go about the country, two together, actually making a trigonometrical survey of about four square miles of country. They have astronomical and other parts of this course to attend to, and then at its conclusion an exercise is set to them which generally takes them a month to complete, namely, the application of a work of defence to a given site. A contoured plan is placed before them, the strength of the garrison is given to them, and the number of guns and the object of the work defined, and upon these data they have to design a permanent fort. At the conclusion of the constructional course they have also always an exercise to perform, which is regulated, as far as possible, according to their taste. They may take either a bridge or a military building, or some of them take the detail of one of the forts which they have themselves designed in the survey course. Some of those going to India have taken up subjects connected with irrigation. We vary the subjects as much as possible, but the project they make generally occupies them for six weeks, and includes a detailed estimate of the probable cost, such as they would render if they were called upon to execute a work in any part of the world. Those are two of the courses they go through; then another of the courses, namely, the field works, is entirely practical. We try to vary this course also as much as possible, in order to make it interesting to the officers, by varying the character of the different exercises as far as our limited ground will permit. In addition to the practical exercises they have to draw up a project of an attack of some given fortress, the plans of which are the best we are able to furnish to them, generally speaking it is of some one of the fortresses on the continent.

6562. What would be the number in each class?—It varies, but about 20 is the limit of what we like to have going through one course at the same time; they are not however all at the same stage of that course; they are not all working together absolutely as one class.

6563. I suppose that the lectures are sometimes given in the open air and sometimes in rooms?—They are always given in rooms.

Instruction of line officers.

6564. I presume that as regards models of fortification, and for other purposes, there are many means and appliances at Chatham which would be supplied with a great deal of difficulty and expense at places of regimental instruction?—Yes; the models we have for instruction in field works, and upon which full explanations are given, are beyond what could be supplied to regiments, but there is no reason at all why, with a very small expenditure, models of such things as are absolutely necessary might not be provided for a large station like Aldershot.

6565. But it would be almost impossible to supply all those things at a barrack or quarters where a single regiment was quartered?—I should say that it would be quite out of the question. I think that the best way of giving such instruction, if you wished to extend it to regiments, would be to do it by sand modelling in the way in which it is exercised at Chatham. This is a most instructive and valuable means of giving knowledge, and I look upon it as a most important part of the field work course. The system at Chatham is that all the officers and men go through a complete course of sand modelling, in which the sand models are, I think, one-sixth of the full size. They carry on sand modelling in precisely the same way as the work is done out of doors. In service we relieve the men every four hours, and the work of each relief is modelled in succession in sand; they model everything we teach, so that they get a very fair knowledge of the subject before they go on the ground at all. It is impossible to let every man see everything we teach there of full size; it would take too long a time; but having seen them all as models, and having made them all, or assisted in making them all as models, by seeing a few in the field of full size they realize the whole. The difficulty with young soldiers is to get them to realize what you teach them; but having made both

Maj.-Gen. J. L. A. Simmons, C.B.

20 April 1869.

Instruction of line officers.

officers and soldiers throw up works as models, they by seeing a few of the full size realize the whole. I think that sand modelling might be done in regiments with a very small piece of ground, and that it would be far better than attempting to give them lectures on models, and it is certainly far more interesting.

6566. You think that it would be a very good thing to have at all camps a battalion course of instruction in field fortification and in throwing up works?—Yes; and I think that the sand modelling might be carried out not only in camps but in smaller stations to a very considerable degree.

6567. You have said that you see very great difficulties as regards discipline in making all officers pass through Chatham, but that you see no difficulty in keeping up schools at large camps, where every officer could be instructed in fortification and matters of that description; how long do you think that a practical course for officers in throwing up works should take?—I think that four months would amply suffice, with five days in the week for instruction, and about five hours each day, to give them a very good knowledge of field instruction, in fact all that is necessary for them.

6568. Do you think that a course of that kind should be made voluntary or compulsory?—I think that a full course of that sort might be left voluntary, but I think that a portion of it should be made compulsory. I think that in our army we neglect, far more than we ought to do, the measures which are necessary for the safety of the army in the field, by not teaching the men the use of the spade and the pick, and the officers the control and direction of men at such works.

6569. You have no entrance examination for officers of the line who are attached to the school at Chatham?—No; the only officers who have been attached have been officers who have come at their own request, in order to go through particular branches of study. For instance, we have had several officers there to go through a course of surveying at their own request; others have gone through a course of field works; others through a course of photography. We teach photography to a certain number of men, and we allow the officers in their spare time to work at it; and officers from other corps have occasionally come up at their own request and have been permitted to go through the voluntary course of photography; we have merely acceded to the wish of the officers. The mere fact of their showing a wish has been taken as a desire to improve themselves, and we have acceded to it.

6570. Would not the fact that there is an entrance examination at the Staff College account for a number of officers preferring to go to Chatham rather than to the college?—The number who come to Chatham is very small. During the three years that I was there I think that there were only a dozen; there was no examination for entrance.

6571. (*Sir C. Russell.*) Are there not three battalions quartered at Chatham?—There were three depôt battalions whilst I was there.

6572. Were they permitted, or do you know whether they are now permitted, to derive any benefit from the practical course in the corps of Royal Engineers?—Practically they derive little or no benefit from the establishment at Chatham, because the system has been not to compel officers to attend, but only to let such officers come as wish to come. I may, however, except from that statement one or two small matters of field works in which the general officer had the officers instructed last year, such as escalading.

6573. Are you aware of any objection to a battalion so quartered at Chatham going through the practical course of instruction which you have recommended for a battalion?—There is no objection whatever that I am aware of, but there would be some difficulty in consequence of the heavy garrison duties which the troops are called upon to perform. I have been for some months in command of the district of Chatham, and have been in the habit of seeing the returns, and the duties there are excessively heavy. The majority of the men were recruits, and there were barely enough trained soldiers to furnish the guards with three nights in bed.

6574. If they were full service battalions would not that give you a much larger body of men?—Yes.

6575. Is there accommodation at Chatham for three full battalions?—Yes.

6576. What piece of ground or shed do you think it would require for giving instruction in sand modelling to an ordinary battalion?—We have a shed at Chatham about 120 feet by 40 feet, in which almost the whole of our instruction is carried on, and I think that by careful arrangement a battalion might be worked through a shed of half that size.

6577. I suppose that you would equally expect to teach a battalion the construction of a rough pontoon bridge with casks, and so on?—Yes, we give all that instruction by models.

6578. I suppose that that would be attended with very little expense?—Yes; they might make a greater part of the models themselves. A part of the instruction in the model course is to prepare gabions and sand-bags, and it would only be necessary to supply a very small amount of material, and a few models of barrels, and things of that character, which are almost costless.

Roya Estal Chat

6579. (*Lt.-Col. Chesney.*) It has been found necessary, I believe, in preparing the estimates to fix the pay of the instructors at Chatham at a rather higher rate than at either of our two cadet schools or at the Staff College?—I do not know what is the rate of pay at the Staff College or at the military schools; the estimates show it. The rate of pay as now fixed in the estimates which is given to our instructors is not at all in excess of what is necessary for the class of men whom we require; in fact it is rather low, if anything, for the purpose.

6580. Of course you desire in an establishment of that kind to have the selection of almost the whole corps as regards your instructors?—Certainly.

6581. Referring to the question of discipline, can you state whether most of the men who came under you had been acting as under-officers or corporals at Woolwich?—I have not made inquiries on that point, but I presume that probably all have acted as under officers or corporals.

6582. In your opinion is that a help to discipline in such an institution as Chatham?—Yes; when they come to Chatham they are very amenable to discipline so far as I have had experience.

6583. As to the number of instructors of which you have spoken, do you mean to say that you do not like to have more than 20 young officers in one class at the same time for an instructor or an assistant instructor?—Yes; they cannot do them justice if they have more than that number with the other duties which they have to perform at Chatham; they have no military duties, but they have other duties connected with the education of the men.

Insti line

6584. Supposing that some plan was provided for adopting the kind of schools at large camps which you speak of, can you suggest any system for the camps at the out-of-the-way parts of the empire?—I can only conceive a system of sand modelling, and I would combine with it, at those stations where facilities could be obtained, out-door field works. I may state with reference to this question that some little time ago I proposed to the authorities that the rewards which are given to soldiers of the line and cavalry for proficiency in the use of their particular arms should be given to a sapper for his knowledge of sapping; at present that reward is given for good shooting. When I made that proposition I had to consider in what way instruction could be carried out for the sappers in many places at which they were stationed, and the result was that I found that in a small plot of ground of about half an acre, one could have carried out a system of instruction and also the examination which it would

involve in order to allot the rewards to the most proficient sappers, and I think we made out that about half an acre would do for a company. Of course that is a very limited area in which to carry out such a system, and it would require a good deal of management to do so, but you could also test their capacities to a certain extent with sand modelling.

6585. If you were recommending some slight compulsory examination in these subjects for all officers of the army would you recommend it for lieutenants or for captains?—If there were a compulsory examination I think that it would be far better to have it for captains, because during the previous time they are occupied in learning their military duties and in getting a knowledge of their profession.

6586. And in that case there would probably have been much more opportunity for an officer to have acquired that instruction?—Yes, probably from the change of stations to which he might have gone. On this subject I may further state that when I was at Aldershot, where I was for five years, I prepared a small piece of ground for sand modelling and also carried on some field works with the sappers there; at that time there was a class of officers under instruction by the staff officers in the camp, and those officers attended the instruction of the sappers in all weathers most regularly as volunteers, and seemed to me to be most anxious to acquire a knowledge of the subjects in which the sappers were being instructed.

6587. During such a period as five years a great number of regiments would pass through such a place as Adershot, would they not?—Yes; I suppose that half the regiments of the British army, or perhaps more than half, passed through it.

6588. (*Maj.-Gen. E. Wilmot.*)—With reference to the instruction of regiments you have said that part should be compulsory and part voluntary?—Yes.

6589. How would you draw the distinction?—I would not put every man in a regiment through a prolonged course of sand modelling and other modelling, because many men are not fitted for it; but I think that every man, whether he has a natural taste for it or not, should be compelled as a part of his duty to learn the use of the pick and the shovel, which I consider is as essential a part of a soldier's duty as the use of his firelock, and every year it becomes more important.

6590. Would you make every officer go through that instruction in sand modelling, but not every soldier?—Certainly, because every soldier has not the education which would enable him to do so.

6591. You think that there is no hardship in making an officer learn his duty?—On the contrary, the more the officers learn the better they are in every way. The bane of the army is too great idleness and having too little to do.

6592. (*Sir D. Cameron.*) Would it be sufficient to confine the sand modelling to the officers without compelling the soldiers to go through it?—I think that a large proportion of the soldiers would take a great interest in it; and another thing is that they would not wear out their clothes so much, and less working pay need be given to them.

6593. In the compulsory course do you include the non-commissioned officers as well as the officers?—I think that every superior non-commissioned officer ought certainly to go through a regular course.

6594. Are there any other professional subjects besides field fortification, in which you would like to see the officers of the line instructed?—It would be attended with great advantage for them to have a knowledge of languages, and of military sketching, and the power of drawing up reports upon roads and country; that would be a very great assistance; in fact the more you can educate them and bring them up to the qualifications of staff officers, the better for the army.

6595. It would take longer than four months to put an officer through a course of that kind?—Yes; the four months' course to which I alluded would be in the practical works of an engineering nature, such as would be used by an army in the field.

Maj.-Gen. J. L. A. Simmons, C.B.

20 April 1869.

Royal Military Academy, Woolwich.

6596. Have the young officers who join the establishment at Chatham already received at the Academy practical instruction in field fortification, field sketching, and the other subjects in which they are instructed at Chatham?—They have received a small amount of instruction in field works, and a certain amount of instruction in sketching, and surveying; this latter is one of the courses in which, as far as I can judge from results, I think there might be some little modification in the system of instruction at Woolwich. I mean that the surveying as taught at Woolwich is not sufficiently accurate, and is not of that character which enables an officer to undertake the charge of a trigonometrical survey; and I would rather confine the studies at Woolwich to what is of equal value to an artilleryman and to an engineer, namely, military sketching and reconnaissance, without going into the use of instruments, which are of little consequence to an artilleryman, but are essential to an engineer. That I think is almost the only point in which I think there might be some modification in the instruction at Woolwich.

6597. Do the officers who join the artillery from the Academy receive any practical instruction in field fortification and other branches after they have joined their corps?—I think not. As far as I understand, officers of artillery join their brigades wherever they may be stationed.

6598. (*Major-Gen. E. Wilmot.*) That has now been altered; they now join at Woolwich?—I was not aware of that.

6599. (*Sir D. Cameron.*) Do they sand model at the Academy?—I do not know.

6600. Are any tools used for sand modelling, or is it done by hand?—There are a few tools. Small trowels are used for digging the sand.

Instruction of line officers.

6601. (*Major-Gen. Haythorne.*) How far would you render the passing of an examination compulsory for officers at a place like Aldershot?—I see no objection whatever (as I think I have stated) in making the examination compulsory in field works and in the practical work, such as I think they should be instructed in, and in my opinion the period of that examination should be previous to the promotion to captain instead of lieutenant.

6602. Would you carry the compulsory examination into other branches?—I think that the present examination should be extended. Only three days ago I was before the Royal Commission on Courts-martial, and there I expressed an opinion which I can repeat here,—that it is very desirable that the knowledge of officers on the subject of military law should be more ample than it is now, and that they should be required to study it with greater attention and go through a proper examination in it.

6603. Would you make military sketching, without instruments, compulsory, inasmuch as some officers have not a turn for that sort of thing?—I would make the attempt to learn it compulsory, and I would make the examination compulsory. I think that it is quite reasonable that if it is seen that an officer has tried his best to acquire an art of that sort, and has not been able to acquire it, it should not stop his promotion; but I still think that it is very desirable that he should be examined in order that those who are over him should know what his capacity as an officer is.

6604. From your experience, do you consider that most officers would be able to sketch in the field?—Certainly. We have no difficulty in making all our own officers sketch. Of course there is a great variety in their sketching; it is an education of the eye and of the hand. It does not require any peculiar mathematical talent; it is very mechanical. There are very few men who would not acquire a power of sketching ground up to a certain point with great facility.

6605. Do you approve of the age of the entry of cadets at Woolwich. I believe that it is from 16 to

Maj.-Gen. J. L. A. Simmons, C.B.

20 April 1869.

Royal Military Academy, Woolwich.

19?—I think that the age could not well be reduced consistently with their receiving the same amount of education as they now have.

6606. By the time that they have passed through your hands, at what age do they get to their regiments?—They get to their duties at the age of about 21 to 23.

6607. (*Rev. Dr. Butler.*) Have you observed that any of the young officers who come to you from Woolwich appear to be physically overworked?—I have had one or two cases, not more than that, in which officers have been physically overworked; I have been obliged to pay attention to those cases, and to give them a repose from head work by placing them at their ordinary military regimental duties for a period before taking to head work again.

6608. But such cases would be quite exceptional?—Quite exceptional. One of those cases was very lamentable.

6609. I gather that you would hardly apprehend that the system of severe study necessary to qualify for Woolwich in the first instance, and the system of continued severe study imposed upon cadets at the Academy, are attended with any serious results?—No; on the contrary, a finer lot of young officers physically than those whom I had to deal with at Chatham I never saw in my life; they were good cricketers, good football players, and good at all athletic sports; there is nothing whatever to complain of in that respect.

6610. (*Lord de Ros.*) You mentioned that you had become a recent convert to the competitive system. Used there not to be almost generations of officers in the artilley from father to son?—Yes.

6611. Do you not think that that was a great advantage in the artillery?—I think that we get the same thing now. A number of artillery and engineer officers bring up their sons with a view to their entering the academy, and a very fair proportion of them still enter.

6612. In speaking of the young officers being full of activity and energy, you notice among them none of that apathy and sluggishness as to active amusement which has been observed at Sandhurst?—On the contrary, my system was to encourage to the utmost all amusements of that sort, and it was always a great source of gratification to me to see that they worked hard at their studies and equally hard at their amusements, and those amusements were in athletic games to a very great extent.

Method of conducting examinations.

6613. We have been told in some of our evidence that it is impossible entirely by written questions sent, for instance, to officers in the colonies, to elicit their real capabilities and what they know, and to detect what they do not know. Do you not think that an examination *vivâ voce* is a necessity in order to arrive at those objects, or do you think that it can be done entirely by writing?—I presume that the necessity for an examination in writing arises from the fact that the individuals who are to be examined are distributed over the face of the world, and that therefore it is necessary to take care that if the subject of their examination is at all competitive, they should get the same nature of examination in all cases. If they were examined *vivâ voce* by different people, the examinations would be very different, but if it is a mere abstract question as to examining them *vivâ voce* or in writing, I think that it would be very desirable, if it could be accomplished, that in all cases some part of the examination at any rate should be *vivâ voce*, but I apprehend that when the different people who are to be examined are scattered over the face of the earth, there would be great difficulty in getting a uniformity of examination under these circumstances.

6614. It has been very much complained of, and I believe it to be a hardship upon the officers examined entirely by writing, that they have not the same opportunity of asking a question as they have now in this country, so as to ascertain the drift of the question put to them. If you exclude an officer from the opportunity of doing that, is he not subjected to rather an unfair hardship?—I do not think that the questions ought to be of such a nature that there should be any manner of doubt as to what the meaning of any particular question was. For instance, if you give notice that your examination is to be upon a given campaign, the questions ought to be put with such an amount of clearness that there should be no manner of doubt as to their meaning.

6615. You have spoken of the size of classes at lectures. Do you not think that large classes are objectionable on the principle that in our service it has always been observed that as regards private soldiers our drill squads are much smaller than in foreign services, and that they make better progress in instruction in consequence. You would apply that principle to the lectures would you not?—Yes, but not to a special lectures by particular men. I think that in carrying out a course of instruction it is desirable that the numbers in the classes should be small.

6616. As regards the question of young men being somewhat overdone by study, it has been stated here that eight hours of mathematics consecutively is not too great a strain upon the brain, do you agree with that?—No, on the contrary, it is more than a full grown man can stand if the dose is repeated very frequently.

6617. As regards the camp instruction to which you have alluded, do you consider that having it carried on in the camp, namely, the instruction in earth works and in field fortification, would not only teach those under instruction, but that the lookers-on would very much profit by it?—Yes, and I think that in camps of instruction the manœuvring of the whole camp might be made very much more interesting in that manner. The late Prince Consort attached great importance to the instruction of officers and men of the army generally in field works, and before I went to Aldershot he had a commencement made, and some field works thrown up by the division under the guidance of engineer officers on Hungry hill, where they remain to this day; they have never been completed, but the whole division turned out as in the presence of an enemy and pickets were placed in advance to cover the working parties. This operation was carried on for several days, and as far as I know it was the first and the last operation of the sort which has taken place there, but I have not the slightest doubt that such operations carried on in a proper manner would not only be very instructive, but would very much add to the interest which all officers and soldiers would take in the manœuvres of the camp. One difficulty occurs in carrying out a system of instruction of that nature in our service. It has arisen from the practice of olden times; it is taken as a custom of war, that all soldiers of the British army whenever employed in any other way than actually handling a firelock, are to receive working pay or additional pay. I think this is a very wrong system. Men ought to be at the service of the Government for anything which might be required of them. If they are employed in a special way in which the Government derives benefit from their work, then I think it is quite right that they should be paid something for it, because their work then effects a saving to the Government, but when it is merely intrsuctional work, such as field works, except getting a slight remuneration to cover the injury to their clothing, I do not think they should get any additional pay; it should be quite as much a part of their duty as handling a firelock.

6618. I daresay that you recollect the remarkable aptitude which was shown by the Egyptian regiments at Schumla in throwing up works?—Yes.

6619. They were almost barbarians; but did not the officers acquire it very quickly?—Yes; the difficulty was that we had not sufficient instructed men to direct them, but I think that Englishmen acquire that knowledge as quickly as any others. I had a British regiment once at work for six months, and at the end of that time I could have got out of

it 150 as good "navvies" as could have been found on any railway in England; after they had been working in that way they came into their own lines; the half-yearly inspection took place the next day, and the inspecting officer told me he had inspected them two or three times before but had never seen them appear better on parade.

6620. Do you consider that sort of exercise which causes perspiration very conducive to the health of soldiers?—Yes; it develops muscle.

6621. To enable the officers of the line to direct working parties is not possible without actual practice, is it?—Certainly not.

6622. It has been said by some witnesses that ignorance is the prevalent type of the British officer; your remark as to the officers volunteering to attend these classes very much contradicts that statement, does it not?—I think that the officers who volunteer to come to this sort of thing are rare exceptions. I had for some years the management, to a certain extent, of the Prince Consort's library at Aldershot, which was about as good a military library as exists almost in the world, and I am very sorry to say that it was very little used. That fact in a large station like Aldershot is in some measure a test of the desire of officers to acquire military knowledge.

6623. Was not one reason of that, the injudicious mode of keeping the officers constantly employed at Aldershot upon regimental drills?—That might probably have had a great deal to do with it. I think that our regimental system tends to check study, because the duty breaks up the time of officers into very small fragments, and everyone knows of course that when the interruption to study is such it is pursued under difficulty.

6624. As regards the out-stations distant from camps, do you not think that it would be possible to send occasionally an engineer officer as an instructor to regiments so stationed to be placed with them for a certain number of months and to allow the officers to avail themselves of it?—I see no objection whatever to it; the only question is whether there is a sufficiency of officers in the corps to be spared for such duties; but if officers could not be sent it is probable that non-commissioned officers might be sent for the instruction of men and also of officers.

6625. Are not some of your non-commissioned officers of such a class that the officers would not feel at all degraded by being placed under them?—Certainly; a good deal of instruction is carried on at Chatham by non-commissioned officers; in fact, in the British army every officer is drilled by a non-commissioned officer when he joins. The only thing is that it is necessary to have a senior officer present so that the orders are given in his name.

6626. Is not the sand modelling an attraction?—Yes.

6627. If it was carried out to a greater extent would it not be likely to lead to officers taking more advantage of instruction in field fortification?—Yes; I think much advantage would result from the application of what has been learnt in the modelling room on service whenever necessary.

6628. (*Rev. W. C. Lake.*) Do you find any defects in the character or bearing of the young officers as gentlemen?—Not in the least.

6629. How many hours do you work them intellectually at Chatham?—My impression was that a young man of average capacity would require about five hours' close application every day to get through the course. Of course clever young men would require less time, and others would require more.

6630. Do you combine any, and if any what, military duties with their intellectual work?—During the time that they are going through the special engineering classes they do no military duty, unless exceptionally. The military course involving a knowledge of military duty I have taken as a distinct subject of study, and during the time that they are at that study they do all the necessary military duties of the station.

6631. Are they all kept together in one building or college?—No, they are in one barrack, in which there is the usual allotment of officers' quarters and men's quarters.

6632. They are separate from the other officers in the garrison?—Yes; our barracks are entirely occupied by ourselves; our barracks have been partially occupied by other troops when the garrison has been full, but that has been exceptional.

6633. Chatham has been spoken of as a possible place for additional institutions of the same kind, but you think that very objectionable?—Yes; the town is bad for a purpose of that sort, and the neighbourhood is not altogether eligible for it.

6634. With respect to the length of the course, you have said that it is 22 months besides both long leave and short leave; that must make it a course of nearly two and a half years, must it not?—No, you misunderstand me. The course of study is 22 months, and in addition to those 22 months they are allowed two months of long leave. The system which I introduced there was that during the various courses of study if they could economise any time by extra work in their own time they could get occasionally their two or three days leave which would not count out of their two months.

6635. Will you very shortly state the respective functions of the officer instructors and of the assistants?—The different classes are handed over to the instructor, who generally has his classes subdivided; in fact they are subdivided by the periods at which they go to him. It is seldom possible to send the complete class all at the same time, and the result is that he takes them through a part of the course and then hands them over to his assistants instructor; or in some of the courses, such, for instance, as field-work and out of door work, the general instruction is carried on very much by the non-commissioned officers, these officers going round and supervising the squads as they are at their exercises.

6636. Have you anything like the *répétiteur* system which is employed by the French either by the instructors or by their assistants?—No.

6637. The course at Woolwich does not finish until about the age of 21 or 22, I think?—Some of them come away younger than that; the course at Chatham I think finishes between 21 and 23, but not at Woolwich. Age of admission to the service.

6638. Do you consider that there are any serious disadvantages connected with young men going into the army at so late an age?—I think that in the Engineers you could not reduce the age without reducing the education; and as I do not think that the amount of learning which they get is beyond the mark, I should be inclined to say that you could not reduce the age; in fact, it is as much as a young man can possibly do to acquire the knowledge within the limits of age now fixed.

6639. Do you, or not, think that a young officer joining at about 20 gains as much in general information and intelligence as he loses in aptitude for his military work?—I do not think that he loses at all in aptitude for his military work. On the contrary, I find that they are just as apt in the habits of discipline as if they had been previously acquired.

6640. Would you extend that opinion to the whole army?—No, I think that there is a marked difference. You do not require the same high amount of mental education for the rest of the army as you do for the Engineers and Artillery.

6641. What, in your opinion, should be the age at which a young officer ought to join in the rest of the army, taking into account a fair amount of education?—I should think that 17 to 20 is a very good age. I should not wish him under 17.

6642. (*Chairman.*) I believe that in Prussia the engineer officers engage in their ordinary military duties first, before repairing to any special school of instruction?—Yes.

6643. What would you think of that system?—I think that the practice which we have at Chatham

Maj.-Gen. J. L. A. Simmons, C.B.

20 April 1869.

Royal Engineer Establishment, Chatham.

is quite sufficient to give them a knowledge of their military duties before studying engineering. Our practice there is for them to go for three or four months to purely military duties before they begin their studies, and I think that if they were sent to another regiment, to a regiment of the line for instance, to learn their duties there for a few months, there would be a great deal of difficulty in getting them to stick to their studies in a satisfactory manner afterwards, and that they might perhaps get habits of idleness which it would be a little difficult to overrule. I think that our system at Chatham of placing them at their duties for three or four months keeps them pretty close at work, much more so than is the case with the officers of the line.

6644. As I understand you, you rely entirely upon the habits of industry acquired and required at the Academy, and confirmed by your system at Chatham, to secure the close application of the young officers?—I think that it is a very great help to them.

6645. You have no test examination?—There is a test examination before they come to us.

6646. But after they have once come you rely upon the general atmosphere of industry which prevails, and the industrious habits which they have already acquired for keeping them at their work?—Yes, and the amount of work which is set them, and which they have to do.

6647. If an officer wishes to shirk his work, how can you prevent it?—First and foremost, he entirely loses the privilege of these short periods of leave, which is a great inducement to him to work; secondly, he will get no leave at all if he does not work; and, lastly, there is always kept as an ultimate appeal a report to His Royal Highness the Commander-in-Chief, and the possibility of such a report I am happy to say is of great weight with the young officers. They also know that after they leave the Engineer Establishment it is the custom (although they have no absolute right to it) to give them two or three months' leave to go to their friends before joining at a new station, and if the report on their leaving the establishment is not favourable they do not get that leave. There was an idea (and it was recommended by a committee of which I was a member) that the officers should lose rank if they wasted their time at the Engineer establishment. That recommendation was made by the committee in consequence of its having happened that officers stayed an unconscionable time at the establishment, and did not exert themselves to get away, but it was found to be attended with great practical difficulties in carrying it out, and that it would have worked so unjustly and unevenly to different officers that it became a dead letter. An order came out just at the time when I left, and in consequence of a recommendation of mine, by which an officer, if he exceeds his time, and if that excess of time cannot be accounted for by the director in a satisfactory way, such as illness or some cause of that sort, will lose a portion of his pay. The pay of an engineer officer is made up of two items, namely, first, subsistence pay and a servant's allowance; and, secondly, extra pay—the extra pay being to provide for coals and candles and so on; and when he lives in barracks there is an amount of stoppage from that extra pay in consequence of his being provided with quarters. He can now be deprived of that extra pay, so that it acts as a penalty upon him, or upon his parents, as the case may be, if he overstays his time.

6648. What is the proportion of young officers with regard to whom it is necessary to bring to bear these compulsory influences?—Very small; it is a rare exception; sometimes you find an officer who perhaps is a little too much taken up with his amusements and devotes too much time to them, and we are obliged to put a little pressure upon him, but it is quite exceptional.

Instruction of line officers.

6649. Several witnesses who have been examined before the Commission have strongly recommended that to every regiment of the army there should be attached an officer under some such title as "Military Instructor" for the purpose of communicating to the younger officers of the army the technical elements of military knowledge to which reference has been made; do you think that that would be advisable?—I think that it would be a very good thing in regiments, as far as one can judge, to employ as instructors such officers in them as had gone through the Staff College, or had otherwise qualified themselves, and who were not required for staff duties, with some pecuniary advantage attached to that employment.

6650. (*Lieut.-Col. Chesney.*) Have you heard of a design which was entertained by the late Prince Consort of having a winter class for officers at Aldershot?—Several letters passed between Colonel Elphinstone and myself as to making the Prince Consort's library more generally attractive to officers, and also as to the possibility of getting up a course of lectures there which officers might be induced to attend.

6651. Was not that very shortly before the Prince Consort's death?—It was shortly before the Prince Consort's death.

6652. (*Lord de Ros.*) You have been accustomed to live at Aldershot among the officers and to see the habits of the regiments; do you not think that there would be danger in an officer from among themselves being taken as an instructor, from the circumstance that many of them would think that it was the blind leading the blind, and that the instructor would be exposed to a sort of quizzing and to some of his pupils thinking that they could teach him?—No, I think not. I think that there would be no more difficulty, or little more difficulty, in getting an officer for that duty than there is in getting an officer for the duty of instructor in musketry. Of course the qualifications would be higher, and therefore many men would not be qualified for the position, but I do not see why the instructor should be subjected to any more ridicule for acquiring a higher class of knowledge than for acquiring an inferior one.

6653. Do you not see a great distinction between the mental qualifications in the one case, and the mere practical qualifications in the other, and do you not think that an officer would be very willing to be taught the musketry instruction who would not take for granted that the instructing officer was superior to himself in military history?—No; I think that having had the previous test of an education at the Staff College that man would be superior to the ordinary class of officers, and that he would very soon take up his position in the regiment.

6654. (*Chairman.*) Will you state to the Commission whether, in your opinion, it would be desirable to effect either a complete amalgamation or a partial amalgamation between the Royal Military College at Sandhurst and the Royal Military Academy at Woolwich?—I think that it is not desirable to do so, and for some of the reasons which I have already stated, namely, that the class of education required for the Artillery and the Engineers is higher than that required for the Line, and therefore in order to acquire that education I conceive that the age for admission cannot be reduced, whereas for the army in general there is no necessity for officers entering it so late. Another great objection, I think, to the amalgamation of two establishments of that sort is that all the young men who enter the academy at Woolwich enter it with the idea of gaining their livelihood in the army, and they devote their time to it; they know that their future depends upon it, and as a general rule the race of competition which they begin there goes on through life, each man looking forward to the particular service to which he is attached as that in which he is to pass his existence; whereas in the other branches of the service numbers of young men enter with the idea of passing only a few years in them; they are men of considerable means, and there is not the same tendency nor the same desire in a man to pay attention to his work in that case as there is in that of a man whose future entirely depends upon it. I

think that those are important points to bear in mind in any attempt to amalgamate those two institutions.

6655. (*Rev. Dr. Butler.*) I understand that you object to the amalgamation mainly on the ground that there would be a fear of introducing a comparatively non-working element into Woolwich, where there is at present so much hard work?—That is one of my reasons; it is not the main reason. I think that the one which I first stated is the principal reason, but both combine as objections.

6656. Supposing that the constitution of Sandhurst were so far altered that no young man was admitted except after passing an examination as severe, or almost as severe, as the examination for entering Woolwich; if, in other words, all the young officers studying at Sandhurst were men of picked ability, would your objection to the amalgamation of the two establishments hold equally?—I think that first of all you would not get a sufficient number of young men for the army on those conditions; and, secondly, the education which you would require of them would be higher than would be necessary for the army, and therefore you would increase the age at which they would enter by two or three years, which is objectionable.

6657. You are perhaps aware that at West Point, in America, the officers for the line and the cavalry, and the officers for the scientific branches of the army, are educated together?—Yes; but the condition of West Point is totally different from anything which we have in this country. West Point, when I knew more about it than I do now, used to be as much a civil college as a military college. It was a civil college under military discipline, and a very large number of young men who went through West Point never went into the army at all. Then again the numbers of the American army are very small. In the last few years they have been more numerous, but previously to the late war in America the army only numbered about 10,000 men, and what gave them great facilities for expanding their army when the war broke out was the number of young men who had gone through West Point and were following other professions, law, physic, and divinity; men were drawn out of all those professions and became officers, and if any one fact was established more strongly than another by the American war, it was that special instruction is necessary to make good officers; nearly all their most distinguished officers had been educated at West Point, as was proved even in the case of Bishop Pollock, who died as a general at the head of his division.

Maj.-Gen. J. L. A. Simmons, C.B.

20 April 1869.

Amalgamation of Woolwich and Sandhurst.

6658. Do you think that any advantages might be expected if the abler officers in the line and in the cavalry were to become acquainted in early life at a place of education with the officers of the Engineers and of the Artillery?—The objection to that is, that if you have a certain numbers of officers in the service of a higher education than others, they will always start at a disadvantage, because they will enter the army at an older age than those who have entered with inferior education; and you could not place a man by examination at once over the heads of men of less qualifications who perhaps had already served two or three years.

The witness withdrew.

Brevet-Colonel G. T. Field, Royal Artillery, examined.

Col. G. T. Field.

Royal Military Academy, Woolwich.

6659. (*Chairman.*) You are inspector of studies and second commandant at the Royal Military Academy?—Yes.

6660. Will you have the kindness to communicate to the Commission a general description of the internal economy of the Academy, the nature of the studies which are pursued, and the character of the discipline which is maintained there?—The Governor of the Royal Military Academy is His Royal Highness the Commander-in-Chief. The staff, under the Governor, consists of one lieutenant governor, who is commandant; one inspector of studies, who is second commandant; one assistant inspector of studies, three captains, four subaltern officers, one chaplain, one paymaster and adjutant, one quartermaster, one surgeon, one chief clerk (civilian), one paymaster's clerk (civilian), and non-commissioned officers, namely, one serjeant-major, one quartermaster serjeant, seven drill serjeants, one hospital serjeant, three gymnastic serjeants, one serjeant gunnery instructor, one serjeant instructor in field works; clerks, artificers, servants, &c. The present number of gentlemen cadets is 222, divided thus—the whole body is divided into three divisions, separately designated A., B., and C., and each division into three subdivisions; there is one responsible under-officer to each division, one subdivision under-officer to each subdivision, and one corporal to every 10 cadets. The executive educational branch of the Royal Military Academy consists of 34 professors, military instructors, masters, and lecturers. There are three captains and four lieutenants as executive military officers, under the lieutenant-governor and the second commandant, with an adjutant and paymaster, a medical officer, a quartermaster, and a chaplain—that makes 13 officers. I subdivide the establishment into two branches. I distinguish between the executive officers of the military branch and of the educational staff, because the duties of the lieutenant-governor, and of the inspector and second commandant are connected with both branches. The superintendence of the lieutenant-governor extends as much over the professors as over the military officers. The number of cadets is now 222. For military purposes they are divided into three divisions, corresponding more or less to three companies in the army, each division being under a captain and a lieutenant, the divisions being designated respectively A., B., and C. The A. division consists of 44 senior cadets. The B. and C. divisions have 89 cadets each, equally divided as to length of standing in the Academy.

6661. (*Lord de Ros.*) When they first join are they put indifferently into either company?—They are divided equally between the B. and C. divisions. In the last six months they are put into the A. division. The cadets are admitted between the ages of 16 and 19, by open competition, the examination being conducted under the Council of Military Education. The cadets are divided for instruction into five classes of equal strength, according to length of residence; there are 44 in the first four classes, and 46 in the junior class. By the army estimates for 1869–70, the detail of the expenditure for the Royal Military Academy appears to be for the military branch 5,609*l.*; this amount includes the governor, the lieutenant-governor and commandant, the inspector of studies, the assistant inspector of studies, the chaplain, three captains of cadet companies, four lieutenants of cadet companies, a paymaster and adjutant, a quartermaster, a surgeon, and a mess allowance for officers of cadet companies. The expenditure for the educational branch is 13,380*l.* That branch includes a professor of fortification, four instructors in fortification, a professor of artillery, three instructors in artillery, a professor of surveying and topographical drawing, four assistant instructors in surveying and topographical drawing, a professor of military history, a professor of mathematics, a professor of mechanics, four mathematical masters, a professor of practical geometry, two masters of geometrical drawing, two masters of landscape drawing, a professor of French, two masters for French, a professor of German, two masters for German, a professor of Hindustani, and a lecturer on chemistry. The expense of the non-commissioned officers and men is 2,256*l.* The expense

Col. G. T. Field. 20 April 1869. Royal Military Academy, Woolwich.

of the civilians, including clerks, servants, modellers, a foreman of the workshop, housekeeper and female attendants, as cooks, &c., is 2,762*l.* The expenses of the cadet company for messing and the allowance for washing and sundries amounts to 9,416*l.* The general expenses, which include rates and taxes and water, and fuel and light, prizes for study and gymnastic instruction, travelling expenses, and contingencies amount to 1,583*l.*, making a total of 35,006*l.*

6662. (*Chairman.*) How much a head does that amount to?—There are 222 cadets, and it makes approximately 157*l.* each. Against the total expenditure the contributions of the cadets last year amounted to 22,624*l.*, and the credit taken from the East India service amounted to 9,240*l.*, making 31,864*l.*, leaving a balance of 3,142*l.*

6663. What would be the contribution of each student?—It depends upon the class; for private gentlemen it is 125*l.* a year; for the sons of admirals and of generals having regiments it is 80*l.* a year; for the sons of generals without regiments it is 70*l.* a year; for the sons of captains and commanders of the navy, and of colonels and regimental field officers of the army, it is 60*l.* a year; for sons of all officers of the army and navy under the above ranks it is 40*l.* a year; for sons of officers of the army and navy who have died in the service and whose families are proved to be left in pecuniary distress it is 20*l.* a year; for the sons of professors at the Staff College, and the Royal Military College at Sandhurst, and the late College at Addiscombe, it is 60*l.* a year; for the sons of masters at the above institutions it is 40*l.* a year.

6664. What is the system of instruction?—The cadets are divided into five classes, and the instruction is conducted chiefly in class rooms, upon the tutorial system, partly by lecture and partly by class-room instruction. The cadets attend on the average for six and a half hours in the day in the class rooms, two and a half hours in the morning, two hours in the afternoon, and two hours in the evening, except when lectures are delivered, when the duration of the lecture is one hour.

Entrance examination.

6665. Will you describe the entrance examination?—The entrance examination is conducted under the Council of Military Education at Chelsea by open competition. The only information which I have upon that subject is from the result of it. I have no means of being acquainted with the system further than that I have attended by permission at the examination and have seen how it is conducted.

6666. In what subjects are the candidates examined?—The examinations are competitive, and are held at Chelsea twice a year, in January and July, the subjects of examination being mathematics, pure and mixed. Pure mathematics include in the first section arithmetic, algebra, Euclid, and plane trigonometry, for which 2,000 marks are allowed; the second section includes spherical trigonometry, elements of coordinate geometry, and of the differential and integral calculus, for which 500 marks are allowed. Mixed mathematics include statics, dynamics, and hydrostatics, for which 1,000 marks are allowed,—giving a total of 3,500 marks for mathematics. In English language and composition, history of England and geography 1,000 marks for each. In classics, in the Latin language 1,500 marks, and the same in Greek. In French and German and Hindustani 1,000 marks for each. In the experimental sciences, namely, chemistry, heat and electricity, including magnetism, 1,000 marks. In natural sciences, namely, mineralogy and geology, 1,000 marks. In elementary geometrical drawing, including the use of drawing instruments, 500 marks; and in freehand drawing of machinery, architectural, topographical, landscape, or figure subjects 500 marks. No candidate is allowed to be examined in more than five subjects, of which one must be mathematics, (the obligatory minimum is 700 marks in section 1 of pure mathematics), and from other subjects candidates may select any not exceeding four in number. The examinations after entrance are conducted half-yearly, partly under the professors and masters of the Royal Military Academy, and partly under the Council of Military Education, the examination in all final subjects being conducted by the Council and the professors jointly. These examinations decide upon the relative merits and places of the cadets in each class; they are entirely written examinations.

Course of instruction.

6667. Are they all competitive?—Yes; the final examination is chiefly conducted by the Council of Military Education.

6668. Is there a minimum?—There is a maximum number of marks attainable and a minimum required. The total number which can be gained by a cadet on leaving the Academy is now 35,800; the minimum required is 13,583, being ·439 on the whole number. This aggregate is obtained from the following subdivision of marks. The final number of marks including extra subjects is, in mathematics, 6,800; in fortification, 6,300; in artillery, 6,200; in surveying and topographical drawing, 4,200; in practical geometry, 2,100; in French, 1,500; in German, 1,500; in landscape drawing, 1,500; in mechanics, 1,600; in natural philosophy, 900; in chemistry, 1,200; and in military history, 2,000; the amount required in each of these subjects, to count towards the aggregate minimum (without including "extra" subjects), being in mathematics, ·5; in fortification, ·5; in artillery, ·5; in surveying and topographical drawing, ·5; in practical geometry, ·25; in French, ·33; in German, ·33; and the same in Hindustani (the study of German or Hindustani is optional); in landscape drawing, ·25; in mechanics, ·33; in natural philosophy, ·33; in chemistry, ·33; and in military history, ·5. The final examination in all these subjects does not take place at the same time. The final examination in mathematics is held in the third class, after a residence of a year and a half. Fortification becomes final in the first class (the last term of residence), and it is studied in four classes; the fourth, third, second, and first. The subject of artillery is studied in two classes; the second and the first; it becomes final in the first class. In surveying and topographical drawing the subject is final at the completion of the course, having been studied throughout the terms of residence; practical geometry becomes final in the fourth class, after one year's residence; French becomes final in the second class, after two years' residence; the same with German and Hindustani; landscape drawing becomes final in the third class, after a year and a half's residence, or three terms. The study of military history, chemistry, mechanics, and natural philosophy becomes final in the first class, having been taught in the last two terms.

6669. Are all those studies compulsory?—Yes, with one exception, namely, that a choice is allowed between German and Hindustani.

6670. With regard to the physical instruction, such as riding, gymnastics, and drill, what is the case?—The cadets on first joining go through a course of gymnastic instruction for six months, or longer, according to the orders of the lieutenant-governor. The instruction in this training is conducted under the superintendence of an officer employed as superintendent of gymnasia on the staff of the garrison and district of Woolwich. There are three serjeants as assistants to carry out the details. Artillery drill and exercises are conducted partly under the military officers and partly under the professor and the instructors of artillery. Riding drill in the last two terms is conducted under the officer commanding the riding establishment of the Royal Artillery. The time devoted to riding is from four to five hours a week, on an average, in the last term, and about two or three hours a week in the fourth or last term but one. Swimming is taught optionally. Other drills which are taught are marching drill, carbine drill, company drill, and battalion drill, field gun drill, mortar drill, heavy gun drill, and sword drill.

6671. Is there musketry drill?—No, not beyond what I have stated.

6672. What is the discipline; what officers superintend it?—The discipline is under the superintendence generally of the lieutenant-governor, and it is maintained in the instruction branch by the inspector and assistant inspector, the professors and masters, and the cadets on duty. Certain powers are vested in officers of different ranks, and cadets, to carry out the discipline as required. The professors and masters are answerable for the maintenance of good order and discipline during the hours of study, but they have not the power vested in them of administering actual and definite punishment. The nature of the punishments is open arrest, close arrest, and restriction from leave. Close arrest is the most severe punishment; it carries with it extra drill of half an hour before breakfast and also in the afternoon, and confinement in the room during recreation hours. Open arrest is the same as to extra drill, but the confinement is only to the enclosure, with restriction from engaging in games or amusements. In addition, for more aggravated offences there are the penalties of dismissal or discharge, and rustication, on the recommendation of the lieutenant-governor. Officers of the military branch can exercise the power of punishment, the professors and masters report to the inspector, who awards. The corporals in charge have power to place cadets under arrest for a time, and report the fact to the inspector.

6673. What are the amusements?—There are some subscriptions for recreations and amusements, which embrace the following; library, cricket, band, amateur theatricals, athletic sports, workshops (which are maintained by the Government, the tools and materials being supplied at the expense of the cadets at a certain rate). There are racquets, foot-ball, bowls, bagatelle, bird stuffing, and photography. The subscriptions to these amount to a moderate sum.

6674. Are there billiards?—Yes; there is one very good billiard table, and eventually we hope to have another. The subscription to these amusements is voluntary, and the cadets avail themselves of them very largely.

6675. Will you describe the board and lodging and the nature of the buildings?—The barrack accommodation consists of 135 barrack rooms, 32 of them are constructed to hold four cadets each; 92 are constructed to hold one cadet each (or more if required); and there is one particular block of buildings "the tower," which is constructed to hold 23 cadets; 222 cadets are accommodated in 128 rooms; the greatest number in any one room is four; there are 24 rooms at present with four cadets in each of them.

6676. (*Lord de Ros.*) Is there any reading room?—There are two very excellent reading rooms. There are about 24 rooms with four cadets in each, six barrack rooms with three cadets in each (I am speaking approximately), and 10 rooms with two cadets in each, the remainder being accommodated in single rooms. There are two dining halls; the number accommodated in one is 178, and 44 in the other (a smaller hall for the senior division). There are eight class rooms calculated to hold about 40 each; some of them are large rooms, and there are two lecture halls.

6677. (*Chairman.*) Is there any tap?—No. All refreshments are supplied from the mess. The cadets have four regular meals a day; their breakfast, lunch, dinner, and tea are supplied in the halls, tea alone being in their barrack rooms. Breakfast consists of tea, coffee, or cocoa, bread and butter, and meat or eggs, and lunch of cold meat or soup. Dinner of hot meat, vegetables, puddings or tarts, bread, &c. The breakfast is at half-past 7 o'clock, the lunch at half-past 12 o'clock, the dinner at 3 o'clock, and at 8 o'clock there is tea or coffee, with bread and butter. Refreshments are provided for any cadets who wish to avail themselves of them between half-past 4 and 6 o'clock at a moderate tariff, charged in the cadet's accounts by his captain. A cadet can also if he wishes it obtain marmalade, jam, eggs, or cold meat for tea, on a written requisition, the expense of which is charged by the captain in his account. A limit is put upon this; it is not allowed to exceed 10*s.* a month.

Col. G. T. Field.
20 April 1869.
Royal Military Academy, Woolwich.

6678. (*Lord de Ros.*) Is there any season when the dinners consist wholly of cold meat?—Yes; but only at the cadets' own request. The affairs of the mess are conducted by a committee, of which three responsible under-officers are members. In summer breakfast is at half-past 7. The first study is at half-past 8. Drill at a quarter after 11. Lunch at half-past 12. The next study at 1. Dinner at 3. Recreation till 6; and study again from 6 till 8. Prayers at 8, then tea, and roll call at 10.

6679. (*Sir D. Cameron.*) Are there any half holidays?—On Saturdays the studies are held from half-past 8 till half-past 1, with a break of half an hour for lunch; for the remainder of the day there is a holiday.

Discipline.

6680. (*Lord de Ros.*) When are lights put out?—At half-past 10. The senior cadets are allowed lights until 11. The cadets are strictly forbidden to enter public-houses in the neighbourhood, or any house of public resort, or billiard rooms.

6681. There is no house especially excepted from that restriction?—No.

6682. (*Lord E. Cecil.*) What are the bounds of the Academy?—There are no particular bounds. The hours at the disposal of the cadet are about two hours in a day, and he is not specially limited. The cadets are not allowed out of the enclosure at night after prayers and tea, during the first year and a half of their residence. One of the privileges of the seniors is that they can go out in the evening if they wish it for an hour, which is at their disposal.

6683. (*Rev. W. C. Lake.*) Have you reason to think that you enforce the order not to visit publichouses?—I think so to a great extent.

6684. What would be the punishment in that case?—It would rest entirely with the lieutenant-governor.

6685. Are such cases frequent?—They are very unfrequent.

6686. Are they dealt with very severely when they are brought up?—Yes.

6687. (*Sir D. Cameron.*) By rustication?—I should think by rustication, but I have never known a case. The openings which have been given to obtaining things at home with facility are so ample that there is not very much temptation.

6688. (*Rev. W. C. Lake.*) Have you a billiard room within the Academy?—Yes; it was opened last year; it is a very nice room.

Accommodation.

6689. Speaking of the accommodation, are there four cadets in a room, day and night?—Yes, but they neither study, nor have their meals (except tea) in their rooms.

6690. Do you not think that is objectionable? Do you not think it much better to have a room for each cadet?—I should decidedly prefer to have single rooms, but they are good and comfortable barrack rooms.

6691. Have you found or heard of any objectionable results arising from there being four cadets in a room?—No.

6692. Have you heard it complained of by any cadet as being disagreeable?—No, the cadets feel rather crowded with four in a room.

6693. But you have not heard such complaints as that one of the four may be a young man of bad character, and therefore extremely objectionable or disagreeable to the others?—No.

Number of instructors.

6694. There are 34 professors, I think, for 222 cadets?—Yes, professors and instructors.

6695. Are you aware that that is a very large proportion compared with any great public school?—We have 13 subjects of instruction.

6696. Will you enumerate them?—In mathematics there are one professor and four instructors. In fortification one professor and four instructors. In artillery one professor and three instructors. In surveying and topographical drawing one professor and four instructors. In practical geometry one professor

Col. G. T. Field.
20 April 1869.
Royal Military Academy, Woolwich.

and two instructors. In French one professor and two instructors; in German the same; and in Hindustani one professor. In landscape drawing two masters. In mechanics and natural philosophy one professor. In military history one professor. In chemistry one lecturer.

6697. Will you have the kindness to describe the different functions of the professors and of the instructors?—Their functions are to a certain extent the same; they teach together in the same room. The professor has to a certain extent the supervision of the whole branch of study, but he chiefly teaches in the same way as the instructor; he teaches in the same room and at the same time.

6698. Are there two classes going on at the same time?—There is one class, for instance, the third class, in which the professor of mathematics teaches that class only; he is assisted by one master, and teaches at the same time in the same room. With regard to the number of professors and masters I may mention that the greatest number of cadets taught by one instructor at a time amounts to 23.

Duties of the staff.

6699. What work have the lieutenants of companies to do as far as regards the instruction; have they to be present at the instruction?—No, not at the education, but in the interior economy; they have in fact the training of cadets at all times when they are not in study; but they have nothing to do with the instruction.

6700. Are the professors and the instructors held to be entirely responsible for the instruction?—Entirely, subject of course to the prescribed control of the lieutenant-governor and inspector.

6701. And to have the entire power over the cadets at the time of instruction?—Yes; the instructions are worded thus:—"The professors and masters are on all "occasions to receive every mark of attention and "respect to which their position in the institution "entitles them. The cadets during the hours of study "are placed under their charge, and they are held "responsible for their due instruction in the several "branches of study in conformity to the true spirit of "these regulations, and also for the maintenance of "discipline and regularity of the class rooms." A report from a professor is regarded as implying neglect of duty on the part of the corporal, who ought to preserve order in the room. The professor maintains order through the military functions of the corporal.

6702. What is the exact period of a Woolwich course?—Five terms.

6703. (*Lord de Ros.*) Does the lieutenant-governor ever go round the rooms, the riding school, and the hospital, and look into the details of the corps, the same as he would do in a regiment?—Yes, the printed instructions are such.

6704. Has every cadet his own writing desk, and his own chest of drawers, and the command over his own clothes?—Yes, in the class room there is a desk provided for him in which he keeps all his books. In his barrack room he has his portmanteau, and a separate cupboard to himself.

6705. Is any inspection or examination ever made of those cupboards?—They are liable to be subjected to daily examination.

6706. Is there any rule with regard to pocket money?—Yes, the pocket money paid weekly to the cadets is on a scale; the responsible under-officers receive 5*s.* a week, others in proportion down to 3*s.*

6707. As regards the means of washing; has every cadet the means of washing in private?—There are separate baths and lavatories.

6708. When he gets up in the morning has he the means of washing himself alone?—Yes, he has a separate bath to himself.

6709. With regard to smoking; is there any restriction as to the hours or places?—There is as to places; there is a smoking room.

6710. May the cadets smoke at any time?—There is no restriction as to time, so long as it is in a proper place.

6711. Could a cadet smoke there at 9 o'clock in the morning?—No, because he would be in study from half-past 8 till 11.

6712. Have you anything of the description of sand modelling?—No.

6713. Are there any workshops?—Yes, workshops for carpentering and turning in metal work as well as wood. A steam-engine is provided to drive the lathes, &c. The cadets largely avail themselves of this amusemennt. I think the number of subscribers averages from 90 to 100.

6714. Have they access to the arsenal to see what machinery is in operation?—They are regularly for six months taken there as a part of their instruction.

6715. To attend the workshops and to see what is going on?—Yes.

Discip

6716. (*Maj.-Gen. Haythorne.*) Do you think that the scale of punishments is sufficient?—I think so; it is assimilated to what is the case in the army. The corporal has the power of placing a cadet in arrest, but it must be confirmed by a superior authority. A captain has power to award four days' close arrest. It is, however, a very rare thing that the power is exercised to that extent. The inspector has power similar, I think, to that of the colonel of a regiment, at all events, as far as seven days' close arrest, and 28 days' confinement to the enclosure, that would be the limit, but it is a very rare thing to exercise that power.

Age admi

6717. Do you consider the age of the entry of cadets at Woolwich a good one?—I think that the range is too great, namely, from 16 to 19. I think that 19 is too high a limit, because the result is that the present age at the Academy is high. The average age of 44 cadets who will be shortly commissioned will be upwards of 20 years; the average age of the first class is now 19 years and 9 months, which is *too* high.

6718. Would you make any alteration in the examination for entrance?—No. I think that the upper limit of age should be lowered, and not the lower. With a limit of from 16 to 18, I should think the educational standard need not be lowered.

Ent exa

6719. Do you approve of the examination as it stands at present for entrance?—In a general way I think it seems to answer, but I should certainly advocate a higher qualification in mathematics. I think 700 marks out of 2,000 in pure mathematics is decidedly too low a qualification. I should prefer to see it 1,000.

6720. Would you advocate any other alteration?—I think the qualification in geometrical drawing is low; some qualification is necessary. I think a higher qualification than at present would be an advantage to the cadets after they enter the Academy. The question of a classical education before entrance into the Royal Military Academy presents some difficulties. I advocate general education; I regard a classical education as of the utmost importance, but some cadets who have entered the Academy, owing to their high marks in classics, and who have had low marks in mathematics, have been at a disadvantage afterwards, because the marks in classics are very high, namely 3,000, and a classical scholar when pitted against a mathematician almost always loses ground afterwards. It is a difficult question upon which to suggest anything; but that is a fact.

6721. (*Sir D. Cameron.*) I think that you said that you would raise the qualification for admission in mathematics in the obligatory section?—Yes.

6722. Is that because you find the cadets on joining defective in that section in mathematics?—It is not so much that, as that it would necessitate their paying more attention to those particular subjects and would perhaps prevent their gaining a superficial knowledge (a sort of cramming knowledge) of the higher subjects merely for examination.

6723. You do not think it necessary to require a higher qualification in the other section?—The cadets are not deficient, but at the age at which they join,

namely, between 16 and 19, I think that they might be expected to know the first section thoroughly. Our course of instruction at the Academy comprises algebra, geometry, and plane trigonometry.

6724. And they form a part of the obligatory section?—Yes.

6725. Is there any limit to the power of the lieutenant-governor as regards close arrest?—No; the powers of the lieutenant-governor are not defined by regulations as to the amount of arrest.

6726. Does the inspector of studies dispose of all offences in study?—Either the inspector or the assistant inspector does so.

6727. Without reference to the lieutenant-governor unless the case is serious?—Yes.

6728. Are offences in study frequent?—No, they are very trifling offences. Every offence by a cadet against discipline is taken notice of, but they are quite minor offences; the regulation is that a cadet placed in arrest by the corporal in charge remains in arrest for 24 hours unless released in the meantime by the inspector. In minor offences the inspector generally confirms the arrest of the corporal. In study every offence is immediately reported to the inspector; if he did not investigate the case the arrest would expire in 24 hours, but practically the inspector or the assistant inspector investigates every case brought before him.

6729. (*Lord de Ros.*) Is the case, as it were, pleaded before him?—Yes. The corporal places the cadet in arrest. The cadet is present and has opportunity of explanation or self-defence. A professor has only to call on the corporal to maintain order. He would send a written report, if it was a serious offence, which would be brought before the lieutenant-governor.

6730. I suppose that the ordinary offences are talking or laughing during study?—Yes.

6731. There is never any impertinence?—That is very rare.

6732. (*Sir D. Cameron.*) Has the lieutenant-governor the power of rusticating a cadet without previously referring the case to the Commander-in-Chief?—I can hardly answer that question. From my knowledge and experience of the Academy it has not been done. The Commander-in-Chief, who is the governor of the Academy, has always been referred to in every case of dismissal or removal.

6733. Have you had many cases of rustication since you have been there?—Two or three.

6734. How long have you been there?—Three years.

6735. (*Lieut.-Col. Chesney.*) Have you had any cases of general misbehaviour on the part of classes?—Very rarely.

6736. Have you known any case where a whole class has been placed under arrest temporarily?—Yes.

6737. Was that on the report of the professor?—Yes, for talking; nothing beyond that.

6738. Have you any captains of artillery among your professors or instructors?—Yes, several.

6739. As regards college discipline, is there not a strong line between a captain of artillery who is teaching and a captain of artillery who is an officer of discipline—does there not appear to be a considerable difference between their powers?—All the officers who instruct, whatever corps they belong to, are exactly in the same category as to discipline as the civilian professors; they have no power to award a definite punishment.

6740. They have no power because they are professors?—Yes.

6741. They are in a different position from the disciplinary officers?—Yes, so far.

6742. Is not that of itself rather contrary to ordinary military practice? In the army an officer holding a commission is to a certain extent on duty everywhere?—Yes, the officer is so, and by virtue of his commission he can of course place *any cadet* under arrest for misconduct, but I should not advocate making any change in that respect. I think it better that the power should be limited as at present.

6743. Do you think that it would diminish a man's teaching power if he had disciplinary power over his class?—No, I should not say that it would necessarily do so, nor improve it.

6744. Will you state what is your actual objection to the idea of a military professor being also charged with some degree of discipline?—By the regulations a military professor is in charge of the discipline of his class, but he carries it out in a different way from an officer of the military branch; he has not the same power vested in him; he can order a corporal in charge to place a cadet in arrest, but he has not power to deal finally with the case; that is the only difference.

6745. You do not like the professors to have the control of the cadets at any other time than when they are in their classes?—No, but a professor must take notice of any breach of discipline.

6746. (*Lord de Ros.*) If he met a cadet intoxicated he must report him?—Yes.

3747. (*Lieut.-Col. Chesney.*) Do you ever remember such a report being made by a professor?—I cannot call to mind any special instance, but it certainly would be taken notice of.

6748. (*Lord de Ros.*) Do the officers who are charged with the discipline of the establishment reside within the Academy, or are they quartered out in houses?—With some exceptions they are quartered within the precincts.

Finance.

6749. (*Chairman.*) You have mentioned a contribution from the East India Company?—Yes.

6750. What is the nature of that contribution?—On the amalgamation of the East India military establishment at Addiscombe with the Royal Military Academy the East India Company became responsible for the additional charge thus laid upon Woolwich to the following extent, which for last September quarter stood thus:—

	£	*s.*	*d.*
1 captain at 5*s.* a day, 1st July to 30th September, 92 days.	23	0	0
2 lieutenants at 4*s.* - - -	36	16	0
100 gentlemen cadets at 3*l.* 2*s.* 6*d.* pay, and 6*d.* for clothing.	1,380	0	0
4 serjeants' pay at 3*s.* 2*d.*, allowances 1*s.*	76	13	4
7 masters - - - -	462	10	0
Servants - - - -	137	2	4
Coals, gas, candles, and contingencies -	200	0	0
Per quarter - -	2,316	1	8

6751. How are the professors selected?—They are selected on the recommendation of the lieutenant-governor.

6752. How are they brought to his notice? He has not the undisputed patronage, has he?—They would be appointed by the Commander-in-Chief on the lieutenant-governor's recommendation. I have never known an instance of a professor being otherwise appointed.

6753. Practically the lieutenant-governor recommends, and his recommendation is generally accepted?—Yes.

6754. Has there been extensive combination against the authorities, or a rebellion, at the establishment within the last 10 or 15 years?—I think that seven or eight years ago the records show there was something of the kind. I think there is a return before the Royal Commission which shows it.

6755. Is there much venereal disease among the cadets?—No.

6756. There is some?—Yes, there is some; a return has been furnished to this Commission on that subject.

6757. There are 40 cadets in each class room, are there not?—At present there are 44 in each class. The classes are subdivided in some instances on account of the rooms.

Col. G. T. Field.
20 April 1869.
Royal Military Academy, Woolwich.

6758. Is an attempt made to administer instruction to 40 cadets at once?—Yes.

6759. Is not that rather a large number?—It is a large number in one room for a long attendance. We have 44 cadets in one room for mathematical instruction. In some subjects three masters teach at the same time in one room.

6760. So that it is not one man who is attempting to teach 40 young men at once?—No, the greatest number is about 23, and about 14 or 15 is the usual number.

6761. You have one professor and a military instructor to every five cadets, and one professor to every seven cadets; is not that rather a large proportion of instructing power to the number of cadets?—It would appear a large proportion if they all instructed in one branch, but as a professor and his staff represent the teaching power for one particular branch of study, the proportion does not appear to be large, because it entails the carrying out of instruction by one professor or master to 15 cadets on an average.

6762. And you do not think that the present instruction could be advantageously administered with a less number than the present number of instructors?—Not under our present system.

6763. Are there any suggestions which you would wish to communicate to the Commission with regard to any changes or improvements which you would like to see introduced beyond those which you have mentioned?—I have already mentioned reduction of age at entrance; I think that would be desirable.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

Thursday, 22nd April 1869.

PRESENT:

THE RIGHT HON. LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
GENERAL LORD DE ROS.
LORD NORTHBROOK.
LIEUT.-GENERAL SIR D. A. CAMERON, K.C.B.
MAJOR GENERAL EARDLEY WILMOT.
MAJOR GENERAL HAYTHORNE.
C. S. PARKER, ESQ., M.P.
REV. DR. BUTLER.
REV. W. C. LAKE.
LIEUT.-COL. CHESNEY.

CAPTAIN E. J. BRUCE, Royal Artillery, examined.

Capt. E. J. Bruce.
22 April 1869.
Royal Military Academy. Course of study.

6764. (*Chairman.*) You are assistant inspector of studies at the Royal Military Academy?—Yes.

6765. How long have you been in that position?—Nearly five years; I was appointed in June 1864.

6766. Is it your opinion that the organization of the studies as it at present exists is satisfactory?—On the whole I think that it is good. It is of course capable of improvement in some respects.

6767. Will you kindly explain to the Commission in what respects you would advocate improvement?—That is a large question. I have put down my thoughts on that subject in writing, and I will endeavour to give the leading points *viva voce*. I am favourable to giving the Artillery cadets a six months' course after they leave the Academy, specially suitable to *them*; and something analogous to what the officers of Engineers get at Chatham. At present there are 34 professors and masters, and 13 subjects are taught. A choice is allowed between German and Hindustani, and a *partial* election in *one* branch of mechanics. This leaves 12 subjects compulsory on every cadet, though not all subjects at one time, but as follows: In the fifth class six subjects, in the fourth class seven, in the third class six, in the second class nine, and in the first class seven.

6768. We have had that information from a previous witness, and we know what exists. What changes would you recommend?—I question whether it is desirable to force all alike through the whole 12 subjects. It may lead to loss of time, to a distaste for work, and to the occasional disappointment of the instructor. I would make obligatory on all, absolutely—mathematics, artillery, fortification, surveying and topographical drawing, military history, and one language. I would oblige all, for one term at least, (both for positive gain, and to prove whether they may profitably go on with the subjects), to study practical geometry, drawing, elementary chemistry, gunpowder and explosives, and the lower course in mechanics. The following subjects I would make voluntary: Applied chemistry, including metallurgy and laboratory work; applied mechanics (theoretical and descriptive course); and physics, including light, heat, sound, electricity, and magnetism. High "marks" should be given to important subjects, not generally popular. The foregoing subdivision does not show the order of the subjects, or the time to be given to them; nor do I venture so much to recommend it, as to offer it for consideration. I am inclined, under *any* system, to give *permanent marks* for all subjects, at every examination; few to the earlier examinations as of less value, and more to the later as more important. The Council of Military Education would either forego sharing the earlier examinations, or else examine in every subject in every class. I would say in explanation, that the Council now, as a rule, share all examinations carrying *permanent* credit for a commission. In all classes, at present, there are periodical examinations for *class* promotion, and some of the marks gained are only *temporary*, and in these the Council of Military Education have no share; but if all marks were permanent the Council of Military Education must either forego the examination in the earlier subjects, or else examine in every subject taught in each class. Another suggestion which I would make is, to demand ·5 on the aggregate marks in the "course" without "extras," rather than on subjects in detail. It may, however, be desirable in special subjects, as mathematics, fortification, artillery, and surveying, perhaps also military history, to require still a final qualification, say of ·33 on each; or even if *optional* studies be introduced, ·5; because with fewer subjects, you might fairly require a higher attainment.

6769. (*Mr. Parker.*) When you speak of decimals, does unity represent full marks?—Yes.—Again, conduct, drills and exercises, gymnastics, &c., might carry some permanent marks towards a commission. The constant aim should be to develop all subjects, so as to give them, in their treatment, a practical professional bearing, especially mathematics and the sciences. Certain professors should have a clear apprehension of the relation of one branch of instruction to another, and of the line of teaching pursued. To do this, they ought to meet together occasionally under the vice-presidency of the inspector of studies. The lieut.-governor, I presume, would be the president. To this end, a board or council of improvement might

be either a help or a hindrance, according as it was or was not skilfully directed, and according to the mutual understanding or *mis*understanding of its members. They should not discuss matters of discipline. The next heading which I have is still connected with the Academy itself; it applies to the joint education of the Artillery and Engineers. I think it most desirable, up to the end of the Woolwich course; because, in presence of the enemy, at field works and siege operations for attack or defence, these officers must work together. Each needs, up to a certain point, a sound knowledge of fortification, and of the nature and effects of artillery fire. Mutual understanding is essential, and it is likely to be fostered by a similar education, at the same college. The Woolwich course now lasts two and a half years. Should it be reduced to two years, as perhaps it might be with advantage, the Engineers and the Artillery might then *diverge*, the young officers of the Royal Engineers going, as now, to Chatham, and the young RoyalArtillery officers going to the School of Gunnery at Shoeburyness, and to the Department of Artillery Studies at Woolwich, with provisional commissions, for further practical training—finally passing an examination with *qualifying* test only, after a six months' course. I would further suggest that a captain of Royal Artillery should be specially appointed to have charge of these young officers. I might say incidentally here, that provided the term of residence were reduced to two years, and that the Artillery cadets were guaranteed a short after course, it might be possible and expedient to diminish slightly the fortification work done at the Academy, and also to reduce some of the minutiæ of the manufacturing details of artillery, to the benefit of both Artillery and Engineer cadets. The Chatham course is already defined, and in full operation. The following are "hints" for the Royal Artillery further course:—perfect their knowledge of artillery materiel and manufacture; keep up riding; gain some acquaintance with stable management, forage, stores of a battery, harness, draught, driving-drill, and field battery exercise, a slight introduction to farriery and veterinary knowledge; learn something of the interior economy of the regiment, pay, messing, clothing, &c.; acquire some knowledge of military law and practice of courts-martial; have more artillery practice at Shoeburyness; practise throwing up cover for guns; make rafts and spar bridges; lay platforms, embark, disembark, mount, dismount, and transport ordnance. It will be seen that no new educational machinery or staff is proposed, but the use of means already existing, namely, the School of Gunnery and its instructors for one part of the course; for the other, Woolwich, with the director and assistant director of Artillery studies, the captain instructors in the Royal Arsenal, and the veterinary establishment. It would be necessary, only, to afford at Woolwich and Shoeburyness barrack accommodation, and the use of the existing mess establishments. For the arrangements in detail, when the course was once approved, the captain alone should be responsible, under, of course, the commandant at each station. I do not know that I have anything more to suggest on this particular topic.

6770. (*Chairman.*) As I understand from your observations, your suggestion would be to reduce the number of obligatory studies, but not to reduce the subjects of general study?—I would still teach every subject which is now taught in the College.

6771. Do you think that it would be possible to introduce a reduction of professors and instructors, because the proportion seems to be rather great to the number of cadets under instruction?—Working on the present system I should hardly say so; but of course, if the optional system were introduced, you must wait to see what the effect would be: then, probably, a reduction might be made.

6772. Are you satisfied with the system of open competition?—I am.

6773. And you would not suggest any alteration in the entrance examination?—I have no fault to find with the present age, 16 to 19, if promotion were more rapid. But I would readily relinquish one year of the superior limit, making the age 16 to 18, and leaving the average at 17 instead of 17½. This need involve very slight (if any) lowering of the entrance examination, which I hold to be a matter of very great importance, as keeping up the educational standard. I would give *two* trials, and no more. In mathematics, section 1, I would demand ·5 for qualification. In other subjects as now, I would demand a qualification of one-sixth (·16) on each. On the aggregate of all subjects taken up by each candidate, I would demand ·5 instead of the constant 2,500 now accepted as qualification from all comers. Thus: a candidate may take up five subjects, the full marks for which shall be 9,500. Another may take up five, the full marks for which shall be 6,000. The qualification now demanded from these two is the same, viz., 2,500. I propose to require from each *half marks*. To compensate classics (dropped on entering the Royal Military Academy), I would carry on marks gained, in all subjects, at entrance, to final credit for commission; or it would be enough perhaps to do so to the first periodical examination, that is to say, to the end of the first term.

Capt. E. J. Bruce. 22 April 1869. Royal Military Academy. Entrance examination.

6774. As I understand you, you would allow the marks gained at the entrance examination to count in the total of marks for a commission?—Yes, that is my first proposition; but it is quite possible that it may be thought to be excessive, as giving too much weight to the entrance examination; so I say that it may be enough to carry the marks gained at the entrance examination to the first periodical examination, namely, to the end of the first term at the Royal Military Academy. It is clear that a good classic and indifferent mathematician is heavily weighted in his mathematics, and is most likely to suffer, in his *first* term: if he carries on his "entrance marks," his classics may help him over the difficulty. The *outside* limit of residence is three years, the course requiring 2½ years; a cadet may lose one term; if, after that, he misses another, he must go.

6775. Another part of your proposition was to reduce the term of residence from 2½ years to two years, upon the understanding that the Artillery cadets were to have the advantage of a course at Shoeburyness analogous to the present course through which the Engineers are put at Chatham?—Something analogous. Length of the course.

6776. The advantage of that would be that their joint studies might be suitable to both?—Yes, being carried on under slightly more favourable conditions: besides, I think two years enough at the Academy, if the Artillery officers have the six months practical course proposed.

6777. With regard to the discipline, are you satisfied with it?—Yes. I do not think that the place was ever in a higher state of discipline than it is now. Discipline.

6778. Is the power of the Lieutenant-Governor sufficiently unrestricted?—I think that the resident man should govern.

6779. Do you think that he does govern sufficiently?—I do not think so. I would make him Governor.

6780. What powers of punishment are vested in the Lieutenant-governor?—I think, anything short of rustication and discharge.

6781. But he has not the power of sending a cadet away?—I believe not.

6782. Do you think that it would be an improvement if such a power were to be placed in the hands of the Lieutenant-governor?—Discharge is a serious thing, and I think it well that even the resident Governor should not have that absolutely in his power. I certainly think that he should have the power of rustication.

6783. Have there been any instances of general insubordination amongst a number of cadets during your residence?—No, with one exception, and that

Capt. E. J. Bruce.

22 April 1869.

Royal Military Academy.

was a very short time after I joined the Academy in 1864, when a cadet behaved ill and was dismissed; the subaltern officer on parade read out the notice of his dismissal, or rustication, without any senior being present, which perhaps was not wise, and the cadets murmured; they, afterwards, openly yelled and shouted. There was another case of combination for practical joking against a corporal, for which some cadets were rusticated. There has been nothing more than that, I think.

6784. Is there much venereal disease?—Too much. Before 1863 there was a period of transition and trouble. Our predecessors had very trying times, owing to the changes which were being carried out. There was a great medley of cadets—some admitted under the old nomination from various schools, some from Carshalton, some from Addiscombe, some from Sandhurst, and some by open competition—of different ages and interests. Besides their racket courts, their gymnasium, and workshops were all taken down to make room for new buildings, when greater accommodation was needed. The evil of this deprivation was strongly urged by Colonel Wilford, the Governor, Then followed, for a time, disorder and discontent; and Woolwich got a bad reputation. Colonel Field and myself were appointed later, when the difficulty had passed, and we found things comparatively smooth and easy. I would not for one moment be misunderstood to reflect upon those who went before us. But a gradual improvement has taken place—*not* shown, however, to the extent anticipated, in the following statistics. In 1858 there were 13 cadets in hospital for venereal disease; in 1859 there were 29; in 1860 there were 29; in 1861 there were 20; in 1862 there were 39; and in 1863 there were 25. In the year 1864 there were 10; in 1865 there were 12; in 1866 there were 13; in 1867 there were 15; and in 1868 there were 12.

Appendix, p. lxii.

6785. (*Lord E. Cecil.*) Will you state the relative numbers of the cadets at the college during those years?—I find they are as follows: Average strength of the cadet company in 1858, 137; in 1859, 179; in 1860, 189; in 1861, 233; in 1862, 265; in 1863, 237; in 1864, 189; in 1865, 165; in 1866, 168; in 1867, 185; in 1868, 207.

6786. (*Chairman.*) I think that the neighbourhood in which the Academy is situated is under the Contagious Diseases Act, is it not?—It is now.

6787. Do you think that that has anything to do with it?—It may possibly have had some effect, but I do not think that that Act has been in operation more than two years at the outside.

6788. I suppose that you would be of opinion that it would be desirable, on every account, to accommodate each cadet with a separate room if possible?—Yes.

6789. (*Lord E. Cecil.*) What power have the professors over the cadets in their halls of study?—They are bound at all times, whether in or out of study, to take notice of any irregularity which they may see, but they have no power of punishment. A master is responsible for the discipline, but to prevent his being disturbed, he keeps order through an under-officer, corporal, or cadet on duty.

6790. Have the professors any power outside the study walls; do they take any part in the discipline or in the amusements of the cadets when they are away from study?—Some of the military instructors take part in their games. Professors should notice anything which is wrong, but they have no power to punish.

6791. Supposing that a professor found a cadet drunk, what steps would he take under the circumstances?—He would be bound to report the case to the inspector of studies and second commandant.

6792. He would not have the power to place the cadet under arrest?—A civilian has no power of arrest. An officer is an officer always, and of course he could put a cadet in arrest if he saw anything wrong.

6793. Do you look upon the cadet as a soldier, or simply as a student?—He is a student, and more than a student, but he certainly is not absolutely a soldier; he is, however, much more of a soldier than of a mere student. We have not treated the cadets as soldiers, and it would be a great mistake to do so.

6794. I understand you to say that the fact of a professor being a military man would give him the power of arrest which as a civilian he would not possess?—Certainly.

6795. There is then an essential difference between the power of a civilian professor and the power of a military professor out of doors?—Only in that one respect, that the one being an officer has the power of arrest. I see no other difference. It is not the custom of the military professors, as a rule, to place a cadet in arrest; they keep order like the civilians through the corporal on duty, but the military professor being an officer can place a cadet under arrest. If he saw anything wrong he would probably simply report it.

6796. Are the cadets under the Articles of War?—I believe that they are, but I am not perfectly certain.

6797. I presume that the fact of whether they could be treated as soldiers, or not, would depend very much upon whether or not they were under the Articles of War?—Yes, strictly, and legally, if it were challenged.

6798. What is the mode of instruction in the various study halls?—It necessarily varies considerably with the great variety of subjects taught. There are some pure lectures in lecture halls. There is also the tutorial system with close individual instruction, as distinguished from lecturing. Languages are taught to "sections" of four, five, or more, grouped according to their knowledge.

Syst
inst

6799. I presume then that there is no uniform system of instruction, but that each professor has power to carry out his own particular plan of instruction as he pleases?—The same class books must be used throughout, in each subject. The general rules and regulations pretty clearly define how the instruction is to be conducted; but as to a man's *method* of teaching, he is not hampered or restricted in that.

6800. Is the system of lectures largely used in the halls of study?—No; but there are *vivâ voce* examinations, which are better than lecturing, and which are largely used, which form a supplement to other modes of instruction.

6801. What is the system; do the cadets take notes, and are they examined afterwards?—The cadets take notes at all lectures, rough notes or fair notes, as they like. Their lecture books are subject to examination by the inspector and assistant inspector, and are overhauled by the instructors; and a certain proportion of the final marks is allotted to fair note books.

6802. Is there any preparation out of study?—None obligatory. They work in their rooms, if they like.

6803. But not with the help of the professors of the college?—No. The nature of the instruction in the class rooms is such that the cadets will not want that coaching which is wanted elsewhere, because the professor or master takes the cadets one by one, for individual instruction.

6804. Is private study, as a general rule, encouraged at the Academy?—We leave them to do as they like. If a man is weak in any subject, he will probably work at it.

6805. Is there any restriction as to the hours of private study?—Yes; lights are put out at half-past 10, except with the first class, who are allowed lights till 11; and during the term of the commission class, lights are allowed up to 12, on request made by themselves. It is well to allow it, as there is no reasonable excuse left for their keeping up lights contrary to regulations.

6806. You have nothing to find fault with in the present system of teaching; there is nothing which you could recommend as an improvement?—No; except that instead of taking the mathematical cadets

in detail one by one, I think that sometimes three or four or five might be grouped and taught together. At the same time I admit that, if they are taken one by one, it perhaps gives each cadet more help, and has the advantage of cutting him off from the necessity of getting final coaching outside, at an expense to himself and additional time spent in hard study.

6807. Would you diminish the number of subjects taught at the Academy; do you think that the higher branches of mathematics are essential for Artillery, as well as for Engineer officers?—I would not. I think that a high average should be kept up; and although I do not think it necessary for every Artillery officer, or even Engineer, to be a first-rate mathematician, yet they ought all to know a good deal of mathematics—more than is necessary for many professions. It is not merely the amount of mathematical knowledge which a man gets, but it is the accuracy of thought and the power of concentrating his mind upon a subject that is of value to him. All do not get a full knowledge of the "course" as it is; many are very far short of it. We do not weight them so heavily that they cannot get their commissions even with a moderate knowledge, as compared with the whole course. Superior knowledge in one subject may compensate for deficiency in another. I have known cadets get commissions without *counting* any marks in mathematics, having fallen short of the required "minimum" in that subject.

6808. Would you be in favour of having separate classes for the Artillery and for the Engineers at the Academy during the last year of residence?—Certainly not.

6809. (*Lt.-Col. Chesney.*) Would not a division in the studies of the kind spoken of in the last question affect the sort of college spirit which now exists in young men when they leave, which seems a common feeling between the two corps?—I think that a similar education at *one* college tends to a corps feeling. It is often familiarly said between Artillery and Engineer officers, "We are all one regiment;" there is that feeling between the two, and I hope it will continue.

6810. And you attribute that to their going through the same course?—Yes; but I do not see that that feeling would be weakened by partially separating the instruction.

6811. What is the punishment, or what are the disabilities attached to venereal disease at the college?—None that I know of.

6812. That is to say, a case of venereal disease is treated by the college exactly as a case of any ordinary disease?—I do not know whether a parent would be communicated with; I think not. As far as I know it would be treated like any other case of disease or sickness; the cadet would go into hospital for it, and when he was well he would come out. I do not know that he would not be spoken to about it; I think that he would. The late Lieutenant-governor showed a most earnest solicitude for the moral and the religious character of the cadets, and I certainly think that he himself would have spoken to any cadet who was in hospital for that disease.

6813. Do you see any good reason *à priori* why a military professor, say a captain of Artillery, who is teaching within the halls, should be in any respect differently treated from a similar officer attached to the cadets outside? What good reason is there for the existence of any distinction between a captain of Artillery who is attached to cadets inside the hall, and a captain of Artillery who is attached to cadets outside the hall?—I do not admit that there is any great difference. I do not know it.

6814. But you state that the captain of a company, or other military officer, has a certain power which a professor has not; can you give any reason for the difference between the two?—I think that a military professor, or master, should have nothing to do but to teach as the civilian masters or professors teach. I do not see why you should establish any distinction between a civilian professor and master and a military professor and master in respect of his teaching and his powers of control as teacher.

6815. Did I rightly understand you that some of the military professors associate themselves with the cadets in their amusements?—Yes.

6816. Does not it then occur to you that the fact that those officers have less authority than the executive officers of the college have is so far a direct loss to the Academy?—No. As regards authority, they do not personally exercise any beyond reporting or warning, but they have all the authority which they need. The subaltern officers outside only place in arrest, and the cases come for decision before the captains. I think that the *fewer* men punishing the better. I am strongly opposed to combining the functions of teaching and discipline. I want to keep them apart.

6817. Are you aware that at the Universities any college authority may take notice of any misconduct of an undergraduate?—So he may at Woolwich.

6818. Colonel Field has told us that during his time there has been no case of a professor reporting any misconduct of a cadet out of study. Do you think that that would be so if the authority of the professors was the same as that of the captains?—I think that they would have no opportunity of reporting unless they chanced to see a cadet going into, or coming out of, a public-house. The cadets are in a garrison town, and the eye of the garrison is upon them. That is one advantage of their being in a garrison town. Wherever they go they meet officers, and if they were disposed to do wrong they would have to be very careful. I do not suppose the professors and masters have frequent opportunities of reporting them.

6819. Does not a great part of your answer imply that practically the professors see very little of the cadets out of study?—Undoubtedly they see very little of them out of study.

6820. Do you consider that to be a desirable state of things?—Yes.

6821. With respect to the corporal or under-officer in a class, have you ever heard of a case of his having lost time for study in consequence of his having had to take charge of other cadets elsewhere?—Yes; but that has been remedied lately. I have known it to be named, and one has seen it and acknowledges it. It is a pity to withdraw men much from their class to go elsewhere, it interferes with their work; and feeling that to be so, since last term we have adopted a different system, namely, that whereas those belonging to the second class used to do duty in all classes below them, they now do duty only in the third class. We take a selected number of the men in the third class to do duty in the fourth, and a selected number in the fourth class to do duty in the fifth.

6822. Junior cadets?—Yes, but always doing duty in the class below them.

6823. If those junior cadets do that duty well, does it give them any claim to promotion?—Yes, certainly; it affords us an opportunity of seeing who can be trusted, and who cannot.

6824. Are you aware that in that respect you are imitating the old Addiscombe system?—I am not aware of it; but we do not care whom we imitate so long as we do well.

6825. I understood from one of your former answers that you did not think that there would be any disadvantage from increasing the influence of the professors with the cadets in the Academy and their association with them?—Their influence is one thing, and their coming athwart the men who have charge of discipline is another. I think that their influence in the place should be kept up as much as possible, and that the more all are associated the better; but I am in favour of keeping the teaching and the discipline distinct.

6826. Do not your officers who are in charge of discipline teach?—None.

6827. Do not they teach drill?—Most of the drill

Capt. E. J. Bruce.

22 April 1869.

Royal Military Academy.

(it should *all* be so) is in their hands, and most of them teach it. We make a strong distinction between drill and study.

6828. Do you think that there is a great advantage in drawing a strong distinction between the men who teach drill out of doors and those who teach studies in doors?—The distinction is between subjects, not *men*. There is no particular advantage as regards the arrangement itself, but as regards economy of time, &c., there is an advantage.

6829. Of how many cadets has one of the discipline officers the personal charge?—There are three captains and four subalterns. One of the captains takes charge of the senior (or commission) class. Our "establishment" is 200, and 40 under those circumstances would compose the senior class; that would leave 160 to be divided between the other two captains. The A division has 40 cadets, and the B and C divisions have 80 each. The A division captain has one subaltern, B and C divisions have one subaltern each, and the fourth subaltern acts as orderly officer. Our present strength is 222.

6830. Are the same executive officers attached to the same divisions of cadets?—Yes.

6831. What is the largest number under one officer under those circumstances?—A captain has superior, and a subaltern has *subordinate* charge of 80 cadets.

6832. Has the same subaltern officer always charge of the same division?—Yes.

6833. Do you think that the system is a good system by which a captain and a subaltern only are responsible for a division?—I would much rather have one captain in charge of all, and a second captain under him, and three subalterns. The cadets would be dealt with uniformly, and I think that it would be better in every way.

6834. Is it a common practice at Woolwich for the cadets to bring any private difficulty or trouble to the captain for his advice and assistance?—I should hardly think so; but you must bear in mind that they are not mere boys, but young men from 16 to 20. I think that a cadet would certainly do it if so disposed, and would get help and counsel from his captain.

6835. At Woolwich there is no one who exactly fills the office of a college tutor at the University, who has personal charge of a small number of young men and who knows pretty well what they are doing?—The captain and subaltern know pretty well what the 80 cadets are doing, though less intimately than a college tutor does; it is their own fault if they do not.

Duties of assistant inspector of studies.

6836. Will you explain to the Commission, who observe there is no such office at Sandhurst, the special nature of your own office as assistant-inspector of studies?—When the inspector is not present the assistant-inspector acts as inspector, is in fact his deputy, reporting everything to his chief. He consults with the inspector, and points out any irregularity or departure from rule which he may observe. He is responsible for discipline in study, investigates complaints, and punishes. He visits the class rooms and attends the lectures, and is daily in communication with the professors and masters. As a rule, he is present at two out of the three daily study attendances. On Saturday he is not present at all. He drafts orders and memoranda and some of the correspondence, and prepares for submission to the inspector the programme of study and examination attendances. He examines the monthly and periodical examination returns, and keeps the inspector's defaulter book. He prepares the prize lists, countersigns requisitions for books, stationery, instruments, &c. and takes up similar minor details.

6837. What additional gain is there to the studies in the assistant-inspector visiting the studies, or even the inspector doing so, if there is a professor in each hall?—It has been laid down that there shall be some one to judge, as well as he can, by his intercourse with the professors and masters, and by what he observes in visiting the classes, whether the different studies are carried out according to regulation if he noticed any departure from it, he of course would have it rectified. He is able to judge, to a certain extent, whether the lectures are delivered so as to be profitable to the cadets, considering the end in view. He affords the professors an opportunity of making any representations which they like to make to him, whether written or personal, with regard to a change of studies, or any fault, or any improvement. He helps to link the whole together, and to keep all running smoothly. He prevents each man (without using the expression offensively) from running riot in his own line, without control.

6838. Then am I to understand you to say that the assistant-inspector in some sort regulates and controls the works of the professors?—No, certainly not.

6839. But still you imply that he is placed there essentially as a check upon the professors rather than upon the cadets?—He is there certainly to observe both. Any departure which he might see from the regulations, or anything else irregular, he would report to the inspector.

6840. I suppose that in some cases the assistant-inspector may have less experience and less army rank than the professor?—Yes; the professors of fortification and surveying are both his seniors in rank.

6841. And I presume that you would rather look upon it as a college arrangement than as a military arrangement?—The professor of fortification, or of artillery, might have under *him* an officer of senior rank.

6842. Do you mean that in that case the interference of the inspector, or of the assistant-inspector, would be necessary?—No; but I mean that the assistant-inspector, though junior to the professor of fortification, has a certain priority to him upon the educational staff, as the latter himself would have over an officer who, though his senior, might be a subordinate instructor.

6843. Still, neither the inspector nor the assistant-inspector would be supposed to be perfectly qualified in all the studies, would he?—I grant that. I speak of an official priority.

6844. It is a college distinction, and not a military one?—Yes.

Disci

6845. (*Maj.-Gen. Wilmot.*) Do the cadets receive warrants at the present time, as they did formerly?—I think not, but I am not sure; they sign a "declaration" that they will obey all orders.

6846. Is it not one of the orders which a cadet receives, and to which he has to submit, that he is to salute every officer whom he meets?—Yes.

6847. On receiving such an order he understands that he is under military discipline?—Yes.

6848. In fact you look upon a cadet as being as much a soldier as an officer?—Yes; or, rather, something intermediate.

6849. I gather from your answers that you consider that the military system is of essential importance to a military establishment?—Most undoubtedly.

6850. With regard to the professors, have you ever known of any instance in which a cadet declined to submit to the authority of a professor?—I never knew a case in which they were in direct collision. Of course the professors have had to find fault with the cadets, as others have sometimes had to do.

6851. A cadet understands that if he is seen by a professor to do anything objectionable outside the barracks he is liable to be reported by that professor?—I cannot doubt it.

6852. In fact it is one of the regulations which a cadet has uniformly read to him, that he is to be obedient to the professors and masters?—Yes.

6853. I conclude that you think that every officer, whatever his rank may be, has the power of placing a cadet in arrest if he sees him doing anything in breach of military discipline?—He certainly has that power. I am not sure that everyone would exercise it. I think that any officer seeing a cadet doing wrong, if he did not place him in arrest, would report it.

6854. An officer seeing a cadet committing a breach

of propriety or an irregularity, and neglecting either to report it or to place him in arrest, would do so entirely upon his own responsibility?—I think so, certainly.

6855. In former days when a cadet came out of hospital, suffering from venereal disease, he was placed under medical restriction for a considerable time, not ostensibly as a punishment, but with the view of keeping him within the enclosure to prevent his getting into trouble; is that the case at present?—As far as I know that does not exist, but it may exist without my knowing it.

6856. In the case of a cadet being in hospital for that disease, do you not think that both the chaplain and the captain of his company would speak to him upon the subject?—I do not know whether the chaplain would or would not do so; it would depend upon what chance he had of doing it.

6857. But does he not go daily to the hospital?—It would depend upon the opening which he saw to do it; if he saw any opening he would do it. Of course a cadet in that position, and with for the time, perhaps, an ill condition of mind and body, would not be very approachable, and it might be a difficult thing to break in upon him. The cadets are not like young boys; they are men, and the chaplain might think that it was not an easy task.

6858. Do you not think that at some time, if a cadet was in hospital for that disease, the chaplain would take an opportunity of speaking to him upon the subject?—I hope that he would.

6859. You stated that you thought that the system of three captains was not so good as the system of having one captain entirely in command?—Yes.

6860. For what purpose would you have a second captain?—I would have a second captain to lighten the first captain's work, because one captain, in charge of all the cadets, would have a great deal to do. I also think that the second captain might look after the recreation committees, the games of the cadets, the arrangements of the athletic sports, and things of that kind. He might also have permanent charge of "A" division. If the first captain were ill, or on special leave, there would still be a captain over all.

6861. As a general rule, is a captain allowed leave of absence at all?—Very rarely.

6862. You do not think that it would be as good a system to have one captain and a sufficient number of subalterns, as to have two captains and a less number of subalterns?—For the reasons I have given, I incline to have a second captain also, in case of the first captain being temporarily laid aside. If the second captain *came between* the first captain and the subalterns it would be an evil. The impression left on "A" division, in their last term of residence, when on the eve of being commissioned, is specially important. Here the influence of a second captain should be effective.

6863. Looking back on your own career as a cadet, and from the knowledge of your own friends who have been cadets, do you not think that there was always a disposition, as Colonel Chesney has said, in the officers to receive the cadets and advise them upon all points?—Most certainly, with some officers eminently so.

6864. Of late years a system has been introduced by which the cadets are supplied with the means of playing billiards and smoking. Do you approve of that system?—I do. I hesitated about it, before the question came up in the Royal Military Academy, whether it was prudent to introduce billiard tables in our mess rooms at Woolwich, but I approved of it, because I believe that, with young officers or cadets, if you do not give them a billiard table, they *will* play billiards somewhere, and will go to low places and get into bad habits. I am afraid that a cadet would very often contrive to find a billiard table within reach, and you certainly take away all excuse if you give him the opportunity of playing billiards within the establishment, and you can keep it *there* under proper regulation. On the whole I think that it is calculated to do more good than harm, and I do not see any objection to it. Smoking is another thing; it prevails in this country much more than it did some time ago; it prevails among the youth of the country, and it is better I think to let them smoke in certain places than to have the thing done surreptitiously.

6865. I gather that at the present moment the discipline, as well as the instruction, is under the same officer?—It is.

6866. Do you consider that a good system, or would you prefer the discipline being under one captain and the instruction under another officer, as it was in former days?—On the whole I am in favour of the present system, namely, that one man should gather up all the interest of the studies and the out-door work, in order that the whole may work smoothly. It is more easily done when one man controls it, than when there is an independent captain and an inspector of studies.

6867. Then what becomes of the Lieutenant-governor?—He does not go so fully into all the details as the second commandant does. I suppose that his duties, which are very responsible, would prevent his doing so.

6868. Has the second commandant time to take part in the amusements and the drill of the cadets, and so on?—Yes, to some extent.

6869. Is it to a sufficient extent to make it really valuable?—A very energetic man has enough time. I can conceive a case, which is very likely to arise, where the officer getting that double appointment might be more disposed to the smartness of military work than to the study; he would be apt to take a greater interest in the one than in the other. That is the only objection which I can see to it. On the other hand, if he is a man of energy, and is capable of doing both, the place will benefit by it.

6870. What connexion is there between drill and amusements and studies, which makes it desirable to connect them together before they come to the Lieutenant-governor?—The Lieutenant-governor properly centres in himself both branches, the educational and the military charge. In *principle*, the double duty imposed on the inspector, I admit, is objectionable; but its working, in the hands of an officer combining in himself some rare qualities, has, for the present, its advantages. The three divisions seem to need some one to direct them who is intimate with all details.

6871. Supposing that you had one captain, the difficulty would be much less?—It would.

6872. And if certain times were defined for study, and certain times not defined for study, there would be no difficulty in preventing their clashing?—There ought not to be any difficulty. But you might have the case, which I think occurred, and which probably led to the union of these two offices in one, namely, that of a captain in command showing want of agreement with the educational staff.

6873. In that case would he not be removed by the Lieutenant-governor?—No doubt that is the remedy.

Course of study.

6874. (*Mr. Parker.*) Are you decidedly of opinion that the amount of mathematical study at Woolwich is not excessive?—I am.

6875. You think it valuable, not only for directly professional purposes, but as mental discipline?—I do.

6876. As a matter of fact, do you think that better mathematicians have better habits of accuracy, and a better trained mind, as a general rule; I speak of the cadets?—I cannot state that I have seen anything which would lead me to affirm it. With those whom I have observed to be first-rate men on the whole, it has not occurred to me to ascertain whether they were good mathematicians or not.

6877. Have you noticed whether the better mathematicians show greater facility in mastering the technical subjects, such as fortification and surveying?—In the study of mechanics they undoubtedly have an advantage, and they clearly gain in natural philosophy, and such subjects.

6878. You observe a considerable difference between one cadet and another in that respect?—Yes.

Capt. E. J. Bruce.

22 April 1869.

Royal Military Academy.

6879. Of course, also, there is a considerable difference between the facility with which a boy of 16 will master those subjects, and the facility with which a young man of 18 or 19 will do so?—The limit of admission is from 16 to 19. Few come to us at 16; they are mostly older; the average is from $16\frac{1}{2}$ to $17\frac{1}{2}$.

6880. Do you notice whether there is any difference between the older and the younger candidates in mastering the subjects of study?—No. I do not think that the difference between them in age is sufficient to make it apparent.

6881. Do you think that a young man of 18 or $18\frac{1}{2}$, coming from the sixth form of a public school, well versed in mathematics, could not be passed through the Woolwich course in any shorter time than if he had come at the earlier age of 16?—Assuming him to be well prepared in mathematics, his ability and attainments would probably fit him to pass through quicker; but the course of study as laid down would have to be altered, to permit him to do so.

6882. Would you think it desirable to induce candidates to come to Woolwich from the higher forms of a public school?—Yes, you cannot have better fellows than public schoolboys, if they come up to our standard of qualification for entrance.

6883. And you would not wish them to leave a public school before they got to the higher forms?—By no means, if they can come up to our standard of examination. Any diminution of previous training in a liberal education I should look upon rather as a disadvantage. Of course, if they cannot get from a public school what they need for us, they must seek it elsewhere, they must go.

6884. Do you think that it would be at all practicable to shorten the course for those youths who came from the upper forms of a public school, in order to induce them not to leave the public school at an earlier age?—I would make no exception.

6885. (*Sir D. A. Cameron.*) I think you have stated that cadets, not being under-officers, or corporals, are sometimes placed in charge of halls of study?—Yes.

6886. Is the senior cadet of the class always selected for that duty?—A cadet belonging to a previous term, and to a different class, is selected.

6887. They are not necessarily the senior cadets of the term?—The senior would be taken if fit, but if not fit, he would be passed over, and a junior would be taken.

6888. Are any particular privileges given to them?—No, except that they would be remembered afterwards, and when eligible for corporal, they would have a preference over others for that rank.

6889. (*Maj.-Gen. Haythorne.*) At Woolwich, do the civilian professors receive the same pay as the military ones?—No, it varies; some have less, some have more.

6890. Are they allowed to give private instruction to pupils?—They are not.

Powers of professors.

6891. With reference to the question of the civilian professors having the power of arrest, do you agree with me in thinking that it is a matter of little importance whether a civilian professor has that power or not, so long as he considers himself bound to report all misbehaviour coming under his notice?—I do not think it of the slightest importance.

6892. A cadet would be brought up, and it would not matter whether he was put in arrest by the civilian professor, or was reported?—Undoubtedly.

6893. Until the cadets came under the professors in their classes they would not know a good many of the cadets?—No, they would not know them until they came under them in their own particular subjects.

Course of study.

6894. (*Rev. Dr. Butler.*) There are two points in connexion with the studies on which I should be glad to be favoured with your opinion. Do you think it of importance that the students should have an opportunity of studying by themselves subjects collateral to the main course, namely, such subjects as are part of a liberal education?—Nothing else than the prescribed course at Woolwich.

6895. You are perhaps aware that it has been considered of importance that they should keep up their liberal studies, supposing that they have a taste for such studies?—Yes, but at Woolwich they have enough to do, and I should strongly object to any additional work. If a cadet were a good Greek and Latin scholar, I hope he would keep it up, but I would not allow him to study classics at Woolwich.

6896. Then you think that while at Woolwich his attention should be specially concentrated upon professional subjects?—Yes, I do.

6897. With regard to languages, have you any opinion as to whether they should be taught by foreigners or by English teachers?—Yes; I think that they should be taught by foreigners.

6898. Do you, or do you not, find at Woolwich a practical difficulty in getting modern languages well taught, and good discipline maintained, by foreign teachers?—The time at Woolwich given to languages is very short, and I do not think that our men who come to us, knowing nothing of languages, have time to become good linguists. I cannot say that otherwise I have found difficulty in teaching languages; and as to discipline, I admit the presumption is that cadets would be more inclined to be unsteady with foreigners, but some of our language masters maintain as good discipline as any other instructors.

6899. It has been observed by some witnesses that the Woolwich men show signs of overwork; have you observed that to be the case either at their entrance or at the completion of their course?—No, or at least only one here and there.

6900. They seem physically strong?—Yes; as a body they seem very healthy and strong.

Organization.

6901. Has it ever occurred to you whether the functions of Lieutenant-governor, second commandant, and inspector of studies might be combined in one officer?—It would be utterly beyond the power of one man to undertake those duties, so as to perform them well. A thorough supervision of everything and everybody the Lieutenant-governor might and should overtake. But if he conducts his own correspondence, and actively devotes himself to all interests, he cannot discharge the duties of inspector of studies.

6902. Do you mean from the stress of business, or from the variety of attainments implied?—Certainly from the stress of business more than from the variety of attainments.

6903. That is to say, if I understand you, that the duties of general control, of superintending discipline, and of inspecting studies would occupy too much of any one man's time?—Yes, so as to give his attention to the studies as he ought to do. When you take into account the many studies that there are, and the number of professors and masters, and the things which from day to day such a superintending officer would have to decide upon, and the examinations at the end of each term, and all the interests of the cadets, I think that anyone who undertook those duties would be unwise, and that he would break down.

Moral vision.

6904. As to the moral condition of the students, are cases of drunkenness at all common?—They are very few.

6905. Is there any recognized punishment which they would consider as likely to follow such an offence?—I think that a cadet, so misconducting himself, would probably be dismissed, or rusticated.

6906. Has that always been so as regards the view taken of drunkenness, both by the authorities and by the students?—I think that the regulation is of long standing, that they are now sharply looked up, and that they expect to be dealt with strictly.

6907. With reference to diseases arising from immorality, the ages of the students range in round numbers from 16 to 19?—The average in the whole place is about 19 years and 3 months.

6908. Are there many students who have completed their 20th year?—There are a few.

6909. Has it struck you whether it might not be possible largely to reduce the extent of that offence? Are you aware that at the great public schools, where many boys stay until after they are 19, the offence is now almost unknown?—Some of the students have brought it with them. I am not aware how it is to be prevented, and I am not aware whether the disease is or is not known at the public schools.

6910. Would the captains in any way feel themselves called upon to offer remonstrance or counsel in such a case as that?—Yes; I hope so.

6911. What is the principle on which captains are appointed; is it because they are supposed to have any educational fitness?—The theory is that they are the fittest men who can be got; men of high character, likely to exercise a beneficial influence; men firm, sympathetic, intelligent, with knowledge of the world. If this is more ideal than real, the aim should be to realize it.

6912. And you think that they hold themselves responsible, not only for the discipline, but for the moral welfare of the young men?—Certainly; they are bound to do so.

6913. Would it be a part of their recognized duties to communicate with parents from time to time?—Certainly; and I know that the second commandant has frequently written to parents. Captains would be at liberty to do so, but as a rule such a communication is made, I think, by the second commandant.

6914. (*Lord de Ros.*) In the case of these contagious diseases would not punishment entail concealment, and consequently some danger to future health?—I think that it would be very likely to have that effect.

6915. Do you not regard a cadet rather as a subaltern officer than as a soldier?—He is not quite either; he is something between the two, but more approaching a subaltern officer than a private soldier.

6916. He thinks it no great hardship to salute an officer; is he not rather proud to do it, as showing that he is a cadet at Woolwich?—I cannot say that he is proud to do it, but only a cadet of bad tone would have the slightest objection to do it.

6917. Should you approve of the senior cadets taking turns as orderly officers, instead of the subalterns, in order to accustom them to that duty?—They have almost an analogous duty: there are corporals, subdivisional under-officers, and responsible under-officers; these positions accustom them to responsibility.

6918. Your object in having one captain instead of three has reference to a more complete chain of military responsibility, has it not?—Yes, and to the simplification of work, and to *equal* dealing with the cadets.

6919. Do you not regard the visitation of the studies by the assistant-inspector as very useful, both for maintaining uniformity of study and for the support of the authority of the teachers?—I do.

6920. As regards rustication, is it not a greater punishment upon the parents than upon the young men, and do you not think that it is a disadvantage to the young men to be in compulsory idleness for so many months?—It recoils upon a young man when he gets home. Perhaps you may say, that comes rather late, but I think young men would dread rustication beforehand.

Capt. E. J. Bruce.
22 April 1869.
Royal Military Academy.

6921. Supposing that the foreign teachers could be selected from military persons, would it not be an advantage; such men as officers of the old German Legion, for instance?—I am not sure that it would.

6922. Do you not think that a military person attracts more attention from the cadets than a civilian?—Probably.

6923. As regards the very different lines of occupation eventually of an Engineer officer, and of an Artillery officer, have you any opinion as to whether the subject of construction should not be rather separated from the other studies, so that an officer who had a turn and talent for architecture, which is so valuable in the case of the Engineers, should be able to devote particular attention to that subject? Would it not be advisable to separate the studies of those young men who showed such an aptitude from the studies of those who looked purely to the military part of their profession?—Not at Woolwich. At Chatham the opportunity is given for the study of architecture; *that* is, I think, the place for it.

6924. (*Chairman.*) I suppose that you would not be in favour of the amalgamation of Woolwich and Sandhurst?—No, I should not.

Amaglamation of Woolwich and Sandhurst.

6925. Is that because you would feel that the infusion of a lower class of students would be injurious to the high standard which is maintained at Woolwich?—My first objection is that it would necessitate a lowering of the educational standard for entrance, and consequently an inferior attainment for a commission.

6926. Have you any other objection?—If Sandhurst and Woolwich were united there must be, for the different classes of cadets, unequal times of residence, which in itself is not desirable, as some of the best men might be tempted by an earlier commission in the line not to wait, and work for a commission in the Royal Artillery and the Royal Engineers. The same temptation would strongly beset men of superior fortune, who, possessing the means of purchasing their promotion, would prefer a rapid rise to the slow progress of a seniority corps. You might be hampered in arranging the scheme of studies so as to suit both classes of cadets, especially in fixing the *order* of the subjects. Again, it is not good to associate those working leisurely with those working hard: the former impede the latter. It is open to question whether the same class of ability, if poor, would offer for a contest which might issue in a line commission without the power to purchase a single step; and it is doubtful whether parents who are not rich would, as readily as before, incur the expense of education at this risk.

6927. Do you think it a matter of very vital importance that the Academy should be maintained in its present locality?—Yes, I think the locality offers many advantages over Sandhurst, for a college for Artillery and Engineers, especially because of the manufacturing departments in the Royal Arsenal.

The witness withdrew.

SECOND CAPTAIN H. BRACKENBURY, Royal Artillery, examined.

6928. (*Chairman.*) You are a professor at the Royal Military Academy?—I am.

6929. You were formerly lieutenant of a company of cadets?—Yes.

6930. And you were afterwards assistant instructor in artillery, and are at present professor of military history?—Yes.

6931. Consequently your acquaintance with the Academy extends over a considerable period?—About seven years.

6932. It seems to be your opinion that the mathematics are carried too far in the examinations for admission?—I think that they are carried to an unnecessarily high point.

Capt. H. Brackenbury
Royal Military Academy.

6933. To what extent would you limit them?—I think that all that is necessary for all artillerymen is a sound knowledge of arithmetic, algebra, plane trigonometry, and elementary mechanics. I think it very desirable that a certain portion of artillerymen should take up higher mathematics, namely, those who have a taste for the subject, and a special bent in that direction; but I think it quite unnecessary that it should be carried so far as it is now for the whole number.

6934. You would exclude also from the entrance examination the experimental and the natural sciences?—Yes, because I conceive that those are subjects which are especially what I may call

Capt. H. Brachenbury.

22 April 1869.

Royal Military Academy.

"crammers'" subjects; they are taught in the most superficial way by the "crammers," who have the preparation of so many of our young fellows for entrance; and, moreover, every cadet on joining starts again at the beginning, and very often has to unlearn much of what he has previously learnt.

6935. You approve of open competition?—I approve of open competition. I do not approve of the present style of examination.

6936. You are anxious to secure to the candidate as prolonged and as liberal an education as is compatible with the time which must necessarily be devoted to the acquisition of technical knowledge before he enters the army?—Yes, I am most anxious for it.

6937. And you think that the age of from 18 to 19 would be a very good age for commencing that technical education?—Yes.

Appendix, page liii.

6938. As we have read your written replies to our questions, I will not ask you to repeat the opinions with which you have favoured us; but I should be glad to hear a little more largely from you in what way you would be disposed to arrange for the shortening of the term during which the cadets remain at Woolwich?—Chiefly by the abolition, as compulsory subjects of education at the Academy, of languages and mathematics.

Course of instruction.

6939. You would send your artilleryman, after closing his course at the Academy, to Artillery classes, such as those which are established at Chatham for the Engineers?—I doubt whether it would be necessary. I am inclined to think that a course of 18 months' practical education would be sufficient for an artilleryman's training.

6940. Then you think that the special course of six months, to which you refer in your written answers, might be carried on at the Academy?—Yes; but I do not object to a longer time.

Organization.

6941. The staff appears to be rather out of proportion to the number of students who are instructed. Are you prepared to tell us to what degree you would diminish it?—Yes. I think that if you had a Lieutenant-governor with great power and who was an active man, with no second commandant, but one captain who should be selected for experience, with a second captain as adjutant, and three subalterns, it would be amply sufficient for all that is connected with that institution as regards military discipline. I think that having three captains is decidedly bad. I have known a case in which three cadets have been brought up for the same offence before three captains; one was let off altogether by his captain, another got the highest punishment his captain could award to him, and the third was brought before the Lieutenant-governor, and got a very heavy punishment. As long as there is this system of three different captains, I think that cadets do not know what the punishment for an offence will be, and besides that, I do not think that there is sufficient for the captains to do.

6942. You would greatly enlarge the powers of the Lieutenant-governor?—Yes.

6943. Would you give him the unrestricted power of dismissal?—Yes.

6944. Without reference to the Commander-in-Chief?—Yes.

6945. In a great measure the Lieutenant-governor influences the appointment of the professors, does he not?—Yes, to a great extent.

6946. Do you think that he does so to a sufficient extent?—I think so. As regards the reduction of the educational staff, I would have one professor of mathematics, one professor of French, and one professor of German; and I would have no other instructors in any of those subjects. I think that there should be a professor of mathematics, who should study that subject with any cadets who might wish to pursue it to any extent, and I think that the same should be the case in French, German, and landscape drawing; and that would at once abolish a very large portion of the staff. I also think that surveying is carried very much further than it need be carried for artillerymen, and that consequently the staff of instruction in surveying might be reduced. It also seems to me that if fortification were only taught for two or three terms instead of five, as it is now, there might be a reduction in that respect.

Cours

6947. When you say that Woolwich should be a practical school, and a school of application, in what instru sense do you use those expressions?—I mean that instead of mathematics being a compulsory subject of study, such subjects should only be studied as applied to military sciences; that is to say, the problems in artillery and surveying requiring mathematics must be studied. I also think that instead of languages being studied, except by cadets who have a taste in that direction, they should only be taught by certain military books being read under the professors of those military subjects.

6948. For the practical purposes of the career of an artilleryman, would the standard required in his entrance examination imply a sufficient knowledge of mathematics to carry him through his profession up to the higher grades?—I think that the present examination is no test of the knowledge of a man in mathematics. I think that it is too long, and is not broad enough; it extends to a great height, it is a great test of memory and of book work, but it is a very small test of the power to apply that book work. I think that a broader examination in algebra, trigonometry, and arithmetic, and in the elements of mechanics would prove that he knew sufficient to carry him through.

6949. When you propose to convert a cadet into a commissioned officer, which I gather is what you suggest, do you mean after he has passed his entrance examination?—Yes; we should in that way get rid of a great many difficulties.

6950. Do you think that his commission should date from his entrance examination?—Yes. I think that would hold out a great inducement for good men to come up, and that it would get over the difficulty which appears to exist in some minds as to age, it being thought that officers should not be so old when they attain their commissions.

Discip organi

6951. Are you satisfied with the discipline of the establishment?—Lately I have had comparatively little opportunity of seeing the discipline, but I do not think that the discipline is very good.

6952. Do you think that the Lieutenant-governor should associate with himself the professors and military instructors in maintaining the discipline of the establishment, and in regulating the organization?—I think so.

6953. You think that he should consult them occasionally?—Yes. I think that if they had a definite voice in the conduct of the establishment it would be most desirable; at present we have no voice whatever, except just in one's own individual branch of study.

6954. Would you give larger executive powers to the professors; I mean larger powers of discipline and of punishment?—I do not know exactly what advantage would be gained by that. I am very much averse to a system which leaves professors and instructors sitting for hours in study with cadets while the cadets are doing their book work; and I think that if that system were abolished, as it seems to me most desirable that it should be, there would never be any collision of any sort between the professors and the cadets, and there would be no occasion for their having any great disciplinary power.

Syste cours instru

6955. What particular system would you substitute?—I would substitute, to a very much greater extent, the system of lectures by professors, with subsequent examination by instructors upon those lectures; and I would let the cadets do their book work at their own time and in their own way. At present a cadet is forced to study a certain subject for a certain number of hours; he has no time for free study. For example, some of the cadets who are not particularly clever find themselves unable to take up all the subjects in the first class; some of them do

not take up chemistry, some of them do not take up mechanics, but nevertheless they are obliged to attend all the lectures in those subjects, and to give a definite number of hours to those subjects, and cannot devote that time to the subjects which they do take up.

6956. A professor has no power of punishment, has he?—I believe that he has no power of punishment.

6957. Can he report?—He can place a cadet in arrest, and can report his having done so, but he can do nothing more.

6958. Do you think that the lads are worked too hard; I do not mean whether their studies are over-crowded; but do you think that the general weight of application is more than is wholesome?—I think that the extreme difficulty of studying closely six or seven subjects at once is really too great almost for any man.

6959. And yet, as I understand you, you would shorten the period of the whole course?—Yes; but I would considerably reduce the number of compulsory subjects of study.

6960. (*Rev. W. C. Lake.*) Will you enumerate the six or seven subjects which the cadets study?—In the first class the studies are artillery, fortification, including permanent fortification, siege works, and military bridging, surveying, military history, mechanics, natural philosophy, and chemistry. In the second class two languages are taught in addition to these subjects.

6961. When you speak of the first class, you mean the senior class?—Yes.

6962. Then those are the subjects of study for the last year of the course?—Yes.

6963. Do you think that the subjects are too many and too high for Engineers as well as for Artillerymen?—I think that they are too many to be studied at once, but I think that an Engineer requires a much higher education than an Artilleryman.

6964. With a view to that, would you suggest that there should be any difference between the studies of the Artillerymen and the studies of the Engineers?—I should separate their studies after one year. I think that the course of surveying and also the course of fortification are carried very much further than they need be carried for an Artilleryman, and the course of artillery gives much more detail than is necessary for an Engineer.

6965. You have spoken of the course of mathematics being given up after entrance into the college. Would not that be open to this difficulty, that very many students come in very imperfectly grounded in mathematics?—I think that the examination allows them to do so, which is very objectionable. I think that the present entrance examination in mathematics involves too much book work, to which I think that a much greater prominence is given than there should be; and I think that the practical application of that book work to problems is not sufficient.

6966. How can you have anything but book work for boys; must not the application to practical subjects come later?—I think that is the great mistake. I do not think that boys should come.

6967. You would not have them earlier than 18?—No; but if mathematics were studied from 13 or 14 to 18, and if a student were not required to study more than plane trigonometry and elementary mechanics, I am satisfied he could learn to apply them; but if you give a student spherical trigonometry, analytical geometry, and the integral calculus, and things of that sort, and examine him at 16, I think that it is impossible that he should have any practical knowledge on those subjects.

6968. Then you would shorten the course?—Yes.

6969. Have you anything to add upon the Advanced Class?—It is rather a difficult subject for me to speak upon. I do not think that it is satisfactory as it is now.

6970. Do you find any difference between the position of the military and civilian professors at Woolwich?—I can only speak from hearsay. The civilian professors in their relation to the cadets have never come under my actual personal observation, but from what I hear on all sides their relations are in some cases not satisfactory. I am quite convinced from what I hear that some of the civilian professors cannot keep order in study.

6971. Do you attribute that, as far as you can judge, to their not having sufficient powers of coercion?—I do not attribute it altogether to that; I attribute it to a man not having the moral force which it is necessary that he should have in order to control cadets. I do not think that it would do to give disciplinary powers to the civilian professors as the Academy is now constituted. If they were all officers I think that it might be different.

6972. With regard to free study, do you think that it would be desirable to encourage it?—I think that it is desirable to give more time than is now given for free study. The instruction by lectures is very partial. I think that free study would be most desirable, because one cadet has the power of mastering a certain subject in much less time than another.

6973. Do you propose that a professor should lecture, and that his lecture should afterwards be worked up by an instructor?—I propose that the cadets should work it up by themselves, and that the instructor should afterwards examine them.

6974. That is something like the French system of a *répétiteur*?—Yes.

6975. Do you find that the cadets take very eagerly to military history?—Yes. I have adopted a system which, I believe, no other professor has ever tried there, of examining the notes of every individual cadet after every lecture; and by that means I know what every individual cadet is doing.

6976. (*Lord de Ros.*) I think that one of your objections is, that the studies are too much simultaneous; but if the same studies were divided into courses, would it not in a great degree obviate your objection?—I think that would be better.

6977. You would be inclined to allow a variety of study, according as the instructor discovered the peculiar bent of mind of the student, would you not?—I would allow the student to choose for himself. There are certain subjects which are necessary for an Artilleryman and an Engineer, and beyond that I would allow a cadet to choose what subjects he would study.

6978. For instance, if he had a peculiar taste for languages, you would encourage him to study them?—Yes.

6979. You have stated that surveying is less wanted for the Artillery than for the Engineers?—Yes. I do not think that elaborate trigonometrical surveying is necessary for an artilleryman.

6980. You would not bind a cadet to take up the exact delineation of a town, for instance?—No.

6981. Should you attribute any value to the system of practical modelling in sand as well as out-door work?—I think that a system of practical modelling in sand might be useful, and that if we had modelling in sand, in connexion with tactical studies, it would be useful to a certain extent.

6982. With regard to the conduct of examinations, I presume that your view is that the examiner should rather elicit what the pupil *does know* than what he *does not know*, and that wherever he found him likely to excel he should rather find out in what he excelled than in what he failed; in history, for instance?—I have not complained of the style of examination at the Academy, but I have objected to the style of the entrance examination.

6983. As regards your particular province, namely, military history, you think that it is much more desirable to ascertain what a cadet does know than what he fails in, do you not?—In subjects which are taught by lectures, we give lectures to the cadets, and then examine them upon those lectures. I do not quite understand the bearing of your lordship's question.

6984. If in any historical subject you found that a pupil had a particular turn, for instance, for the biographical part of history, would you not lead him on in it?—We teach history with a special view, namely,

Capt. H. Brackenbury.

2 April 1869.

Royal Military Academy.

with a view to the art of war; I teach military history in special relation to the movement of troops.

6985. I suppose that all your historical instruction is connected with geographical history, if it is military?—Yes. The amount of knowledge of geography on the part of cadets is most lamentable, and I occasionally find that their ignorance is something astounding. I took it for granted that they knew where Mayence was, but, at the last examination, the Council's examiner reported that they had placed it in different places all over Europe. In my last examination on the campaign of Marengo, I asked a question as to the position of the Austrian base and lines of operation, and I was told by one cadet that the base of operations was the Bohemian mountains defended by the fortresses of the Quadrilateral. That is an example which is not altogether singular.

6986. Do not you attribute that sort of smattering to the system of "cramming?"—Geography is not a subject in which they excel. If you asked some of them upon what river Paris was they could not tell you.

6987. Do you not think that geography is best taught with history?—Yes.

6988. It makes more impression on the mind and memory?—Yes.

6989. As regards history, would you not prefer that a cadet should get up well some certain period, as at the University?—Unquestionably; that is the way in which I endeavour to conduct my own course of lectures.

6990. As regards private study, at the University a student gets up the subject of the lecture before the lecture. Do you not think that that is preferable to lecturing first, and examining afterwards?—I would have both.

6991. As regards languages, do you not think that many young men could be taught to make their way as a courier on the continent in German and French by conversing familiarly in the language, who could not be very well taught the grammatical construction of the language?—Certainly. I think that that is a very great fault in the entrance examination at Woolwich; it seems to feed the cramming schools by the puzzling questions which are asked. I have had at different times young gentlemen, relatives of my own, living in my house, who have been studying with "crammers" both for Woolwich and for the line, and I have had every opportunity of seeing the note books from which they were studying for their examination in languages; those note books were most curious; they simply gave the derivations of words and curious idioms, and I could not have answered one in twenty-five of them; they took these books to bed with them, with a candle by their bedside, and they learnt these things by heart, until they fell asleep, and they generally finished up with 150 trigonometrical formulæ.

Discipline, general tone.

6992. Supposing that dismissal was made a summary punishment in the hands of the Lieutenant-governor, would you for ever exclude from the army a cadet so dismissed?—I think that it is rather hard to visit with a life-long punishment an offence of a very foolish young fellow.

6993. You would not exclude him from the army?—I do not know that I should. I am not inclined to be so severe upon the follies of young men.

6994. (*Rev. Dr. Butler.*) Can you distinguish at all between the type of the Woolwich "crammer" and of the Sandhurst "crammer"?—They are very much the same; a great many cram for all.

6995. You have spoken of the discipline as not being thoroughly satisfactory; in what respects does it seem to you to be deficient?—I will give you an instance. There are a great many parades, study parades, and dinner parades, and so on. Whenever those parades are carried on under an under-officer, and not under the eye of the officer, they are almost a farce. Only last night, previously to giving my lecture, the cadets were supposed to be falling in under an under-officer, and there was no parade at all; they were all standing together talking. I think that the under-officers and corporals have no real authority with the older cadets.

6996. Would you say that the general tone of the place is loyal to the authorities?—Moderately so; but not so much so as I should like to see it. I must say that I have not the same opportunity of seeing these things now as I have had. I only go into the Academy to give my lectures, and I have not now many personal friends among the cadets, and therefore I have not the same opportunity of judging which I had. I know that at one time the feeling was very disloyal to the authorities, but I hope and believe that it is better than it was.

6997. (*Maj.-Gen. Haythorne.*) Do you consider that the scale of punishments at Woolwich is a good one, and one which is suited to the cadets?—I think that all those minor punishments are bad. I think that they rather tend to destroy the self-respect of a cadet and his self-reliance, and I think that those minor punishments should be abolished altogether. I would treat a cadet as if he was an officer, and I would insist upon those punishments which are laid down being carried out. The book of "General Rules and Regulations" says that for falsehood, however qualified, dismissal or discharge shall be imposed. I remember the case of a cadet forging an invitation; he did it upon his own paper, with his own crest, and put it in a Royal Military Academy envelope. He went before his captain and the second commandant, and before the Lieutenant-governor, and he denied it; he was convicted of it, and was reported to the Commander-in-Chief, and he got seven days' arrest and 21 days' confinement to barracks.

6998. (*Lord E. Cecil.*) For telling a falsehood four times?—Yes, for telling a falsehood repeatedly.

6999. (*Sir D. A. Cameron.*) Was that recently?—No; it was some six years ago, when I was a cadet officer. I know that the cadets do not consider that the punishments are meted out with uniformity.

7000. (*Maj.-Gen. Haythorne.*) Is that owing to so many people awarding punishments?—I think that that has a good deal to do with it. I also think it most important that the Lieutenant-governor should have the absolute power himself, and in fact, that he should be the Governor. To give another example of the necessity of acting up to the rules regarding punishments—when I was a cadet officer I had occasion to believe that arrest was systematically evaded, and I gave notice to the cadets that by visiting the rooms of the cadets in arrest, I should endeavour to put a stop to that state of things. I went round one evening, and I went, I think, four times to the rooms of two cadets who were absent on each occasion.

7001. That was arrest on honour?—Yes. They were present at roll call. I read to them my letter of report to the captain. One cadet admitted that he was in the back yard smoking, and the other cadet said that he had gone to the hospital to have a wounded hand dressed. The doctor took up the question, and it was found that that cadet had not been near the hospital, but it appeared that he had been out of the Academy. He had been released, and no farther notice was taken of it, and when I myself spoke to him upon the subject, speaking, perhaps, more as a friend than anything else, he said, "Sir, I "knew that if I was found out in that falsehood "no further punishment would overtake me than if "I confessed that I was absent from my room, and "the temptation was too great." The other cadet who confessed was rusticated.

7002. (*Sir D. A. Cameron.*) You do not object to the punishment of close arrest; you would retain it as a punishment?—I would, while the cadets are as young as at present. I object to the drill. I do not object to close arrest. I believe that the arrest is now properly kept.

Instr

7003. With regard to your lectures on military history, are they lectures on particular campaigns?—Yes, on particular campaigns, and on general principles

as deduced from those campaigns—the principles of strategy and of tactics.

7004. Do you find that a large body of cadets really benefit by the instruction?—Yes, I think that decidedly a large number of them do benefit by the instruction.

7005. Is military history an obligatory subject?—Yes; at Woolwich they are all obligatory subjects.

7006. Are your lectures printed and distributed to the cadets?—No; but I have adopted the system of printing a syllabus containing the argument of each of my lectures, and I give it to the cadets before the lecture, and that guides them to the main points of the lecture and to what is of importance, and they take exceedingly full notes of my lectures.

7007. (*Lord de Ros.*) How far back in history do you go; I suppose that you do not go further back than Charles the First?—I give a lecture on the main changes in the art of war, and the rest of my lectures do not go further back, as a rule, than Napoleon. I may select an example from an earlier period.

7008. (*Sir D. A. Cameron.*) Do you generally select campaigns of a simple character; for instance, would you select the campaign of 1814?—That would be a rather complicated and long campaign. I generally begin with the campaign of Waterloo, and then give them two lectures or so on principles, and then one other campaign; that is the course for the second class; and then in the first class I give them a very recent campaign, and pass on to tactics.

7009. Do you go into the subject of transport and supply?—Just enough to give them a little information upon it, but the time is too short.

7010. How many lectures do you give?—One lecture a week to each class, first and second; and out of the seventeen Wednesdays allotted to me in this term three have been taken away, and a fourth will be taken away.

7011. Have you any note studies?—No. The cadets take notes of the lectures, and I examine and credit those notes afterwards. On the subject of the suspension of study I think it most important that the professors should have some voice. For instance, the second class learn Hindustani and French; there are three or four attendances a week in those subjects, and the professors of French and Hindustani would probably not at all object to occasionally losing an evening; but to me it is a very serious matter; it is a loss of a large part of my course. A suspension was given for a football match in the last term; and I had the greatest difficulty in getting another evening in place of that which was taken away from me, though I could not have otherwise completed my campaign.

7012. With regard to maps, what maps do you give to the cadets?—I supply them with Colonel Chesney's outline maps, and then I get them to sketch in greater detail any particular portion of the theatre of war, which appears to me to be of importance, and to put down the position of troops, and I give them credit for those maps.

7013. (*Maj.-Gen. E. Wilmot.*) Does the average acquaintance with mathematics go beyond the general standard which you wish to see established?—I think that it does. It is very difficult to say. It is my opinion that it is very hard to strike an average.

7014. Does not it provide in some way what you would really require, namely, to have some cadets comparatively high, with an average which is not more than sufficient?—It may provide that, but with a very great waste of labour in arriving at that result.

7015. (*Lt.-Col. Chesney.*) Does not the system of study which you speak of by lectures, with a great deal of voluntary study besides, approach rather dangerously near to the Oxford type, with undergraduates who are working up every subject in their own line?—Near, but why dangerously near?

7016. I suppose you know men at Oxford do little or no work the first few terms?—Because they have no immediate object for work, which the students at Woolwich have.

7017. That is to say, you would check the progress made?—Yes, as it is now checked by examinations.

Capt H. Brackenbury.

22 April 1869.

Royal Military Academy.

7018. In your answers to the questions addressed to you, you observe that you think the professors are not sufficiently consulted in the management of the Academy?—Yes.

Powers of professors.

7019. Touching that subject, do you see any really good reason for the iron distinction between a military professor and a military officer of the Academy, or why one should have a much more practical power over the cadets than the other?—I do not think that it would be desirable to force the military instructor in any way whatever into collision with the cadets, as I think would be more or less the case if the discipline of the college, as now carried out, were in any way placed in his hands.

7020. Is there any special difference between a military college and the upper part of a large school, or of a university, which requires this distinction to be kept up at the former only?—There is a great difference as matters are now; whether there need be such a difference is another question. When you have cadets on parade eight or nine times a day, to which I much object, and when you have cadets made to rise up and to sit down at their dinner by the command of an officer, I think that there is a very great difference between a military college and another college. I do not think it desirable that the professors should have anything to do with such a duty as that.

7021. With the age and stamp of the young men whom you have at Woolwich, would it not be just as well if they went into their halls of study and their meals without being paraded?—In my opinion it would be infinitely better.

7022. In fact the only parades which you would have would be the genuine military parades for drill, &c.?—Yes.

Course of instruction.

7023. (*Lord E. Cecil.*) You have, I daresay, seen a small pamphlet by Major Stuart, headed "An inves- "tigation of the educational course at the Royal "Military Academy, Woolwich?"—Yes.

7024. Do you agree with the principal portion of it?—Yes.

7025. As regards French and German, do you agree with what he there says, namely, "that in most cases "the cadets know as much of those languages when "they enter as when they leave?"—I think that in the majority of cases they know as much when they enter as when they leave. Not perhaps quite as much, but they know very little more when they leave than when they enter.

7026. He then says that the cadets "would tell you "that they knew more mathematics at entrance than "on leaving." Do you agree with that statement?—I think that some cadets know quite as much when they come as when they leave; in fact a great many of them are merely going over again what they have already learnt.

7027. He says, "Instead of the present system, a "sufficiently high standard should be demanded on "entrance, and the application of mathematics to "special artillery and engineering designs and sub- "jects be taught." In that you perfectly agree?—I do.

7028. Speaking of the military constitution of the Academy, he says, "The cadets should not only be "considered as soldiers, but be made so to view them- "selves." Do you agree in that or not?—I do. I think that a cadet should understand that when he is on parade he is to all intents and purposes a soldier, and that he should be subjected on parade to as strict discipline as a soldier, or as a subaltern officer is subjected to. I think that if you attempt to carry out the idea of his being a soldier into all his daily routine, you ought to treat him in other respects as a soldier, and to give him a soldier's privileges; but now he is partly a schoolboy, and partly a soldier.

7029. Major Stuart says, again, that "every cadet "should be able to speak at least one foreign language "with tolerable fluency on entrance." Do you agree with that statement?—I think that every cadet should have a correct knowledge of French on entrance.

Capt. H. Brackenbury.

22 April 1869.

Royal Military Academy.

7030. And not only as regards grammar, but a colloquial knowledge of it?—I do not care much about the grammar, but I think that he should have a colloquial knowledge of it.

7031. Can you state what amount of mathematics you think is necessary for an Artillery officer and for an Engineer officer?—I think that an Artillery officer requires a sound knowledge of arithmetic, of algebra, of plane trigonometry, and of elementary mechanics. I think that an Engineer officer requires a knowledge of higher mathematics; how much more it is not for me to say. I think that is for Engineer officers to decide.

7032. At all events, you would make a great difference between the two?—I would upon the final examination.

7033. Again, Major Stuart says that he would have the Academy so enlarged "as to have cadets for "Artillery, Engineers, and a few for the line, to "be selected for commissions according to their "acquirements, tastes, &c." Would you have a college where Artillery, Engineer, and line cadets were brought up together?—No, I do not agree with that recommendation.

7034. Then you would in no cases have line candidates brought up with candidates for the scientific corps?—I do not think that it would be an advantage. I see a great advantage in bringing up Artillery and Engineer candidates together. They are very much connected together in the field, and I think it very desirable to have a bond of union between them of having been educated in one place—up to a certain point.

Discipline.

7035. You have stated that the discipline was not good in former years; can you state what cases of insubordination took place at the Academy some seven or eight years ago?—The chief cases of insubordination were very shortly before I went there, but there were cases of insubordination whilst I was there. There was one case of the drill swords being taken by the cadets and thrown down the reservoir.

7036. (*Lord de Ros.*) Would that kind of boyish sport, not affecting their character as gentlemen, appear to you to be a serious offence?—If they were soldiers it would be a very serious offence; it depends upon the light in which they are to be viewed.

7037. (*Lord E. Cecil.*) I have gathered from your evidence that even now you think that the discipline on parade is not so good as it might be?—On those minor parades I think that the discipline is far from good.

7038. To what do you attribute that?—I attribute it to having such an immense number of those parades.

7039. Do you attribute it in any way to the subaltern officers being badly selected and having no power?—Several of those parades have no officer, and those are the worst. Where an officer is present it is better, but I do not think that the selection of the subaltern officers is always what it should be, and I do not think that the subaltern officers have sufficient power.

7040. By whom are the subaltern officers selected?—I think that their nomination rests practically with the deputy adjutant-general of the Royal Artillery.

7041. Does he choose them on the recommendation of the Lieutenant-governor, or do you know in what manner the selection is made?—I know that there have been cases in which it has been done on the recommendation of the Lieutenant-governor, and I know of some cases in which they have been appointed not in any way upon the recommendation of the Lieutenant-governor. I think that at present the nomination rests with the deputy adjutant-general of the Royal Artillery.

7042. As to the promotion of the under-officers and corporals, is it as satisfactory at the Academy as it could be; are not they sometimes promoted without wishing for it?—I have known cases of that kind. I think that practically the under-officers and corporals have no inducement to hold that post. It is distinctly laid down in the regulations that they shall have greater privileges than the other cadets. Now no privilege whatever is given to the under-officers and corporals which is not shared by a cadet in the first and second classes, although he is not an under-officer or corporal. The levelling up was made during my term of service as a cadet officer, and I thought it a bad thing. The under-officers and corporals used to have longer leave in the evening, and other privileges which were not given to old cadets, but those privileges were subsequently extended to old cadets, and this took away the last advantage which the under-officers and corporals had over the old cadets.

7043. During the time when you were in authority as an executive officer, did you find that you had that support from under-officers and corporals which you had a right to expect?—That is rather hard to say. I am rather inclined to think that there was an apparent support which was not very real. I do not think that the under-officers and corporals have any authority with the older cadets.

7044. The cadets do not respect them as they should?—Your Lordship knows that in the army a non-commissioned officer is not supposed to associate with a private soldier, but here, where they are all together and are living in exactly the same way, there is no difference between them.

7045. From your experience, can you make any suggestion to the Commission by which the selection of under-officers and corporals could be improved?—I think that a great mistake has been made as regards the levelling up, which it is very difficult to get over. I think that it is very difficult to know what privileges could be given to them.

7046. Have you any opinion as to the age of executive officers and professors; as to how long a professor, for instance, should continue in the exercise of his duty at the Academy?—I think that age is of importance. I think that a young man is much better than an old one in that respect.

7047. At what age would you superannuate professors?—Certainly not an hour later than 60.

7048. And the same rule would apply to executive officers?—I think so.

7049. I suppose, for instance, that the offices of paymaster and quartermaster require a man of young and active habits?—The office of quartermaster certainly does so. I do not think that it matters much with the paymaster what age he is. Upon that point I may perhaps be allowed to say that I think it very desirable that the paymaster should have the whole payment of the cadets, and that the captains should have nothing to do with it. There could be no difficulty about it; for in the Royal Marines I have seen a whole division paid by the paymaster; and in the Royal Military Academy there are only about 200 cadets. I also think that combining the offices of paymaster and adjutant is a great mistake. The adjutant never puts on uniform.

Age of admis

7050. As regards the future of Woolwich, would you have it an elementary school, or a school of application?—I would have it a school of application for youths who have already had a good liberal education up to 18 years of age. I ask permission to draw the attention of the Royal Commission, if they have not seen it, to the report of a committee, dated Nov. 1854, on the examination of candidates for the Civil Service of India, which was drawn up, I believe, by Lord Macaulay, in which he speaks most strongly of the extreme desirability of a liberal education being carried on up to a considerable age, and remarks how much better men are always found to be in after life "in the business of every profession," who have not been taken away from their liberal studies when very young to be driven into one groove of technical studies.

7051. (*Chairman.*) Have you any further observations to make?—I would wish to add my firm conviction that all difficulties as to the method of imparting the special education, universally admitted

to be necessary for officers of the Royal Artillery and Engineers, hinge upon the question of the age of the pupil at the commencement of that special training. If boys of 16 or younger are admitted to compete, a sufficient knowledge of mathematics and languages cannot be enforced at the entrance examination; consequently these subjects, though not essentially military, must be taught after entrance, and Woolwich Academy must do the work of an ordinary school as well as of a military college. Boys being admitted, the discipline must be such as is suited to boys; and if, in addition, the semblance of soldiering be kept up, constant difficulties arise, because the student is half a school boy and half a soldier.

If, on the other hand, it be decided that no one be admitted to compete under 18 years of age, at which age school is generally left, then a sufficient knowledge of subjects not strictly military may be expected on entrance; Woolwich may confine itself to the duties of a purely military college, and its students may be treated as officers.

The objections generally urged to the age of admission being fixed as late as 18 are—that then the student, after his course is finished, has reached the age of 20 or so, and, receiving his commission so late, does not get his promotion till he is too old; and that he cannot so well be taught military discipline and habits as he could at an earlier period of life. But if promotion when young be important, that can be arranged from the other end; and in regard to what can be done with young men entering the army late, and not passing through any cadet stage, the Royal Artillery affords a remarkable example. After the Crimean war, direct provisional commissions were given to several batches of young men, all over 18 years of age, some much older. Graduates from the Universities came direct into the regiment, but no difficulty was found in keeping discipline among them during their year of study at Woolwich. Hart's Army List shows how remarkably successful has been the after career of the majority of these officers, and I firmly believe every successful candidate, all being over 18 years old, might safely receive a provisional commission at once. There are other advantages to be derived from deferring the age of admission to the latest possible time. Not only might the staff of instruction, being only required to teach military subjects, be largely reduced, and the course of instruction shortened, but there are the advantages so well expressed in these words of Lord Macaulay's, copied from the report of a committee on the examination of candidates for the Civil Service of India: "It is undoubtedly desirable that the "civil servant of the company should enter on his "duties while still young, but it is also desirable that "he should have received the best, the most liberal, "the most finished education that his native country "affords. Such an education has been proved by "experience to be the best preparation for every "calling that requires the exercise of the higher "powers of the mind. * * * We believe that "men who have been engaged up to one or two-"and-twenty in studies which have no immediate "connexion with the business of any profession, and "of which the effect is merely to open, to invigorate, "and to enrich the mind, will generally be found, in "the business of every profession, superior to men "who have, at 18 or 19, devoted themselves to the "special studies of their calling."

Capt. H. Brackenbury.
22 April 1869.
Royal Military Academy.

The witness withdrew.

Adjourned to Tuesday next at 12 o'clock.

Tuesday, 27th April 1869.

PRESENT:

THE RIGHT HONOURABLE LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.	MAJOR-GENERAL EARDLEY WILMOT.
GENERAL LORD DE ROS.	MAJOR-GENERAL HAYTHORNE.
LIEUT.-COL. SIR CHARLES RUSSELL, Bart, V.C.	REV. DR. BUTLER.
LIEUT.-GEN. SIR D. A. CAMERON, K.C.B.	LIEUT.-COL. CHESNEY.

BREVET-LIEUT.-COLONEL C. H. OWEN, Royal Artillery, examined.

Lt.-Col. C. H. Owen.
27 April 1869.
Royal Military Academy.

7052. (*Chairman.*) You are professor of artillery at the Royal Military Academy?—Yes.

7053. You were formerly assistant instructor and instructor in artillery?—Yes.

7054. When did you first become connected with the Academy?—I was made assistant instructor in 1856, instructor in 1857, and professor in 1859.

7055. I see from the paper with which you have favoured us, that you are of opinion that too many trials are allowed in the entrance examination?—Yes.

7056. Would you allow more than one trial?—I think so. I think that three would not be too much. We have six at present.

7057. You would also approve of marks obtained at the entrance examination counting in the final examination?—I should.

7058. I understand that you would only advocate instruction in mathematics, languages, and landscape drawing to be given to those cadets who have a natural turn for the subjects named. From the evidence which we have received it would appear to be a very general opinion that a knowledge of some foreign language is almost essential to a soldier?—That is not quite my view; it is this: I do not advocate the dropping of all mathematics when a cadet comes into the Academy. I think that elementary pure mathematics should have been learnt at the age of 16, if a boy is fit for the Academy, before he joins; but when he joins I think that there should be a course of mechanics, natural philosophy, and machinery; that those should be combined in one course. I think that a qualification in one language, and I should prefer French, should be indispensable, and that qualification in pure mathematics and in mechanics, without the calculus, should also be indispensable.

Organization.

7059. You think that the discipline and the instructional branches should be kept distinct, but with a more intimate connexion between them than at present exists; will you explain a little more fully how you would suggest that that idea should be carried out?—My idea is that there should be a board similar to what there is at Metz and at some of the French schools, which should assemble once or twice a year to consult on questions which relate generally to the Academy. For instance, last year there were considerable changes made in the attendances for study, combined with other arrangements for meals, and drill, and so on. I think that when changes of that sort, or anything relating to the whole arrangement of affairs at the Academy, is under consideration, it would be a great thing to combine the two branches,

Lt.-Col. C. H. Owen.

27 April 1869.

Royal Military Academy.

namely, the officers for the discipline part and also those for instruction, because the different study attendances, the meals, drills, and those kind of things must all work in together. I also think that something might be done to encourage social intercourse among the officials of all classes, civilians and officers of all branches. A reading room expressly set apart for them, a general meeting (perhaps with a lunch, as formerly) presided over by the Lieutenant-Governor, who might briefly review the events of the term, and a few other, what may appear trifling, changes would no doubt serve to create a common interest and good feeling, which at present has but accidental existence. Of late years the tendency has been to isolate the instructional branch as much as possible; for instance, when lists are circulated or officials are assembled for common purposes, the instructional and discipline branches are carefully and, many think, invidiously separated.

Discipline.

7060. I see from the replies which you have given to our questions that on the whole you are not dissatisfied with the condition of the Academy at present?—I am not. I do not mean to say that it is perfect; but I think that on the whole it is in a very fair state.

7061. The want of discipline to which you allude does not refer to any serious breaches of discipline, or anything approaching to insubordination, or combination against the authorities on the part of the cadets?—No, I think that that stage has passed away, but we had it for a number of years. After the dismissal of General Wilford and Captain Williams, a disturbance occurred annually to commemorate their dismissal; but that has all died out.

Course of instruction.

7062. (*Lord E. Cecil.*) You observe in your statement that time is wasted in the first year, and that the cadets give too much time to mathematics and languages, which they must have studied before entrance; would you diminish the amount of mathematics to be studied at the academy?—I would reduce it. I should only have a portion carrying on the higher branches. All should carry on mechanics, but with regard to the higher branches, I should say that they should be confined to those who showed particular aptitude for them. I should say that they should have studied those subjects sufficiently for ordinary purposes before entrance.

7063. Would you make any difference between those cadets intended for the Engineers and those intended for the Artillery, during their course at the Academy? Would you require a higher standard of mathematics for the Engineers than for the Artillery?—I do not think so at all.

7064. You think that the same amount of mathematics is useful in both cases?—Decidedly.

7065. And I may even go beyond that, and say, necessary?—I think so.

7066. You speak of the study of the cadets being encouraged by giving a few scholarships at entrance to be held during residence. How would you supply the necessary funds for that purpose; would you have the Government give a certain amount yearly for that object?—Certainly; such a thing is desirable, and I consider that it would be an inducement to boys coming up from schools; and if it is necessary, I imagine that the funds must be paid by the Government.

7067. What number of scholarships would you think advisable, considering the present state of the Academy?—I would give two to mathematics, and one to French and one to German.

7068. You think that four scholarships would be enough?—I think so, but that is a matter of experience. There is no inducement of any kind except the passing.

Appendix, page 1.

Numbers of staff.

7069. In your fifth answer to the questions sent to you by the Commission you speak of the discipline and the instructional branches being kept distinct; are you not of opinion that at the present moment the number of professors and executive officers is largely in excess of the ordinary proportion between instructors and students at other establishments?—I think that they are decidedly in excess.

7070. Do you not think that a combination of the two classes of officers would so far effect a reduction in the numbers of the staff, without in any way diminishing the value of the instruction given?—I think that the instruction would be depreciated by mixing it with the duties of maintaining discipline out of study. I think that the excess arises from their being such an immense number of subjects, and the course being so complicated in consequence.

7071. What would be your plan for diminishing the present excessive number of professors?—The only plan which appears to me practicable, would be to make a certain number of subjects, fewer than those now studied, compulsory; they should be mixed mathematics, natural philosophy, and machinery, combined in one branch, and also chemistry, practical geometry, surveying and topographical drawing, fortification, artillery, and military history. At present, during the first year, you have a number of studies carried on; there is a distinct mathematical branch, which is supposed to work up those cadets who have an insufficient knowledge of mathematics; and as the entrance is comparatively low for mathematics, the absolute number of marks required being only 700 out of 2,000, it is no wonder that a great many youths pass into the Academy with an insufficient knowledge of mathematics. But besides that, there is an immense number of attendances which all are compelled to go through in French and also either in German or in Hindustani. You may have one cadet who has gone up, and who has a thorough knowledge of the subject, and you may have others without the slightest knowledge, and others again with a half knowledge; you put the whole of those cadets into one class, and there must be a considerable waste of time. I think that you would save a great deal of time by not compelling these attendances, but setting apart a certain number of attendances for optional subjects, and confining the studies to those subjects which are considered to be matters which are absolutely necessary; and you would decrease the number of subjects which are obligatory by about five.

7072. How many professors do you think under such a scheme you could dispense with?—Supposing the subjects to be divided, so that the students should only be studying a few at a time, you might reduce the number of instructors from 34, which is the present number, to about 24.

7073. You might then dispense with about one-third of the number?—Yes.

7074. You say in your answers to our questions that "no officer or civilian engaged in instruction has any power;" but in the sentence immediately afterwards you say that in your own branch it has been the custom for the instructor to give a cadet 24 hours' arrest when he has thought it necessary?—Yes.

7075. Then I presume that there is a certain power vested in the professors, though not exactly similar to the power of the disciplinary officers?—By the recent regulations there is no power of any kind. The theory is that the corporal on duty is to preserve order, and that the professor is to have nothing to do with it, but that his undivided attention is to be given to instruction, and that if anything improper occurs the professor is to tell the corporal on duty to put the offending cadet in arrest.

7076. You say that in the artillery department it has been the custom for the instructor to give a cadet 24 hours' arrest if he thought it necessary to do so?—That has been a tradition which has been handed down. I have always done it, and my predecessors have done it. My branch, and one or two others, may differ from a great many other branches. Perhaps half our time we are out of doors, and you cannot possibly leave that to the corporal; you are just as much bound to maintain discipline there as an officer on parade has to do. I very seldom have to exercise my authority, but if a cadet was trouble-

some I used to warn him the first time, the second time I said, "I shall put you in arrest until to-morrow "morning at breakfast time," and after that I said, "I "shall now have to report you to the inspector." At present for the merest trifle, if you take notice of any disturbance, it goes at once to the inspector, and it is entered down as an offence against the cadet, and becomes a matter of serious investigation, and perhaps the cadet may get off altogether, or may get too much punishment.

7077. In cases where you give 24 hours' arrest, is it ever entered in the punishment book?—It used not to be so entered.

7078. It seems then that this practical power, whatever the theory may be on the subject, is not objected to on the part of the lieutenant-governor or of the authorities?—Certainly, before the present inspector and assistant inspector were appointed, I never heard of a question on the subject; I always used to exercise this power, and I never had any opportunity of judging whether it was questioned or not.

7079. Then the present inspector and assistant inspector of studies, in conjunction, I presume, with the lieutenant-governor, have laid down rules that the professors shall not exercise any powers whatever of discipline?—I do not say that. I think that when they came they found what was stated in these regulations, which I fancy were drawn up just before they came, after the whole discipline was re-organized by a committee which sat, I think, in 1862, and took more than three years to go into the matter. They probably found it in these regulations, and they adopted that notion, and hold it. I do not think that they originated it.

7080. Have you any reason to suppose that this power is extensively exercised by other professors in their study halls?—It is not so much in study, it is more out of study. I certainly have reason to believe that it is now actually done in the surveying department.

7081. Supposing that a professor finds a cadet misconducting himself down the town, do you think that he ever exercises in practice the power of arrest, though he may not possess it in theory?—That may depend upon the notion, which I do not think is at all provided for in the regulations, that you are supposed to punish a cadet for any irregularity which you see. Practically I do not think that a case could be mentioned in which any such step has been taken with a cadet for years. Cadets rarely misconduct themselves in public.

7082. Supposing, for instance, that you yourself saw a cadet misconducting himself down the town, should you have any hesitation in putting him under arrest?—Yes; I think that I should. I should certainly take notice of it if it was anything very disgraceful. I should inquire his name, and should report the circumstance, but I should take no further notice of it. I should certainly not put him under arrest.

7083. Then you would make this difference, that if he misbehaved in your class you would put him under arrest at once, but if he misconducted himself down the town you would simply report him?—In the class, according to present regulations, I should not have the power of putting him under arrest.

7084. But you state in your printed answers that practically you exercise that power?—I did exercise it until lately. In study, the proper thing would be to tell the corporal to put a cadet under arrest, which, I think, is a very objectionable proceeding, and a very improper way of doing it; in fact, I ought to do it myself. As an officer I suppose that you have some sort of power of putting anybody in arrest whom you see doing wrong. I should not think of exercising that power if I saw a cadet doing wrong in the town. I should simply report the circumstance.

7085. Would you enlarge the powers of the professors in study?—Not beyond what I have stated in my paper. I think that 24 hours' arrest is quite sufficient.

7086. But I understand that, as you put it in that paper, that is opposed to the regulations?—Yes.

Lt.-Col. C. H. Owen.

27 April 1869.

7087. You would have those regulations altered?—I certainly should.

Royal Military Academy.

Discipline.

7088. You speak of defective discipline being shown chiefly by an unsteadiness at parade during late years. Do you recollect any of the serious disturbances which took place about 1863?—Yes; I remember them all.

7089. Can you give the Commission any account of them?—Of course I should have to go back to get the exact facts, but I remember generally what they were. In the first place there was a disturbance raised when General Wilford was at the Academy as the governor, and Captain Williams was captain of the cadets; that was, I think, in 1861. The feeling of the cadets was shown by firing off some guns and those kind of things. I almost forget what they did besides that; they paraded about the Academy, and fired off some guns in front of the parade. They always commemorated this, for about four years, by doing similar things. On one occasion they took the swords out of the Academy, and threw them into the reservoir at the top of the common. It was simply an organized disturbance which took place every year, by firing off guns, to show their triumph over General Wilford who was the governor, and they professed openly to show their approval of the dismissal of General Wilford and Captain Williams.

7090. Since 1861 there has been no fresh insubordination of the kind?—This was continued, as far as I remember, for three or four years; it was on the same night in every year; it was at some time in the autumn; it was always to commemorate the dismissal of General Wilford and Captain Williams.

7091. What was the last occurrence of the kind?—The last occurrence of the kind, I think, was the cadets throwing their swords into the reservoir.

7092. In what year was that?—That, I think, must have been in 1864 or 1865; but I think that it was in 1864.

Appendix, page 1.

Cramming schools.

7093. In your printed answers, in reply to the fifth question, you speak of defects in training previous to joining; I suppose that you allude to the "cramming" schools?—Yes; to a certain number of them.

7094. And I suppose that you would be very much in favour of their abolition, if possible?—Yes; I think, however, that some of the private schools are very good; others take a few pupils and work them very hard, but do not look after them out of study hours.

7095. Have you any practical acquaintance with the "cramming" schools for Woolwich?—Yes; I know them all by reputation. Some of those schools are very good; but others appear to be in a most disreputable state. I could mention four or five.

Influence of under-officers, &c.

7096. I see that you are in favour of deriving more assistance from the corporals?—Yes.

7097. Will you explain your ideas at greater length?—As far as I understand the duties of prefects in some of the public schools, the corporals are not of the use which they might be. In some of the classes, for instance in the first class (it may arise to a certain extent from their all being of the same standing), the corporals are scarcely of any use at all.

7098. How would you remedy that?—By separating the corporals rather more from the other cadets, by giving them more privileges, by making a reduction a very serious offence, and by making every one do his duty as a corporal efficiently before receiving his commission. I think that that might be easily done; it has been done before now.

Amalgamation of Woolwich and Sandhurst.

7099. I observe that you are opposed to the amalgamation of the two colleges of Woolwich and Sandhurst; and you state one of the principal objections to be, that cadets would be taxed beyond what is at all necessary. Was it not the case that cadets at Addiscombe were brought up for the line?—A certain number of cadets at Addiscombe, who failed or the Artillery and for the Engineers, had line commissions; but only a small proportion of the Indian line got commissions in this way.

Lt.-Col. C. H. Owen.

27 April 1869.

Royal Military Academy.

7100. Do you think that they were taxed beyond what was necessary?—I think that you can hardly compare the two systems; the cadets were admitted at Addiscombe very young, and the course was entirely different from that which is now carried on at Woolwich.

7101. You speak further on of losing many good men, besides lowering the standard by reducing the competition; but surely what is worth having is worth trying for, and if these good men could not come up to the standard the loss to the service would not be so very great?—I do not think that they could not come up to the standard, but they would not take the trouble. If a young fellow thought that his father would purchase a commission, he would not take the trouble. In preparatory schools I think you will find that they say that they have very much more difficulty in making the students work for the line than for the Artillery and for the Engineers.

7102. If they will not take the trouble, does not it show a want of perseverance?—To a certain extent; but I think that when a young fellow is sent to such a place, he should be obliged to go through a certain amount of the course, or otherwise you give way too much to certain inclinations, which it might not be well to indulge. A boy might think very differently 10 or 12 years hence.

7103. Of course the arguments as regards scientific corps are entirely different from the arguments as regards those cadets who are working for commissions by purchase in the line. For the scientific corps a high standard is required, and cadets who were idle and would not take any trouble would not have sufficient qualification for the scientific corps, whereas, perhaps, idle young men might be enabled to qualify for the line?—Yes; but it might not be from their being idle. Those parents who were well off might not wish to send their sons to the Artillery or Engineers, but would be perfectly satisfied with the line. There is another objection, namely, that I think if you educated all the cadets in one college, the rapid promotion in the line would place officers in the line a long way ahead in promotion of officers in the Artillery and in the Engineers; and if they were all educated together that would no doubt be considered a great grievance.

7104. You seem to think that it would excite a great deal of jealousy between the two services?—Yes; if you took three men in one batch, one of them would get the Artillery, another would get the Engineers, and the third would get the line; and, perhaps, the line officer might have been an idle fellow, but from interest and good fortune he might be a colonel when the other two were captains. I heard an Engineer officer complain the other day that he, when only a subaltern, had been stationed with a line officer who was a captain and on the staff, but who, having been a cadet of the same standing as the Engineer officer, had been dismissed from the Royal Military Academy.

7105. Does not the same argument apply to all boys studying at a public school for the Engineers, for the line, or for any other profession; the one may arrive at distinction long before the other, but I never heard of that being a grievance?—I think that it would be a great objection in a military college where you put them together, and I think that it would be desirable to enable them to count service.

7106. That of course touches the whole question of promotion in the scientific corps, and in the army; but if the promotion could be accelerated in the scientific corps, as it is in the line, you would see no objection to it?—There would not be so much objection, but the line, from their greater numbers, would always have it in their power to accelerate promotion by raising retirement funds.

Course of instruction.

7107. (*Sir C. Russell.*) I see that you suggest that the marks at entrance should be carried forward, and should count for the commission examination; will you state why you think that that should be done?—Taking a subject like classics, I believe that in the last few years it has been considered desirable to offer inducements to those who are educated at public schools to come up to Woolwich, and that it would be an advantage if the marks for classics were increased, and if those for mathematics were decreased. At present those cadets who have studied classics, and who are good classical scholars, certainly obtain a good place at entrance, but then they suddenly drop down. I could mention several cases of cadets who were very good cadets, and were inclined to work well, but who have been very much disgusted by losing a whole term from their imperfect knowledge of mathematics, and from their classics not being of the slighest use, except at entrance. If the classics counted in the last examination they would get some value the whole way through. I think that the same applies to French and German. I knew a case the other day of two cadets who went in, one was supposed to be a good German scholar, and the other a very moderate scholar; one got double the marks of the other at the entrance examination. At the examination at the end of the first term at the Academy they got equal marks, or very nearly so. Such a thing certainly tends to disgust those who have worked hard at a subject before entrance. The examination at entrance no doubt is stiffer than at the end of the first term, and a man with moderate knowledge could obtain as many marks as the other who has more knowledge, and therefore the latter would get no advantage.

7108. You probably allude in what you have been saying to one of your printed answers, in which you say, "Time is, I consider, wasted during the first "year in compelling all the cadets to give so many "attendances to subjects (mathematics and languages) "which they must have studied sufficiently before "entrance"?—I would amend that statement by saying, "which they should have studied sufficiently "for ordinary purposes." Appendix page

7109. Do you consider that an average boy who enters the Academy has acquired sufficient knowledge either of French or of German to enable him to give up its study while in the Academy?—I think that languages should be commenced early; and I think that if you made it absolutely necessary to obtain a qualification in French you would get it; but if you did not like to lay down such a rigid rule as that, supposing a cadet not to be qualified on entrance, he should be compelled, when the optional subjects were going on, to work up the quantity due in French before he got his commission.

7110. You do not think that an average boy would lose serious ground in those modern languages which are specified for study, knowing that his marks which he had earned on coming in were to count?—I think that those who had a good knowledge of the subject would carry it on; they would be induced to go on with those studies, because it would affect their commissions; but with regard to those who had gone up to a certain point, I think that it would show that they were incapable of going beyond it, and that they would not learn very much while at the Academy.

7111. I understand you to say that one half of the instruction of the cadets is in the field?—Very nearly one half in special subjects, such as artillery, fortification, and surveying.

7112. Is the duty of the field thoroughly practical?—Quite so.

7113. I understand you to say in your paper, that you recommend that the instruction should be as much as possible class instruction, and you place that in italics, as if you wished to call attention to it?—What I mean is, that the number of cadets in classes should be reduced, and that you should not have, say, a class of 40 cadets, some doing one thing and some another. I say that in most of the subjects it is a great object to have all the cadets doing the same thing, and that those who are not up to a certain point must get the information as best they can.

7114. What is the reason why artillery cadets upon joining the service are now retained at Woolwich for

an after-course?—That is more than I can tell you: I think that it is considered by some persons to be desirable that those cadets should be sent to study certain subjects; it is a matter of opinion what those subjects should be. I think that there are certain subjects, such as interior economy, and law, and those kind of things, which might very well occupy them; I think that the notion is that it is a pity to let them drop everything directly they have left the Academy, but I do not at all agree with the idea that we cannot teach them at the Academy everything which is requisite for the artillery, if we have only the proper time which ought to be allowed to us, and I think that assembling the last-joined officers at Woolwich is most objectionable, for many reasons.

7115. Then do you think that the time is somewhat short for your own particular branch?—I think that in the last few years we have laboured under very great disadvantages, our attendances have been reduced. Some few years ago it was always the custom to have eight attendances a week for a year for artillery instruction, and that was the time when we had only smooth-bore guns in the service, and consequently the exercises and drills were very much fewer than we have now, and there was much less to study as to the application of gunnery and artillery. The attendances were reduced to four a week. I remonstrated against it, and they were then raised to six attendances a week in one term, and five attendances a week in the other. They were then reduced about a year ago, to make way for military history, to five attendances a week in the year, and they were then again raised on my recommendation to the present number, which is six in a week in one term and five in another. Since what used to be termed the Practical Class was removed up to the Academy, we have taken more time to go up and down to our work, and some of our work at the Academy has been very much interrupted by the general duty of corporals in the Academy falling upon one particular class. This latter point has been remedied in the last term to a great extent, but these things combined have certainly reduced our time very considerably, and unless we had instructed on a different plan altogether, we could not have done our work at all; and I think that the result as regards the artillery, as with other subjects, is not so favourable, simply from the fact of there now being so many subjects to get up during one term, namely, the last term; there are seven or eight subjects, all involving a considerable amount of study, during the last term. The cadets have too many very heavy subjects to get up for a fortnight's examination in the last term, and I think that that has a great effect in depreciating every one of the courses.

7116. (*Lt.-Col. Chesney.*) With regard to the changes of study, are the professors in any way consulted before those changes are made?—Sometimes they have been, but generally speaking they are not consulted. On one occasion, a short time ago, they were consulted.

7117. What is the position of a professor towards the assistant inspector visiting his class, who is possibly a junior officer to himself?—The assistant inspector I simply consider as a sort of deputy inspector, in the same way as an adjutant would be the deputy of a colonel. I do not consider that he has any power himself except through the inspector.

7118. Is it generally understood that his duty is to see that the professors do their work, or that the cadets behave properly?—That is a point upon which I am not myself clear; I think that it is a very great mistake to consider that his duty is to see that the professors do their duty. I cannot see any object in that, in fact, it would very much hamper them.

7119. With regard to the cadets behaving properly, if there was an efficient system of discipline ought there to be any necessity for an inspector or an assistant inspector to go round?—No, I do not see the slightest occasion for it, because even if an inspector comes round, I consider that the officer who is carrying on instruction is the person who is responsible for what goes on there, even though the inspector is present. An instructor who cannot be trusted should not be appointed.

Lieut.-Col. C. H. Owen.

27 April 1869.

Royal Military Academy.

7120. You have already recommended an extension of the powers of discipline of the professors, would you give them the same powers as, for instance, the subalterns of companies have at present?—I think that probably it is sufficient to give what I have stated in my paper, namely, that they should have the power of inflicting a small amount of punishment.

Discipline.

7121. You speak of the unsteadiness of cadets on parade. Do you refer to the smaller parades in going in and out of study and so on?—I refer to every parade. Of course I am not present on their ordinary drill parades, but I judge of them when I have them for practice, exercises, or when they are going down to the arsenal; they are not steady, they lounge about. Of course you can remedy that if you like to exert your authority, but they certainly would not do it for their corporal.

7122. May not a part of that be owing to the number of useless parades which are imposed upon them for the purpose of going in and out of their different studies, and for going to and from meals?—Probably it may be so to some extent.

7123. Are the discipline officers of the Academy responsible for these small parades for the purpose of going in and out of the various halls?—They are not responsible for the study parades.

7124. But are they responsible for those parades which are connected with meals?—Yes, I believe so.

7125. Are the captains and lieutenants always required to be on duty under the present system, or do they take it turn and turn about?—Perhaps I am not the best person to be asked on such a subject as that, but I understand that the senior captain does not take the same duty as the other two captains do; the other two captains take turn and turn about, but the senior captain does not do so, but exercises a sort of superintendence.

7126. Do you approve of the system of making a corporal do duty in a class in which he is not himself working?—It is most objectionable, so far as his own work is concerned, but as regards the discipline, he will generally do it much better in a class with which he has nothing to do than in his own class.

7127. If the system which you propose were adopted of giving the professors some small power of punishment, do you think that it would be necessary to send corporals away from their own work to keep order in other classes?—I think not after the first term or two, but in the first term or two it might perhaps be otherwise.

7128. Might not the old Addiscombe system of acting corporals in the junior classes be found sufficient?—I think that in the first term, after joining, it would be necessary to have some cadets from another class, because they would be better acquainted with the manner of carrying on the discipline.

7129. Referring to a recommendation in your paper, are you aware that at Addiscombe the cadets' service always counted towards pension?—Yes.

Entrance examination.

7130. (*Maj.-Gen. Wilmot.*) You have spoken of the number of trials at entrance?—Yes.

7131. Practically a candidate can only have six trials, can he?—I think so; he can have two when he is 16, and two when he is 17, and two when he is 18.

7132. Practically speaking, does that ever occur?—It may do so.

7133. Does a boy often go up at 16?—Not generally. I think that generally they go up at 16½ or 17, but some go up at 16. I can mention some cadets who have had four or five trials.

7134. Is not the usual age of admission now about 17½ to 18?—I think that they generally come up at from 16½ to 18. The regulation is from 16 to 19.

7135. At what age do they actually enter the Academy?—I think from 16½ to 18½.

7136. That is two years?—Yes.

Lt.-Col. C. H. Owen.

27 April 1869.

Royal Military Academy.

7137. In that time they could only have had four trials?—Yes.

7138. So that practically you have not often a man who has six trials?—No, but you very often have four. Besides this, men now come up merely to see what the examination is like, without expecting to pass.

7139. Four is the number which I understand you would allow?—If you allowed four trials, I think that practically you would only have about two.

Powers of professors.

7140. With regard to the board or council of which you have spoken, as a rule does not everything in the arrangements give way to study; that is to say, are not the best possible arrangements made for study, and is not the remaining time utilized as well as it can be for drills, or any other work which is required?—I think that everything gives way to meals and recreation, allowing, of course, a certain time for study.

7141. How long do you think that that has been the principle?—I really cannot say.

7142. You do not think that that was the principle when you were a cadet, do you?—No; but of late years I think that the principle has been to pamper the cadets in that way beyond anything.

7143. I suppose that you consider, as an officer, that your authority over a cadet as a subordinate in the class is as complete now as it could be by any further regulation?—With the exception which I state, namely, 24 hours' arrest, according to the old custom.

7144. Supposing that power was given to the professors to name a definite time of arrest, would you have the offence entered against the cadet?—No.

7145. If so, no one else in the establishment could give that punishment except on the same terms, that is to say, that it could not be entered against the cadet?—Just so; I do not see why it should be entered against him.

7146. Do you not think that a cadet who is frequently in the position of having 24 hours' arrest, holds a different position from another cadet?—I should never give him a second 24 hours' arrest; I should only give it as a warning.

Organization.

7147. The practical class is now in the same barracks as the theoretical class?—Yes.

7148. Do you think that discipline and management of the instruction, such as is in your hands, are advantaged or disadvantaged by that system?—I think that the combination of the practical class with the rest of the Academy was a great disadvantage.

7149. Do not you think that it was one great advantage of the separation that you could treat a cadet rather in a different manner, giving him greater liberty, and treating him more as an officer, than you can do now?—Decidedly; it was a kind of promotion to him in every way.

7150. Would not the restoration of that system do a great deal to assist the position both of the cadets and of the professors who were connected with that particular class?—I decidedly think so.

7151. When you say that the number of professors is excessive, I suppose that you do not mean to say that they are more than sufficient for the present purposes of the Academy, but only that they are more than in an ordinary school?—Exactly so.

Discipline.

7152. When you say that a corporal is responsible for order, is he not responsible to the professor?—Yes, he is supposed to be responsible to the professor.

7153. And, as a general rule, would it not be argued as a great neglect of duty on the part of the corporal, that it should be necessary for the professor to call the attention of the corporal to any irregularity which was going on?—It ought to be.

7154. It shows a laxity of discipline if that is the case?—I think that the corporals do not perform their duty as they should do.

7155. Then in fact there is a laxity of discipline?—There is a laxity of discipline certainly.

7156. Is it not the duty of the professor to report a corporal so neglecting his duty?—Certainly.

7157. As I understand it, the theory is that the intention of having a corporal is to prevent the professor being interrupted in his work?—Yes.

7158. And to call the attention of the professor to any great irregularity deserving punishment?—Yes.

7159. If the corporal did his duty there ought to be no interruption and no disturbance to the professor?—Certainly.

7160. Supposing that in such a case the corporal is known to be a man who does his duty, do you not think that as a general rule he has very little trouble?—There seems to be, I think, a sort of understanding that except in giving leave to quit the room, and that kind of thing, there is to be no interference.

7161. Supposing that a corporal was known to do his duty well, would the cadets take liberties with him and make a noise?—When you get good corporals I think not.

7162. Are such corporals rare at the present day?—Yes. The last one whom we had, namely Mr. Cunynghame, was the best; he was the senior. It is very rare to get one of the ordinary corporals to do his duty satisfactorily.

7163. I gather from one of your replies that you have had an opportunity of observing the general manner and bearing of the cadets. Do you think that it is satisfactory at the present time?—I think that the tone and general behaviour of the cadets is exceedingly good, and is an immense improvement as compared with former times; but on parade they are certainly unsteady.

Cours instruc

7164. (*Sir D. A. Cameron.*) With regard to the plan of carrying on the marks which are gained at the entrance examination, would you carry on the marks gained in all the subjects, even in those which are taught afterwards in the Academy?—I think that I should confine that to languages, classics, and pure mathematics.

7165. As respects mathematics, as they are taught afterwards in the Academy, a cadet has an opportunity of gaining marks in them at his final examination?—I should do away with the instruction in pure mathematics at the Academy, except as an optional subject. I would take mixed mathematics, namely, mechanics and hydrostatics. I have an idea that coming at the age at which the cadets do, they should be able to master mathematics up to that point. I leave out the calculus purposely, because I think that most people's experience will show that very few make use of it, only those who have a taste for it.

7166. (*Maj.-Gen. Haythorne.*) Are you an advocate for dividing the artillery cadets and the engineer cadets, during the course at the Academy?—No; I think that they ought to go through precisely the same course.

7167. (*Lord de Ros.*) Suppose that when a cadet first arrived at the Academy you examined him carefully, and ascertained both his acquirements and the bent of his mind, could not you better classify the cadets for their future study, and determine as to which studies should be reserved until they went up for their commissions?—I should think that the entrance examination would accomplish that.

Disci

7168. You would not record in the books of the Academy every trivial or boyish offence, which might be committed from exuberance of spirits or thoughtlessness?—I would not.

7169. Do you not think that when you wanted seriously to punish a cadet you might inflict upon him an imposition with solitary confinement, and would not that give a better opportunity of improvement than the mere punishment of solitary confinement?—There is no solitary confinement now; there is confinement to the cadet's room, but a cadet so confined may be in the room with others.

7170. Do you not think that it would be a good thing that there should be the means of enforcing that punishment, by making it solitary in the room, and not allowing the presence of others while the cadet was confined?—I am not prepared to answer that question as to whether solitary confinement would be a good thing.

7171. I refer to the cadet being alone in his room with an imposition, and without any company?—I think that in some cases it might be advantageous to keep the cadet alone in his room.

7172. As regards the discipline, I understand you to say that you think that no officer of any description should be obliged to delegate his authority, or to act as it were secondhand through the corporal?—Certainly not.

7173. As to the so-called mutinies, is it not your opinion that any officer with habits and notions of command of men, with the spirit and manners of a gentleman, would be able in one moment to set that sort of thing right by addressing the cadets and putting them in mind of their position?—I think that it is to a great extent a matter of personal qualification. No officer should be appointed to a responsible position unless he has previously shown that he can deal properly with cadets; but he must be supported.

7174. Do you think that both classics and French, though very desirable and valuable to a commissioned officer, might be, as it were, put in abeyance during his studies as a cadet?—Classics certainly. I should only require those who wished to go on with French to do so. I would not force all to do so, unless at the entrance examination a cadet had not qualified in what was considered necessary. If you made a qualification in French absolute for the entrance examination, you would not want it afterwards; but you might say, "If you can qualify in French before you get your "commission, well and good;" and a cadet under those circumstances would have to take spare time to study that language. I think that as regards the instruction in French and German at the Academy there should be simply optional classes.

7175. Do you think it possible for a young man coming to the Academy with very little acquaintance with French or German, to acquire any competent degree of knowledge of either of these languages under the masters at the Academy?—At the Academy, with other studies, I do not think that you can acquire languages.

7176. When the attendances on certain subjects were reduced, to what subjects were those attendances sacrificed?—I cannot say without examining the books; they were very often changed.

7177. Is there much of what you would call battalion drill at the Academy?—I should say very little.

7178. Would you be for reducing it still more?—No, but rather for increasing it. I would have every cadet able to drill a battalion thoroughly before getting his commission; I mean that he should be able to fall out and drill a battalion, which all the cadets cannot do now.

7179. There are at present three captains?—Yes.

7180. Would not the discipline be better carried on by one captain and four subalterns?—I am not prepared to say; but I hardly think that you want three captains.

7181. Do you approve of rustication as a punishment?—I think that it is not an objectionable punishment.

7182. Does not it lead a cadet to pass a certain number of weeks at home, or elsewhere, in idleness; and does not that make it more difficult to bring him back to his studies?—Yes; it has a tendency in that way.

7183. You made a remark with regard to cadets being rather pampered and being rather treated too well; do you refer to their meals or to their lodging?—I refer chiefly to their meals.

7184. Do you think that they are what you would call over-fed?—I certainly think that they have more than they could expect at an institution of this kind, where the living should be exceedingly plain.

7185. Are the dinners always hot dinners?—I am not certain about that; but they have four meat meals in a day if they like; they had five at one time, I believe.

7186. (*Rev. Dr. Butler.*) You would consider the entrance examination for Woolwich a severe one, would you not?—Yes.

7187. Have you had reason to observe many instances of overwork, either when the cadets first enter the Academy or when they leave it?—Very few.

Course of study.

7188. You would say that generally they were strong and healthy young men?—Quite so.

7189. Would you consider that as the hours are now arranged they have any considerable time for general reading, or for the pursuit of liberal studies apart from professional training?—Yes, I think that they have quite sufficient time.

7190. Would you attach much importance to their availing themselves of it for that purpose?—Not very much; I think that that must be left until afterwards.

7191. At the same time I understand you to say from your printed answers that you do attach importance to carrying on marks in optional subjects which are intended mainly to give general culture to the mind?—I think that marks should be carried on for mathematics, classics, and languages.

Appendix, p. 1.

General tone.

7192. As to the moral tone of the young men; would you say that it has greatly improved of late?—Yes, very greatly.

7193. And would you say that it is now satisfactory?—I think that it is as satisfactory as you would have it in any institution of the sort, or in any public school of the country.

7194. Can you state what opportunities the chaplain has for seeing the cadets?—He reads prayers and attends the hospital, and he is their librarian, so that he is always about. I believe that there is a Bible class, which is conducted by the chaplain.

7195. Practically do you know whether he has many informal opportunities of seeing the cadets otherwise than when they are unwell?—No; I should say not.

7196. You would doubt whether the chaplain was well known personally by many of the cadets?—I dare say that he may be well known personally from his connexion with the library. I should imagine so.

7197. Is any direct religious instruction given as a lesson to any members of the Academy?—Not beyond the ordinary prayers, and so on, and the Bible class, which I have mentioned.

7198. Perhaps you are aware that in the Prussian military schools, religious instruction is habitually given as a part of the instructional course?—I have heard so. We have cadets of different religions, and that perhaps would cause a difficulty; some are Roman Catholics and some are Presbyterians.

Advantages the situation of the Academy.

7199. (*Lord E. Cecil.*) You state that the advantages which are possessed at Woolwich in the artillery course could not be obtained in any other place. Can you state what those special advantages are at Woolwich which could not be obtained at any other place?—In the first place you have the arsenal departments, they give means of instruction which you could not get anywhere else; and besides that there are other means, there is the Repository and the Riding School. You have at Woolwich a branch of the School of Gunnery from Shoeburyness, in which all the different artillery exercises are gone through, that is to say, mounting and dismounting guns, and all the different gun drills, and making bridges, and things of that kind. There is also an excellent Artillery Museum in connexion with the Repository. Those officers who go through the course at Shoeburyness usually go through the arsenal before going there, and the cadets get a thorough knowledge of *matériel* to a great extent by visiting the arsenal departments. Woolwich is the only place where all the service artillery *matériel* can be seen.

Instruction of artillery officers after entering the service.

7200. Could not such a course, as you speak of, with regard to the cadets going through the manufacturing departments at the arsenal, be given to cadets after they enter the service?—I think that it could not be given so well. When an officer has been some

Lieut.-Col. C. H. Owen.

27 April 1869.

Instruction of artillery officers after entering the service.

time in the service he wishes to see what has been done in that respect since he joined, but I think that to leave it until after an officer joined his regiment would be a very bad arrangement indeed. You have not then the same hold on young officers; they have been tired out by their education at the Academy and have not the same inducement to work hard, because, while at the Academy, they are working not only for a commission but for a place; and the course at the Academy is carried on under circumstances all of which bear more or less upon it. You have a complete course at the Academy in every way, which I think you do not get at any other place. Artillery is carried on in conjunction with fortification, chemistry, and machinery, all of which bear more or less upon it. You could not possibly expect young officers to undergo the same amount of study which you exact from a cadet.

7201. Supposing that every officer in the artillery was obliged to pass through a course at the arsenal before getting his commission as captain, would not the compulsory examination give him sufficient inducement to work?—It would give him sufficient inducement to be prepared for that examination by the time that he became captain, but it would be a considerable number of years after his most useful service had passed. Scattered as our artillery officers are over the world the necessary instruction could not well be obtained.

7202. How long does the course now take at the arsenal?—It takes the last term.

7203. How many months is the term?—You may take the term to be about 16 or 17 weeks.

7204. So that in point of fact in three or four months an officer could easily pass through this course at the arsenal, if a cadet is able to do so at present?—Not, I think, easily; he would be much disgusted at having to do it. Besides the engineer officers would have no opportunity of going through the arsenal course, which must be of considerable use to them in many cases. I have been informed by many engineer officers that they value the course very much, giving, as it does, an opportunity of witnessing the different methods of practically dealing with metals, woods, and other materials for purposes of construction. I may mention that both in the Crimean and Indian wars officers were sent out direct from the Academy, and they would have had no time for preparation afterwards. We had officers joining the siege train who were only 16, and if they had not known a shell from a shot, or a gun from a mortar, before coming out, they would have been simply useless.

7205. Engineer officers are now sent with temporary commissions to Chatham, to go through a certain course; do you see any reason why artillery officers should not go through a course at the arsenal with temporary commissions?—I do not think that the cases are quite parallel; I think that the Engineers have to go through an elaborate course of architecture, which could not be done at the Royal Military Academy. You could not very well carry on at Woolwich the architectural course which is given at Chatham. You can however in my opinion, as I think I have shown, give a more satisfactory arsenal course, quite sufficient for all general purposes at the Royal Military Academy, than by disgusting officers with labourious instruction just after being commissioned. I do not believe they would be got to work sufficiently hard, after they have passed lately so many trying examinations. They would not have the inducement of working for a place, and there would be unnecessary delay in going to regimental duties. After a few years of service the case becomes quite different. The engineer cadets would, moreover, be deprived of the advantages of the arsenal course, which has always been considered an essential part of their instruction.

The witness withdrew.

LIEUTENANT H. H. S. CUNYNGHAME, Royal Engineers, examined.

Lt. H. H. S. Cunynghame.

Royal Military Academy.

7206. (*Chairman.*) You quitted the Royal Military Academy in last December?—Yes.

7207. And you are at present at the Royal Engineer Establishment?—Yes.

7208. You were a responsible under-officer at the Academy?—Yes.

7209. Where did you come out at the final examination?—First.

7210. By how many marks?—I think that it was about 1,300, but I do not quite remember.

7211. You got a good conduct sword?—Yes.

7212. And a gold medal for the highest marks?—Yes.

7213. You got the highest marks for artillery, surveying, drawing, chemistry, practical mechanics, natural philosophy, and practical geometry?—Yes.

Course of instruction.

7214. Do you consider that the Academy is an institution which affords to any industrious and intelligent young man ample opportunities for completing his education?—It affords so many opportunities, that he has not time to take advantage of everything.

7215. Do you think that the number of subjects is too many?—Yes.

7216. What would you exclude?—I would make a certain number of subjects obligatory, and would have a certain number voluntary for anybody who liked.

7217. Which subjects would you render voluntary?—I should render voluntary French, higher mathematics, German or Hindustani, the sciences, practical drawing, and mechanics, and free-hand drawing.

7218. Do you think that the multiplicity of studies acts injuriously in rendering the complete mastery of any one of them very difficult?—I do.

7219. In your own case, do you think that as regards those subjects in which you obtained such high marks, your acquaintance with them is not very thorough?—If I had only learnt in all of them what I learnt at the Academy, I do not think that my acquaintance with them could have been very thorough; with many of them it is certainly not very thorough. I got the prize because I suppose that I knew more than anybody else.

7220. Is the entrance examination a good test of a lad's general intelligence?—It is rather superficial, that is to say, you can cram up for it.

Prep the exa

7221. Did you "cram?"—I did not go to a "crammer;" I went to a Cambridge tutor, but I certainly "crammed" in the ordinary sense of the word.

7222. Where were you educated?—At Wellington College.

7223. On the modern side?—On the modern side entirely.

7224. Do you think that the peculiarities of the education which you received at Wellington College, as distinguished from that which prevails at ordinary public schools, were a decided advantage to you?—Certainly.

7225. Did you gain many prizes at Wellington College?—Yes, I gained a good many prizes there altogether.

7226. At what age did you enter the Academy?—I was not 18.

7227. Do you think that that is about the proper age to enter?—I think that it is about the best age.

7228. Do you know any foreign language?—I know a little of French; I do not know anything of German.

7229. Did you learn French at Wellington College?—Yes.

7230. How long were you with a private tutor?—12 months.

7231. Do you think that the discipline at the Academy is pretty well maintained?—Yes, I think that great pains are taken to keep it up.

Disc gen &c.

7232. Do you think that the prevailing tone of the

Academy is gentleman-like?—It is certainly not behind the tone of any other collection of young men at that age in the kingdom.

7233. Do you think that the feeling of the cadets would be on the side of authority, in case of the infliction of any punishment upon a lad who deserved it?—It very much depends upon circumstances. I am afraid that if they got into their heads a clear idea that they were being unjustly treated, they would resent it; but if they had not that idea, I am certain that they would not do so, and that they would be very strongly in favour of the punishment.

7234. Does a lad who wishes to devote himself to study encounter any discouragement at the hands of his comrades?—No; that has died out since the older cadets came in, the age of entrance being increased. They will not stand it now.

7235. Is much swearing and ungentleman-like language used among the cadets?—There is a certain set of persons in every society who, I think, will do so, but I think that there is not an inordinate quantity of it at the Academy; not more than I expected to find when I went there.

7236. Do you think that it is a good thing that the instructors should have the restricted powers of punishment which now seem to belong to them, or would you put them upon the same footing in that respect as the military officers, as to their power of maintaining discipline?—I should not. I think that the civil professors have quite enough power. If they desire a cadet to be put in arrest it is immediately done, and I think that that is as much power as could be fairly entrusted to them. Military professors are quite different persons.

7237. Does a civil professor receive as much deference at the hands of the cadets as if he were a military professor?—I have observed that the conduct which is shown towards him chiefly depends upon his own conduct and disposition. There is one civilian professor now at the Academy who is treated with the utmost respect, because he has a pleasant manner with the cadets, and there is no trouble.

7238. When you were at the Academy were you satisfied with the conduct of the cadets?—Yes, in every way.

7239. How many lads were in a room with you?—When I joined there were two others with me, but now there are four in a room.

7240. I suppose that you would have preferred to have had a room to yourself?—I did not mind much which way it was. It was very pleasant to have companions, and it was also pleasant to have a room to oneself. If I got disagreeable companions of course it was unpleasant.

7241. You received instruction in classes and also by lectures?—Yes.

7242. Which of those two methods of imparting instruction do you think was most fruitful in its effects?—Each possesses its advantages. The drawback in the case of a lecture is that if the beginning is misunderstood, the end very often becomes totally useless.

7243. After the lecture was over were any means taken by the lecturer to ascertain whether the pupils had understood what they had heard, or to test their progress in the particular subject of the lecture?—In one set of lectures such an opportunity was afforded, but in others it was not. In the military history course the cadets wrote notes, which were remarked upon by the professor every day. In the chemistry course also you could ask questions of the professor.

7244. I suppose that the more that system was expanded the better it would be for the pupil?—I think that there is a great deal of good in a pupil mastering a subject himself. You never learn a subject so well under other circumstances, but otherwise I think that lectures are a good thing.

7245. Do you think that you were pretty well fed while you were at the Academy?—Yes.

7246 Not too well?—Not too well, I think.

7247. It has been mentioned to us that the lads are supplied with meat four times a day, which seems a little beyond what is required to support human nature, even under the severe mental discipline to which the cadets at the Academy are subjected; is that the case?—They themselves pay so much for their own messing, which is managed by a committee in which they are represented, so that within limits practically they have it in their power to give themselves what they like.

Lt. H. H. S. Cunynghame.

27 April 1869.

Royal Military Academy.

7248. Had you always hot dinners?—No; in summer we had cold dinners.

Discipline, &c.

7249. Were there any cases of combination, or of flagrant insubordination, among the cadets whilst you were at the Academy?—There were no instances at all of flagrant insubordination.

7250. Did you see anything of the chaplain?—I have spoken to him, I think, once or twice.

7251. He never visited you in the same way as the rector of a parish would think it right to visit a parishioner?—No.

7252. If a lad is ill does the chaplain visit him in hospital?—He does.

7253. You were an under-officer; do you think that as an under-officer you were treated with proper respect and deference by your fellow cadets?—It entirely depended upon myself. Except on parade, I think that I was not at all treated in any different way from the rest.

7254. Do you think it advisable to increase the power or influence of the under-officers?—Decidedly.

7255. You think that they would be a good instrument in raising the general tone of the Academy?—They would be almost sure not to abuse any power, and it would be most valuable.

7256. What are you doing now?—I have just gone through the military course at Chatham.

Royal Engineer Establishment, Chatham.

7257. How long did it take you?—71 days.

7258. In what respect does that military course differ from your previous course at the Academy?—The course is strictly professional and practical.

7259. Before finishing that course at Chatham was your progress, or your application, tested in any way?—I have been examined by a board of officers; it was a garrison board.

7260. Supposing that your replies have not been satisfactory, what will be the result?—I shall be sent to take another month.

7261. So that there is that test?—Yes.

7262. Do you think you derive advantage from the military course at Chatham?—Yes. It is a rest, after the hard work at Woolwich, and one receives instruction in military duties.

7263. The change from strictly scientific instruction to practical instruction was beneficial to you in every way?—I had nothing to do with science, it was all military.

7264. (*Rev. Dr. Butler.*) How long were you at Wellington College?—Five and a half years.

Royal Military Academy.

7265. Why was it thought desirable for you to go to a tutor before entering Woolwich?—Because at Wellington College they would not give me an opportunity of learning the special subjects which I wanted to learn. I wanted to give more time to mathematics and to French.

7266. What place did you take upon entering Woolwich?—Thirteenth.

7267. Do you consider that you were overworked in preparing for your entrance examination?—No.

7268. It was rather during your time at the Academy that you felt the intellectual discipline to be severe?—Yes; during the last year at the Academy.

Course of study.

7269. Have you any reason to think that the mathematical standard, either at entrance or afterwards, is too high?—I think that a lower standard for mathematics would be better for general education, and then I should have a voluntary higher course.

7270. Is there any definite point at which you would recommend that the obligatory mathematics should stop?—Short of the differential calculus.

7271. Would you say that there is much time, or

Lt. H. H. S. Cunynghame.

27 April 1869.

Royal Military Academy.

sufficient time, left at the Academy for general study, independent of professional subjects?—There is no time at all.

7272. I notice that you yourself were fortunate enough to obtain prizes in very numerous subjects, which, of course, implies that you were engaged in many and various studies; but do you think that that is generally the case, or that most of the younger men at Woolwich would be prevented from studying general subjects, classics for example?—Anybody at Woolwich who desired to work hard would have no time for general subjects, particularly during the last year.

7273. Then probably one of your reasons for thinking that there should be more optional and less compulsory subjects is to afford time for general subjects?—Yes.

General tone.

7274. You have stated that the tone at Woolwich is good. On first going there did you think that the tone was equally good as that to which you had been accustomed?—I at first thought the tone decidedly lower, although not very much.

7275. Was that lower tone noticeable more on the part of those cadets who had come from "crammers" than on the part of others, or do you make no distinction?—I think that crammers do great harm in that way.

7276. You are now speaking of the moral tone?—Yes.

7277. Can you account for that?—I think that in public schools out-door games and athletic sports are kept up, whereas at "crammers" they are neglected; the crammer has simply to cram as much mathematics, and so on, as he can put into a young man.

7278. Do you think that that is the general feeling among the students at the Academy, namely, that the tone at the crammers as a whole is bad?—I am unable to say.

7279. How far did you find at the Academy anything corresponding to the personal influence of the masters at Wellington College? I think that at Wellington College there is a master attached to each dormitory, who is specially responsible for the moral conduct of the boys?—Yes, but at the Academy there was no such a person.

7280. At Woolwich was there anything at all analogous to that, allowing for the increase of age?—The feeling that one was going to be in the army to a certain extent supplied it, but there was no personal supervision.

7281. Does it appear to you that such an influence could be introduced with happy results, of course allowing for the difference of age?—I can imagine no case where it could not be introduced.

7282. Were cases of intoxication at all frequent at Woolwich?—Before the new regulations were instituted for allowing beer and coffee at all times they were; since then they have wonderfully diminished.

7283. I presume that a young man would at that time have hardly been thought the worse of by his companions for giving way to that temptation?—Every endeavour was made to screen a cadet who was intoxicated.

7284. As to offences connected with women, did anything of that sort strike you at Woolwich?—That was what I meant in my former answer. The tone appeared to me to be far lower than in a public school.

7285. Should you say that a young man who in that way was known to have done wrong lost caste with his companions?—No, except he failed in a matter of honour, which is of a different description from an exactly moral matter.

7286. Was there any person at the Academy who was felt by the young men to stand to them in the light of a moral or religious adviser?—By the rules and regulations the chaplain should have done so.

7287. His personal relations with the young men, except in the case of illness, were comparatively infrequent?—Yes.

7288. Comparing your recollections of Wellington College, of the chapel services for example, and other means of bringing religious influences to bear, does it appear to you that more might have been done at the Academy than was done in that respect, or that the difficulties would have been insuperable?—Everybody who wished to go in for that line, if I may so express it, had full opportunity of doing so. Some cadets were eminently religious, and showed that they were so, and they had no hindrance.

7289. (*Lord de Ros.*) As regards Dr. Butler's questions, do you not think that it is advisable that the chaplain at Woolwich should not be too old, but should be rather nearer the age of the cadets, and that he would then have more influence with them?—I think that the chaplain at Woolwich should be a young energetic man who ought to command their respect and win their confidence and esteem, but it is a very difficult question.

7290. Would you separate the corporals at meals and quarters from the other cadets?—No.

7291. You are aware that that is done in the army?—Yes.

7292. Do you not think that it gives more influence to non-commissioned officers from the fact of there being less familiarity?—I think that it certainly does give them more influence, but I should not be inclined to do it. To do this would destroy the only link at present which exists between the cadets and the authorities.

Course of instruc

7293. We have had it stated that it is not too much strain for a young man's mind to be eight hours in the course of the day at mathematics; what is your opinion upon that point?—I think that it is too much.

7294. From what you have said with regard to your having wished to acquire more French at Wellington College, do you not look upon that as a very valuable acquisition to an officer?—Very.

7295. Not only as to the use of the language, but as so many scientific books for an Engineer are in French?—Yes.

7296. With regard to lectures; if a cadet was called upon at hazard, the same as at the universities, to expound any portion of a lecture, and was liable to be taken up by another cadet if in error, would not that tend to produce more attention to the lecture?—When I was at the Academy there were a certain portion of the cadets at lectures who desired to learn, and a certain portion who did not care to do so; those who desired to learn worked hard, and, I think, would not get any benefit from such a system; those who did not desire to learn did not work any how.

7297. Would not the subjecting of the cadets to be called upon to explain some parts of a lecture rather induce an idle one to exert himself?—I think not.

7298. As regards the parades for meals, and parades for different purposes (I do not mean military parades), do you think that they could be reduced with advantage, and that it would induce more attention to military parades if that was done?—Decidedly, amongst the older cadets.

7299. Then you would relieve the older cadets from certain parades?—Yes, from as many as possible.

7300. As regards the number of studies, you have said that you think that the number of studies might be very much reduced?—Yes. I think the number of subjects studied might be greatly reduced.

7301. Do you think that it would be advisable to class those studies to a certain degree as to time, so that the whole attention in one term should be given to certain subjects, rather than mixing them all up as you went along?—I think that they had better be mixed up as you go along, there would not be too many.

7302. (*Maj.-Gen. Haythorne.*) Do you consider that the artillery studies are too few with reference to others, such as surveying?—Rather so. I think that it would be advantageous to give a little more time to artillery subjects.

7303. Do you think that it would be advisable to separate the artillery and the engineer cadets during the course at Woolwich?—No.

7304. (*Sir D. A. Cameron.*) Did you take up classics at your examination for entrance to Woolwich?—No.

7305. How long before going to Woolwich did you discontinue the study of classics?—I made up my mind to go to Woolwich about three years before, and gave up that study.

7306. Do you think that it would be fair to allow cadets to carry on the marks which they gain at the entrance examination in classics and other subjects which are not taught at the Academy?—I think so as regards classics, because you cannot cram in that, but, as to other subjects, I think not.

7307. Is a cadet at Woolwich allowed to call for any quantity of beer which he likes in the course of the day, is there any limit?—There is no limit, but I never saw that power abused.

7308. Do the cadets keep their arrests very strictly?—As a rule, the arrests are kept strictly, but I have known instances of an arrest being broken.

7309. As a rule, would a corporal report a cadet whom he found breaking his arrest?—Yes, if he did his duty. I think that most of them do so.

7310. Is the feeling at Woolwich very strong in favour of keeping arrest?—In my time it was.

7311. (*Maj.-Gen. Wilmot.*) Do you think that it is an advantage or a disadvantage to divide the cadets by placing them under three captains, or would you prefer to have one captain assisted by as many subalterns as were required?—I think that dividing them into three companies is a good plan.

7312. Supposing that the senior class was entirely away from the building, would you still divide the remainder into three?—I should then divide them into two.

7313. What advantage do you think that you would gain by that?—I think that there is a less amount of breaches of discipline when they are divided into two. I think that the work of the company goes on better. I have never had any exact opportunity of observing the effect of the cadets all being under one captain, but I should be decidedly against it.

7314. You have spoken of the advantage of there being a friendly intercourse with the cadets, could not the captain of the company place himself in that position?—Certainly.

7315. Then the absence of that fact is more to be attributed to the officer not coming forward than to the cadets?—I have known some officers to have been great friends to the cadets, and that the cadets have received great benefit from them. If an officer made advances to the cadets I think that they would receive them willingly.

7316. As an under-officer have you ever considered it your duty to advise the cadets?—I have frequently begged them not to give me the disagreeable duty of putting them into arrest.

7317. Do you think that your advice was received?—Yes, they received it in very good part; but I am afraid that they did not often profit by it.

7318. (*Lt.-Col. Chesney.*) Am I to understand your objection to one captain to be, that you think that one man would not be enough to put himself into communication with the cadets?—I think that one man would be enough; but I think that if you divide the cadets into sets, those sets will get into less difficulties with regard to discipline, and that there is less danger than if you keep them in one great lot.

Lt. H. H. S. Cunynghame.
27 April 1869.
Royal Military Academy.

7319. Supposing that each of those sets was put into personal communication with a military officer of some sort attached to the Academy; would it not be possible to establish that common relationship which you said could not be supplied at the Academy?—I think that it might, but I really cannot say.

7320. Do you not yourself see an obvious want of some link between the student and the authorities, and that the student has no private adviser?—Yes; I think that there is a want of that kind.

7321. (*Sir C. Russell.*) Do you consider that you derived much advantage by going into the modern side at Wellington College?—Yes.

7322. Judging from the boys who stood the highest on the classical side, and whom I presume you knew intimately, do you think that they could have gone to Woolwich and have passed high?—They could have gone and did go to Woolwich, and many passed in high, but I think not so high for final commissions.

7323. I presume that is on account of the large number of marks for classics allowed at their entrance, but which are denied at their leaving?—Exactly so.

Course of instruction.

7324. Did the existence of the modern side at Wellington College bring about a separation, as it were, of the school?—No.

7325. It made no break at all?—None whatever.

7326. (*Lord E. Cecil.*) Do you think that the same amount of mathematics is required for an artillery officer as for an engineer?—No.

7327. Then, so far, you think there should be a difference in the instruction of the artillery and the engineer cadets at the Academy?—It would be found to work in this way. I propose higher mathematics to be a voluntary subject, and I think that most of the engineers would be found to take it up, for though it would demand hard work, it would reward them well; a few of the artillery men might take it up, and it would do them good.

7328. But you would not insist upon a course of higher mathematics with regard to cadets intended for the artillery?—No.

7329. (*Chairman.*) Would it not simplify the discipline of the Academy if the small parades were done away with altogether?—Yes, in the higher terms; for the higher terms I should merely have what parades were absolutely necessary for instruction. I should insist upon parading in the junior terms.

7330. (*Rev. Dr. Butler.*) Do you remember how many hours daily you devoted to mathematics with your tutor before going to the Academy?—I had about six hours a day.

7331. Do you remember what the number of hours had been previously at Wellington College?—Three or four.

7332. So that, in fact, it was mainly to secure the advantage of the difference between the six hours a day at the one place, and the three or four hours a day at the other, that you were led to leave Wellington College?—Partly for that reason, and partly because I found that I learnt better with a tutor. I do not myself learn well in a class; others may do so.

The witness withdrew.

Lieutenant W. A. Nugent, Royal Engineers, examined.

Lieut. W. A. Nugent.
Royal Military Academy.

7333. (*Chairman.*) You left the Royal Military Academy in December 1867?—Yes.

7334. And you are at present at the Royal Engineer Establishment at Chatham?—Yes.

7335. You were, I believe, a corporal at the Academy?—I was a corporal for the last two terms.

7336. Where were you before you went to Woolwich?—I was abroad for two years at Geneva, and then I had two years' instruction at Mr. de Burgh's establishment in Dublin.

7337. Could Mr. De Burgh's establishment be technically regarded as a "crammer's"?—Yes.

7338. Was there any discipline maintained there?—Yes; I think that more discipline was maintained there than at most establishments. If we were allowed to be out in the evening at all we had generally to be in by 10 o'clock, but as a rule we had to study in the evening from 8 to 11.

7339. Was the tone of the lads pretty good?—There was a certain admixture, but I think that it was as good on the whole as is generally the case.

7340. I suppose that you learned French before you went up?—Yes, I knew French and German.

7341. How many marks did you get for your

Lieut. W. A. Nugent.
27 April 1869.
Royal Military Academy.
Entrance examination.

French and German at the entrance examination?—I got 763 marks in French and 756 in German.

7342. In mathematics what did you get?—1,472.

7343. Where did you pass?—I passed twenty-first.

7344. When you passed out where did you pass?—Ninth.

7345. Do you think that the entrance examination is a fair one?—I think that it was so in the subjects which I took up.

7346. Have you any suggestions to offer with regard to the entrance examination?—I think that the marks for classics are rather high on the whole.

7347. Did you take up classics?—No.

7348. Are the marks for classics higher than for French and German?—Yes; for classics they are 3,000, and for French and German they are 1,000 each.

7349. (*Sir D. A. Cameron.*) In classics there are two languages, namely, Latin and Greek?—Yes; but they count together as one subject, whereas French and German are two separate subjects.

7350. (*Chairman.*) With that exception you have no complaint to make of the preliminary examination?—No; I think that it is a very fair one, and I have no fault to find with it. There was ample time to do everything.

7351. Do you think that the lads are allowed too many trials for the entrance?—No; a great many go up merely to see what the examination is like.

7352. They take a preliminary canter?—Yes.

7353. With regard to the course of study after entrance, are you satisfied with it?—Yes, upon the whole. I think that some improvements might be made.

7354. What alterations would you suggest?—In the first instance, I think that practical geometry is carried too far for any permanent use which you get from it; it is only the first portion of it which you ever make use of afterwards. Elementary practical geometry is very useful, but I think that when you come to the sections of solids, and all the problems relating to spheres and cones, there is no practical use for it.

Course of instruction.

7355. Do you think that too many subjects are crowded into the course?—I think that the time is just sufficient to carry one through the subjects. I think that a man working well could get good marks as the subjects now stand, as is proved by the result of the examinations.

7356. Do you think that the course of study is at all severe upon the physical health of the students?—Not if a student has been pretty well prepared before going in, but otherwise it is rather hard work. I had to work very hard to make up, because I did not know much of mathematics on entering. I entered at 18½.

7357. Is there any other remark which you wish to make with regard to the course of study?—Yes. I think that in free-hand drawing it would be advantageous if machinery sketching was more practised. At the Academy they had a sort of model drawing from statuettes and things of that kind, which I think is not of much use, to the extent to which it is at present carried.

7358. Have you anything else to suggest upon that point?—No.

7359. How many examinations were you put through during your course?—One at the end of every half-year, that is to say, five.

7360. Is that a *bonâ fide* examination?—Yes; you get marks for it, by which your place in the class for the ensuing term is regulated, and there are some marks which are final in each examination, that is to say, which count towards the gross total for your commission.

Discipline, general tone, &c.

7361. With regard to discipline, do you think that the tone of the Academy is good?—I think that it is greatly improved from what it used to be. I observed a decided change while I was there.

7362. To what do you attribute that?—I attribute it principally to the Lieutenant-Governor, the late General Ormsby. I think that he did more for the good of the Academy than anybody else; he trusted to the fellows' honour, and trusted to them to keep up the discipline.

7363. He treated them more like gentlemen?—Yes. There was very little *esprit de corps* in the Academy while I was there.

7364. Was there much immorality and insubordination?—There was not much insubordination; but I do not know much about the other thing, because I did not mix with fellows who were likely to be given to it.

7365. Was the atmosphere of the place conducive to study? Were the other lads inclined to discourage a cadet who was disposed to be industrious?—Yes, a certain class of fellows were so inclined.

7366. Were they the majority?—Upon the whole I think that they were equally divided.

7367. At all events they were sufficiently strong in numbers to exercise a certain influence?—It depended upon the particular fellow. I do not think that any cadet who really wished to get on, and to get to the Royal Engineers, would be discouraged by that.

7368. Among the particular set which you describe, would there be included those lads who looked rather to going into the Artillery than into the Engineers, that is to say, who would only pass the lower examination?—Yes, but they would have liked to pass the higher one if they could have done so without trouble.

7369. Would you keep the artillery and the engineers together?—Yes, at any rate during the first four terms, and, I think, all through.

7370. Do the corporals and under-officers exercise much authority?—Yes, a great deal of the discipline of the place depends upon them.

7371. Do you think that they have sufficient authority?—No; I would decidedly increase their authority. In the first term, while I was at Woolwich, some fellows exercised their authority in order to gratify private animosity, and their authority was greatly diminished on that account.

7372. Do the professors exercise any authority?—Yes, in study, but never out of it.

7373. Do you think that it would be advisable to clothe them with the same authority out of study as regular officers have?—I do not think that there would be much advantage in it, in fact, I think, that it would not be advisable because, as a rule, I think you find that civilian masters are apt to act on their own ideas, and would not act quite as impartially as military officers.

7374. Are the civil professors treated with the same deference and respect as the military professors?—Yes, we always salute them.

7375. The fact of a professor being a civilian would not diminish his authority in his class-room?—No; because he would always have the inspector or assistant inspector to back him up.

7376. Do you think that you got more advantage out of the lectures than from the classes?—We only had lectures in the last two terms, and on a limited number of subjects.

7377. Some of the witnesses have expressed an opinion that the system of lectures should be extended; would you be in favour of that change?—It would depend upon the subjects. I think that lectures on mathematics would be useful on the whole, because that is a subject in which you make least advance when you enter the Academy, as, unless a fellow is very clever, he does not get on in mathematics, in consequence of his receiving very little help personally from the master, the latter having so many cadets to attend to. If part of the time was devoted to a lecture, I think that the cadets generally would receive a greater amount of information.

7378. Did you receive any religious instruction or advice from the chaplain?—Not unless I asked for it.

7379. I suppose that he used to visit you some

times?—He used to visit the hospital. I was only there once or twice, and I do not think that I ever saw him there, but I think that he used to visit it.

7380. On the whole are you satisfied with your own career at Woolwich?—Yes.

7381. You are now at Chatham?—Yes.

7382. How long have you been there?—I joined on the 15th of February last year.

7383. When do you expect to finish your course?—My batch will leave in the summer; the time of departure of each individual will vary from the end of July to September. I expect that I shall be one of the last. As I was away last year on sick leave I expect that I shall not leave till the beginning of September.

7384. (*Lord E. Cecil.*) Do you think that the number of subjects studied at the Academy were too numerous or not?—I do not think that you could omit any of them in order to have a satisfactory result.

7385. Would you be in favour of making any of them optional, or would you make them all compulsory?—There are now a certain amount of optional extra subjects; there are extra subjects, for instance, in mathematics, which are not compulsory.

7386. But you would not be in favour of increasing that number?—I think not, upon the whole.

7387. With regard to French and German, did you find that you learnt more in those languages at the Academy than you knew at entrance?—I perhaps learnt a little more with respect to military expressions; but I do not think that I acquired more general knowledge of French and German after entering; but that perhaps was owing to my knowing them very fairly when I went in, and neglecting further study of them to a great extent, for the sake of working at other subjects.

7388. From what you have heard other cadets say, do you think that they have made any great progress at the Academy in those languages?—You do not generally find that cadets who enter with a limited knowledge of French and German ever get very high marks in them.

7389. That would go rather to show that the increase in the knowledge of languages is not very great?—Yes.

7390. Do you think that any difference ought to be made, with regard to mathematics, between cadets intended for the Artillery and cadets intended for the Engineers?—I do not see the object of making any difference, because it is only those who get high marks who go to the Engineers; it is generally the turning subject.

7391. You said that you had but few faults to find with the system of teaching?—Yes, as far as I remember.

7392. Is any encouragement given by the professors and authorities generally at the Academy to private study?—No, I never received any.

7393. If, for instance, a cadet wishes to work up his subject for examination after lights are put out, is there any obstacle to his doing so?—During the first four terms he cannot have lights after 10 o'clock without special permission, and I do not think that anyone has ever asked for that. In the last term the cadets are allowed to have lights later (until 11 p.m.). It would be an advantage to the cadets in the third class if a similar extension was granted to them, as the work is nearly as hard as in the last term.

7394. Do you think that the work which every cadet is obliged to go through, particularly in his last term, is almost more than he can manage?—Not at present, as the subjects in which the cadets used to be finally examined in the last term are now spread over the two last terms. The mathematics are now distributed through three terms instead of being confined to one, namely, the third term, so that less severe study is required to get up the subject.

7395. Taking into account the amount of study which every cadet has to go through in his last term, and the preparation for that study, what amount of time is left for recreation; what amount of time had you to devote to recreation, to manly games, and out-door exercises?—In the first half of the term I suppose that I had about an hour and a half or two hours in the afternoon for recreation, but I do not think that I had more.

7396. Do you think that the small amount of time allowed for recreation, as a rule, had a prejudicial effect upon the health of cadets in the last terms of their course at the Academy?—I think not. You do not often hear of a cadet laid up from the effects of hard study; their drill, and so on, generally allows them a sufficient amount of open air exercise in the day.

7397. Were cricket and football played at the Academy?—Yes; we used to play against a great many clubs around.

7398. Of course there were no means for boating?—No; they used I believe in former times to have a boating club, but they have not one now. With regard the question whether I was satisfied with the course of study, I have mentioned that I was not satisfied with the mathematical course; I do not think that fellows got on at all well in mathematics.

7399. Can you mention any reason for that?—With the exception of one master I do not think that the masters taught the subject well. Mr. Crofton taught the subject the best.

7400. In your opinion are the military instructors or the civilian instructors the best?—The military professors, I think, taught best.

7401. Did that apply to mathematics also?—There were no military professors of mathematics. In the third class, I think that there were not sufficient masters for the number of cadets. In the first two terms the batches had three masters amongst them, but in the third term the same number of cadets had only two masters to teach them the higher, and consequently more difficult portion of mathematics, and of which the majority had little or no knowledge.

Discipline.

7402. With regard to discipline, what was the power of an under-officer?—He might turn out a cadet to extra drill, and place him in either open or close arrest, making a report to the sub-officer on duty to that effect; and the next grade of under-officer, namely, the sub-divisional under officer, had the same power; but I do not think that the corporals had sufficient power.

7403. Would you give more power to the under-officers and corporals?—Yes; I think that the discipline depends more upon them than on the military officers; they see more of the cadets and what they are at.

7404. How are the corporals and under-officers selected?—They are selected generally according to their seniority, if they have good characters.

7405. Did it ever happen that an under-officer or corporal was promoted against his wish?—I think not; I never heard of it.

7406. Did the power of the under-officers and corporals extend out of doors, in the town as well as on parade?—Yes. If they saw a cadet, for instance, going into a public house, they could put him into arrest and report him.

7407. Did they constantly exercise that power?—No; I do not think that I ever knew an instance of their doing so, they always tried to keep out of the way when they saw a cadet likely to infringe the regulation to that effect.

7408. In fact their power was pretty much restricted to the ordinary parade exercises, or to the conduct of the cadets in study?—Yes; and you may say that the power of the corporal was almost entirely restricted to the conduct of the cadets in study.

7409. While you were at Woolwich was there much drunkenness?—There was a certain amount of it, especially towards the end of the terms.

7410. How do you account for there being more drunkenness at one time and less at another?—Towards the end of the terms and after the examinations were over, fellows had more time upon their hands,

Lieut. W. A. Nugent.

27 April 1869.

Royal Military Academy.

and were more inclined for jollification at the prospect of the vacation.

7411. Was there much untruthfulness?—I think not.

7412. Was there any bullying or practical joking going on?—There was no bullying at all; in some instances there might be practical jokes, but they were merely trivial.

7413. During the time that you were at Woolwich was the arrest ever systematically broken?—No; it was broken I think in two instances, and that was all; it was one feature of the Academy that arrest was scarcely ever broken.

7414. Was there much venereal disease during the time that you were there?—I think not; at least not much that I ever heard of.

7415. No punishment, I suppose, was attached to its discovery?—None at all.

7416. I presume that there was no feeling amongst the cadets against any cadet who was discovered with that disease on him?—No, not generally; in individual instances there might be, but not as a rule.

7417. Have you any reason to suppose that it was often concealed and not found out?—I think not.

7418. (*Lt.-Col. Chesney.*) In one of your answers to the Chairman, you seemed to doubt the wisdom of giving the professors power to punish cadets out of study; did you apply that to both military and civil professors?—I think that it would apply more to civil professors than to military.

Mathematical studies.

7419. From another of your answers, I gather that you think that the study of mathematics, as carried on at Woolwich, has the effect of practically dividing the two corps?—Yes, the marks being so high it is generally the deciding subject.

7420. On the whole is there not an *esprit de corps*, and brotherly feeling, between the officers of the two corps, as having been together at Woolwich?—In the place itself I do not think that there is very much.

Discipline.

7421. In your opinion would Woolwich have a less good discipline if all the small parades and marching in and out of study were abolished?—I think not. I think that there are too many parades; the fellows get slack. A cadet has over 4,000 parades on the whole during the time that he is at the Academy.

7422. If the cadets were allowed to keep up lights to a later hour, do you think that the indulgence would be abused?—I think that it might be abused in some cases.

7423. But would you recommend it under proper observation and restriction?—In the last term and in the third class I think that it might be allowed; but generally I do not think that there is any necessity for it. In fact, upon the whole, I think that the hours are quite long enough. I never sat up after the time for lights to be put out while I was there.

7424. If a Woolwich cadet is in a sort of difficulty, as to which he wants private advice, is there any particular individual attached to the Academy to whom under those circumstances he would naturally go for that advice?—I should think not, unless he be an officer or individual that he knew personally.

Instruction in riding, &c.

7425. Were you instructed in riding at Woolwich?—Yes.

7426. Do you consider the riding course beneficial?—Yes; I think that the cadets had sufficient of it to give them some idea of riding, but I do not think that they had enough to make them good riders, unless they were accustomed to riding before they entered.

7427. For how long does the riding course last?—For the last two terms; it is on every day, except Saturday.

7428. Is the study of gymnastics, including fencing and such things, in your opinion sufficiently carried out at Woolwich?—Yes; prizes are given for it.

Discipline.

7429. (*Maj.-Gen. Wilmot.*) Do you say that if a cadet did not wish to be made a corporal, he would be passed over and allowed to remain a cadet, and not to have responsibility placed upon him?—I do not know; there was no instance of it while I was in the Academy.

7430. Then it was assumed that every cadet would be made a corporal when it came to his turn?—Yes.

Ins

7431. (*Sir D. Cameron.*) Have you gone through the course of fortification and practical instruction and field sketching at Chatham?—I have only gone through the field sketching, but not through the fortification.

7432. Do you think that sufficient practical instruction is given for that purpose at Woolwich?—Yes; I think that as much instruction in those respects is given at Woolwich as could well be.

7433. When you left the Academy could you sketch any sort of ground, either with instruments or by the eye?—I had no talent for drawing; but I should have been able to have made a reconnaissance of the ground with a compass. I think that I could have done any military sketching in which instruments are employed.

Di

7434. (*Lord de Ros.*) As regards the parades, would you diminish the number of parades for all the cadets, or only for the senior ones? Would you make any distinction as regards allowing the senior cadets to miss, for instance, all the parades for meals?—I do not know why there should be any distinction between the two.

7435. As regards the authority of corporals over the cadets, would you separate them at meals and quarters, so as for the corporals to have less familiarity with the cadets?—When I was at the Academy there used to be a great distinction between the terms, there was a great gap between them. The A division or 1st class did take their meals by themselves, owing to their hours of study and drill being different. I do not think that there would be any necessity for the corporals and under-officers of the 2nd class to be separated from the rest at meals; at present they serve to keep order if necessary at the different squads.

In

7436. Can you suggest any improvement as to the mode of giving lectures. We have been told that, as regards the lectures, some cadets who are disposed to study, profit by them very much, and that others, who are not disposed to study, do not profit by them. Do you think that being questioned on the lectures would be an advantage?—I think not.

7437. Would it not rather put a young man on his mettle to answer well in public; would it not rather stimulate him?—I do not think that it would make much difference on the whole.

7438. As regards machinery drawing, is it not very much connected with the study of perspective?—Of course you want perspective to do it perfectly, but you can make a rough sketch of a machine, or a working drawing, without any great knowledge of perspective.

7439. Is perspective taught at all at Woolwich?—It is, I think, more or less of a voluntary subject. I never learnt it, except to a limited extent with respect to sketching.

7440. As regards classics, do you not think them of use to an officer eventually, though not perhaps at the Academy?—It is good education for him, and teaches him his own language.

7441. Would you allow the marks obtained for classics at entrance to the Academy to go on, and to be counted in favour of the cadet on the final examination?—If you did so, I do not know whether you would get the same high class of scientific officer. I do not know whether it would be advisable to carry on the marks, but I would not wish to offer an opinion upon that subject.

7442. As regards French and German, do you not think that it is necessary for an Engineer to study both those languages in order to read the scientific books?—Yes, especially French.

7443. As regards the riding, you said that the riding was daily?—Yes.

7444. Was elementary training taught, namely, the getting acquainted with the first management of the horse, and the riding on the snaffle with two hands?—Yes.

7445. Was there a good deal of instruction in the training of the horse? If you were put upon an awkward young horse, were you taught sufficient to enable you to train him for military purposes?—No, I think not enough for that.

7446. As regards the handling the accoutrements of a horse, the saddling, and the bridling, and so on, were you taught that?—No.

7447. You were taught nothing with respect to the shoeing of a horse?—No.

7448. You knew no more about a horse's foot while you were at Woolwich than you knew before?—No.

7449. Did not you suffer from study, partly in your eyes?—Yes, slightly; but that was before I went in.

7450. In the winter time are the rooms lighted with gas or not?—There is gas all through the Academy.

7451. Have you never heard that complained of as injurious to the eyes?—I do not remember it.

7452. (*Rev. Dr. Butler.*) With reference to the question of *esprit de corps* at Woolwich, I observe that you convey your opinion that there is a deficiency of it; to what do you attribute that, is the life other than a bright and happy one?—I think that it is a very pleasant life, but I do not think that cadets have very much reputation to keep up; "a cadet" used in fact to be almost a byeword. Of course, it would be very difficult to introduce a different system, but under the present system I think that it would be very hard to have more *esprit de corps*. A cadet is treated as something between a schoolboy and a private soldier, and he gets no credit if he behaves well.

7453. You speak of the cadets as being treated partly as private soldiers and partly as boys?—Yes.

7454. Do you mean that the system of discipline is too rigid, and not sufficiently friendly?—Yes, I think that on the whole it is. Of course, for a military establishment it is not too rigid; for a military establishment I do not think that the discipline is a bit too great.

Lieut. W. A. Nugent
27 April 1869
Royal Military Academy.

7455. Do you think that it would be well if the military discipline could be less rigid, and if more genial relations could be established between the authorities and the young men?—Yes. I think that if they had some reputation to keep up in that way, and if the cadets were treated less as private soldiers and more as officers, their condition might be improved, but I think that such a change would require to be brought about very judiciously.

7456. As I understand you, you do not object so much to the discipline of the establishment, as to its being a discipline suitable rather for a private soldier than for an officer?—Yes.

7457. Do you think that it would be as well to introduce a system of discipline less suitable for a private soldier and more suitable for an officer?—I think that it would require a great deal of care to introduce it among the cadets who have been used to the former system. If they got more liberty I think that they might abuse it at first; it is a hard question, and one on which I do not feel competent to offer a definite opinion.

7458. I presume that in your opinion there is not much pride in the present institution?—There is a great deal of pride with respect to football and cricket, but I think that if there was more *esprit de corps* with respect to their general reputation, fellows would take more care how they behaved, and that they would not play the fool the way they do sometimes.

7459. (*Lord de Ros.*) Do you think that the same, or rather better discipline might be maintained by treating the cadets almost like regimental subalterns?—Yes, I think so, if that system was once established.

7460. Did not the late General Ormsby make a very useful advance in that respect, and did not he adopt that system a good deal?—He may have done it after I left. I was only there six months with him.

The witness withdrew.

J. J. Sylvester, Esq., F.R.S., examined.

J. J. Sylvester, Esq. F.R.S.
Royal Military Academy.

7461. (*Chairman.*) You are professor of mathematics at the Royal Military Academy?—Yes.

7462. When did your connexion with that institution commence?—About 13 years ago.

7463. You have favoured the Commission with so lucid and ample a statement of your views,* that I do not think that it will be necessary for me to put any further questions to you. You state that you think that there ought to be more opportunities for private study among the pupils?—I think so.

7464. By private study what do you mean?—I mean that they should be able to study subjects according to their own view of their wants.

7465. Do not they do that now?—The study is all carried on in the class-rooms, except that some try to work when they probably might be better employed in recreation.

7466. Then if I understand you, your desire is that the hours of study in the class-rooms should be diminished in order to leave more time for private application?—Yes.

7467. (*Rev. Dr. Butler.*) You state that the Academy groans under the weight of a divided government at present?—Yes.

7468. What is the extent to which you think that a concentration of offices might take place? For example, do you think that the duties of the Lieutenant-Governor, and the Inspector of Studies, and the Commandant, might be discharged by one officer?—The second commandant is inspector of studies, and under the inspector there is an assistant inspector.

7469. Do you think that the duties of inspector and second commandant might be discharged by the same officer who was Lieutenant-Governor?—I think so, with very great advantage; and in support of that opinion I would refer to the present state of the Academy. For six weeks past we have had no Lieutenant-Governor, and I think that the discipline and working state of the Academy have never been so good as during that period. I think it most important that the authority should be concentrated in the hands of those who are practically connected with the Institution. At present the Lieutenant-Governor is a little king, or god, who seldom or never comes into connexion with the ordinary mortals of the establishment. I think that either the Lieutenant-Governor should be his own Inspector, or that the Inspector should be the Lieutenant-Governor.

7470. You think then that the feeling of the cadets towards the Lieutenant-Governor is so distant that they hardly regard him as a fellow creature?—I think that that is the general feeling; but I am not very well able to speak of the feelings of the cadets in particular, because I have not much to do with them in their private capacity. I believe that no Lieutenant-Governor during my connexion with the Academy has ever exercised any moral influence over them whatever. I think it most important that the officer who has really to look after the studies should be the one entrusted with authority to carry out his own views.

Preparation for the entrance examination.

7471. In your observation of your mathematical pupils, have you had occasion to think that they are over-worked at the Academy; do you think that the preparation which they undergo in order to pass the severe entrance examination, and again for the final examination, leads to over-work?—They undoubtedly work very hard, but I do not think that they are overworked. I do not see any symptoms of its doing them any harm; and certainly as regards their preparation for coming into the Academy, although we hear a great deal said about "cramming," in the generality of instances I do not recognise any bad effects

* Appendix, page xlvii.

J. J. Sylvester, Esq., F.R.S.

27 April 1869.

Royal Military Academy.

produced by the supposed cramming system. I think that the incoming cadets acquire some very bad ways and habits at certain of the training schools; but I do not find them crammed in mathematics, on the contrary, I find that they understand what they are doing, and work intelligently. I am particularly struck with the general intelligence of our cadets.

7472. Is the mathematical standard at the entrance examination very much what you yourself would recommend?—I think that if we are to go on upon our present system, a larger amount of mathematics ought to be exacted at entrance, and more still if the course is to be made more exclusively practical, because the cadets do not enter sufficiently prepared in the subject to dispense with the study of pure mathematics at the Academy. I think that it would be very desirable to go on almost exclusively at the Academy with those subjects only which would have a direct bearing upon their professional studies, and that the Academy should not be converted into a preparatory school for young gentlemen intending to enter the army.

7473. (*Lord de Ros.*) One of the cramming masters told us that he considered that eight hours a day at mathematics was not too much strain upon the mind of a young man, what is your opinion upon that point?—It is a considerable strain; I should think that eight hours was quite the extreme maximum which ought to be given to such a subject; but nothing approaching to this goes on at the Academy.

Organization.

7474. With regard to the double government, do you think that where there are so many military officers employed, the presence of an officer of a higher rank than the others is not of some advantage in maintaining discipline in the establishment?—I think the presence of an officer of the rank of our present second commandant sufficient for all purposes. It seems to me that there are many more officers than are necessary, and I go upon this ground. When I first joined the Academy there were one captain and two subalterns employed at the establishment, who took the duty alternately, one subaltern being on duty and another on leave. That was when we had 160 cadets up on the common, and there was a practical class of 30 or 40 in the lower part of the town, of the arrangements of which I am not able to speak. When there were 160, as against 200 or 220 cadets at the present time, the work was done really by only two officers. There are now three captains, and four lieutenants, and a paymaster and adjutant; that makes eight officers to do the work which was formerly done virtually by two, and I think that that also gives additional weight to the observation which I ventured to make with regard to the office of Lieutenant-Governor. I think that there is no motive for the Lieutenant-Governor to practice economy. I do not think it possible that such an improvident and unnecessary scale of expenditure could have grown up if the Lieutenant-Governor had felt that he had a duty to perform to the Government and to the Public; whereas it seems to me that the gentleman placed in that position has a natural inducement to surround himself with state, pomp, and patronage. I have been very much struck with the following fact. On looking at the army estimates for the Royal Military Academy I find that we employ no less than 100 servants to do the work of these 200 young men; this number includes civil and military servants, 32 of one class, 68 of the other, such as serjeants, gatekeepers, assistants, porters, &c.

7475. You think there are too many subordinate employés?—Yes; I think that we are very much overweighted in that respect.

System of instruction.

7476. Is any of your instruction given in the form of a lecture?—No, it is entirely tutorial.

7477. Do you think that the system of lectures is a good one, or that you might stimulate those who were idle at the lectures?—As far as I know, lecturing at the Academy is never unaccompanied with tutorial instruction; but we are so isolated from one another that I cannot speak with any certainty as to what goes on in other departments than my own. I am quite satisfied that I should be of far greater use in giving lectures and summarising, than in carrying on the ordinary work of a tutor.

7478. Would you conduct the lectures on the same principle as at the universities, namely, laying a certain amount of instruction before the pupils, and then questioning them, or calling upon a certain pupil to explain a problem?—I think that that would be desirable. I think it very desirable that lecturing and questioning should be combined, as I have seen done in foreign universities.

Organi

7479. (*Sir D. A. Cameron.*) If the office of Lieutenant-Governor were combined with that of Commandant and Inspector of Studies, would not the person holding that appointment require some one to assist him in his duties?—I think that he has ample assistance at present.

7480. Would you still keep the assistant inspector of studies?—I scarcely presume to state the way in which the organization of the Academy should be reformed, as I have not sufficiently considered that matter, but I think that you do not require the present staff. The great thing, which I think is needed, is the concentration of authority. I think that the Lieutenant-Governor should be his own Inspector, that is the point upon which I have principally made up my mind. Not to be misunderstood, I must beg to add that I consider the Academy is most fortunate in having the services of the present Inspector and second Commandant.

Systen instruc

7481. (*Lt.-Col. Chesney.*) Do I understand that with regard to your own teaching you would approve of the system adopted at West Point, where the professor has no class but rather superintends the instructors?—No; I would have a class. I do not see why the third class, which is now the highest mathematical class, should not be in two sections, of which one would receive direct instruction from the professor of mathematics. I would not propose that my functions should be by any means confined to the supervision of those under me.

7482. But you would have the general control of that branch of studies?—Certainly.

Discip

7483. As to the discipline in classes, have you recently had any trouble in that respect?—There is generally a knot of three or four ill-conducted young men; the great majority are very gentlemanly and well-conducted, but there are three or four who seem to take a pleasure in making noises. I ought to add that these are cadets who have no business to be in the class at all, as they know beforehand that they have no chance of passing the examination in mathematics, and are only wasting their time during the hours supposed to be given to mathematical study.

Numb staff.

7484. (*Lord E. Cecil.*) According to the evidence which we have had we find that there is something like one professor, or executive officer, to every five or six cadets. I understand you to say that you think that that is a great deal too much?—I have not considered the question of the rate of proportion between professors and cadets, so that I am hardly in a position to answer that question.

7485. I understood you to say that the number of officers and servants was too large?—I think that there are three persons set to do the work of two or one in the military branch.

7486. Do you think that that is the case with the professors?—I cannot state—we are not brought together—a public spirit is not developed. I can only speak of my own department, and I think that we are not at all over-officered; we have as much as we can do to get through with the work.

7487. Do you think that by a re-construction there might be a reduction?—Yes.

7488. Supposing that the classes and the class-rooms were re-adjusted in your own department, could that be done?—I do not say that it would be impossible, but I do not think that any serious reduction could be made. When I first joined there were seven mathematical masters and myself as Professor of mathematics. There are now only four mathematical masters and myself as Professor.

7489. You say that you have no knowledge of

what might be done with regard to other studies; but you have been a very long time at the Academy?—Yes.

7490. And I daresay that you have turned your attention to that subject, namely, as to the great number of professors as compared with cadets?—Occasionally.

7491. And possibly you have something which you can suggest to the Commission on that head?—Perhaps it is an omission on my part, but I have not given sufficient attention to that subject, except as regards my own department, to enable me to do so. I have a general impression that the proportion of instructors to the number instructed is large, but I should not be able to state an opinion in any precise form as to the mode in which a curtailment could be effected.

7492. Do you think that your opinion is generally held among those who are acquainted with the system of instruction in the college?—I cannot say that I have heard that opinion generally expressed. Probably being parties interested we are not the best judges. I have never heard the opinion avowed that there were too many instructors, not even in incidental conversation. I do not see that in the mathematical department the number could be well abridged.

7493. Have you any opinion as to the propriety of reducing the servants and officials of the Academy generally?—No, that does not lie in my department. I have only been struck with the large number. If at Woolwich we want 100, there ought at a public school to be, say, 300.

7494. (*Rev. Dr. Butler.*) I gather from you that the professors at Woolwich act very little together and see very little of one another?—I ought to state that when I first joined, there were only the Professor of mathematics, namely, myself, and the Professor of fortification; all the other professorships are recent creations of the Council of Military Education. With regard to our acting together there is very little of it, there are many of the instructors whom I really do not know by sight; I have asked who they were when I have met them in company with others. That occurred to me only the other day in the case of Captain P——, and I did not even know what subject he instructed in.

7495. So that the professors and instructors are never assembled together to discuss in common any possible improvements which may be required, either in the instructional department or in the moral discipline of the place?—No; the only instance of such a meeting, within my recollection, was one which was called by the present inspector, Colonel Field. That meeting was held to consider a change of hours, but I have never known anything of the kind before or since.

7496. (*Chairman.*) Had that meeting any practical effect?—Yes; the Lieutenant-Governor did not attend, but the Inspector of Studies did attend. I think that that was an occasion when the Lieutenant-Governor ought to have attended.

7497. (*Rev. Dr. Butler.*) Do you think that advantage would arise if such meetings were more frequent?—Yes; it would tend to an *esprit de corps* among the professorial staff. We feel ourselves very much in the light of day labourers; we have our work to do and are paid for it. I should be very glad to see a stronger feeling of co-operation. In France a student at the Polytechnic is proud of his school as long as he lives, and I think that there is much more of that spirit among our cadets than there used to be, but I should like to see it carried further still.

7498. In short, you attach great value to any organization which would bring the members of the instructional staff to act together?—I think that it would be of great importance in every way.

7499. (*Lt.-Col. Chesney.*) You have drawn a comparison between the number of employés at a public school and at a military college; does not it strike you that the varied education which you give at Woolwich must require a greater proportion of instructors?—Yes; you must make a certain allowance for that. I would not draw an exact comparison. I may state that many of our cadets, at times, study intensely out of hours, and I happen to know incidentally that they get private instruction. With all the instructional power which is brought to bear upon them at the Academy, some of them find it necessary to get additional help in the town in order to pass their examinations.

7500. (*Maj.-Gen. Wilmot.*) There is a certain amount of time in which the cadets can do that?—They do it in the evening if they are very hard driven. I have asked cadets whether they like the Academy, and they have said that they are very comfortable there; but have added, "We are worked very "hard," and that they have always the terror of an examination hanging over them.

Position of th instructional staff.

7501. Do you see much of the cadets personally?—I should be glad to see a great deal more of them were I in a position to do so.

7502. As far as your experience goes are you treated with respect?—Yes, by an immense majority; it would be strange if it were otherwise. But there are certainly two or three of a lower stamp who are either ill-bred or ill-educated, and who I think conduct themselves occasionally in an improper manner.

7503. Is that personally towards yourself?—I should say that in some cases undoubtedly I have been affronted, and that sufficient notice has not been taken of it at the time. To show the laxity which I think results from our extravagant and divided system of government, I beg to narrate the following occurrence:—In June last there was a public examination: I had some friends present. The Bishop of ———, a very old friend of mine, was there; he went round the place where the drawings of the cadets were exhibited. I was not present, but a friend of mine went round with him, and they witnessed together a caricature of all the civil professors and instructors in the Academy with the exception of myself and another. Redress was asked, but none was obtained. The bishop could not conceal his surprise and pain at such a thing being tolerated. It was in a frame, standing in a conspicuous position, over a mantel-piece. Redress was asked, not by myself, but by a master who was caricatured. The caricature was publicly exhibited before the Duke and his military staff, and a crowd of gentlemen and ladies who visited the Academy. I think that that was perfectly disgraceful conduct on the part of the military authorities, and that there was a gross dereliction of duty, when redress was claimed, due to the whole body of Academy instructors, to allow it to go unredressed, and unvisited with censure in any form.

7504. (*Lord de Ros.*) In what form were the caricatures represented?—It was all in one, and hung up in a frame upon the wall.

7505. (*Sir D. A. Cameron.*) Was that done with the knowledge of the authorities?—With whom the fault lay I cannot pretend to say, and I do not so much blame what, it is to be hoped, may have been only a lamentable oversight on the part of the military authorities in allowing the affront to be offered, as the neglect with which the matter was treated after their attention had been directed to it; such neglect could not fail to invite a repetition of the offence, and to lower the consideration of the whole body of civil instructors. And this is but one instance out of a multitude of the mischief arising from the distribution of authority among so many hands, and the consequent laxity of discipline. The parties concerned in the proceeding were perfectly well known, and there would have been no difficulty in taking due notice of the occurrence.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

Thursday, 29th April 1869.

PRESENT:

THE RIGHT HON. LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
GENERAL LORD DE ROS.
LIEUT.-COL. SIR CHARLES RUSSELL, BART., V.C.
LIEUT.-GENERAL SIR D. A. CAMERON, K.C.B.
MAJOR-GENERAL EARDLEY WILMOT.
MAJOR-GENERAL HAYTHORNE.
C. S. PARKER, ESQ., M.P.
REV. DR. BUTLER.
REV. W. C. LAKE.
LIEUT.-COL. CHESNEY.

Lieut.-Col. G. A. Milman.

29 April 1869.

Royal Military Academy.

BREVET-LIEUT.-COL. G. A. MILMAN, Royal Artillery, examined.

7506. (*Chairman.*) You are captain of one of the companies of cadets at the Royal Military Academy?—I am.

7507. And you were formerly a subaltern officer in a cadet company for a short time?—Yes.

Appendix, page li. Organization.

7508. Among the replies you have been good enough to forward to the Commission is contained a suggestion for the institution of a board of improvement; perhaps you would explain to the Commission at a little greater length how you would desire to see such a board constituted?—I should like to see it constituted of a certain portion of the professors, and one or two of the military officers associated with them. I think a board of a similar kind exists at the École Polytechnique and one or two of the distinguished foreign colleges. I believe that it would tend to destroy a certain line of demarcation which at present exists between the professorial element and the military element, so to speak. With regard to the actual constitution of the board, I think that that should rest with the governor of the institution.

7509. In fact it would be rather a consultative board?—Yes, consultative decidedly. The second commandant would be *ex officio* president of it; and if anything occurred that led to any dispute he would be able to put his hand upon it and stop it at once.

7510. You seem to think that we cannot get rid of the cramming establishments?—I think, as I say in my answers, it is just a case of supply and demand. I do not know what may be the effect of special classes being established at the public schools; they may tend perhaps to a certain extent to do away with it; and I should be very glad of course to see it done away with; but I must say that I think a cleverish man, having a certain limited number of pupils at his house or in his establishment, whatever it may be, would be very likely to run a very good race with any public institution.

7511. (*Lord E. Cecil.*) You say that you think that certain modifications might be made with advantage as regards the military officers in charge of the cadets; do you mean that they might be reduced in number?—That is quite a matter of opinion. I think a certain number of military officers are essential. There are at present three captains, one to each division. I think it is quite a question for consideration whether the former system, in which there was a first captain with three subalterns and a second captain, might not be a little more advantageous in some respects; but that is altogether a matter of opinion.

7512. What in your opinion is the minimum number of executive officers which would be necessary for the present establishment of cadets?—I should say certainly five, a first and second captain and three subaltern officers. I think the association of the officers with the cadets in games, if they take an interest in them, has a good moral effect.

Appointment of officers.

7513. Do you think that the officers generally are selected in the best possible way?—That is rather an invidious question to put to me. To tell the truth, I do not exactly know how they are selected or who appoints them. Whether the appointments rest with the Duke of Cambridge or the Lieutenant-governor of the Academy, I could not tell you. I have no knowledge how they are appointed, except that they appear in the Gazette.

7514. In your own case, how were you appointed?—My name appeared in the Gazette. I do not really know how I was appointed, more than that; I suppose previous character and professional credit have something to do with it, or at all events ought to have something to do with it; I must say that I have very strong opinions upon that subject.

7515. Perhaps you would not mind stating them?—These appointments ought, in my opinion, to be considered as some of the highest appointments in the Artillery. I do not know that they are so considered now, but they ought to be; and the officers ought to be selected for them with very great care, regard being had to character and a certain amount of professional knowledge and practical knowledge of drill, and so on.

7516. In whom would you vest the appointment, in the Lieutenant-governor, the Commander-in-Chief, or the Council of Military Education?—In the Lieutenant-governor, certainly, as the Academy is at present constituted, he being a general officer.

Com instr and nary

7517. Would you be in favour of combining the instructional and disciplinary powers in the same person, or not?—Decidedly not. There are a great number of professors there altogether, and I do not see how it would be possible to make a selection, and to choose from the professors those who should be also military officers. And not only that, but they could not, I think, combine the two duties very well; it would come to the same thing in the end, because if you kept up the same number of cadets you would have to increase the number of professors.

7518. Do you mean to say that a military professor would not have the time or the capacity to attend to all his duties?—I do not mean that in the least; but I think that it would create great jealousies. I do not see what rules of selection you could adopt, or in what way you could pitch upon the professors who should do their duties; you would only want three or four of them.

7519. Supposing you were to increase the number of military professors, could it not then be arranged?—My opinion is certainly strong against it. I do not think it would answer, and I do not think the young men themselves would approve of it in any way.

7520. You speak in your answers of there being a "strong line of demarcation drawn between the two "elements, the instructional and the military;" do you think that there is any jealously now existing between them?—I think it has been a question of individuals; I will not name them of course; but in the case of one or two of the captains, at least, and of the captains commanding the cadets, I think a strong line has arisen, more perhaps from individuality than anything else. At the same time, I think, there is a line of demarcation which it is a pity should exist. I think it would be a very good thing if two or three professors were associated with the military officers upon the boards for sports and recreations, and all those things. There are among them clever men, and men of good common sense, whose opinions would be valuable upon a board such as I have suggested, and it might be advantageous to have them upon it. The

military officers might occasionally give a hint regarding a point of study, and I think the professor might give hints which would be useful even regarding points of discipline.

7521. Do you think that such a board would remove any sensitive feelings which exist now between the two branches, the professors and the executive officers?—Yes, I think so; I think it would at all events have a tendency in that direction. I should be only too glad to see it.

7522. You are opposed to any amalgamation of the two colleges of Woolwich and Sandhurst?—I am decidedly.

7523. Will you state your reasons rather more fully than you have stated them in your answers to the questions that were sent to you?—I think the question of purchase in the army is to some extent involved in it. As I have said in my answer, I fully believe Sandhurst is now going on very well; but if you made one universal college for the army a certain number of young gentlemen would come there who would look forward to purchasing their commissions, and they would necessarily not care about keeping up to the same mark as the others. I think that would always infuse a certain idle element into it. I do not like to use those words, but I mean something of that kind; I think that is one objection, and certainly it is a strong one. I think also that if you made one universal college for the army, you would have to lower the standard of entrance considerably. You would be obliged to have a greater number of young men of a lower class as regards attainments and knowledge coming forward as candidates. I think such a great lowering of the standard of entrance would be objectionable; and not only that, but looking at it from another point of view, I do not see what guarantee you would have that those who passed at the head of the list in the college would take the Artillery and Engineers. I suppose that we may assume that it would be an advantage to get clever men for the Artillery and Engineers; but the man who passed at the top of the list might not choose to take the Artillery or the Engineers. I do not say that that would be the case, but you would have no guarantee that your best men on the list would enter the scientific corps. I think that would be another objection besides those I stated before.

7524. If you could admit a higher class of cadets to Sandhurst, such as you now have at Woolwich, would those objections still hold?—I believe that you could not do that. I think you would have to admit so very many more that you would have to lower the standard considerably.

7525. I am not now speaking of one universal college for the army; I am only supposing that a certain number of cadets of high attainments were admitted to Sandhurst. Under those circumstances, supposing that such a thing could be brought about, would your objection still hold?—I certainly should decidedly object to it.

7526. You have no other objection besides those you have stated?—No other objection occurs to me.

7527. (*Sir C. Russell.*) Do you not draw a wide distinction between a man taking a few pupils for a special purpose, and the cramming establishments which we have had it stated in evidence before us are very much calculated to imbue the young men who are educated there with very bad habits?—The question is, what is the result? I really think that as a general rule the present tone of the cadets, both morally and in discipline, and in every other way, is very fair indeed. It is certainly very much better than it was in my time. That arises no doubt partly from their being so very much better treated and so much better fed than in former times; but I only look to the result, and I do not know that I can quite be of the same opinion as that you have referred to, namely, that these cramming establishments do produce such very bad effects. I know some of them do, but I know also of some where the pupils are very well looked after, and those establishments produce excellent young men. I think they make very good cadets and very good officers. I quite agree that I should very much like to see a much stronger element of young men coming from the colleges and from the public schools. But it is merely a matter of opinion, and looking to the results I do not think I should be justified in saying that what you have stated is the case.

Lieut.-Col. G. A. Milma

29 April 186

Royal Milita Academy.

7528. As it is, the element from the public schools, as far as regards giving anything approaching to a higher tone to Woolwich, is completely over-weighted, is it not, by the boys who come from cramming and other establishments?—I am hardly prepared to answer that question, I only look at the general result I do not always know exactly, to tell the truth, where the cadets come from; I am not sufficiently acquainted with the previous history of the cadet to know whether he has come from a public school or not. I can only take it from returns, but, as I say, the general tone and bearing and everything of that kind is very satisfactory now. Of course I could give the proportion from the returns of those coming from public schools and so on; but that would not be from my own personal knowledge.

Course of instruction.

7529. In recommending that the education in matters of a professional and practical character should be more attended to, do you mean that to apply to the out-door work, to the field work, or what?—I think they might do their drills and their out-door work better and more efficiently. I think we are rather apt (it may be the fault of the present age in general) to overlook the fact that really a good ground-work and also a good knowledge afterwards of practical work are of great importance. And although I quite agree in thinking that if two men are equal in other respects, I would much rather have the cleverer and the more scientific for an officer,—it is only under those conditions as regards practical knowledge. I cannot go much into the matter of the details of study. I have gone into it enough to form my opinion, but I am not thoroughly acquainted with the details. I know the number of subjects and so on.

7530. Do you think that the number of parades per day is excessive?—I do not think there are too many military parades; as to the others I do not think it is a very important question. Our habit is to consider that as long as the cadets are on parade it is a military business, and when they go into study all military business ceases. I do not know whether it would not be sufficient to have a bell ringing or a notification in some way that the hour for study had arrived, and then they should be responsible. In that case it would not be a military business at all; but that is quite a matter of opinion, and I am not prepared to say what ought to be done.

7531. I see you have mentioned that in the large class rooms where there are 40 cadets there are three instructors in the same room?—Yes. As a matter of opinion, and speaking from what I have heard the cadets say themselves, I should say that that was slightly objectionable. It is rather too great a number; there is some confusion.

7532. Do you think the confusion arises from the three instructors or from the large number of cadets?—From both. I think it arises from the circumstance of there being so many cadets, and of there being the three instructors. I suppose a certain amount of instruction has to go on at the same time.

7533. Are those three instructors instructing in the same thing, for instance, fortification?—Yes; taking the example of fortification, the professor of fortification and two of his assistants are in the room at the same time.

7534. And mathematics the same?—Yes.

7535. That goes on in the same room?—Yes.

Powers of th Lieutenant-governor.

7536. With regard to the Lieutenant-governor, you suggest that he should have plenary powers as regards discipline; but, if I understand it rightly, you would not leave him the same power with regard to the educational part of the duties?—No; I beg your pardon. It may be rather presumptuous of me to give such

Lieut.-Col. G. A. Milman.

29 April 1869.

Royal Military Academy.

an opinion, perhaps, but all I think is that there is a good deal of circumlocution as far as I understand it. For instance, supposing there is a question regarding the studies of a cadet, a letter has to be written to the military secretary; it goes from the military secretary to the Duke of Cambridge, and from the Duke of Cambridge to the Council of Military Education. I should have thought that on a question regarding studies, the decision of the Vice-President of the Council of Military Education *ex officio* should be sufficient, and he should be the medium of communication with the Commander-in-Chief upon educational matters connected with the colleges. With regard to the Lieutenant-governor having full power, supposing there is a general officer, as there ought to be, at the head of the Academy, I think he ought to have full power of instant removal, but not of dismissal. Dismissal is a very serious thing, entailing consequences upon a man in future life, preventing him from entering the navy, for instance, and so on; but I certainly think, if a cadet commits any serious crime, or does any disgraceful thing, the Lieutenant-governor should have full power to remove him at once. He might appeal afterwards in case of dismissal.

7537. You would limit the Lieutenant-governor's power to the discipline of the Academy and not extend it to the educational department?—I think he ought to be at the head of the whole, decidedly, and fully responsible for everything.

7538. You would give him plenary power?—Yes; otherwise he should be, not a general officer, but only a colonel on the staff; that is my idea.

Position of professors.

7539. (*Lt.-Col. Chesney.*) Do I rightly understand you to say that it would be your wish that a certain part of the professors should take more personal interest in what the cadets do?—Yes; I think it would be a very good thing for one or two of them to be associated on boards of all kinds, for recreation and any matters of that kind. It would be very useful in more ways than one.

7540. You see no reason, do you, why the fact of being a professor should dissociate a man from the cadets whom he is connected with?—Certainly not. I say that it has formerly been a question more of individuals than of anything else. I think there was an antagonistic feeling existing at one time, but it was chiefly due to individuals.

7541. It is not the case that Engineers are ever employed as captains or lieutenants at Woolwich, is it?—No.

7542. They are employed partly as professors, are they not?—Yes.

Discipline.

7543. Regarding the discipline as concerns these parades, did I understand you to say that it is a matter of opinion as to whether there should be any of these small parades for going in and out of study, or not?—Yes.

7544. Does not it occur to you as apt to lead to a confusion in the minds of cadets between parades for real exercise and parades for calling over names?—No, I think not. I think that they are quite aware that as long as they are on parade they are under military discipline, and that a military officer is present, who marches them into study, or if he is not present his *locum tenens* is present.

7545. We have it in evidence that the cadets are not as perfectly steady on parade always as would be implied by a military parade; may not that arise from the fact of their having too many of these minor parades? If there were but few of them would it not be as easy to enforce proper college discipline?—There is a distinction between the two kinds of parade; there are parades for drill and general parades. It might be advisable perhaps that there should be such a distinction as you point to between them. The cadets are not quite so steady as they used to be in former days, certainly, but they attend the drill very well.

Education of candidates for the Line at Woolwich.

7546. You know that they drill very well?—Yes.

7547. Regarding the giving of line commissions from Woolwich, do you not see that there might be the same objection to a moderate number of line commissions being given from Woolwich as there was formerly from Addiscombe, where the officers receiving the line commissions were known to everybody to be the lowest of their set at the time in the college?—I think so; that is one thing which I forgot to say before. I was wrong in supposing, as I did at first, that the idea was to form a universal college; but if that were done, and the cadets at the top all took the Engineers or the Artillery, I do not think the army would very much like the idea that all the lower ones should come into the line; not that they always make the worst officers.

Staff exam

7548. I have been requested to ask you some questions regarding the Staff College examinations. You have been examiner for some time there, I believe?—Yes, I have for two or three years.

7549. Will you state to the Commission what standard of knowledge you find on the average in the officers who are passing out of the Staff College?—Of course I can only speak with regard to the subjects I have examined in. I must say it is not particularly satisfactory. I do not think there is a very high standard of answers, as a general rule, but the subject (I speak of artillery) is of a special character, so that the examination comes hardly upon some of the officers in one way. I only know them by the numbers, but an artilleryman ought to have, and, I should say, would have a very great advantage in answering those questions. I suppose it is necessary to examine them upon the subjects on which they are examined, but really it struck me that it was (I do not know what expression to use) almost a farce.

7550. Are you speaking of the artillery examinations only?—Yes.

7551. With regard to the examination in fortification, did you find that a man leaving the Staff College would be tolerably well up in the lower parts of that subject?—Of the practical out-door work, which I suppose would be all that would be required of them, they have a considerable amount of knowledge. Of course as regards permanent fortification, there were only a few of the easiest questions put to them. They were examined in places they had seen, or in something they had done, as much as possible.

7552. Would you consider that those officers might be utilized afterwards in teaching to others the lower parts of fortification practically?—Certainly. In a camp they might be very useful, decidedly, for the rough practical out-door work. I think it is a matter of the utmost importance now that they should know something about entrenching and so on.

7553. You have not found anything like a want of diligence apparent in the results of your examinations at the Staff College?—Not at all.

Roy Aca Org

7554. (*Maj.-Gen. Wilmot.*) With regard to the system of superintendence and discipline at Woolwich Academy, I think I understood you to say that, as a rule, as a matter of opinion, you thought it would be better to have one captain instead of three?—I say it is quite worthy of consideration.

7555. Have you no opinion about it?—I have not struck the balance in my own mind. I say that the association of a certain number of military officers with the cadets is a thing of great importance, and I say that I think it would be more advantageous in a great many ways to have a first and second captain.

7556. Do you approve then of the present system, by which the inspector of studies is also second commandant?—I think he ought to be *ex officio* second commandant, because he must take the place of the Lieutenant-governor should he be ill or absent. But, as a matter of opinion, I do not think that he should interfere to any great extent in the military matters. I think he has a great deal to do, and I think there is a certain amount of circumlocution; there is a great deal of unnecessary correspondence going on now from that reason. But I think that *ex officio* he ought to have that position, so as to take the

place of the Lieutenant-governor if he went away and was absent or ill.

7557. Without being *ex officio* second commandant, would he not as senior officer immediately assume all the functions of the Lieutenant-governor in his absence? Has not it always been so since the Academy was founded?—It has always been so.

7558. Supposing the Lieutenant-governor to be absent, although the inspector of studies was not *ex officio* second commandant, would he not immediately assume all the functions of the Lieutenant-governor in his place simply in virtue of his being the senior officer present?—Perhaps he might not be the senior officer; that would be quite possible. I suppose the Lieutenant-governor has the power to appoint anybody as the inspector of studies.

7559. Have you ever heard of a case of the inspector of studies being under the rank of lieutenant-colonel?—No, I think not.

7560. With a view to that very thing, has not the inspector of studies always been a lieutenant-colonel ever since the Academy was founded?—Yes.

7561. The present system of the inspector of studies being also second commandant necessarily involves the addition of two other offices, as I understand, namely, the paymaster and adjutant, the duties of both of which offices were formerly performed by the officer commanding the company. The officer commanding the company was the paymaster, and had the entire responsibility formerly, had he not?—Yes; but I do not think under present circumstances the captain of a company could be the paymaster, because there has been a change as to the payments. In former days he did not pay all the salaries of the professors and everybody; now the paymaster pays everybody, so that an immense sum of money passes through his hands.

7562. Still the addition of 34 people who have to be paid only increases the amount of clerks' work?—It increases the sum of money which passes through the paymaster's hands. You could not, I think, under the present system, make a military captain responsible for so large a sum of money; that would be decidedly objectionable.

7563. Would the objection merely be that he would have charge of a certain sum of money, and a larger sum than he ought to have charge of?—I think there ought always to be a paymaster and adjutant. I do not think you want another adjutant; what duty he does I do not know.

7564. Whom do you refer to?—There is a fourth subaltern who acts as adjutant, I suppose.

7565. In addition to the adjutant?—An additional office adjutant.

7566. There is another adjutant besides him?—Yes, the paymaster and adjutant.

7567. In one person?—Yes.

7568. Does the adjutant superintend the drills?—He is the second commandant's mode of communication with the captains.

7569. Then have the captains nothing to do with the drills at all?—Certainly, they have.

7570. How can they if the adjutant is there too?—He has nothing to do with the drills beyond this, that the drills are detailed in the office, and he is the mode of communication for the colonel and the second commandant with the captains.

7571. What is that step wanted for?—That I am not prepared to say.

7572. I suppose the captains could communicate with the second commandant without him?—I am not prepared to say.

7573. Is there anything now hindering the Lieutenant-governor or the second commandant from associating the professors and officers together in the way you have described?—No, I suppose there is not. The Lieutenant-governor would have the power to do it, unquestionably. I do not suppose he would do it. They do not deviate, of course, from the printed regulations which were issued, as I understand, by the authority of the Commander-in-Chief. There are printed regulations for everything, and they are not deviated from.

7574. I understood you to say that this board was to be principally consultative?—Yes.

7575. The power of forming any consultative board he thought proper under his orders would surely rest with the Lieutenant-governor?—Yes, perhaps so; but it would be a deviation from the general system adopted in the Academy, and accordingly it would probably have to go before the Commander-in-Chief; but I am not sufficiently informed upon the subject to be able to say.

Accommodation.

7576. When you spoke of the number of classes in the study rooms being so large, I conclude that the objection arose from the rooms being too small for the number, and not from the fact of having different classes in the same room, as is the case at most public schools, supposing the rooms to be large enough?—The old class rooms held 30 cadets and two inspectors; the present rooms, which have been built more recently, hold 40 cadets and three inspectors. There is no objection to it in principle.

7577. In fact, the rooms are too small?—There is not sufficient accommodation without these large class rooms; they are calculated to hold the 40, and they put 40 into them.

7578. Would you prefer seeing separate class rooms for each class, or how would you get over the difficulty?—You could not do it with the existing accommodation. You could not make the existing accommodation sufficient unless you divided them off to a certain extent. Under any circumstances I think there must be drawbacks from having three instructors and 40 cadets in the same class room.

7579. We want to know how to get over the difficulty. The question is whether the rooms are too small, or whether the system of having three classes in one room is a bad one?—I think the system of having such a large class in the room is a bad one.

Discipline.

7580. With regard to these private parades, for studies, which you have spoken of, do you think that when the discipline is satisfactory any evil result can accrue to discipline from the cadets assembling together to march into study?—No; I do not see it myself. I think it is not a serious matter, or, indeed, a matter of any importance at all.

7581. If any evil did result, it would rather argue a want of discipline than a bad system, would it not?—Yes; I think so. I do not see that it is a matter of serious importance at all. I do not know whether the cadets think they are annoyed by the number of parades.

7582. You used the expression, "The cadets think "they are annoyed." Is it the general feeling at the Academy now that that is the main point to consider?—I do not know. Personally, to a certain extent, I may be of opinion that it is; but I think there is a line which ought to be drawn between the two extremes. I think we should not sacrifice any important matter of discipline, and at the same time I think you may keep young men of a certain age too strictly.

7583. Are there any points in the arrangements now which you would indicate as being desirable to be removed upon that principle you have spoken of, I mean with regard to anything with which you are connected as a military officer?—I do not know of any privileges which one would extend to the cadets beyond what they have got.

7584. Or any disabilities which might be removed?—No; as I have said, I think it comes greatly to a question of individuals.

7585. You consider, as a general rule, that the difficulties arising in the institution, of that sort, arise principally from individuals?—Yes; I think so to a great extent. I have opinions with regard to young officers after they get their commissions, but I do not know that they bear upon the subject under consideration.

Instruction of young Artillery officers.

7586. I think that is a very important point for consideration at the present moment. The young

Lieut.-Col. G. A. Milman.

29 April 1869.

Instruction of young Artillery officers.

officers are now handed over to some officer, are they not?—They go to Woolwich.

7587. Do you think that that is a good or a bad system?—I do not think that it is a good system at all. I think they learn nothing, or very little. I do not think Woolwich is a good place for them.

7588. What would you propose instead of it?—I should not propose their being worked hard. I think it is a good thing for them to have easy work for a short time. I think they are hardly worked at the Academy, especially mentally. Some of those I had in my classes, at Shoeburyness, told me themselves that they were hard worked. I think it would be very much better for them, first of all, to be attached to batteries and brigades in England, and that they should only have easy military work for about eight months or a year. After that, if it did not involve any great expense, and I do not see why it should, I would let them go through a short practical course at Shoeburyness of heavy artillery, and all those practical operations. I would let them have some smart field battery work. I do not see any objection to having a demi-field battery at Shoeburyness, which is a very good place for it, and you might then combine both under one captain. With the heavy guns and mechanical appliances used now a days, there is so much for a cadet to learn, that his after education is a matter of immense importance, and if he gets into the idle ways some officers have, all the benefits of his previous education are lost.

7589. You would not let him go to Shoeburyness at first?—No; I would let him join a battery or the head-quarters of a brigade and have easy work, as is the case with the young Engineer officers at Chatham. I would let them learn ordinary matters of parade, attending courts-martial, and those things. Where there were head-quarters of brigades, with an adjutant, a colonel, and so on, I would attach them there, and give them as easy work as is compatible with doing a certain amount of work as an officer, and after that I would give them a short practical course, because, as I said before, science, though of the utmost importance, is not after all the primary consideration with us. I suppose the great object is to make the officer a really good officer for active service, and for that purpose the great thing is for him to have a practical acquaintance with all the details, such as moving a heavy gun over a ditch. I know myself that I had very little practical instruction of that kind, and I would have given anything in the Crimea for having had a little opportunity of learning practical work in that way.

7590. From what you say I gather that you attach considerable value to the instruction at Shoeburyness?—Yes, a great deal. I think the course there might be condensed to a certain extent, both for officers and non-commissioned officers; I think it is of great importance; when we were arming batteries on the coast, I found the first inquiry that was made always was whether the officer or the serjeant had gone through a course at Shoeburyness. I think it is rather too long, and I must say I think a certain number of summer months would have been better, but of course that is rather a matter of opinion. As a whole, it is a matter of the utmost importance, I think.

7591. Do the militia officers, both adjutants and other officers, go through it thoroughly?—The adjutants all went through it very well, I think. I had about five classes of them, and one or two of the militia artillery officers came. I suppose they got leave to come. As a general rule, the adjutants were all old artillery non-commissioned officers who had been promoted, and they worked very hard.

Appendix, page li.

Royal Military Academy.

Entrance examination.

7592. (*Mr. Parker.*) I see from your printed answers that you think it a great object to get young men with a good liberal education both for the Artillery and the Engineers?—Certainly; with a good preliminary education.

7593. Therefore you approve of classics counting high at the entrance examination?—I do, certainly.

7594. And you would even carry on the marks for classics from the entrance examination?—I am not very well up in those matters, but I understand from some of the officers to whom I have talked that there would be no difficulty in saying that some modification of the marks gained at the entrance examination should count afterwards, and that would hinder a boy from at once sinking from being high up to a very low level on account of his classics not counting at all when he is once in.

7595. As captain of a company, can you say whether it would be considered fair, and be popular among the cadets themselves, to carry on the marks?—My principal information is derived from the cadets themselves. I speak with them about matters of study as one gentleman to another, as a friend, I may say. Those whom I have spoken to, as a general rule, I think, considered that it was very hard that the marks were not carried on.

7596. Would you carry them on so far as to the final examination?—Yes, I would carry them on right throughout. I understand that there would be no difficulty in doing so; I believe the lowest number of marks at the final examination is about 23,000, and the highest about 34,000. I would carry on a certain proportion of the classical marks; some one else would be a better judge than I am how much ought to be carried on, but I think some of them should be carried on right throughout, so as to form a portion of the total at the end.

7597. And you think that would have some tendency to bring more young men from the higher forms of the public schools?—Yes, I should say so. We happen to have had a young man in the Academy who came from Eton; he was a very clever boy indeed; he passed first. I believe his opinion was that you would get more boys to come from the public schools if that was the case; he thought that a great many were hindered from that reason.

7598. The knowledge that the classics, although they count at the entrance examination, would be of little use to them afterwards, prevents their coming?—Yes, it prevents their coming to a certain extent. I am not in the least degree capable of judging how much the classics should count for, but I think it would be a very good thing if a certain proportion of the classical marks counted at the final examination.

7599. Do you know about what proportion the whole of the marks for classics at the entrance examinations would add to the whole of the final marks?—I see the maximum of the final marks is 34,900 or 35,000 now.

7600. (*Lt.-Col. Chesney.*) The classical marks are 3,000 at entrance?—Then that would be one-eleventh of the whole; mathematics are stopped for the last two terms, still they do count. It appears that if you carried on the whole of the classical marks they would amount to about one-eleventh of the total maximum marks at the final examination at present.

7601. (*Sir D. A. Cameron.*) Would it be possible Orga for one officer, assisted by an adjutant, to perform all the duties which are now performed by the Lieutenant governor, the second commandant, the inspector of studies, and the assistant inspector of studies?—No, certainly not; I should think it would be quite impossible.

7602. He would require a second in command, or some one to assist him?—Yes. I stated before that it appeared to me that it would be slightly derogatory to a general officer in the high position of Governor if he had not adequate powers, and in that case I think, as I said, that he ought to be only a colonel on the staff; but even if he were a colonel on the staff, he would still want the same number of officers in addition to himself as at present; there would be no difference in that respect.

7603. Supposing the Academy were broken up into small divisions of about 25 cadets each, and that a military professor were appointed to take charge of each division, what would you think of such an arrangement as regards the maintenance of discipline and a proper tone in the Academy; do you think it

would be better than the present arrangement, or not?—I suppose one object of giving the military professors charge would be the idea that they would be associated with their own cadets both in studies and in a social point of view; but I do not see how that would be the case, because they pass from one thing to the other, and when you come to look into the subject I do not see how the professors could instruct and also have charge of the same cadets throughout. It appears to me that it would be impossible, because it is not like a public school where there is a great mixture of boys, and where there are always a certain number of younger boys. These are all young men who are passing from one thing to the other. I do not think they come under the same category as boys at a public school. I am certainly of opinion that it is a great thing for them to learn a certain amount of military work. At the time of the Crimean war young men were sent at once to join their batteries, and were placed immediately in very important positions. It was a great thing for them then to know a certain amount of drill, and marching to and fro, and so on. If you got a young man who had none of that instruction at all he would be, comparatively speaking, useless, though he might be a very good mathematician.

7604. I did not quite understand what you said about the examinations in artillery at the Staff College; did you say that they were a farce?—To a certain extent I am of that opinion. The officers at the Staff College get a certain amount of instruction in artillery, but I do not think that the instruction and the examination, in the way in which they are conducted, are of much use. A cadet who has been any time at Woolwich, if he studied a little military history, and did a little military work, would pass high at the Staff College.

7605. Did you set the questions yourself?—Yes; but although I set the questions, and was the examiner, I felt at the time that the whole thing was not of a very superior character altogether.

7606. Did you ever make known your opinion to the authorities in your reports upon the examinations?—I do not know that I ever did; I was never called upon to express my opinion; I should have given my opinion if I had been asked.

7607. You always make reports upon the examinations, do you not?—Yes; I merely say whether they have done well or badly.

7608. Have your reports generally been favourable?—As I say, I disliked it very much, and I asked not to go down again at one time. I certainly wished not to go down again.

7609. But have your reports generally been favourable, or not?—Not very favourable; I think they have been only tolerable. I have had some very excellent papers indeed, but then, as I say, I do not know who they emanated from, because I only know the numbers. Sometimes I have had a paper hardly answered at all.

7610. (*Lt.-Col. Chesney.*) In artillery?—Yes; but I gave them a certain amount of credit, because you cannot expect a man who has been only a very short time under instruction to do the same as a man who has been a long time at the work.

7611. (*Sir D. A. Cameron.*) Did you think that they showed a sufficient amount of knowledge of artillery to do their duties as staff officers?—I wrote a letter, which perhaps was hardly a proper one, expressing an opinion upon that subject. I said, in forwarding the report, that I thought the amount of theoretical instruction they had was of very little use, and I suggested that, if possible, they should be attached for a very much longer time to a brigade, at Aldershot, for example, where they would learn their proper work practically.

7612. (*Lt.-Col. Chesney*). You mean that they should be attached to an Aldershot brigade?—Or anywhere where there were batteries; I know that was the opinion of the officers themselves. They learnt up the answers to the questions about the construction of a fuze and so on; I tried to set general questions as much as possible in order to make it fair for everybody, but I was rather pitched into for doing so. Some of my questions were said to trench upon military history, or something of that kind, and I was requested to set questions of a more professional and technical character, which was in fact rather what I objected to, because I said I did not think it was of much use to a staff officer to know the interior construction of a fuse. I said I thought it would be much better if they were attached to a place for some considerable time where there were field batteries like Aldershot.

Lieut.-Col. G. A. Milman.
29 April 1869.
Staff College examinations.

7613. Do you think the Repository course useful for a staff officer?—Not so useful as other things. He wants much more to know about the ground where a battery should be ordered to take up a position, and the country suitable for artillery, and so on. I think a little of the Repository course might do no harm, but the mounting and remounting of guns, and so on, is not a subject for them at all.

7614. You think there is too much detail?—Yes. I may be permitted to observe that I used rather a strong expression in speaking of the examinations at the Staff College as a farce. What I meant was this:—I strongly hold that the officer should have a great deal of that instruction in artillery, but I thought it could be done in a much better way by having them attached to field batteries, and then having them examined afterwards as to their knowledge of manœuvres, and of ground, and so on. In fact, they should have a six months course of artillery instead of ten weeks.

7615. (*Maj.-Gen. Haythorne.*) They might be passed in the same way as the cavalry officers are for riding?—Yes, but for them merely to be set down to be asked a number of questions about the construction of a fuze does not seem to me to be useful. The officer merely crams up the answer a few days before out of a book; that is the real fact of it.

Royal Military Academy.
Entrance examination.

7616. Several opinions have been given to the Commission with regard to the entrance examination for Woolwich in mathematics being confined to pure mathematics without going into differential and integral calculus; have you any opinion upon that subject?—I think that for us certainly one or two very high mathematicians are required, but I am not so certain that in the preliminary education it is necessary to pitch a very high standard of mathematics, because I think that those who have a taste for the higher mathematics will develop it afterwards. There are certain things in mathematics which it is absolutely necessary for an officer to know, but I think to require all to pass a high standard is rather a mistake. It is quite a matter of opinion, but I think what is important is to go up sufficiently high to enable a man to see if he has a taste for mathematics; if he has, he will become a great mathematician afterwards. We want two or three first-rate mathematicians to follow up and translate the French books, and to calculate strains, and so on.

7617. You agree then in the opinion that it is unnecessary to take all through the differential and integral calculus?—Yes, I think so, as a matter of opinion. I do not know that my opinion is of much value upon that point.

Influence of the military officers.

7618. (*Rev. Dr. Butler.*) Can you state whether, and to what extent, a captain of cadets feels himself responsible for the moral well-being of the young men, or whether he confines himself to the discipline?—I do not know whether it can be avoided, but I do not think he has quite a sufficient opportunity of seeing enough of his cadets. He hardly ever sees them, except on parade; apart from that it is only those who are in hospital, or who happen to play games with him, that he sees. But at the same time I think in all probability a cadet would come to his captain if he wanted to consult him about any family matters, or anything of that kind. And I consider that it would be my business, if a cadet was going on at all in a bad way morally, or in any other respect, to speak to him about it.

Lieut.-Col. G. A. Milman.

29 April 1869.

Royal Military Academy.

7619. If, for example, he was very idle, or still more, if he was known to be intoxicated, or to be guilty of any other serious offence, would the captain talk with him privately upon the subject?—Yes, I think he would certainly.

7620. Would he under any circumstances think it his duty to communicate with his friends at home?—Yes, certainly. If he thought the cadet was going on badly he would go and speak to him himself, and he would also go to the second commandant, and the friends of the cadet would certainly be communicated with privately.

7621. In coming to him, would the cadet regard him rather as his military superior, or as a friend intrusted with his moral supervision?—I must preface my answer by saying that I do not think there is quite sufficient feeling in that respect of sympathy between the military officers and the cadets, but I think it is a question very much of individuals; as I said before, I believe, as a general rule, a cadet would if he wanted advice go to his captain.

General tone.

7622. It has been stated to the Commission by one witness, who was recently a cadet at Woolwich, that there is very little *esprit de corps* among the young men, and that they do not get attached to the institution as a whole. From your experience, would you confirm that or question it?—I really cannot say; I do not know I am sure; I do not see very much of them. There is a strong *esprit de corps*. I think there was very much more *esprit de corps* some years ago among the young officers and the old. Now we have become such an enormous mass in the Artillery, that we do not know each other; therefore there is not as much feeling of that kind as there used to be.

7623. The total number of cadets at Woolwich is 222?—Yes.

7624. Would it not be natural that at an institution where so many young men at so early a period of life are thrown closely together, there would be a strong *esprit de corps*, as there is at the universities and at public schools?—I think there is a strong *esprit de corps*. It shows itself, for instance, in their taking great interest in their comrades' successes in games, and things of that kind. I think I am justified in saying that there is a very strong feeling of that sort, and I think the cadets are to a certain extent very happy there, so far as I can make out; they are certainly very well treated, and as far as comes under my notice there is very little vice and very little immorality. Any little immorality that does take place occurs when they go away to London. At Woolwich there is no drunkenness and very little vice; there is none of the vice which used to exist when I was a cadet. There is some, no doubt, but what there is takes place when they go away to London or to see their friends.

7625. Would the hospital returns ever come under your notice?—Yes; I visit the hospital always, and I see every cadet who is in hospital, whether he belongs to me or not. I know the returns are very much less than they were in certain years; for instance, since 1863 the numbers have very much diminished.

7626. To what do you attribute that improvement?—I think it is attributable a good deal to their being very much better fed and very much better treated than they used to be. There is every amusement found for them; there are workshops and racket courts, and everything is done for them now; there is an immense deal of fuss made about their food and all kinds of things. I do not think in former days we were treated sufficiently liberally by the authorities, whoever they were, whether the Government or the Horse Guards. We had the greatest difficulty in getting proper food and proper everything in former times; it was only by the exertions of individuals that we got it.

System of instruction.

7627. (*Lord de Ros.*) It has been stated in some of the evidence as a suggestion that "all classes of "minds should have opportunities for free develop- "ment. There should be some choice possible to the "cadets both of the kind and amount of study to be "devoted to particular branches of education." Do you see any practical means of carrying that out?—I suppose the meaning of that is, that some subjects of instruction should be voluntary.

7628. I think it means that a cadet who has a bent for a particular study should have his attention directed to it, and that another who has not a bent for it should not be forced to go through it?—I do not know that I am capable of answering that question.

Knowl artiller requis staff o

7629. As an officer who has been with the army on service, do you consider that it would be of any use whatever to a staff officer to have any knowledge of the details of artillery beyond knowing what extent of road they would occupy in a line of march, and what sort of front they would occupy in a position, and what cover could be had for them? Could it be of any use to him to know the details of gunnery?—I think he requires to know what results can be produced by certain kinds of fire; what ground is suitable for artillery to manœuvre upon: the space occupied by troops and batteries in different formations, &c., but I do not think that an intimate knowledge of the details of the construction of a gun or a fuze is of any use to him.

7630. Or the management of a gun?—I do no think he wants that at all.

Royal Acade Appoi officers

7631. (*Rev. W. C. Lake.*) You spoke of the importance of the appointments of the instructors and other officers connected with the institution?—Yes, certainly. I was only speaking of the selection of the instructors. As a matter of course they ought always to be selected with reference to their qualifications. As regards the military officers, I meant that those appointments ought to be considered good appointments, as our scientific corps are supplied with officers from the institution.

7632. Is there no such thing as indicating a wish for one of those appointments; as standing for an appointment, for example?—I suppose any amount of interest would be used, as is the case for all appointments; I fancy a man would bring to bear all the influence he had got of all kinds.

7633. I thought you spoke of not knowing on what grounds they are appointed?—There are wheels within wheels; I understand that testimonials are now the order of the day. If you want an appointment you are obliged to send in a certain number of testimonials. I think to a certain extent it is objectionable for a man's character to be known in that way. I do not altogether like the idea of testimonials.

7634. I want to know what plan you would suggest in place of that?—I do not know what plan should be adopted; but care should be taken by some one, say it rested with the Governor of the institution, that proper men were appointed; that is all I meant; beyond that I cannot go.

7635. Do you think that there is reason to doubt the propriety of the appointments?—Not at all; but I mean that they are not looked upon in the proper light which they ought to be. I think they should be considered as superior appointments; and I do not think they are looked upon sufficiently in that light at all at present.

7636. You think possibly that they require some special talents for the performance of their duties?—No; I think they require a certain amount of professional knowledge and common sense. The officers holding them ought to be well up in their drills; of course I do not mean more than that.

7637. You speak of the instructors?—I speak of the military officers; as to the civilian professors I do not know how they are selected, whether it is by the Council of Military Education or not.

Comb instru and d nary

7638. Do you think any combination of officers beyond what at present exists desirable?—As I have said, I think it is a matter for grave consideration whether certain modifications might not be made; but I do not know whether I am competent to pronounce an opinion upon that point myself.

7639. Do you think that anything might be done at all in the direction of putting the discipline more into the hands of the professors, whether military or civilian?—I understand that in the class rooms the professors are entirely responsible for the discipline, but they have no power of punishment beyond putting a cadet in arrest, and there it is referred to a higher authority.

7640. Would you give them any further power?—I am not quite so certain whether there should be any further power given to them or given to the subaltern officers either. A young man might be put in arrest by a subaltern officer in the heat of the moment; and I am not so certain whether a reference afterwards to a higher authority, who might be supposed not to be prejudiced or excited, but who would treat the question with coolness, is not after all the best system.

7641. Under the present system is there a reference to a higher authority?—I do not know about its being a higher authority; it goes to the inspector of studies.

7642. You seemed to think it desirable that some amount of classical study, such as that of Latin, should be continued during the cadet's course?—No, I do not say that it should be continued; what I said, or what I meant to say, was, that I thought it was very hard that if a boy were a good classical scholar he should gain no advantage by that whatsoever after he is in the Academy, and if any arrangement could be made by which the marks gained in all the subjects including classics, to some extent at least, at the entrance examination could be carried on, I think it would be a very good arrangement.

7643. Do you think it would be undesirable to carry on the study of some amount of Latin, or to give facilities for the study of some amount of Latin, by the cadets in the course at Woolwich?—They have such an amount to do now that I do not see how they could have that in addition; they have 13 subjects altogether; they are obliged to do eight or nine subjects in one term I think even now they have almost too many subjects I think the number in one term is not nine, because they have the choice between German and Hindustani, that reduces it to 8, as they need not do both; still they have eight subjects to do in one term, and they have altogether to qualify in 12 or 13.

7644. (*Lord de Ros.*) Do I understand you rightly that though you would not make classical studies a part of the study of the Academy while the cadet is there, you would give him the advantage of his classics on joining the regiment as an officer, and would make it worth his while to keep them up himself to a certain degree, in order that they might count when he was examined for his commission?—I think that it is a good thing for an officer to know classics.

7645. And to be able to resume his studies?—No, I do not think it would be very useful to him to resume the study of classics. The great thing is to be able to read Greek and Latin so as to have access to certain authors, although you can generally get a good translation, but not beyond that. I must say I think a knowledge of French, German, and Italian is of very great importance,

Lieut.-Col. G. A. Milman.

29 April 1869.

Royal Military Academy,

7646. Then I understand you to mean that what knowledge of classics the cadet brings to the Academy should not be thrown away at the final examination, but that it should be put in abeyance, as it were, until he arrives at his commission?—Yes.

7647. And then it should tell in his favour?—Yes.

7648. (*Lt.-Col. Chesney.*) Referring to an answer which you gave to Dr. Butler just now as to the possibility of a cadet communicating with his captain on private subjects, is not the number of 88 cadets rather large for one captain to know in that personal sort of way?—I prefaced my answer by saying that on the present system one does not know them sufficiently. Unless a cadet happens to come into hospital, or happens to play games in which one is associated with him, with the exception of two or three seniors who are naturally associated with one constantly, one has not quite intercourse enough with the cadets. I do not even know the names of some of my cadets. I do not know whether that could be remedied. I certainly think there is not quite enough association in that way, and not quite enough sympathy; still, as a general rule, if a cadet was going on wrong I should feel it my duty to speak to him as one gentleman to another.

Influence of the military officers.

7649. We have had it in evidence, with respect to Sandhurst, that those military professors who take a class of cadets out on the ground for surveying, or for field fortification, or similar branches of study, and spend the morning with them in the open air, must necessarily upon that system know more of them than the captains; do you think that that is so at Woolwich?—Yes, I think so.

7650. (*Lord de Ros.*) It has been stated by one of the witnesses, "I should like to see young officers get "into a habit of studying in their rooms; it would "adhere to them afterwards." Do you see how that could be carried out in the Academy, and would you not think it desirable that it should be carried out?—The seniors have asked now, inasmuch as they have hard examinations to prepare for, if they might have a longer time at night if they worked in their own rooms, and we have now broken through the old rule, and we give them a longer time.

Private study.

7651. Do you think that that works well?—Yes; I think it works well, but I would not extend it beyond a certain time, because they work hard enough.

7652. You would not extend it beyond 12 o'clock?—No, not beyond 12 o'clock, and that is only just before the final examination. But I think it is a matter of great importance to get officers to work to a certain extent after they become officers.

The witness withdrew.

LIEUTENANT F. NICOLSON, Royal Artillery, examined.

Lieut. F. Nicolson.

7653. (*Chairman.*) You left the Academy last December, I believe?—Yes.

7654. And you came out senior artillery officer of your year?—Yes.

7655. What are you doing now?—I am temporarily attached to a brigade at Woolwich; we are going through a course in the Repository and riding school; the former is a course of heavy-gun drill, mounting and dismounting guns, and so on.

7656. Will you describe a little more fully what your work is at present?—We have to work in the Repository; it is heavy-gun drill of all sorts, mounting and dismounting heavy guns in all sorts of ways, and embarking them in boats, and that sort of thing.

7657. Is your time fully occupied in those practical occupations?—We are occupied about three hours a day upon the average; that is all we do at present.

7658. You are not kept at any scientific study?—No; we have a lecture twice a week upon military law.

7659. But otherwise you are engaged in learning the practical management of heavy artillery?—Yes, and in the riding school.

Royal Military Academy.

Course of education.

7660. Do you look back with pleasure to your life at the Academy?—Yes, I liked it very much.

7661. Were the lads you associated with gentlemanlike?—Yes.

7662. Are you satisfied with the education you received as an artillery officer?—I think it might be improved.

7663. Perhaps you will explain to the Commission

Lieut. F. Nicolson.

29 April 1869.

Royal Military Academy.

in what respects you think that improvement might be introduced into it?—I think there are too many subjects. I think several subjects might be voluntary. In my opinion there is a great deal of time wasted in going over ground which you have gone over before you went in.

7664. Will you enumerate the special subjects which you think might be made voluntary?—Practical geometry beyond the mere elements of it, natural philosophy, and, I think, one language, and landscape drawing.

7665. But at present only one language is obligatory, I think?—In the Academy two languages are required.

7666. French and German?—French, and the choice of German or Hindustani. I would not make one language voluntary in the Academy, if you were obliged to learn two for coming in; but I do not think it is of any use for a man who knows nothing of German on coming in, to learn it when he comes in—he learns nothing of it there.

7667. Did you know any classics when you came up?—I knew a small amount. I did not take them up as a subject on coming in.

7668. Where were you educated?—At Wimbledon.

7669. At a school there?—Yes, at Mr. Brackenbury's.

7670. Did you go to a crammer?—No; I passed from there.

7671. Where did you pass in?—Fifth.

7672. And you came out first?—I was first in artillery, 17th in my term.

7673. The education you received at Mr. Brackenbury's was sufficiently good in those subjects which you had to take up, to obviate the necessity of any special course with a private tutor?—Yes.

Discipline, general supervision, &c.

7674. Do you think that the discipline at the Academy was pretty well maintained?—I thought it was very well.

7675. You have no suggestions to make with regard to that part of the subject?—No; I have not.

7676. Did you ever see anything of the chaplain?—Not much; he reads prayers in the morning and evening. I did not know him personally. I have spoken to him once or twice when I have met him.

7677. Do you think that it would be an improvement if the professors were given more direct authority?—I think it would be very much the other way.

7678. Do you think that at present they have got too much?—No; but I do not think it would do to give them authority.

7679. They have now the power to place in arrest, with appeal, have they not?—They have no power themselves, but they tell the corporal on duty in the class to put a cadet under arrest.

7680. You allude, of course, to the civil professors?—I allude to them all. I think if you gave the power to one, you would be obliged to give it to the other.

7681. You were a corporal yourself, were you not?—Yes.

7682. Do you think that the power intrusted to you was sufficient?—Yes; I think so.

7683. You would not wish it to be increased?—No; I think not.

7684. Had it much practical influence, do you think?—Yes, certainly.

7685. How many lads were in a room with you?—When I first joined two, and afterwards three in my third term, and then afterwards I had a room to myself.

7686. Do you attach great importance to having a room to yourself?—It is much more comfortable.

7687. If the lads had rooms to themselves do you think they would be more ready to devote their spare time to private study?—I think it would be objectionable that they should devote their spare time to private study. I think you get quite enough study without that.

7688. You think that the classes and the lectures occupy as much of the time of the cadet as is good for his health or for his mental vigour?—I think so.

7689. Were you satisfied with the food?—Yes; I was very well satisfied.

7690. What were the amusements?—There were two racket courts, and lately there has been a billiard table, and cricket and football.

7691. (*Maj.-Gen. Wilmot.*) And workshops?—Yes.

7692. (*Chairman.*) Did the lads take kindly to football and cricket?—Yes.

7693. Should you say there was much *esprit de corps* at the Academy?—Yes; I think it is increasing; I think it has increased a good deal lately. I believe these matches with Sandhurst have increased it very much.

7694. Do you consider yourselves very superior to Sandhurst?—Yes; I think there can be no doubt about that.

7695. Did you beat them at cricket?—They have beaten us once.

7696. Do you think that it is a good thing that the artillery and the engineer officers should be educated together?—Yes, a very good thing.

7697. Is it often the case that a cadet who takes such a place in his examination as would entitle him to a commission in the Engineers, prefers a commission in the Artillery?—It happens now and then; I did it myself.

7698. Had you chosen you might have been in the Engineers?—Yes.

7699. But you preferred being in the Artillery?—Yes.

7700. Do you consider that there are too many drills and minor parades?—There are a good many, but I do not think that that is a great grievance.

7701. You do not regard it as much of a grievance?—No; certainly not.

7702. Did you ever see much of the Lieutenant-governor?—Very little.

7703. Whom did you principally look to; who, in your eyes, represented the authority and the majesty of the Academy?—The second commandant is practically governor; at least, he always appeared to be so while I was there.

7704. Do you think that in case of any disturbance, or an occasion for the exercise of the legitimate authority as against a cadet or a number of cadets, the public opinion of the place would have been loyal to the second commandant? I do not mean to him individually, but to the officers?—If there was a general disturbance I do not see how that could be.

7705. I do not mean a general disturbance of the cadets in the whole establishment; but supposing that a set of unruly cadets raised a disturbance, and that they were had up for punishment, on which side would the public opinion of the Academy be?—I think that would depend a good deal upon the circumstances of the case. If they had done anything ungentlemanly in any way I think the public opinion would be against them decidedly.

7706. Do you think, from your own feelings now as an officer, that, upon the whole, what the public opinion of the cadets would characterize as ungentlemanlike, would be a sound definition of the term?—Yes, I think so, on the whole.

7707. You think that the general tone of the place, in fact, is gentlemanlike and satisfactory?—Yes, I think so, on the whole. When you get a lot of young fellows together, there are always some rather loose ideas on some points; but as far as I can judge the tone of feeling is a good deal better than it is at any other places of that sort.

Syste course instru

7708. (*Rev. W. C. Lake.*) Do you think it would be a bad thing for the cadets to devote more time to private study? Suppose you were to knock off some of the time necessarily occupied now with public lectures, and give more opportunity to the cadets to work in their own rooms, do you not think it would give them a habit of working for themselves which would be useful to them afterwards?—The

end of that would be that there would be a good many who would not work at all.

7709. Then you do not believe in any work that is not done under the eyes of the professors?—I think the work is done better in that way. I think that most of the work which the cadets do there must be done in class.

7710. You know that in public schools and colleges at the universities a good deal of work is done by the young man privately?—Yes.

7711. Why should that not be the case at the Academy?—I do not see what would be gained by it; and, in fact, you could not do that with most of the work at the Academy.

7712. What work could not be done in that way?—For example, drawing plates, and work of that kind. The greater part of your time is taken up with drawing of some sort, and you constantly want help or to ask a question.

7713. Do you think it would be desirable to have any means of continuing your Woolwich studies, either the practical or the more strictly scientific portion, after you get to the army?—I think you have the means to a certain extent. If a man is of a scientific turn in any way he can go in for a special course at the Staff College, or for the "Advanced Class" or "Long Course."

7714. You have nearly finished your time at Woolwich, how do you expect to spend the next three or four years; do you expect to have any opportunities of continuing your studies of any kind, either practical or scientific?—The scientific studies I suppose I should have to do on my own account, but you get an opportunity of learning your practical work; you get your regimental work; you are drilled with your battery.

7715. Do you look forward to drill at Shoeburyness?—If I go in for a special class or a special course I shall get it. I do not think I shall get it otherwise, unless my battery happens to be sent there.

7716. Have you found the work at Woolwich very severe?—It is not too severe, I think; it is quite hard enough; the last six months especially.

7717. What would you say were the most valuable of your studies there?—If you mean those that would be of the most use to me, I should think the fortification, the artillery, the surveying, and the chemistry.

7718. Those are the studies to which you devoted most attention yourself?—I do not know that I devoted more attention to those than to some of the other subjects.

7719. Had you a course of military history?—Yes.

7720. Did you consider that a valuable course?—Yes; I think it is a good thing in one way. I think it has a tendency to make fellows take an interest in that sort of reading. I cannot see that it would be of any great practical use to oneself immediately. I do not see that there is any great chance of our commanding armies for some time to come.

7721. At the school where you were before going to Woolwich were no classics taught?—Yes; classics were taught.

7722. I mean to boys who preferred not to learn them?—No; if you gave them up you need not learn them. I was learning classics till within a year and a half of going to Woolwich, and then I gave them up.

7723. I understand you to say that you took up no classics?—No.

7724. Would you just explain where the course of classics ceased at Mr. Brackenbury's?—There were always a certain number of boys there who did not learn classics at all. If you said you did not wish to learn classics, and your parents did not wish you to do so, you need not do it.

7725. What was the substitute?—English, generally, and history.

7726. Had you much mathematics?—Yes, a great deal; that was a strong point there.

7727. So you might learn no classics from the beginning?—I think in the case of quite a young boy of 10 or 12 years of age Mr. Brackenbury would make him learn classics.

7728. At what point then did the necessity of learning classics cease?—There was no special point, or special limit of age in any way. I merely say that in the case of a young boy, I think Mr. Brackenbury would insist upon his learning classics.

7729. (*Lord de Ros.*) Did you take up French and German?—Yes.

7730. Did you learn either of those languages abroad, or did you learn them entirely at Mr. Brackenbury's?—At Mr. Brackenbury's, and before I went to him. I had been learning French for a long time.

7731. Not abroad?—Not abroad.

7732. At Mr. Brackenbury's was the teacher of French a Frenchman?—Yes.

7733. And was the teacher of German a German?—Yes.

7734. Do you think it would be possible to teach these languages well except through natives?—I think if you had an Englishman who knew them well, he would teach you them better.

7735. As regards the riding, how long were you at that course?—We are going through the riding course still. We had a year of it at the Academy, and we are still going on with it.

7736. Is it merely the ordinary riding school work of trotting round, with the turns and inclines, or do you go through post practice, and all that part of the course usually taught in regiments?—It is mere riding school work.

7737. You are not taught the use of weapons?—Yes; we have sword drill as well.

7738. You do not go through the post practice on horseback with the sword or lance?—No; we have not done it yet; I do not know whether we shall.

7739. Are you taught anything of the management and training of the young horse?—No, nothing.

7740. Are you taught anything of the saddling and bridling for yourselves?—We have done a little in that way; I suppose we shall have to do it.

7741. Are you taught any veterinary matters, or a knowledge of shoeing?—No, nothing.

7742. With reference to pontooning, are you taught the executive work, or do you learn it merely as lookers-on?—We have not done any pontooning. All we have done in that way is that we have dismounted a gun, and embarked it in an ordinary open boat.

7743. As regards the smoking allowed at the Academy, are you a smoker yourself?—No.

7744. What sort of proportion is there of cadets who do not smoke; is it a fourth?—I should think quite that.

7745. Is there a limitation as to the time at which the cadets may smoke? Is there a rule that they may not smoke before a certain hour in the morning?—No; there is a limitation as to place.

7746. Anybody might smoke before breakfast if he liked then?—If he chose to get up on purpose he might, but he might not do it in his room.

7747. Do you think it is a good system to have a billiard room in the Academy?—If you have not a billiard room there the cadets will go out to play billiards. I think it is much better to have one.

7748. Does it never lead to the cadets devoting themselves too much to the game?—Not that I know of; but it had only been opened a few weeks when I left there, so I do not know.

7749. What was the reason why you went into the Artillery instead of the Engineers? Was it because you preferred the more general military associations of the Artillery, or the horse work, or what led you to it?—Because I thought I should get on better there than in the Engineers. I thought I was more fitted for that than for engineering work.

7750. You thought you would get on quicker?—I do not know about that, one can only go on at a certain rate; but I thought I should make a better artillery officer than engineer officer.

7751. (*Rev. Dr. Butler.*) How many hours a day

Lieut. F. Nicolson.

29 April 1869.

Royal Military Academy.

used you to devote to mathematics at Mr. Brackenbury's?—On the average about three or four; I cannot remember exactly.

7752. About four?—From three and a half to four, I should think.

7753. Would you say that there is much over-work among young men preparing for entrance into Woolwich?—No; I do not think so; now and then, perhaps, some get a little seedy, but I do not think it is anything very serious.

7754. Among those who were actually members of the Academy, did you notice many suffering from over-work?—No.

7755. I suppose that you were familiarly acquainted with most of the ablest of the young men during your stay at the Academy?—Yes.

7756. Would you say that in any considerable proportion of them there was anything like a literary taste at all, or did they entirely confine themselves to their professional subjects?—Very few I think had any literary taste. A few had, I think; a certain proportion had some. Most of them had been working too hard before they came in, and were working too hard while there, to feel much inclined to sit down and read during the leisure time they had.

7757. Do you think that the effect was distinctly perceptible that they had been hard worked for several years and were still working hard?—Yes; I think the feeling of some is that when they get out of the Academy they will not look at a book again.

General tone, moral supervision.

7758. When you first entered the Academy may I ask how you were struck by the general moral tone prevailing there?—It was a great deal better than I expected.

7759. From what you had heard of it before?—Yes; I used to hear all manner of wonderful stories, and when I joined I found it was quite a mistake.

7760. With regard to cases of drunkenness, were they at all common?—No; there was a slight amount of drunkenness when I first joined; but there was very little when I left, and it was principally among the junior classes. When the cadets first join they think it is a fine thing to do rather, but they find it is a mistake bye-and-bye, and give it up.

7761. Would you say that it was looked down upon by the public opinion of the place; would a young man who was known to be frequently drinking be thought worse of?—If he was a regular drunkard he would; but if he was drunk occasionally I do not think he would be.

7762. With regard to other cases of immorality, would you say that anyone who fell into them would be condemned by the public opinion of the place, or not?—No, I do not think he would.

7763. Were such cases of immorality, I mean connected with women, so far as you observed, at all frequent?—Yes, there was a good deal of that.

7764. Did that strike you when you first entered the Academy?—I do not know that it is more common there than it is anywhere else.

7765. Was there any one at the Academy who would have thought it his duty to speak to the young men on such a subject, and remonstrate with them if he thought they were going wrong?—Of course if anything of the kind was actually brought under an officer's notice he had to punish the cadet for it; but I do not think that anyone ever spoke to a cadet privately in any way about it.

7766. You are now alluding to drunkenness?—Yes.

7767. Because the other offence is not punishable at all, is it?—No, I think not; it is an offence that would not be known.

7768. Would you say that there was any attention paid to the religious welfare of the young men, apart from the maintenance of discipline?—None.

7769. Is it a place to which the young men get personally attached, as compared, for instance, with what you know of the *esprit de corps* at a college or a public school?—No, I do not think it is as great as that; I think it may be in time, but I do not think it is now. I think they like the place; they have friends there, and that sort of thing; but I do not think the feeling is so strong as it is at a college or a public school.

7770. Are there any persons among those who represent the authorities of the Academy to whom the young men become personally attached so as to visit them afterwards frequently?—No, we do not see enough of anyone. Of course, some men are popular, and others are not; but I do not think there is any sort of attachment.

7771. And you do not think that the professors, as a rule, could be safely entrusted with the duty of maintaining discipline?—Certainly not the civil professors.

Comb instru and d nary

7772. Why not?—I think it would be against the whole arrangements of the place to give a civilian authority; you would be mixing up military and school arrangements together. The present system works very well, I think.

7773. Do I gather from you, then, that the civilian professors are rather looked down upon as compared with the military?—I think that depends a good deal upon the individual.

7774. Supposing that the individual is himself an able man, where would be the difficulty of his maintaining discipline?—He would be able to maintain discipline, but I think he is able to maintain discipline now, practically he has the necessary power, because there is the corporal on duty in the class; and if the corporal does not keep order he can report the corporal.

7775. You think that practically he has sufficient power, direct or indirect, to maintain discipline?—Yes, I think so.

Entr exam

7776. (*Maj.-Gen. Haythorne.*) Do you consider that the mathematical part of the entrance examination might be confined with advantage to pure mathematics?—No.

7777. Do you approve of it as it stands?—I think the standard is too low at present.

7778. Are some of the questions that are put to candidates rather catch questions?—Yes, I think so sometimes.

7779. Does not the fact of having questions of that kind put rather help the cramming system?—Yes.

7780. The questions are not very searching as regards the lower branch of mathematics, are they?—No.

7781. (*Sir D. Cameron.*) Do the officers and professors see much of the cadets in their houses?—No, very little.

7782. (*Mr. Parker.*) The marks which you get in the entrance examination often differ very much from those you get in the final examination, apart from idleness, do they not? A cadet comes in with high marks, and from the difference of the subjects he goes out with low marks?—I think that it is his own fault a good deal, if there is a great difference in the number of marks in the same subjects.

7783. I mean from the change of subjects?—Yes, that is so.

7784. It has been suggested that the marks which the cadet gets on coming in, or some portion of them, might be carried on towards his examination on going out. Do you think that would be regarded as fair?—I do not think that it would be a good plan, because I think by the present arrangement you get the best men for the Engineers at the top of the list, which is just what you want to do; and by the arrangement you suggest I do not think you would get that. You would get men who know very little of mathematics, and have not much turn for that sort of thing, but who are good hands at classics, higher up on the list. I should think they would do better in the Artillery than in the Engineers.

7785. Have you ever heard it remarked by the cadets that it is a hard thing that the marks they get at the examination on coming in should not be counted in the examination on going out?—No, I think

sometimes you hear cadets say they wish that that was done, but I do not think it is much thought of.

7786. Do you think that the knowledge that the classical marks in the entrance examination will not count for anything when they go out has a tendency to keep good classical scholars from coming in?—I do not think they know enough about it before they come in for that to keep them away. The general idea is, if you can get in, it is all right.

7787. The classical cadets do complain a little, I suppose, when they find it out?—Yes, but it is their own fault.

7788. (*Lt.-Col. Chesney.*) Regarding the question Mr. Parker has just asked you, it seems that the whole marks for classics on entering are not quite equal to one-eleventh of the total marks at the final examination. Do you think that carrying on the classical marks would make a great difference, and change the general system under which men are chosen for engineers?—I think it would make a considerable difference.

7789. Would you be afraid of it as too decided a change?—I think it would make a great difference if some men got 2,000 marks additional in that way.

of 7790. We have it in evidence that certain professors, those chiefly who have gone out with the open air classes for surveying, have been in the habit of giving arrest for a day upon their own account. Are you aware that that has been objected to by anybody?—I never heard of such a thing.

7791. Have you never heard of a professor of one of those classes putting a cadet in arrest on the spot?—I now remember a case of this kind occurring.

7792. Do you see any special objection to that power being vested in a military man under those circumstances any more than on parade?—I think it would be the thin end of the wedge, would it not?

7793. How so?—If you gave them that power you would next give them the power of arrest in the Academy; and if you gave it to them you would be obliged to give it to the civilians also.

7794. Do I rightly understand that the real gist of your objection is that you would be afraid of that power coming to civilians?—I think it would be a mistake; I do not think it would work as well as it does at present.

7795. Do you think that, as the Academy is at present constituted, the cadets look upon the captains of their companies as their special friends and advisers?—No.

7796. There is not the least community of feeling of that kind?—No, nothing of the sort.

7797. Such good tone as exists then in the Academy at present must arise almost entirely from the young men themselves?—Almost entirely.

7798. It is not directed by the authorities at all?—Very little.

7799. Is it your opinion that the language used among the cadets at Woolwich is not more strikingly coarse than it would be at any other large institution where young men would meet together?—I do not think it is worse.

7800. With regard to these minor parades, as distinct from drill parades—these parades for marching in and out—do you think that the discipline of the Academy would in any way suffer if they were abolished?—I do not see why it should.

7801. (*Sir C. Russell.*) Is the course you are now going through at the Repository intended to be thoroughly practical?—Yes.

7802. I think I understood you to say that it does not include pontooning?—I believe not.

7803. Does it include the construction of bridges?—I do not know whether it does or not, we have not done anything in that way yet.

7804. (*Lord E. Cecil.*) What are the bounds at the Academy for cadets?—There are none.

7805. Are there no bounds at all?—No.

7806. How far is the town distant from the Academy?—About ten minutes' or a quarter of an hour's walk; a quarter of an hour, I should think.

7807. Are there any places of dissipation in the town which the cadets ordinarily resort to?—I do not know whether you would call a billiard room a place of dissipation or not; there is nothing beyond two or three billiard rooms.

7808. There are no such places as the night houses in the Haymarket, for instance?—No, nothing.

7809. I suppose the opportunities for dissipation are very small?—Very small indeed.

7810. And it rarely occurs that a cadet can obtain leave to go to town?—He can go up every Saturday and Sunday.

7811. I do not know whether you noticed it, but there was a story which appeared in the newspapers some months back, I think, about some cadets going to the Alhambra. I think it was stated that there was but one cadet from the college at Sandhurst, and one from the Academy, and from that I suppose it is an unusual thing for cadets to go to such places as the Alhambra?—No, I should think it was rather a common occurrence.

7812. (*Lt.-Col. Chesney.*) Would you explain what took place on the special occasion which has been referred to?—It was on the occasion of the Woolwich and Sandhurst athletics, and nearly every cadet from both places was up in town, so, of course, there were more of them there than usual. The story I heard (I was not there myself) was, that some men, I do not know who they were, not connected with either place, began the disturbance, calling out "Woolwich" and "Sandhurst," and that sort of thing, and some of the cadets joined in it, but only a few of them joined in it.

7813. There were several cadets present, were there not?—Yes; those few who joined in it were junior cadets, I believe. As far as Woolwich was concerned, the only cadet who was taken into custody was perfectly inoffensive. I suppose not being very big they walked him off.

7814. (*Lord E. Cecil.*) My object in asking the question was to find out whether the cadets are ordinarily in the habit of going up to town for the purpose of amusing themselves?—Nearly all those who go up to town are going up to see friends and relations. For the first three terms you are obliged to show a written invitation to go up, afterwards you need not do so.

7815. How is leave granted; is it at the application of a relation or guardian, or simply at the request of the cadet?—The cadet sends in a written invitation with his request for leave. The corporal on duty for the week collects the names of all those who wish to go on leave, and sends the list to the officer, and the officer looks through the list.

7816. And if there is nothing against the cadet, the leave is given as a matter of course?—Yes.

7817. How long does the leave extend; is it for Saturday and Sunday?—It is from two o'clock on Saturday afternoon till Sunday evening. The junior cadets have to be back by 10 or half-past on Sunday night, and the others by 11. I believe that the Saturday and Sunday leave does more good than anything else. The cadets go and see their friends and relations, which surely must assist very much in keeping up a good state of feeling amongst them.

7818. (*Lt.-Col. Chesney.*) When you state that cadets are frequently at the Alhambra, and such places, do you not mean that they are there from their own families and friends living in London, and not as cadets from Woolwich?—Yes.

7819. (*Chairman.*) They do not go up to London without leave and go there?—No; it would be impossible.

7820. It is now as an officer in the army that you are going through this Repository course?—Yes. Repository course.

7821. How long does the course last?—The course lasts as long as we remain at Woolwich.

7822. Shall you pass through any examination before leaving?—No.

Lieut. F. Nicolson.

29 April 1869.

Royal Military Academy. Course at the Academy.

7823. There is no test whatever to mark your efficiency?—I suppose we must do it to the satisfaction of the captain in charge. I suppose it depends upon him. If he sends in a satisfactory report it is all right.

7824. (*Rev. W. C. Lake.*) With regard to the possibility of continuing Latin as part of the course, is not it felt by those who have done well at the entrance examination to be a very hard thing that they should get nothing at all afterwards for their classics, and have to take to quite a new course of study?—They have had an immense advantage by getting in through their classics; they would never have got in if it had not been for their classics.

7825. But on coming in they have to give up their classics at once, and take to an entirely new course; might they not be allowed, if they chose, to go to a Latin class and be examined in Latin at the end of their course, and have marks for it?—That would be making the Academy a place for the benefit of the cadets and not for the benefit of the service, would it not? I do not see what would be the advantage of it.

7826. Latin is considered to open the mind as much as mathematics?—I suppose so, but there would not be time for it, to begin with; there are too many subjects as it is. When I said that some subjects might be made voluntary, I did not mean that they are not practically useful, but that they are not absolutely necessary.

The witness withdrew.

CAPTAIN T. B. STRANGE, Royal Artillery, examined.

Capt. T. B. Strange.

Instruction of young artillery officers.

7827. (*Chairman.*) You are instructor in gunnery at the Royal Military Repository, I believe?—Yes.

7828. So that the young Artillery officers on leaving the Royal Military Academy pass immediately through your hands?—They do.

7829. How long do they remain under instruction with you?—About three months under my instruction. They go to the riding school in the forenoon, in the afternoon they come to me.

7830. And that course lasts three months?—Yes.

7831. Then what becomes of them?—They are then attached for duty to the various brigades; they come to me occasionally when not on duty.

7832. Of their own free will, or under regulation?—Under regulation; when not on duty they come to me in the afternoon.

7833. Are they detached from distant stations to come to you?—The fact is, that they have been posted to brigades at different stations (nominally) before joining. They never have gone to these stations.

7834. How do you test their progress under you before they leave?—I have no final examination, but as I instruct them through the whole course personally, I ask them questions as they go. I think by that means I have a better knowledge of what they have learnt, than I should get by a simple examination at the end, especially as I do not suppose my commendation would procure them any tangible good, which I imagine they know.

7835. How many young officers are under you at a time?—Twenty is about the average, from 20 to 22 are the numbers.

7836. When they leave you they are, as I understand, attached to certain batteries?—Yes, to batteries at Woolwich.

7837. Are they depôt batteries?—Whatever batteries happen to be there.

7838. They are there on duty I suppose?—Those that are attached to the field batteries learn stable economy, and manœuvre with their batteries when their batteries go out for exercise.

7839. During the spare intervals of their time, they return occasionally to you?—Yes.

7840. How often during the course of the week?—There are some officers who come daily, except Saturday, of an afternoon. It depends on their being taken for duty, if not for brigade or battery duty or parade they come to me.

7841. What is the exact thing that you teach them?—I endeavour to teach them principally the duties of an artillery officer of a siege train or garrison.

7842. Do you mean the drill?—Not only the drill but the mechanical appliances which would be necessary to mount heavy guns in position, to replace guns when dismounted by an enemy's fire, to embark and disembark heavy artillery, to construct bridges for heavy artillery, and though they are not exactly called upon to construct siege batteries, I like to bring before them the probable changes that the new arms will introduce in the construction of siege batteries, and in all siege operations, if only to get them to think.

7843. In the replies you have been good enough to send us, though you bear favourable testimony to the general character of these young officers, you say that you notice a deficiency in their knowledge of historical and general subjects; would that criticism extend to their knowledge of military history or not?—It would not in general terms extend to their knowledge of military history, because lately they seem to be very well taught military history, and the campaigns they have gone over, I have very little doubt, they know well; but I do not think that many of them ever read any military history for themselves.

Appe p. liii Resul instru the A

7844. You say that though their intelligence is evidently of a very high order, and their mathematical attainments are considerable, the majority do not seem inclined to continue their own education from any interest they take in it. Do you consider that the severe mental discipline to which they have been subjected for the purpose of passing their examination has for a time exhausted their intellectual energies?—I think it is probable that it has at all events given them a distaste just at that time to go on with further studies.

7845. Have you observed whether or not, after a certain interval has elapsed, that distaste passes away and gives place to a renewed inclination to study and to intellectual pursuits?—I should rather be inclined to think that they have not much ambition, because they look upon their professional prospects as somewhat narrow. I am not, perhaps, qualified to give a very full opinion upon that point, because these identical officers leave me in six months, and I do not see the same officers again for very many years perhaps; but I find some officers of garrison artillery become apathetic after a few years service.

7846. You say you find that their knowledge of practical artillery is very limited when they come to you?—I am of opinion that it is.

7847. Is their theoretical knowledge of it very considerable?—I do not think it is; but it is hard to define where theory and practical knowledge join each other.

7848. (*Lord E. Cecil.*) You speak of the military discipline of the young officers under your charge as being somewhat lax?—Yes.

7849. Do you find that it is lax during the time of study, or on parade, or in their general conduct?—It is lax on parade, and I should consider it lax at all times; but I may be adhering to an old fashioned standard of military discipline, because there is a national change, I think, in this matter. It is an immense subject altogether. There appears to be a national want of discipline everywhere now, if one may say so.

7850. Do you think that there is a want of respect towards yourself personally, or towards their commanding officers, or is it a want of right feeling amongst themselves?—There is no want of respect whatever towards me, nor have I ever seen any towards another officer, but there is a want of self-discipline. If I might venture to give an instance of it, I mean questioning an order. Supposing an order is

given by the general commanding that they are to march to the Repository, they want to know the reason of that order, and comment upon it.

7851. They do not render that implicit obedience which you would expect from officers and soldiers under military law?—They do not; they ask the reason, and do not seem to realize the obligation to do a disagreeable thing, *simply because it is ordered.*

7852. You do not find any fault with their manners?—None.

7853. You think they conduct themselves generally as officers and gentlemen?—Certainly they do.

7854. Then it is more that spirit of inquiry, which you think is abroad in society generally, than anything else that induces you to make that remark with respect to their being rather lax in discipline?—There are other causes, I think. I think that—if I may presume to criticise what I have not a very familiar knowledge of, namely, the discipline of the Academy, because I have never been there as an instructor or an officer in charge—judging by what I see, I am of opinion that the discipline there is not conducive to the formation of habits of military obedience.

7855. What grounds have you for saying so; will you give the Commission your ideas upon the subject?—The grounds I have for thinking so are that the officers who come to me appear to be wanting in discipline. The causes, of course, are a different thing. My evidence upon this subject must be considered somewhat in the light of hearsay, for the reason I have given before, that I do not belong to the institution, therefore, practically, my knowledge of it is from hearsay.

7856. Of course you have means of observation, which perhaps others have not?—I think that the personal influence of the officers in charge is not sufficiently considered. I think that they can have little or no personal influence, because they appear to have little or no power, from the Lieutenant-governor downwards.

7857. And you think that is one of the very great defects in the Academy, namely, that the executive officers have not sufficient power?—I think it goes down not only to the junior officers, but to the corporals. When I was a cadet myself the discipline began down at the bottom; it began with the corporal, and he had what would be looked upon now, as a great deal of power for a subaltern officer.

7858. I gather from the answers you have given to the questions that were sent to you, that you are rather in favour of a more liberal education at the Academy, and an increased military instruction, if I may so use the words, after entrance into the army?—Certainly I am in favour of increased military instruction after entering, (but it must have its foundation at the Academy,) and of a more liberal general education before entering the Royal Military Academy, or at it. I think the cramming schools narrow, and deteriorate lads in every sense of the words.

7859. You say that the "majority of the cadets do "not seem inclined to continue their own education "from any interest they take in it, from a taste for "general reading, or professional ambition, which last "motive would under existing circumstances indicate "a temperament sanguine above average." I presume you think that general reading and knowledge upon general subjects, such as form the education of a gentleman, what is commonly called a liberal education, would be of great advantage to a cadet?—Certainly.

7860. And that you would gladly see some alteration in that respect before a young officer was qualified for his commission?—I think there might be some alterations in that respect with advantage. A cadet should not be made to waste time over subjects (not necessary) for which he has neither taste nor ability, such for instance as advanced mathematics or landscape drawing; those who have the talent should be allowed to cultivate it, and get credit according to its value. I would continue credits from entrance to the end, not dropping classical credits because the subject is not studied. The best mathematicians should, as a rule, go to the Engineers, for which corps high mathematics should be obligatory.

Capt. T. B. Strange

29 April 1869.

Instruction after entering the service.

7861. I observe also that you say with regard to the second, third, and fourth sections mentioned in your second answer—namely, the course that is to be practically learned at the School of Gunnery at Shoeburyness, the course in the Royal Arsenal at Woolwich, and the course in the field batteries of the depôt, and the riding establishment at Woolwich—that those things could be learned quite as well, if not better, after entrance into the service than before?—I think so.

7862. Supposing the Woolwich course were to be reduced to two years instead of two years and a half, as it now stands, do you not think that the extra six months might be very advantageously devoted to the acquirement of one or more of those practical courses that you have mentioned, so as not to necessitate a young officer entering the army at an increased age?—I do; and I should prefer the extreme limit of age of 19 being reduced to 18.

7863. As the time of entrance into the army?—As the time of entrance as a cadet; now he has until 19. I think 19 is too old, I think that two years would do if it was properly made use of. Instead of drawing so many plates, fortification could in a great measure be taught by modelling in sand, as was done at Addiscombe; and the Academy might become more of a school of application than it is, having all the instructors military officers, specially selected: much indiscipline springs from a traditional habit of chaffing civilian professors.

7864. How long do you think that the different courses you have named in your printed answers—the practical course at Shoeburyness, the arsenal, the field batteries of the depôt, and the riding establishment—ought to endure for a young officer after entrance into the service?—I have mentioned that the duration should be three months at the School of Gunnery.

Appendix, p. liv.

7865. Will you state how long in all you think that these three practical courses should take?—In all a year, because the seasons would not admit of doing parts of them at certain times. A year would therefore be necessary on account of the seasons, I think.

7866. And you see no practical difficulty in young officers with temporary commissions going through these courses after they have passed through the Academy?—I imagine that the accommodation at the School of Gunnery is not sufficient; there are not quarters enough.

7867. But supposing the quarters were enlarged at those stations, you see no difficulty?—I see no practical difficulty.

7868. You speak in your answers of there being no sufficient incentive to the young officers under your charge; do you not think that if every young artillery officer was obliged to pass an examination before reaching the rank of captain in all these practical courses, that would be a sufficient incentive?—He has to pass that examination before he reaches the rank of captain, but it is more or less of a farce, according to the station he happens to be at, and the opinions of the officers composing the board. There is no possibility of testing practical knowledge at some stations where there is not a heavy gun, and the officers collect and keep copies of the written questions that have been given from time to time. I think every officer before promotion should be sent through a course at the School of Gunnery and Royal laboratory, and then examined at Woolwich or Shoeburyness, as it would be hard on an officer who had served 10 years in India in field artillery, to stop his promotion for defective knowledge of modern heavy artillery, its materiel and management,—though he is liable to have command of a garrison battery on the promotion for which he is being examined. The number of garrison and mounted batteries in the amalgamated lists is about even (putting them together), about 120 of each; the average time of service in each rank is 10 or 12 years. If the first five years in each rank were necessarily passed in a garrison battery, the remainder in a mounted, officers would not despise heavy artil-

Instruction after entering the service.

lery work, and would be fit for every service. At present an officer may get from one mounted battery to another, until he becomes a colonel and falls to the command of a siege train, which his military ambition would not permit him to decline; or he may serve in garrisons until he gets command of a field brigade on service, by right of promotion to a death vacancy. There need be no unfairness, because a subaltern of five years might take the vacancy in the mounted battery from which the senior subaltern had been promoted, by strict rotation, except when reported unqualified. If an artillery officer cannot be taught both branches, as being too much knowledge, then I think the special education they now get must be a mistake. The removal of artillery stores from the artillery charge is, I think, a great injury to the efficiency of the regiment, and may lead to national disaster. The knowledge of stores is a dry subject to the generality of officers, and will not be acquired without practice and without inducement; both are provided by the system of commissaries of ordnance, in India. Compelling officers to leave the artillery when they enter an ordnance department, will deprive it of some of its best officers for siege operations, and will degrade the corps. A term of five years as commissary of ordnance would very much improve an officer whose taste lay that way. I beg to be excused the egotistic statement that I have served as commissary of ordnance on service, and think such a duty could not be efficiently performed by any but an educated artillerist. I have made these remarks because I think it futile to educate artillery officers if the openings for professional ability are closed, as they now are, and the majority of officers debarred from experience in the mounted branch, which is naturally most attractive, especially to the young, who should be made to win their spurs in the less agreeable, but very necessary, garrison batteries. Having had the good fortune to serve in peace and war, in both branches, I am anxious to procure for the young officers passing through my hands an equal advantage and stimulus, and I do not think I put an undue value upon service in either branch of the corps.

7869. You think then that there is not sufficient incentive to work?—I think not.

7870. Is a young officer obliged to pass an examination in military law?—He goes through a course of military law with the assistant director of artillery studies, who examines him at the end of each lecture, as he goes on, but I am not aware of a final examination in military law. The present is the first batch for many years who have studied military law. When he gets his captain's commission he has an examination in military law, as far as it is practically found in the Mutiny Act, and in the Queen's Regulations.

7871. You spoke of the professional prospects of the young officers being so small that they did not seem inclined to work as well as they might have done had the prospects been better; do you think that the pay of the Artillery is insufficient, or that the promotion in that corps is not rapid enough, when you say that the professional prospects are so small?—I do not think that the pay is a question with which the young men trouble themselves—most of them have sufficient means—but the promotion is very slow. They find their contemporaries in the other branches of the service in some instances field officers, while they remain subalterns.

7872. Then I understand it to be, in your opinion, a serious bar to their working at the studies they have to pursue under your charge that they calculate their chances of promotion, and in consequence become idle?—I have no complaint whatever to make of their idleness when with me; they work very well, but would work more retentively if they thought professional knowledge would bring any advancement or advantage, and did not know that they can get into a field battery on joining, and go from one to another without ever having to do heavy artillery duty.

7873. Then you think that afterwards they cease to pursue their studies?—As they get on in the service they cease to pursue their studies.

7874. (*Lt.-Col. Chesney.*) Regarding your observation that sufficient time is not devoted to the subject of artillery at the Royal Military Academy, do you mean that the number of drills, for instance, should be increased, or is it class study that you refer to?—Both. There was formerly a whole year of what was called the practical course; that has been in a measure done away with, while the subject of artillery has widened enormously.

Royal M Academy

7875. At present they appear to do artillery drill under one captain of artillery, and to study the subject of theoretical artillery in a class room under another captain of artillery. Is there any special advantage in that distinction between the practical and the theoretical in that one subject?—There is a greater division than that I believe. The professors of artillery teach the theory in the class rooms, and a part of the drills, and another portion of the drills is taught by the executive officers.

7876. Is there, in your opinion, the least advantage in the division of one subject between two sets of men, both of the same regiment, supposing the best men to be chosen for the purpose?—I think it is better to divide them.

7877. Would you state the grounds of your judgment?—It requires long practice and peculiar qualities to instruct in theory in a class room, and an average officer is not fitted for it. Very much in-door work is, I fancy, apt to make a man unpractical outside.

7878. Does that answer imply that you think the average officers would be good enough to be instructors in drill to the cadets?—The better they are the better for the cadets. I would not wish to imply that an average officer would not be fit to instruct the cadets at all, though he might not be up to the mark for theoretical in-door instruction; most officers who have been through the School of Gunnery would be qualified to teach a cadet all out-door work, and, if a selected man, in-door theory; but if an instructor's powers are over taxed the pupils will suffer.

7879. You are aware, are you not, that the same officers who are drill instructors are connected with the discipline of the Academy?—Yes.

7880. Do you not think that for any matters connected with the discipline of an institution like the Academy, it would be desirable to have the selection of the very best men?—Most certainly.

7881. (*Maj.-Gen. Wilmot.*) With reference to this course that you propose, after a cadet leaves and gets a provisional commission, would not there be some danger that, if any emergency occurred requiring a young man to join the service, he might be taken away from this course, and sent to join the service before he was prepared?—There would be always that risk, but it applies also to the Academy; in the Crimean war officers who had never been at the Academy were sent out to the trenches.

Instructi after ent the servi

7882. Then, as a rule, would it not be safer to get as much education of that nature as possible into him before he ceased to be a cadet?—As a rule, it would be an advantage.

7883. I think I understood you to say that it would be necessary to alter the system at Shoeburyness to a certain extent before you could make it applicable to young officers going there, that is to say, you must increase the number of buildings, and make some other arrangements?—I think so.

7884. Would it not be found that, at a place like Shoeburyness, a young man on joining would have very little to do with what one would call the military discipline of a company, and so on?—He would have very little to do with it.

7885. He would learn nothing of that, in fact, would he?—Nothing; but I think he would probably have a dozen years in which to learn it as a subaltern; at any rate he would have a long time.

7886. Therefore it would not very much matter whether he learnt it at Shoeburyness, or not?—I think not.

7887. Could not you, to a certain extent, get over some of the difficulties of slow promotion at first by dating the commission of the cadet much earlier, that is, from the time he joined the Academy, or something of that sort?—I would count that as army rank; it could not be counted exactly as regimental rank, because their places would alter according to the examinations. I think the best plan would be to count a man's service from the time he is a corporal. Then, if you gave him real power, and reduced him for an offence, it would be a very real punishment.

7888. I judge from your answer, with respect to the Academy, that you think that a great deal of the discipline should be entrusted to the corporals and under-officers?—I do.

7889. And that is not the case according to your knowledge of it now?—It appears to me that it is not.

7890. Taking an officer in command of a company of cadets as an instructor of drill, supposing instruction in drill was part of his duty, may he not be almost as much considered a professor, as far as taking charge of the cadets goes, as a man who teaches the theory of drill?—Certainly.

7891. According to the old, and, perhaps, the existing arrangement, an officer who commanded a company was entirely responsible for the drill and discipline of a cadet?—He was.

7892. Is not that duty just as easily done, and better done, by a man who has nothing else to do?—It is better done by a man who has nothing else to do.

7893. Is there anything to hinder the most intimate relations between an officer in that position and a cadet?—Nothing but the personal character of the officer, and the number of cadets among whom he would have to diffuse his influence.

7894. According to the present system I believe there are three companies and three captains, all distinct. According to the old system there was one company and one captain, assisted by a certain number of subalterns; do you not think it is quite possible that that one captain with three subalterns could have just as much knowledge of the cadets as the three captains and two subalterns between them could have?—Just as much. I think that one captain and three subalterns, or it might be with a second captain and three subalterns, as in the case of a battery, would be the best organization, because with three captains there are three different characters; there may be three different kinds of punishment, and the cadets would not quite know what to expect.

7895. We had a case of that sort quoted to us, in which for the same offence three cadets met with three different classes of treatment; that would not be at all likely to occur if the discipline was placed in the hands of one man?—No; but he would always delegate a certain amount to his subalterns. That always was done, and would be done again, I have no doubt; or the chain of responsibility would have weak links and be no stronger than its weakest part.

7896. Many inquiries have been made as to the connexion of the cadets with the officer of their company; judging from your experience and knowledge should you think there is any reason why that connexion and influence should not be very considerable?—Formerly it was enormous; I think now there seems to be very little of it.

7897. Do you attribute that to the introduction of a new system, by which the inspector of studies and the second commandant are brought into one, and so the discipline is separated from the officers of the company just as much as it is from the professors, or to any other cause?—I should think what you have mentioned would be the chief cause, or one of the chief causes.

7898. I think you have had command of a battery of artillery?—Yes.

7899. Do you think that there is anything in the payment of a company of cadets, including 30 professors, which could not be undertaken by an officer in command of a cadet company? In addition to the duties of discipline in former days, you are aware that the payment of the cadets was conducted by the captain of the company; at the present time the professors and masters are also paid at the Academy. Is there any reason why a separate officer should be appointed to do that duty?—I should think not; though the duty is increased.

7900. The increased duty is simply in the work of a clerk?—Yes; in clerks' work, and in the responsibility of large sums.

7901. Do you think it an advantage or a disadvantage to have an adjutant connected with the Academy?—I do not like adjutants on principle. They interfere with personal influence of company officers over men, and so weaken their interest in them.

7902. The principle of the artillery service, I think you understand, is that the officers take upon themselves the instruction of everybody under their charge?—Yes; it is the principle, but it is not carried out as much as it ought to be, and I attribute to the fact of that principle not being carried out almost every defect in artillery instruction.

7903. Then if that principle is set aside in the Academy at Woolwich, does not it introduce an idea in the minds of the cadets very inimical to the general service of the artillery?—I think they would be apt to get an idea that the officers did not know their work, and only came to parade to look on, or maintain steadiness.

7904. Do you consider that the Academy at Woolwich is intended solely to produce cadets, or to produce officers also?—To produce officers.

7905. Should not the general principles upon which it is conducted be such as we have found by experience most advantageous for the service of the Artillery afterwards?—Yes.

7906. I have heard an observation made to the effect, that the great value the young men entering the service at the present time attach to their knowledge is for what it will produce?—Yes.

7907. That is to say, that the love of the military service is not so strong as it formerly was, and that knowledge is pursued simply for what it will gain for those who possess it?—Yes, chiefly for what it will gain, I should think; of course there are always exceptions, but, speaking generally, it is.

Military spirit.

7908. Are you afraid of a military spirit at the Academy?—By no means of the true military spirit.

7909. We have heard a good deal upon the Commission about the tone of the institution; what do you understand by the tone of an institution?—Some people would imply by it, manners, and, perhaps, the general idea that is formed of a gentlemanly man. I think the word might have a much higher signification given to it.

7910. In the higher signification which you would give it, what are those particular qualities which you would like to see exemplified by the cadets in a military institution?—Obedience first of all, self-sacrifice, and self-control, and the other military qualities which everyone expects in a soldier.

7911. Good tone can be got, of course, at a public school of the very highest class?—I rather think myself that public schools in that point are a little over-rated. I do not think the boys are so good as they used to be in that respect. I think also at the public schools now-a-days the boys are treated too indulgently, or allowed to be too self-indulgent.

7912. Supposing, however, the tone of a public school is as good as it is said to be, is that the only point up to which you would like the tone of a military establishment to come?—Certainly not; there are many other military duties,—punctuality, order, and *esprit*, that you would hardly expect, of necessity, to find in a public school boy.

7913. Then in the promotion of this you do not object to a certain number of parades and drills, and a

Capt. T. B. Strange.

29 April 1869.

Promotion in the Artillery.

certain amount of discipline, at such an institution?—I think them absolutely necessary.

7914. (*Mr. Parker.*) Can you state whether the average age of obtaining a lieutenant's commission, and a captain's commission, is much later in the Artillery and Engineers than in the line?—A great deal later.

7915. And the average attainments of an officer are higher?—I believe so.

7916. Is he not then put in a worse position as regards pay than the less well-qualified officers of the line?—It comes to be so, because the man who gets the quickest promotion gets the larger pay sooner.

7917. If a line officer did not purchase his promotion would he have to wait as long as an Engineer or Artillery officer for it?—Circumstances vary so immensely in the various regiments that it is not easy to say. I think he would probably not have to wait quite so long; such matters as exchanges would alter it. In the line non-purchase is the exception, not the rule, so I do not think the comparison holds good.

7918. Do you think it desirable to put the Engineers and the Artillery on a better footing as compared with the line in respect of pay?—The pay is the result of quick promotion. I think it would be very advantageous if you could quicken the promotion of the Artillery and Engineers. The pay of the Artillery is only a few pence a day above that of the infantry; the pay of the Engineers is considerably more; so that in speaking of pay you cannot class the Engineers and Artillery together at all. The Engineers get double pay at all foreign stations, and not to hold a lucrative appointment is a rare thing for an Engineer.

7919. Do you think that, in a pecuniary point of view, the higher pay in the Engineers and in the Artillery counterbalances the slowness of promotion as compared with the line?—It counterbalances it to the Engineers. As regards the Artillery the extra pay is nothing to speak of. The subaltern of artillery gets 4*d.* daily more than the infantry subaltern; when he becomes a captain he gets 6*d.* per diem less than the captain of infantry, who has, as a rule, served a far shorter time.

7920. Then the Artillery are, as compared with the line, upon a worse footing as regards pay?—Very much I think.

7921. (*Sir D. A. Cameron.*) Has a line officer who cannot purchase promotion as good a chance of getting a regimental lieutenant-colonelcy as an artillery officer? May he not be 30 or 40 years in a regiment without getting a lieutenant-colonelcy, and is not an artillery officer quite sure of getting it in a shorter time than that?—The promotion in the Artillery varies. Our colonels now are young, and in proportion as they are young so will the slowness of promotion be to those who are coming after them. As regards an infantry officer getting his lieutenant-colonelcy I do not think my answer would be worth anything upon that point, because the circumstances are so varied, and non-purchase is the exception in the line.

7922. But is not it a very rare thing for a line officer who does not purchase to get a regimental lieutenant-colonelcy at all?—You have such a vast deal more experience than I have that I do not like to say. I do not think it is a very rare thing, because I have known instances, and I suppose the line officer who is purchased over becomes also apathetic in proportion to his hope-deferred sickness of heart. In the artillery the slowness is general, in the infantry it is confined to the exceptional unfortunates who cannot purchase.

Instruction of Staff College officers at Woolwich.

7923. Have you had any of the officers who have passed out of the Staff College under your instruction?—I have.

7924. What kind of instruction do you give to them; do they go through the whole of the Repository course?—No; I do not attempt to make artillery officers of them, but I try to bring to their notice what sort of tasks they might legitimately demand from siege and garrison artillery on service; what sort of matters they should direct the attention of an inspecting general officer to, when inspecting garrison artillery.

7925. Is their knowledge of artillery satisfactory when they come to you? Do you find them prepared to benefit by your instruction?—Yes; I think, considering that there is no artillery officer instructing at Sandhurst, it is surprising how very fairly they are up in artillery matters. I have formed a very high opinion of their qualifications and abilities generally. I have myself benefited by intercourse with some of them, but there is a very marked difference between the top and bottom of the batches.

7926. Then you think that the instruction in artillery ought to be given by an artillery officer at the Staff College; it is now given by an engineer officer?—I think so. One is afraid of being personal in these matters; I wish to avoid anything like personality; in fact what I have said is a high compliment to the engineer instructor, because I have said I am surprised at the efficiency of those who have come to me from there—considering also that there is no squad of gunners to teach dismounts and shifts of ordnance practically at the Staff College. I am informed sappers are used for this purpose, with an artillery serjeant.

7927. Do you think that the Staff College officers are long enough at Woolwich?—No, I do not think they are at all, and they are sent there at a time of the year, namely the winter, when it is almost impossible for them to learn what I take to be a very essential part of their duties, that is, the sort of ground for artillery, and the pace at which artillery can go over that ground. They never have an opportunity of being present at anything like extensive movements of field artillery, because they come in the winter.

7928. I believe the officers themselves are not satisfied with the course they go through?—I think not; they always regretted that they were not sent in the summer.

Royal Acad

7929. (*Maj.-Gen. Haythorne.*) Is it stated in evidence that there are 221 attendances in surveying, and only 170 in artillery at the Academy; do you think that could be changed in such a manner as to increase the study of artillery by substituting artillery study for some of the time expended in surveying at the Academy?—I think the surveying is very important as well to an artilleryman as to an engineer, and I think, their being instructed together is a great advantage. I do not see how the surveying could be reduced in quantity.

7930. Then how would you propose to give more instruction in artillery?—I am told by officers on joining that they could not pass so good an examination in mathematics when they went out as when they entered; therefore, I think there must be great waste of time in the mathematical instruction at the Academy. I think the fortification plates of obsolete systems too numerous, and not enough of the probable future of fortification, which is a fine field for getting young officers to think professionally.

Artill instru Staff office

7931. (*Lord de Ros.*) Do you think that any competent or experienced inspecting general would ever think of referring to his staff officers for advice as to the points to which he should direct his attention when reviewing artillery? Do you think he is fit to review artillery if he is obliged to refer to his staff for advice?—I do not think he is, but I think a great many would do better if they did.

7932. (*Lt.-Col. Chesney.*) Were you in the Crimea?—I was not.

7933. (*Lord de Ros.*) You were at Lucknow, were you not?—I was at the siege of Lucknow.

7934. (*Sir D. A. Cameron.*) Supposing that no instruction in artillery were given at the Staff College, how long would it take an officer to acquire sufficient information in artillery matters to qualify him for the staff, under your instruction, for example?—I do not think I could possibly give him instruction in both branches, because my instruction chiefly refers to

garrison artillery. I have no means of giving him instruction as regards the movements of field artillery, but I should think that six months would be necessary for the two, including a short laboratory course.

7935. If he received no instruction at the Staff College?—Yes, I think so, but the subject of fortification can hardly be dealt with without going into the subject of artillery.

Capt. T. B. Strange.
20 April 1869.

The witness withdrew.

Adjourned to Tuesday next at 12 o'clock.

Tuesday, 4th May 1869.

PRESENT:

THE RIGHT HON. LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
GENERAL LORD DE ROS.
LIEUT.-COL. SIR CHARLES RUSSELL, Bart., V.C.
LIEUT.-GEN. SIR D. A. CAMERON, K.C.B.
MAJOR-GENERAL EARDLEY WILMOT.
MAJOR-GENERAL HAYTHORNE.
REV. DR. BUTLER.
REV. W. C. LAKE.
LIEUT.-COL. CHESNEY.

MAJOR-GENERAL J. H. LEFROY, Royal Artillery, examined.

Maj.-Gen. J. H. Lefroy.
4 May 1869.

7936. (*Chairman.*) You were employed by Lord Panmure in 1856 to draw up a general scheme of military education, I believe?—I was.

7937. At that time it was in contemplation to amalgamate Woolwich and Sandhurst?—Yes.

7938. Are you still of opinion that it would be desirable to attempt an arrangement of that kind?—No, I do not think so now. In my opinion the great development of the system of competitive examination since 1856 has materially altered the conditions of the case. The nature of the education at Woolwich has greatly changed, and it now differs more widely from that at Sandhurst than was the case at that time; I think it would be very difficult to fuse the two establishments into one without injury, certainly to the Woolwich half of it. Moreover, I think that it would be practically very difficult, if not impossible, to control and manage an establishment so large as it would then become, under a military system.

7939. Many witnesses, to whom we have addressed the same question that I have put to you, have laid great stress on the peculiar advantages afforded to the students at the Academy from the proximity to the arsenal, and the facilities afforded to them for observing the practical processes connected with the construction of artillery; would you attach importance to that?—I should also attach very great weight to that. At the period your lordship refers to, it was not contemplated to deprive officers who entered the Royal Artillery of that advantage during the whole period of their military education, because it was contemplated to draft them from Sandhurst to a school of application at Woolwich, where they would for a limited time have had that advantage. Still I attach great importance to the manner in which they get imbued, as it were, with the spirit of military instruction and artillery exercise by their residence at Woolwich.

7940. Have you any suggestions to offer to the Commission in regard to any improvements which might be introduced into the organization of the Royal Military Academy?—I entertain the opinion that the system of education now given at the Academy is too uniform, that the subjects are too numerous to be learned by everybody, and that there is not a sufficient power of laying out a line of education for each youth as he passes through it. My general impression is, that the education should be common for the first three terms, but that for the last two terms, at all events, it should be of a more special nature; special with regard to those who enter the Engineers and to those who enter the Artillery, and special in both of those classes to the genius and the character of the individual.

7941. Over what period would the first three terms extend?—A year and a half.

7942. I believe that you were mainly instrumental in founding the Artillery Advanced Class; perhaps you will kindly favour the Commission with a description of the nature of that class, and the objects with which it was founded?—The Advanced Class of Artillery officers originated, I believe, in a proposal of mine made to the Adjutant-General of Artillery in the year 1861. What led to it was a very strong impression on my mind, which was shared by other officers, that the Royal Artillery was deficient in the higher branches of artillery science, and that no organized means existed for getting instruction in those branches. It was not that the young officers did not join the regiments as a rule very well qualified,—highly qualified indeed, compared with other young men of their own age,—but that the inducements to keep up that knowledge afterwards were defective. They did not advance with the progress of artillery science, which was at that time making extremely rapid progress; and they naturally, under the conditions of our service, spending a large part of their time in places extremely unfavourable to study, lost what they had learned, and *de facto* there was not forthcoming a sufficient amount of what I call the science of artillery. That persuasion, which had been on my mind for many years, induced me to urge upon the Adjutant-General of Artillery that some steps should be taken to meet this want; and I suggested that the best way of doing so was to constitute something analogous to the Staff College, but having reference to the special duties of the officers of artillery, and which should be their preparation for all the class of civil employments of a *quasi* scientific character which is held under the Secretary of State for War.

Artillery Advanced Class.

7943. The class is now in full operation, is it not?—Two classes of 14 individuals altogether have been instructed, and there is a third class now going through the course; and from what I have seen and heard, it is perfectly successful. My personal intercourse with the young officers who have entered themselves for it has given me a very high opinion of their ability and talent; and I see nothing to prevent the realising of the object which we had in view, provided that the officers so qualified are kept in view and duly selected for the appointments for which they have prepared themselves.

7944. Have you any acquaintance with the Staff College?—No, none beyond what every other officer has.

7945. (*Lord E. Cecil.*) You say that the two principal objections you have to any amalgamation of the two colleges are, firstly, if I understand you rightly, that the education at Woolwich would suffer materially by the Academy being joined on to Sandhurst in the present state of things; and, secondly, that the size

Amalgamation of Woolwich and Sandhurst.

Maj.-Gen. J. H. Lefroy.

4 May 1869.

Amalgamation of Woolwich and Sandhurst.

of such a college in itself would be a very great objection to good education, and I suppose to good discipline. Am I right in thus stating your two objections?—Yes.

7946. You are, I daresay, aware that the college at St. Cyr, in France, numbers 600 pupils; have you ever heard that there has been any great difficulty in managing so large a number of pupils? Supposing that under any future scheme the pupils at Woolwich numbered 200, and the pupils at Sandhurst about an equal number, making a total of 400, would you see any great difficulty in their being managed after the example of foreign schools?—Not if the numbers do not exceed 400. I was contemplating that the numbers would be double that. I do not know of course in what proportion first commissions in the army will be hereafter given from Sandhurst. Woolwich alone commissions 70 or 80 young men annually; and if they remain there two years and a half, that brings it up to about the number you have stated. The number of first commissions in the army at large, though not of course all from Sandhurst, is somewhere about 300 per annum, or more, I believe.

7947. Of course any such scheme would, I presume, in your opinion depend for its success upon the system of education at Sandhurst being totally altered?—Yes, so far as I am acquainted with the system at Sandhurst, I should say so.

7948. But if those two objections which you have named were met in the manner that I have mentioned, you think that there is no other objection to the amalgamation of the two colleges?—I think that there would be a disadvantage in the change of locality, unless there were another establishment at Woolwich, as I mentioned just now. But I think also that there would be a disadvantage to Sandhurst itself. It would be a perpetuation and an increase rather of the evil which at present exists; you would have the young men under training divided into two different classes, the one aspiring to the non-purchase commissions in the Artillery and the Engineers and the Line, and the other knowing that under any circumstances they must purchase their promotion. That line of demarcation would be broader than ever; and it would be extremely difficult to weld them into one satisfactory system, for they would differ so much among themselves. I understand that at Addiscombe, where that system prevailed, there was a very broad distinction between the young men who qualified for the Artillery and Engineers, and those who remained behind forming the bulk of the Line appointments; and the result was that they themselves were dissatisfied, and everybody was dissatisfied, with the inferior degree of education given to the latter.

7949. Do you think that there would be any great jealousy between the two kinds of students, viz. those for the scientific corps and for the Line, or that there would be much heartburning at the different promotion that each student got in his after career in the army?—No; I should not apprehend that.

7950. Then on what feeling, especially, would you ground your objection?—I do not apprehend that there would be anything producing ill-feeling between the young men.

7951. Or heartburning?—Or heartburning. In many instances there would be free choice on both sides. From circumstances of taste, family connection, and other reasons, a great many young men deliberately prefer the Cavalry or the Infantry to the Artillery or the Engineers, therefore I do not think there would be that feeling. But, inasmuch as the qualifications for commissions in the Line need not be, and, I presume, never will be, anything like so high as those for the two scientific corps, you would have a broad line of demarcation drawn below the Artillery and the Engineers, which would create a sort of sense of inferiority, I think, on the part of those who belonged to the lower half.

7952. Do you think that that sense of inferiority would be prejudicial to them in their after career as officers in the service?—No, I do not think it would, inasmuch as the status which a lad takes in his education does not stamp him for life.

7953. Then the objection would simply hold good during their career at the college?—Yes.

7954. (*Sir C. Russell.*) When you were considering the proposal for amalgamation, did you go into the question of cost at all?—Yes; I made out as careful estimates as I could at the time. I submitted indeed a complete system, embracing an estimate of the whole of the expenses as far as I was able to arrive at them. I may mention that in that I had the assistance of an extremely experienced gentleman of this office, the late Mr. Croomes. Very detailed estimates were made out; I have not got them by me now, but I can put them in if they are wanted.

7955. I do not know whether the Commission would think it of importance to have them, but I should certainly like to have an idea as to the cost. I presume that the scheme would bring about a reduction in cost?—The scheme as then proposed did not bring about any reduction, because I contemplated forming a school of education for the Engineers, another for the Artillery, and another for the Cavalry. For the Cavalry it would be a totally new thing. There is nothing of the kind existing. The artillery school would be something analogous to the present military academy, but altered in constitution; the school for the Engineers would be something like the school at Chatham, but altered in some respects. On the whole there would be an increase in expenditure no doubt. Woolwich and Sandhurst, I think, would certainly work more economically combined than they do at present. That, I suppose, there is no doubt about.

Royal Acade

Staff a organi

7956. Have you ever considered whether the present cost of education at Woolwich is excessive?—It appears to me to be rather excessive, but it is based upon such a very artificial footing that it is not easy to say exactly how it can be reduced. You have so many gradations and differences in the rate of payment on the part of parents—some parents paying more than twice, I think three times, what is paid by others; that of course gives the whole thing an artificial character. And then the great variety of subjects taught requires a much more diversified educational staff than is required at public schools and most other places of education. I do not think that the establishment can be called a costly one in its mode of conduct in other respects.

7957. There is, I believe, a paymaster attached to the Academy at present?—Yes.

7958. Are you aware of any necessity for the paymaster?—In my own time, some years ago, the captain of the company was the paymaster, merely assisted by a clerk. The paymaster is, I presume, a sort of steward keeping accounts generally; but, so far as I am qualified to express an opinion, I am inclined to think that that is not necessary.

7959. You could not give any evidence as to what his salary is?—No.

7960. It appears that there is an officer called the assistant inspector of studies at Woolwich, who does not exist at Sandhurst; are you of opinion that such an officer is necessary?—It all depends, of course, upon the number of attendances at which the inspector of studies is required to be personally present. The present distribution of duties, as far as I know, is sufficiently exacting upon the time of the inspector of studies to make it necessary that he should have an assistant to divide the duties with him, because one or other of them is expected to be present at all the attendances, which begin early, and are some of them very late.

7961. I believe there are three captains of companies at the Academy?—Yes; the cadets are divided into three companies, each of which has its captain and its subalterns. That organization has, I think, partly resulted from the arrangement of the building. I do not myself see the necessity for so many. I think there might be a reduction; but those are points upon which officers more conversant than I am with the actual working of the Academy will express a better

opinion, because I have never been a cadet officer, or attached to the Academy in any way.

7962. (*Lt.-Col. Chesney.*) Regarding what was said just now of the assistant inspector of studies, it was stated to us that he is placed to observe both the professors and the cadets during study, and that that is his business. Is not there something false in the position of a military officer, as the assistant inspector of studies is, going there to observe the work done by senior officers of his own regiment or of another regiment, and to be a check upon them as to how they do their professional work?—I do not think the question of seniority comes in there necessarily more than it does in the relations of staff appointments; but I do think that the professors are not sufficiently trusted, and have not a sufficiently independent position.

7963. In relation to that last answer I would ask you further, is there, in your opinion, any necessity for the conventional distinction between the authority of an officer attached to a company to govern it and called its captain, and a similar officer, perhaps a captain of artillery, who is teaching the cadets in the hall?—No; I think not.

7964. (*Maj.-Gen. Wilmot.*) Would you separate the cadets at the end of the third term in the scheme you speak of?—I would have the selection, whatever it is, for the Engineers, made at the end of the third term; and thenceforward the education should be rendered special for those two branches of the service.

7965. Would you make that selection the result of examination at the end of that time?—I think it should depend upon the aggregate number of marks gained in the three preceding terms. I would not make it depend upon the examination at the end of the third term only.

7966. It has been suggested to the Commission that the marks obtained in classics at the entrance examination should not be thrown away, but should be carried on to the final examination. What is your opinion upon that point?—I am entirely of that opinion.

7967. The result would be that a cadet might take a very high place, owing to his classics, at his final examination; but that would not necessarily show that he was qualified to be a good engineer officer, would it?—I think it would.

7968. He might be very low in drawing, and very low in everything connected with the specialities of his branch of the service?—My own feeling is that we do not want to make such special men. I want to see education liberalised as much as possible. I am quite certain that out of the excellent stuff we have at command you can by after training at Woolwich or Chatham give all the special knowledge that is required. As you have alluded to classics, I may perhaps remark that I think it is a great injustice and a great mistake that those young men who obtain their first commissions by their classical attainments are placed not only at no advantage, but at a positive disadvantage afterwards. In my opinion classical knowledge is as well worthy of being maintained as a qualification for a commission in the Engineers or the Artillery as any other subject whatever, except, possibly, mathematics.

7969. Would not that rather militate against the special instruction of those corps, because you might obtain the classical attainments without having a military academy?—Perhaps I had better explain that I have no idea of carrying forward classical studies, and making officers classical scholars. What I want is, that a young man who has, up to the age of 17 or 18, attained a considerable amount of scholarship, should keep it up. Let it be gained early, and let it sink into his mind, trusting to his own intelligence in after life to preserve it. I only desire that the cadets shall not forget what they have learned before they came in.

7970. With regard to the scheme for combining Sandhurst and Woolwich, I think it was more with reference to the educational difficulties than to difficulties arising from the cadets themselves that you were speaking, that is to say, if you had men of comparatively low attainments, knowing that they were going to get commissions without any difficulty, they would be a clog upon the institution generally?—Yes, they would be both a clog and a bad example.

7971. You were not speaking with reference to any bad feeling between the two classes of cadets themselves?—No. They would lower the general tone of feeling.

7972. Supposing that Woolwich and Sandhurst were not combined, should you prefer to see the Woolwich academy conducted on any other system than the one on which it is now carried on?—There would be a considerable change of system if what I referred to just now were adopted, that is to say, if the education for the last year took a more special direction, and the selection for the Engineers were made at an earlier point of the course; that of itself would involve a great many changes. But I am also in favour of grouping the studies, and allowing cadets after a certain time to make their choice in which group they will make progress. And to prevent difficult comparisons between dissimilar studies, I would have no taking of places during the last year. The boys at public schools do not take places in the sixth form, and I do not see why a similar rule should not be carried out during the last year of the education at military schools. In that case you avoid the difficulty of comparing things which are incommensurable.

7973. Supposing the artillery cadets and the engineer cadets were to carry on the same class of studies, would you not lose one great incentive to them to work if you had no competition amongst them at all?—I do not know whether the engineers could take places amongst engineers, and the artillery amongst artillery, that is a point which might, perhaps, be left open. I am not prepared to express an opinion upon it, but I think that at all events the taking places should only be among those who pursued similar studies.

7974. But practically now a very large proportion of the studies are dropped at the end of the first year and a half?—I am not aware that that is the case.

7975. Mathematics, for instance, are not pursued at all, and languages are not pursued at all after that time?—The application of mathematics is pursued, both in mechanics and in surveying.

7976. But there is not any direct mathematical instruction?—I think it is a pity that it should not be pursued by those who take up mathematics.

7977. Supposing the system was so far altered that provision was made for a cadet to continue his mathematics if he chose (which he cannot do now, except out of his own private time, and for his own satisfaction), and for him to be entitled to the assistance of a professor in that study, would that in a measure meet part of the want that you feel to exist?—I do not know why it should be confined to his continuing the study of mathematics. There are other subjects the study of which I should think he might also, if he had a special bent in that direction, be allowed to continue. My general feeling is that the service requires officers of special accomplishments, and a good many of them; but it does not require any one officer to possess all that long string of accomplishments which in theory, but not in practice, is supposed to be instilled into him at the Academy. If a man will study mathematics, I should not care about his not drawing; and if another man can draw well I should not care about his not studying mathematics. Mathematics and drawing are not both wanted in the same person. What the service wants is that there shall be men who can do each well. Of course, if you can get a broad basis so much the better; but I should be content if I could get a small number of really good mathematicians. If I could get a few really high mathematicians according to the Cambridge standard I would dispense with a great deal else for the sake of that.

7978. When so much depends upon the competition, do you not see great difficulties in that arrangement?

Maj.-Gen. J. H. Lefroy.

4 May 1869.

Royal Military Academy.

—I do not mean to say that there are not difficulties in doing it. I think it requires a great alteration in the system of instruction and the buildings in which the instruction is given, and so forth. I should like to mention that one of the internal changes which I should like to see is the release of the professors from a great deal of their present work, and a general supervision over the studies confided to them.

Artillery Advanced Class.

7979. With regard to the Advanced Class, I understand you to say that in your opinion it fulfils the intention with which it was instituted?—So far as I have had opportunities of judging from the two first classes which have fulfilled their terms, I may say that among those 14 young officers there are a proportion who are as highly instructed and as clever young men as can be found in any Artillery.

7980. Do you anticipate that it will always be filled by comparatively young men?—Yes; by comparatively young men for this reason, that the entrance examination is in a certain degree competitive; and I think that you will not often have officers beyond 35 years of age, at all events, coming forward for it. There have been as yet only two past that limit.

Returns, p. clxiii.

7981. I think on the last occasion there were only seven competitors?—There was rather a falling off in the numbers on the last occasion I know.

7982. It was understood that only four actually passed the examination; are you aware of that?—Two, I know, were rejected at one of the examinations; but I did not know that only four had actually passed. However, for some reason or other it was remarked last time that the class that presented themselves were not so good as the previous classes.

7983. Have you any notion in your own mind as to what is the reason for that fact?—Hints have been given to me by some of the young men that they do not themselves quite like the course that is now pursued, and they do not think that the prospect is sufficiently certain of their being benefited by the time and labour they devote to it, in getting appointments. The real stimulus that is wanted is something like a certainty of getting an early selection for appointment afterwards.

7984. Most of those who have actually passed through it are holding appointments of some sort, are they not?—I think pretty nearly all of them are.

7985. Therefore, there ought not to be a feeling of dissatisfaction on that score?—No, I think that is an unreasonable feeling; but I believe that it was the feeling of the best officers, judging from what I have heard. The officer who came out second of the last batch has not received any appointment. He is under orders for India, where his prospects of getting any appointment are exceedingly slender. That is, of course, a discouragement.

7986. As time goes on of course that difficulty would increase, because if you fill up the appointments with young officers they are not likely to vacate them as soon as older officers would?—No. It depends upon the degree of strictness with which the five years' rotation is carried out. The number of appointments for which that education is a qualification is very large. I have just been counting them up, and I find that there are as many as 70 or 75 appointments for which that education is a qualification. If those appointments were really all five years' appointments (which they are not) there would be, of course, about 15 falling vacant per annum; that would be quite enough to hold out all the encouragement that is wanted.

7987. It has been stated in evidence, as accounting for the want of zeal, if I may use the term, in private study among the young officers, that the reason is that they see so little opportunity of obtaining appointments. If those appointments were confined to a special class, would not that discouragement exist much more largely than at present, because if you educate so many for a special purpose out of the 1,500 or 1,600, you shut the door to all the rest, except those going through the special training?—I see the disadvantage; it is a real one; but it appears to me to be the less of the two evils. There are a large class of *quasi* military appointments which I have not included in the number I have enumerated, for which other qualifications are admissible, and possibly by going in detail over those I have counted that number might be increased; but I do not see how you are to meet the two purposes. Are you to induce a young man to come forward and go through a laborious course of education, and afterwards, upon an individual opinion that some one else who has not gone through that course of education is the better man, to pass over the man you have educated in that special manner?

7988. Do you think that the course is at present desirable with regard to its length? Is it not more than sufficient to do what is required?—No, I do not think it is. It comes after the best practical course which can be given, that is, Shoeburyness, so that you have every security that the officers who go through it have all that the public service requires of them as regards both theory and practice.

Royal Academy Course of study.

7989. (*Sir D. A. Cameron.*) With reference to the alteration you recommend in the course of study at the Academy, I suppose you would make all the purely military subjects obligatory on every cadet?—Yes. I would make them all attend lectures on military history, but I would not make them all learn field sketching, for instance, which is a purely military subject. After a time you would find some of the lads who never could and never would learn it. I think it would be a mere waste of time to go on teaching them. Sketching the ground is not required as a part of every officer's qualifications. The number of officers who in the course of their service are ever called upon to do it is a very small proportion of the whole. I think you might have quite as much as you want done without requiring everybody to learn it; but I would let all begin, and I would teach them all the use of the surveying compass, and perhaps other instruments, which it takes no time worth considering to learn.

Entrance examination.

7990. (*Maj.-Gen. Haythorne.*) Do you consider that any change is necessary in the entrance examination for Woolwich?—The entrance examination appears to me to be now very well proportioned.

7991. Have you any suggestion to make with regard to the difficulty of getting rid of the cramming system? It has been stated in evidence here that the questions which are put are very much of a nature which requires the assistance of people to get up the answers to them, and that they are not sufficiently confined to the elementary and fundamental part of instruction in mathematics?—I think there is a great deal of truth in that, as regards the examinations generally. The best examiner, I believe, they ever had at the Military Academy, the late Professor O'Brien, made it a rule never to make a question himself. He turned to the best books on the subject, and took the questions he found in them. By that means his questions were kept fairly on the level with the standard of the education which was going on. But it is very difficult in the case of history, physical geography, and languages, and so on, to avoid giving catch questions. Those are the lines in which cramming comes in. I do not think it does in mathematics, for instance.

Course of study.

7992. In your opinion, is there more time given to the surveying and less to the artillery studies than necessary at the Academy?—My opinion is, that there is not time enough given to the study of artillery. I think artillery and mechanics should be considered as one subject; that would be a group with, perhaps, some other. The proportion of time now given to artillery study for those who are destined to go into the artillery is, I think, not sufficient. I think it is more than sufficient for those who are going into the Engineers.

Staff.

7993. (*Lord de Ros.*) With reference to the questions of Sir Charles Russell as to the necessity for the paymaster at the Academy, you are aware, of course, that the paymaster is a sort of servant of the War Office, and a financial check; he is hardly to be con-

sidered as a regimental officer, in a military sense, is he?—No, I think not.

7994. Do you think that he could be dispensed with as a check upon the expenditure at the Academy?—I am really unable to say to what extent, in his position at the Military Academy, he is a check or not. It works according to such very definite rules that I should think he was hardly required there, as you have other responsible officers.

7995. You think he might be dispensed with?—I should not like to commit myself to that opinion, but I should think he might be.

7996. As regards the separation of the artillery and engineer officers at the Academy after a time; I presume that one point you would take into consideration in that would be that the art of construction and building as well as of fortification is exclusively engineers' work, which it is not necessary for an artillery officer to learn?—They do not learn that at the Academy. I think all that is learned after the engineer officers get to Chatham; but an artillery officer must learn the elements of permanent fortification, in order to get a knowledge of the works he may have to defend. In my opinion that is given at present with too much reference to purely abstract cases, and not with enough reference to the actual fortresses of the British empire and the actual positions in which an officer may find himself placed. Take, for example, Malta: an officer may have learned all his fortification at Woolwich, and yet be unable to recognize the works when he sees them at Malta or elsewhere, and not have the least idea how to defend such a place.

7997. You think that the fortification instruction should be more varied with reference to actual fortified towns, instead of merely representing a system of fortification in the abstract?—Yes, and every example that was given should be taken from some real case, as far as possible, in the British empire. We used to learn the fortification of Alessandria, which was at one time in vogue, but we were never taught the fortification of Malta, which is as diversified, and gives as many examples of fortification as Alessandria; and the same was the case with other examples. What I say is, that examples might be chosen from the actual possessions of the British Crown, which would be more instructive than abstract ones.

7998. Do you think that the want of candidates for the Advanced Class may arise from a want of confidence in the instruction given there, rather than from any idleness or unwillingness to learn on the part of officers?—I do not think there is any reason for a want of confidence in the instruction. The professor of the Advanced Class is a most indefatigable teacher, and a very able man. So far as I know there is no want of confidence felt, and the instruction appears to be extremely good. Fancies get abroad among a class of young men sometimes. It is difficult to say what fancy has led to a falling off in the zeal for this class, but I hope it will revive again before long.

7999. Independently of the qualities of the instructor, do you think that the instruction itself as laid down is a good course of instruction?—As far as I can judge it is.

8000. Would it not be a dangerous principle to admit that the superior education given in the Advanced Class was an actual claim for employment; would it not lead to very great jealousy on the part of officers who had seen some service, and who considered themselves quite equal to those who had passed through that course of instruction?—I should not wish any educational test to be taken as an obligation for employment. I think that can never, in practice, be the case, because there will always be more qualified officers than can be employed at any one time; but I think when an officer has qualified himself by passing through this class, and when there is not a word to be said in any respect against him, he should have the preference as against any other officer who has not gone through the same course of instruction. This was in fact expressly promised in the General Order of 2nd November 1863.

8001. Would you not add to what you have said, supposing the other officer to be not equally qualified; and might he not qualify himself without going through that course?—Then, let him pass the examination.

Maj.-Gen. J. H. Lefroy.

4 May 1869.

Artillery Advanced Class.

8002. Has it not always been found on active service in the field that the best officers are brought forward wherever they are to be found?—If the active service lasts long enough no doubt that is so; but we are here dealing with appointments which prepare for war, but do not belong to the field.

Sandhurst.

8003. (*Rev. W. C. Lake.*) I understood you to object to the amalgamation of all arms at Sandhurst on the ground that it would be a bad thing to mix a class of young men who had no hope of getting a commission without purchase, and who, therefore, usually become idle, with others who came there to work?—Yes, that is my opinion; idleness is a very contagious thing, and I think all young men going through a college of that kind should, as much as possible, be under the same stimulus.

8004. Then you would think that, supposing Sandhurst were maintained, it would be very desirable that all the young men there should, if possible, have hopes of obtaining a free commission by examination?—If possible.

8005. Do you think it would tend very much to improve the discipline and to quicken the diligence there if that were the case?—I think it would.

Royal Military Academy. Classical instruction.

8006. With regard to the study of classics, I think you used the expression that it was desirable that young men who were well up in classics at their entrance examination for Woolwich, should not forget what they had learned; would you wish to attain that object simply by allowing them to retain the benefit of their classical marks, or to pass some examination after a year or some other period? or would you go even further and wish that there should be a class in which, if they liked, they could continue to learn classics?—I would not continue the classics in the sense of putting them into any new books; my idea is not to make classical scholars, but simply well educated gentlemen, who shall be competently instructed in what has been the staple of their own education. I would have classes, undoubtedly, and a professor of classics, but it should be more for the purpose of keeping up the languages than anything else, and their reading should, as far as it could be arranged, have some bearing upon their military profession, which could be effected by reading the classical military writers and historians.

8007. The examiners have found that some few of the young men who passed the entrance examination did extremely well in their classics. I suppose you would think that officers of that cultivation were a clear gain to any branch of the service?—I think so.

8008. And that it was desirable to give them some kind of inducement to keep up those attainments?—That is my feeling. The worst bane to the service is vacuity of mind, frivolity, and the absence of a definite intellectual taste.

Moral supervision.

8009. Is there any person who would naturally have the moral supervision of the cadets at Woolwich?—There is no person of whom that is expected. In proportion to their own sense of moral responsibility, individuals exercise it with more or less conscientiousness, but there is no person, at least there used not to be, of whom it was in the least degree expected, and the consequence was (I am speaking now of a long by-gone day, that most flagrant violations of every sense of decency were perpetrated under the very eyes of the masters without the least attempt to check them.

8010. So long as those were not offences against discipline, were they completely condoned?—Completely; that was the case.

8011. Do you think that the effect of there being no person who was charged with their moral supervision would be bad upon the cadets in this way, that they would be liable to resist any suggestions not coming from the natural authority upon that subject?—No, I do not so much think that; but nobody not

Maj.-Gen. J. H. Lefroy.

May 1869.

Royal Military Academy.

having a certain degree of responsibility can exercise a sufficiently extensive supervision. There was no chaplain attached to the institution at the time I refer to. The late Dr. Olinthus Gregory, who was a most excellent and well-known man, has often lamented to me his own want of moral responsibility and influence over the cadets; but so far as he could exercise it by his personal influence, he did so, and a most beneficial influence it was. I have no doubt that the same thing has been done by many others.

8012. Have you reason to suppose that since that time the chaplain has considered it part of his functions to exercise a moral influence over the cadets?—Yes, I think he has.

8013. Would you have the governor of the Academy under all circumstances a military officer?—Yes, I think so. I think that the whole establishment is so essentially military, and it is so essential that it should be pervaded by a military spirit throughout, that it is necessary that the governor should be himself a military man.

Annual expense.

8014. Have you any impression that the general expenditure upon the Academy might be reduced without disadvantage to its efficiency?—I think that by a different distribution of time the number of masters might be diminished with great advantage. We do not want four instructors of artillery, I should think, for the time now devoted to that subject; probably a diminution would be attended with some extra claims on the part of those who remained. I cannot say how far small reductions are possible. I do not know that the internal economy of the establishment is necessarily extravagant in any way. The establishment after all costs the country a very small sum indeed compared to the benefit it derives from it, three-fourths or four-fifths, I think, of the expenses are borne by the parents of the cadets.

8015. (*Chairman.*) I am going to ask you a question upon a point with respect to which we have had no information yet from any previous witness. At any of the places of military education with which you are acquainted is there any instruction given in the subjects connected with the commissariat and the military train and the ambulance corps?—There are lectures on military administration given to the Advanced Class of Artillery officers at Woolwich, and the relations of the manufacturing departments to the War Office, and to the departments of supply, are expressly included in their course. There are also, I believe, lectures on military administration at Sandhurst.

Instruction in administration.

8016. At the Staff College?—Yes, the subject has acquired a concrete form, but recently; I think, it is a great deal too much neglected in all military education, and I should be very glad to see more importance attached to it. The only book which we have on the subject, De Fonblanque's, which is a little out of date now, was expressly prepared for the Staff College, though never adopted there, in consequence of some of the opinions expressed by him being unpalatable to the officers at the head of administration at that day.

8017. I suppose that a certain knowledge of the way in which troops ought to be supplied with food is most essential to every officer at one time or another of his career?—I do not know that a regimental officer requires any very extensive acquaintance with it, more than could be elicited by regimental boards and by daily experience; but for a staff officer I think it is at least as important as any other qualification he is called on to possess.

The witness withdrew.

Brevet-Lieut.-Colonel C. F. Young, Royal Artillery, examined.

Lt.-Col. C. F. Young.

Department of Artillery Studies.

8018. (*Chairman.*) You are Director of Artillery Studies at Woolwich, I believe?—Yes.

8019. You were formerly instructor in artillery at the Academy?—Yes.

8020. And the Artillery Advanced Class is under you?—Yes.

8021. Would you explain the difference beween the respects in which you are Director of Artillery Studies at Woolwich, and those in which you are superintendent of the Artillery Advanced Class?—The department of artillery studies was revived some years ago under a director, my predecessor. The object of the department was to assist officers in improving themselves in their professional and scientific studies. Officers who had an inclination to scientific research were sent to Woolwich, and they were generally placed under the orders of the director, who superintended also the instruction of the young officers of the regiment, and the arrangements for all classes of non-commissioned officers and men that were sent to Woolwich for instruction. When the Advanced Class was instituted some five years ago, it was placed under the orders of the Director of Artillery Studies, and the department was increased in order to meet the wants of that class, an assistant being appointed to perform some of the duties previously performed by the director.

8022. How long have you held your present appointment?—As Director of Artillery Studies I succeeded Colonel Smythe at the latter end of 1859, and the Advanced Class was formed in 1864.

Artillery Advanced Class.

8023. How many pupils have passed through your hands in the Advanced Class?—We are now instructing the third class. Each class is limited to eight, and it is a two years' course. At the formation of the present class only seven qualified at the entrance competitive examination, and one of these seven, who was in India at the time, considered that it would be inadvisable for him to return home to take up the duties at Woolwich, as he would have lost two or three months; so that we commenced the present class with only six, and we have just completed the first year's examination.

8024. Do you find that commanding officers object to their officers coming up to Woolwich for the Advanced Class?—I could hardly say that the commanding officers have objected, although I have been told by officers who have come forward and others who have thought of coming forward that there was rather a suspicion against the class, simply because they did not see their way to any employment after completing their course. However, the orders which have been issued from time to time from the Horse Guards have been all in favour of the class. In fact His Royal Highness only a year ago, as I mentioned in the statement I sent to the secretary of the Commission, gave great encouragement to the class by saying that all first appointments of a scientific character were to be given in preference to officers who had passed through the class with credit, that is to say, who were favourably reported upon by the Council of Military Education.

Appendix page

8025. Do you feel that those officers who have passed through these classes have really acquired a very considerable amount of proficiency in the subjects in which they have received instruction?—I can speak most confidently with regard to the last class, I mean the one which completed in March 1868. The Report of the Council of Military Education was most satisfactory, as well as the letters that were written to me by the professors who instructed the class. Nothing could have been more satisfactory, I think, than the whole of these reports.

8026. There is a test examination for the class is there not?—There is a severe competitive examination on entrance, and there is a first year's examination, which is also final upon the subjects they have studied in the first year; and there is a second year's examination. The marks of these two examinations are added together, and they have to obtain a consider-

ably high decimal of the total number of marks to enable them to be qualified.

8027. That is an independent examination is it?—Yes; it is an examination conducted by independent examiners under the Council of Military Education.

8028. And it is thoroughly efficient and searching?—Thoroughly so. The papers are all printed and circulated with the result of the examination.

8029. In fact the Advanced Class at Woolwich is analogous to the Staff College?—In some respects. It gives a special training to qualify for the scientific appointments attached to the Artillery service.

of 8030. I must ask you to make it a little more clear to us who form the classes of students in the rest of the department over which you preside as Director of Artillery Studies at Woolwich?—I said that all officers, non-commissioned officers, and men who are sent by the Deputy Adjutant-General of Artillery to Woolwich for instruction are placed under the charge and direction of the Director of Artillery Studies and his assistant. I should like to enumerate the classes. There is one very large class consisting of 20 officers and 40 non-commissioned officers who are sent to Woolwich for three months preparatory to going through a long course of gunnery instruction at Shoeburyness. This instruction is principally with a view of making them thoroughly acquainted with the manufacture of the different war stores which they will have to use practically at Shoeburyness in their gunnery course. Their instruction is principally in connexion with these manufactures, although they also receive lectures at the Royal Artillery Institution on chemistry, foreign artillery, gunpowder, gun cotton, small arms, &c.; and they pay visits to Waltham Abbey and Enfield in connexion with these lectures.

8031. I will not ask you to repeat what you have already stated very clearly and lucidly in a memorandum upon the subject, but I would wish to know what guides the Adjutant-General in his selection of the officers to go through that instruction?—The officers for the long course at Shoeburyness are recommended by the commanding officers of brigades. The commanding officer of each brigade, I think, is allowed to send one officer to Shoeburyness every year as far as possible.

8032. They pass through your hands as a preliminary to Shoeburyness?—Yes.

8033. Of what rank are they?—Captains or subalterns. There is no reason why they should not be of higher rank; but those I have had passing through my hands have all been either captains or subalterns.

8034. Is it considered a great advantage to be selected by a commanding officer and sent to you?—I think of late years it has been considered an advantage. I believe officers like to go to Shoeburyness. There are certain appointments which officers can receive who have passed through Shoeburyness, such as instructors of gunnery. At any rate, I think that the officers of the regiment at the present day are anxious to make themselves fully acquainted with the details of their profession, which they learn practically better at Shoeburyness than anywhere else.

8035. Can no officer go to Shoeburyness without passing through your classes?—On former occasions there have been short course classes, but I think that they have been discontinued. Those who went through the short course classes did not pass through my hands. I had nothing to say to them.

8036. If it is such an advantage that officers should go through these two courses, namely, that under you and that at Shoeburyness how comes it that all officers are not required to do so?—There would not be accommodation at Shoeburyness to receive more than a certain number at a time, neither are there a sufficient number of instructors. The long course class of 20 officers and 40 non-commissioned officers take up almost the whole time of the chief instructor, a captain instructor, and four non-commissioned officers.

8037. Then that which they learn with you and at Shoeburyness is not absolutely essential to every officer of artillery?—It is very desirable, but it has not been made essential because of the difficulties of the service. The requirements of service would hardly admit of all the officers going to Shoeburyness. You would leave a scarcity of officers with the brigades. But I think those who know the kind of instruction given at Shoeburyness would say that it is very desirable that every officer should have an opportunity of passing through that course.

8038. We must take it for granted that there may be very good officers for practical purposes in subordinate positions who have not gone through it?—Certainly. For field service it is not so important that an officer should go through that course as it is for a garrison brigade. As regards those who have to deal with the very heavy guns which are now being made and mounted upon our works, it is all-important that such officers should have passed through this instruction to enable them to perform their duties satisfactorily.

8039. Your artillery classes correspond very much with the engineer classes at Chatham?—I am not prepared to say that. I do not know much about the engineers training at Chatham. I think at Chatham it is principally young officers who have just joined the regiment who are instructed, whereas with us those who go to Shoeburyness are by no means the younger officers of the regiment.

Preparatory and later instruction of Artillery officers.

8040. You would be inclined to advocate, so far as it may be compatible with the requirements of the service, that artillery classes should be established similar to those to which the engineers are sent at Chatham?—I am not quite prepared to say that, for this reason, that I believe that officers, after they have served for some time with their batteries, and have knocked about the world a little, are more anxious to learn than they would be on just leaving the Academy, where they get a very fair amount of instruction in artillery generally.

8041. Do you think it is advisable to combine at the Academy the education of the officers of Artillery and Engineers up to the time of their finally quitting that institution, or would you separate them after a certain number of terms?—It is a little difficult for me to answer that question directly for this reason, that I would say, if I were asked my opinion, that I would rather have had a separation on first entrance to the Academy, that is to say, I would have had a separate examination for engineers and artillery; but there is not the slightest doubt, I think, that it is important that an engineer officer should learn something of artillery before he joins his regiment at Chatham.

8042. We have had two views submitted to us. The one is that which is in favour of a separation of the young engineer and artillery cadets during the period of their residence at the Academy; and the other that which advocates their united education up to their final examination, but which implies that the artillery officers should then receive special instruction analogous to that which the engineer officers receive at Chatham?—I do not think that I should be inclined to agree with that, simply for the reason I have already given, that officers do not, I think, as a rule, feel disposed to go through a course of reading so well after having had a long residence at the Academy, as they would after they had seen the advantage of it by some years' experience.

8043. Then you would delay their passing through your classes until they had been some time in the army?—Certainly. I find, particularly with regard to the Advanced Class, that those officers who have been with me, have been, on the whole, very hard working. It has been necessary, in fact, in order to pass the examinations, to keep up very close reading; and I do not think you could expect the large body of officers to go through such a course of training.

8044. (*Rev. W. C. Lake.*) The work is very severe I suppose for the Advanced Class?—For the Advanced Class it is.

Lt.-Col. C. F. Young.

4 May 1869.

Artillery Advanced Class.

8045. Can you tell us about how many hours a day they work, including both the practical work and the theoretical?—We only oblige them to attend for five hours a day; but to enable them to do credit to the class, they really must read of an evening, and for that purpose the sanction of the military authorities was obtained to exempt the officers from mess in order to read in the evening.

8046. And you have found in your own experience that they have worked hard?—The majority have certainly. I wish to speak particularly with regard to the classes which have completed the course. The present class has not completed it; and I do not think it is so good as either of the previous ones.

8047. What would you assign as the cause for any persons who go as volunteers to such an establishment not working hard?—I cannot ascribe any cause for it. I cannot see how they could go in for the competitive examination at all without making up their minds to work hard; because the entrance examination is a very difficult one, involving the higher mathematics, as well as chemistry and physics.

8048. Are there, in your opinion, certain direct professional advantages gained by having gone through the Advanced Class?—I do not think we ought to complain up to the present moment, for of the first class who went through, we had seven who qualified (the eighth left on account of illness), and out of those seven, six have been employed. One is doing nothing at the present instant, but he was specially selected for service in Abyssinia on account of his having passed through the Advanced Class; but I think I am right in saying that the other five are now employed in positions of responsibility in the manufacturing departments and otherwise.

8049. (*Lord de Ros.*) Have there been many rejections in the examinations for the Advanced Class?—No, not in the entrance examination. The numbers competing have always been small, and there have only been two or three rejections each time I think, but I have nothing to do with the entrance examinations. I have nothing to say to the class until they come to Woolwich. These examinations are conducted under the Council of Military Education; therefore I am only speaking roughly from memory.

Returns, page clxiii.

8050. Have you much practical and mechanical instruction combined with theory in the Advanced Class?—In the manufacturing courses they go thoroughly into all the details of manufacture and the construction of machinery. In the chemistry courses they spend about five hours every week in analysing the different substances put before them by their professor. They also pay practical visits to large private establishments in connexion with the course of instruction they receive in metallurgy, machinery, and steam engines.

8051. With regard to the instruction in permanent fortification, does the instruction refer entirely to abstract systems, or are certain towns brought under consideration, which with very defective natural features, have yet been made strong by art and skill?—We do not take up the subject of fortification at all.

8052. The instruction of the officers is entirely practical in the manufactures?—Entirely practical in the manufacture and the use of the different war stores.

Artillery instruction in India.

8053. (*Maj.-Gen. Haythorne.*) Do you not think that now, as there are 16 brigades of Royal Artillery in India, amounting to more than one-half of the whole, some establishment, such as the Advanced Class and as the School of Gunnery at Shoeburyness, should be established out there?—I hardly think it would be advisable to establish it out there. I would rather see the officers have every encouragement to attend classes in this country, simply because I believe from my own experience that it is trying work to read mathematics in a hot climate.

8054. It is not at all hot in the Punjaub for instance?—I never was there, and so I cannot speak of that.

8055. Is not each brigade out for about 10 years now?—I believe 10 years is the time now fixed.

8056. Having regard to sickness and occasional leave of absence, do you think it likely that out of the few officers in a battery any could be spared to come home?—Yes, I think they could for the Advanced Class, because we could not have very many for that, we only admit eight every two years. I do not think it is at all desirable even that any great proportion of the officers should receive the high mathematical training we profess to give in the Advanced Class.

8057. Or for Shoeburyness?—As I said a few moments ago, I think every officer who has an opportunity ought certainly to go through a course of instruction at Shoeburyness. I do not know that there is at present any school which is more practically useful to an artilleryman than Shoeburyness.

8058. Then do you not think that such a school as Shoeburyness might be established in India?—It might, very possibly, be established in the Punjaub, if the climate is not too hot there. We have had at Shoeburyness a great number of officers who have voluntarily thrown up a part of their leave for the purpose of going there. That happens every year. In fact, in the last batch we must have had six or seven officers of Indian brigades, and we always have a very fair proportion of officers from these brigades.

Instr Staff officer Wool

8059. (*Sir D. A. Cameron.*) You have had officers of the Staff College attached to your department, have you not?—Yes.

8060. Will you state the nature of the course they went through?—The course of instruction to the Staff College officers has been partly practical, and partly theoretical. The practical instruction has been, attending at the Royal Military Repository, which is a portion of the School of Gunnery, under the direction of the Commandant at Shoeburyness. In that establishment the recruits and the duty men at Woolwich go through courses of instruction somewhat similar to those at Shoeburyness. A Staff College officer is taken there, and taught the duties and requirements of an artillery officer, non-commissioned officer, and man, so far as he is supposed to know about them. With regard to the field Artillery the officers from the Staff College are attached for a certain time to field batteries, and are expected to make themselves acquainted not only with the drills but with the interior economy, the stores, and everything connected with the equipment of the battery. By lectures in my own department they receive instruction on some of the more general war stores in use; for instance, they always receive lectures on gunpowder, and go down to Waltham Abbey; they receive lectures on small arms, and pay a visit to Enfield. Considering the short time they are allowed to remain at Woolwich they do a good deal; but they are only allowed to remain six weeks, which is a very limited time.

8061. Do you think it would be desirable to lengthen that course?—Yes; I think for the practical part of the instruction it would be valuable to have a longer time with the field batteries and horse artillery.

8062. What length of time would you say would be sufficient to learn all the things you have mentioned?—I should think about three months. The time used to be longer once, but it was curtailed because it was thought that these officers were too long away from their regiments. They are allowed six weeks with the cavalry. After having been with the artillery three months they ought to require very little time with the cavalry, because they might learn stable duties as well with us as with the cavalry.

8063. What do you think is the best time of the year for them to go through that course?—Certainly not till much later than they are sent to us now. We have had the greatest difficulty on account of the season of the year. They come in February, and go away in March, before we commence our summer drills.

8064. What would be the best season for them to

come?—I should think May or June would be a very good time for commencing. May, June, and July would be very good months. There is always a great deal going on at Woolwich during those months.

8065. (*Rev. Dr. Butler.*) Do you attach any special importance to the locality of Woolwich, or do you think that the instruction for the scientific branches of the army might be given with equal efficiency elsewhere?—I think it is all-important for the practical part of the instruction that they should be at Woolwich, that is to say, with respect to the manufacturing departments, it is almost impossible for them to learn what they do in the arsenal and in the different Government departments, without being actually on the spot.

8066. They must, in fact, be close to some arsenal in order that the instruction should be efficient?—I think so.

8067. (*Maj.-Gen. Wilmot.*) The seat of your labours, if I may say so, is at the Royal Artillery Institution?—Yes.

8068. Will you just describe what that is shortly?—The Royal Artillery Institution has for its object principally to assist officers of the regiment in prosecuting scientific pursuits.

8069. It was established by themselves for that purpose, was it not?—It was established by officers of artillery, and although we get some assistance, not in a pecuniary way, but some indirect assistance from the Government, it is entirely at the present moment self-supporting. The building was given to us by the Government, but with that exception and a small support that we obtain now in the pay of a secretary and the use of a few non-commissioned officers and men, and supplying us with drawings and the use of war stores for our museum, we may say that the institution is self-supporting.

8070. From that institution arose afterwards the placing of young officers under an officer in the position which you now hold?—Yes. There was one room of the institution when it was built set apart especially, and called the department of artillery studies. Since that we have added two rooms at the back of the institution, so that the department of artillery studies now consists of three rooms; but we make use of the theatre for all our lectures, and also the laboratory, which is in good working order.

8071. Are there classes existing, and officers working there at their own desire?—There are always a few.

8072. They have classes, I think, in languages and chemistry?—In languages, chemistry, drawing, photography, taxidermy, surveying, and occasionally astronomy.

8073. I think now the young officers on joining the Artillery are all collected at Woolwich for a certain course of instruction?—Yes; within the last year that has been done.

8074. Are they now placed under your care in any way?—Yes; for two lectures a week on military law, interior economy, and courts-martial.

8075. Do you approve of the system by which young officers on joining are placed in that position?—I think the present arrangement is very advantageous, because, for example, many of these officers belong to brigades on foreign service, and therefore it is advisable that they should be attached to the field artillery for a certain time before they proceed to those foreign stations which may prevent their having an opportunity of seeing field artillery for some years.

8076. With regard to the Advanced Class, is there any reason why it should be limited to eight?—It was originally intended to have 10, but we found that for working in the departments in the arsenal and at the laboratory it was preferable to have a smaller number; and in addition to this it was thought that it would be a pity to take too many officers through this class without there being a sufficient number of appointments available for them on having passed through the class with credit.

8077. Is the expense of that class considerable in proportion to the numbers which are educated in it?—It is difficult to separate the expense of the class from the expense of the remainder of the department, but it is certainly great. We have first of all a professor, who is highly paid; but the professor has other duties to perform. He is a referee to the Government on mathematical questions.

8078. Would it be possible to revert to the ancient custom by which the professor of mathematics at Woolwich was more intimately connected with the Academy? In former days, as you know, the celebrated Dr. Hutton and Dr. Bonnycastle were as much artillerymen as they were professors of mathematics.—I think our present professor connected with the Advanced Class is a man eminently qualified for the work, because he has taken such a deep interest in all questions relating to gunnery, and has now made himself acquainted with nearly every book, foreign and English, upon the question. As you are aware, he has already made some most important experiments upon the theory of gunnery with a chronograph of his own invention. The report upon those inventions and experiments is now in the hands of the referees to whom it was sent by the Government, namely, the Astronomer Royal, Professor Adams, Professor Stokes, and Captain Andrew Noble (late R.A.). Their report has not yet been sent in.

8079. It has been suggested that the course of instruction in the Advanced Class is not palatable to the officers; can you give any reason for such an opinion getting abroad?—No; the only reason I can find for it is that it is a severe training, and officers will not undertake a training of that kind unless they see a prospect of advancement.

8080. Do you think that no one undertakes it in order to avoid other duty?—I do not remember any instance of that kind.

8081. Do you think that the officers are well selected for it?—Up to the present time it has been quite voluntary; they come forward of their own free will, and there has been no obstacle placed in the way of those who have come forward wishing to enter that class.

8082. You see no danger of that class shutting up the avenues of advancement to every other officer?—I do not think it should do so, because the rules are, that only those who pass through it with credit are to obtain appointments, and that they are only to obtain such appointments as they have shown special qualifications for. If a man showed himself a good metallurgist, he might be employed in a position where a knowledge of metallurgy would be valuable. A mathematician, of course, would be selected for any appointments where a knowledge of mathematics was much required, such as certain appointments in connexion with the late Ordnance Select Committee.

8083. You stated that six who had passed through that class had already received appointments; do you think that the appointments they hold are of a character suited to their particular acquirements?—I think so. The officers now holding appointments in the arsenal appear to give very general satisfaction, especially those connected with the instruction of officers. Captain Stoney, the officer in the Royal Gun Factories, and Captain Browne, in the laboratory, are giving unqualified satisfaction.

8084. A case occurred within my knowledge of an officer belonging to the Advanced Class not being able to accept an appointment because his health would not allow him to do so; do you think that sufficient precaution was taken in allowing such an officer to join the Advanced Class?—I should think not; according to the orders they are obliged to send in a medical certificate.

8085. You were speaking of Shoeburyness; you are aware also, of course, that in addition to the courses you speak of, a very great number of the officers and soldiers of the artillery go through courses there quite irrespective of those who come from Woolwich?—That is what I said. I said, I thought the officers'

Lt.-Col. C. F. Young.

4 May 1869.

short course had been discontinued of late; but I knew that there had been a great number instructed in that way. I am aware also that complete batteries are sent to Shoeburyness from time to time for practice and instruction.

Royal Military Academy.

8086. With regard to the Academy, judging from your experience of the officers who have come under your notice, can you suggest any alteration in the system of instruction at the Academy, either a diminution or an alteration of the study hours, or anything connected with it?—I think, with regard to the Academy, that at the present time the officers on getting their commissions are too old, as they have immediately after they get their commissions to mix with officers of other regiments, and then they find themselves at a disadvantage from their age. I would prefer their joining the Academy earlier, and getting their commissions earlier, or else having some rule that they should be commissioned at the age of 18, even whilst they are undergoing a course of study.

8087. Is not that met to a certain degree by their receiving the rank of lieutenant on joining the service?—No; because the great step is the rank of captain. It does not advance them at all in that respect, because though they are called lieutenants they are practically nothing but second lieutenants; they only receive the pay of a second lieutenant, and do not attain their companies, which is the important step, a bit the sooner for it. There is another point which, perhaps, I might be allowed to state with regard to the Academy. I think that it would be an advantage if amongst the instructors more of the officer element could be introduced. It seems to me from personal experience, as well as from talking to cadets from time to time on the subject, that the cadets work better and harder under an officer than under a civilian. In a Military College it is a good thing to combine discipline with instruction.

8088. Of course there would be exceptions, both in the case of not attending to an officer and attending to a civilian?—Yes, quite so. I am only speaking generally.

8089. If the professors are well selected in both cases, I suppose there would not be any great difference?—No, perhaps not. It seems to be the rule in nearly all the establishments of the kind abroad that the professors and masters are generally officers.

8090. (*Lt.-Col. Chesney.*) Following up the questions which have just been put to you, supposing that at a military college like Woolwich there was no distinction drawn in the power of the military professors that you speak of and the power of the officers charged with the discipline of the college, do you not think that that would be for the advantage of the teaching?—There ought to be no difference, and in fact when I was the instructor in artillery I had the same power. I used to have the power of putting a cadet under arrest.

8091. The lessening of such power then you look upon as a disadvantage to the college?—It is a disadvantage certainly.

Department of Artillery Studies.

8092. Referring to these short and long courses of artillery (not the Advanced Class), is there no special encouragement given to an officer to go through those courses?—I should say that there was encouragement certainly. With regard to the Shoeburyness class, I think that there is every encouragement given, it is only that the number that can be accommodated is limited.

8093. Were those officers who have been instructed under you or under your predecessors in the short course classes, the Shoeburyness gunnery classes, and the firemasters' classes, volunteers, or were they detailed by their commanding officers?—The firemasters' classes were all volunteers.

8094. And the others?—The others were occasionally volunteers and occasionally detailed. It is my duty to acquaint the Adjutant-General when a long or short course class should be formed, in compliance with the scheme approved by the Secretary of State for War and the Commander-in-Chief. On my acquainting the Adjutant-General, he sends round to the brigades at home directing them to furnish one officer or two officers, as the case may be, for such class. I believe the officers generally, as far as possible, come as volunteers.

8095. An officer of any artillery brigade is liable as a regimental officer to be sent to those classes?—Yes.

8096. (*Lord E. Cecil.*) You stated that the number of students in the Advanced Class was limited to eight. How many students do you think would be sufficient to supply the wants of the service?—It is very difficult to say, because the way those appointments fall in is so variable. There has been nothing laid down definitely as to how long a man shall keep an appointment. It is generally said that he keeps it for five years, but there are instances of officers having their time prolonged, and therefore it depends entirely upon the rule being made clear and definite how much employment is found in that way.

8097. I asked the question in consequence of what you say in your printed answers, namely, "If employ- "ment could be ensured to successful students, I am "satisfied there would be no lack of candidates for "admission to the class." The employment, I presume, then, is not sufficient?—No.

8098. Therefore the number of students you have there, although limited to eight, is above that required by the wants of the service?—We have at the present moment, I think, nearly all the last class unemployed; one officer has been employed for about a year at Elswick, superintending the conversion of guns upon the Palliser principle, but I think he is now about to return to his duty. I believe, with that exception, none of those officers who qualified in March 1868 are employed.

8099. Is that the total number of officers who have passed through the Artillery Advanced Class who remain unemployed?—No.

8100. Can you state the number unemployed?—Out of the first class there are two unemployed, Major Govan and Lieutenant Nolan. Lieutenant Nolan has been employed for a short time; but Major Govan has not been employed. Out of the last class who qualified, Captain Morgan was employed for a year at Elswick, and Lieutenant Jones was employed in connexion with the late Ordnance Select Committee until it was abolished. With those exceptions none of the last class have been employed.

8101. Then it would be impossible to hope to increase the number of the Advanced Class, and its general usefulness, unless you increased the number of appointments open to officers of the scientific corps?—Yes, I think so; but it would seem to me to be very desirable that there should be a portion of the officers from the Indian brigades who should receive that training. There are many appointments in India of a scientific character as well as professional appointments. It would be, I think, a great advantage that those officers should receive a training such as we give in the Advanced Class. I have only heard recently that the officers belonging to brigades in India are not allowed to compete for this class. It seems to me rather a pity that when those officers are at home, for example, they should not be allowed to compete.

8102. You speak, in the memorandum that you have sent in to the Commission on the Department of Artillery Studies, of an annual military tour, which is supposed to go on or did go on for the benefit of young officers; does that still go on now?—It went on until the present year. Last year there was a foreign tour; but within the last seven or eight years the young officers have not been invited to join that tour, but a class has been formed of older officers. It was thought that it would not only be more profitable to the older officers, but also that the report would be more valuable if officers were selected who had had some real previous knowledge of their profession.

8103. The tour still goes on then, but it is made by older officers?—It was taken out of the estimates this year.

8104. Do you know for what reason; is it on

account of the expense?—I suppose it was on account of the expense, but it has not been notified to me. I communicated upon the subject with the Adjutant-General, and he said he would speak to His Royal Highness about it, but I have not heard the result.

8105. Can you tell me what the expense was?—300*l.* a year.

8106. Do you think that the system of instruction in the Artillery Advanced Class is calculated to draw out the excellence of an officer in any one individual subject?—I think so.

8107. I suppose you are yourself personally in favour of a system of instruction of that kind, not confining officers to one particular course, but rather drawing out their superior knowledge of any one particular subject?—Certainly.

8108. You said in one of your answers that there was great difficulty in getting young officers to work on first joining the artillery, and that you were rather in favour of officers of an older rank in the army being placed under your instruction than officers on first appointment?—There is a disinclination, I think, on the part of young officers to go to book work; but as regards practical work, I think they cannot have too much of that on first joining, that is to say, the out-door work—drills and artillery exercises. The lectures which have just been resumed twice a week seem to be liked by the young officers.

8109. You are of opinion also, I think, that before sending all officers of the Royal Artillery to Shoeburyness it would be necessary to have a rearrangement of the buildings there, the accommodation not being sufficient?—Yes. I do not think it would be practicable, on account of the way in which our brigades are situated, to send all officers there in succession. It would be rather a difficult thing to do. Of course it would be advisable if we could increase the power of giving instruction at Shoeburyness.

8110. What I want to find out from you is whether it would not be possible to send every artillery officer for a short course either to the Advanced Class or to Shoeburyness, and whether the fact of his having to pass an examination for his commission as captain would not be a sufficient incentive to him to work?—I think that every officer as a rule would be glad to pass through a course at Shoeburyness irrespective of the use it would be to him towards his examination. He learns so much, and it is so interesting a course there, that I think as a rule it is a favourite employment. Though the work is hard they all like it. I have hardly heard a difference of opinion upon that point.

8111. Then supposing the accommodation to be increased at Shoeburyness so as to hold a larger number of officers, what amount of officers do you think could be spared from a brigade in garrison at Woolwich at any one time?—The commanding officers of brigades would say they would find a difficulty in sparing any. They do not like sparing them; that is the great difficulty of these courses. In fact, the great complaint made against them is that extra duty is thus thrown upon the officers remaining with the brigades.

8112. Supposing you were to throw the time of instruction between the time when a young man entered the artillery service and the time he got his captain's commission, do you not think that opportunities might be found of sending every single officer?—I think so, except some who are always abroad. Some officers, either by their own wish or by chance, pass nearly all their time abroad, while other officers are stationed nearly all their lives at home.

8113. But for the deficient accommodation you see no reason why every officer of artillery should not go through these practical courses?—I see no reason at all, except this that I have already stated, that the commanding officers would be loth to part with them.

8114. I see there is an examination of all the subaltern officers of the artillery; what subjects does that examination comprehend at present?—They have the same examination as officers of other regiments. In addition to that they have upwards of 80 questions upon purely professional and artillery subjects. Those questions are framed and the answers examined in my department; in fact, the whole examination is sent by the Adjutant-General to my department. We frame a report and send it up to the Adjutant-General for his information, and it depends upon that report whether they are required to be examined again or not. Officers have been rejected in one or two examinations.

Lt.-Col. C. F. Young.

4 May 1869.

Examinations for promotion.

8115. You consider the examination then not to be a purely nominal one, as it is very often in the line, but a real one?—It is not nominal in professional subjects, that I can vouch for. We have four or five sets comprising about 400 or 500 questions in all, and if he can answer all these he must know his work pretty well. Even if he has seen these questions, or been told of them by others, it makes very little difference, provided that he knows enough to answer them satisfactorily.

8116. What officers compose the board of examination?—It is composed just as is usual for the Infantry or the Cavalry. The president is a field officer; the instructor of gunnery is generally selected, and a staff officer. They frame all the questions on military law and interior economy; and attend while the officer under examination is putting squads of men through certain drills and exercises. Our rule is to have the instructor of gunnery on the board, simply because the drills which the officer has to put the men through are generally of such a character that an instructor of gunnery would be best qualified to judge of his efficiency. There are such a vast number of drills to be learned in our service that a great many senior officers might, and very likely would, become rusty.

8117. You spoke with regard to the professors at the colleges abroad being usually military men?—Usually, I think.

Professors at military colleges.

8118. Do you not think that that arises from the tone of society being rather more military than civilian?—Possibly; but I do not know that that can be applied to West Point, and I think at West Point they are always military officers.

8119. (*Lord de Ros.*) Do you not think that the cessation of this foreign tour you have alluded to amounts to a serious drawback and injury to the improvement of the officers in the Advanced Class? Is not it of immense importance in the study of fortification not to be bound down to a particular system, or to the drawing of a fortress in theory, but to see places like Namur and Luxemburg, and those towns on the continent where the configuration of the ground has been wrought into positions of great strength?—I am quite sure of it, though I think it should be disconnected from the Advanced Classes.

Foreign tour of Artillery officers.

8120. You would disconnect it from the Advanced Class?—Certainly.

8121. How would you arrange it?—It should be connected with my department as hitherto. I think the officers should be simply selected by the Deputy Adjutant-General for this tour. It is very important that officers of artillery should visit the different countries of Europe, and ascertain what they are doing in their arsenals and fortresses. I think that much might be learnt in that way of use, not only to themselves, but to the country generally.

8122. They should not be under the rank of captain for that, I suppose?—No, except that our subalterns are getting so old now.

8123. It might be a subaltern of eight years standing or a captain?—Yes, and I think field officers might go with advantage.

8124. (*Maj.-Gen Wilmot.*) Would it not be a great advantage to the Advanced Class if it were known that at the end of it the officers who had gone through it would have that tour?—Yes.

8125. The original grant of this money was for taking officers abroad at the conclusion of their course in that Advanced Class, was it not?—No; it was to enable the director of artillery studies to take a few of the young officers abroad annually.

Lt.-Col. C. F. Young.

4 May 1869.

8126. Are you not aware that all the officers and men of every brigade going upon foreign service, and a vast number of those stationed in England, do, before going abroad and during the time they are staying in England, come down to Shoeburyness to go through courses?—Yes.

Artillery Advanced Class.

8127. (*Sir D. A Cameron.*) Is the final examination in the Advanced Class competitive?—Yes.

8128. Are the names of the officers published in the order of merit?—Yes. I should like to show the Commission some papers I have here upon the subject. This is the last report (*producing a pamphlet*); it gives the examination and the whole proceedings.

8129. It contains the report of the examiners?—Yes. That was the final examination; these are the officers' names; and those were the marks (*showing them in the pamphlet*), which are very high, 8. They are all independent examiners. Nothing could have been more satisfactory than this class. I will show you the report of Canon Heaviside, who was the examiner in mathematics. He stated "that while all "were far above the minimum of marks fixed by "the Council, three of the students approached "nearer to the maximum than is usual in a high "mathematical examination," remarking "that he had "no fault to find, and no disparaging criticisms of "any kind to make."

8130. (*Chairman.*) There being more than one-half of the whole artillery force in India, are not a great number of young artillery officers attached to the brigades in India immediately on joining?—Immediately on receiving their commissions. Artill... instru... India.

8131. So that a very considerable proportion of the young artillery officers would be deprived of the advantage of these courses?—They remain in Woolwich now for some six or eight months after they get their commissions, for the purpose of receiving some further practical instruction.

8132. Under you?—No; not under me, except for the purpose of two lectures a week.

8133. As far as regards those artillery classes over which you preside, they are deprived of those?—I have nothing to say to them at all on professional subjects; they are supposed to have completed their artillery course at the Academy.

8134. I think, in answer to Major-General Haythorne, you expressed an opinion favourable to the idea of the establishment of some similar classes in India, where practicable?—I think with regard to a School of Gunnery, that might be done; but I hardly think it would be necessary to have classes similar to the Advanced Class in India.

8135. I did not allude to the Advanced Class.—I certainly think there should be opportunities of carrying on artillery instruction in India.

The witness withdrew.

Capt. C. B. Brackenbury.

CAPTAIN C. B. BRACKENBURY, Royal Artillery, examined.

Royal Military Academy.

8136. (*Chairman.*) You are assistant-director of artillery studies at Woolwich?—Yes.

8137. You were formerly instructor of artillery at the Academy?—Yes.

Course of instruction.

8138. And many of the classes in connexion with the department of artillery studies are under you?—Yes.

8139. The officers of the Staff College, when they go to Woolwich, are also under your instruction?—Yes.

Appendix, page lii.

8140. I see you lay great stress upon the advisability of suiting the instruction to be afforded to the cadets and to the young officers to their peculiar capacities?—Yes, certainly.

8141. And you seem to think that mathematics are too much insisted upon?—Too generally insisted upon.

8142. But is not it almost a necessity to an engineer officer that he should have a mathematical faculty?—No; I do not think so, even to an engineer officer; certainly not to an artilleryman. If it were so, nine-tenths of our engineer and artillery officers would not be good engineer officers or artillerymen, because they have not the mathematical faculty, or they have it to so small an extent as is sufficient to carry them through a certain routine of bookwork and a few problems, but not to that which is necessary to enable them to be what may be called mathematicians.

8143. But I apprehend that no *bonâ fide* examination in mathematics could be passed by any one who does not possess that faculty to a very considerable extent?—In that case your lordship is taking rather a lower standard than what I mean by the mathematical faculty. I think that there are many persons who can attain to a sufficient amount of mathematical power to pass examinations, but have so little mathematical faculty that they will forget their mathematics afterwards, and take no interest in them whatever. Nor are they ever, except in a very few cases, called upon to use them.

8144. You would only render such mathematics obligatory as are requisite for the solution of simple artillery and engineering problems?—Yes; I conceive that the common rules and formulæ might become so easily manipulated by a man of very inferior mathematical abilities in a comparatively short time, and with comparatively little trouble, that it is a pity to attempt to carry him on to any great extent in mathematics.

8145. I see also that you would not require the engineers to undertake the manufacturing part of the artillery course?—No.

8146. Nor would you inflict upon the artilleryman the very elaborate military drawing of fortification plates?—No; I should like to say a word about that. I consider that there are two classes of draughtsmen, and two classes of drawings. There is the man who draws very well by free-hand; he is a draughtsman, and will always be of considerable value to the service. And then there is the man who acquires painfully a sort of mechanical method of drawing; he is not a draughtsman, although he may be made to produce neat mechanical drawings. The neat drawings are requisite for an engineer, but they are by no means requisite for an artilleryman. All the teaching in the world will never make a man a free-hand draughtsman; nor is it at all pleasant for a free-hand draughtsman to have to tie himself down to the routine of mechanical drawing unless he has a taste for it also, and the combination is rare.

8147. You would put the artillery and the engineers under the same system of tuition up to a certain period of their course, in fact, as long as they were at the Academy?—As long as they were at the Academy.

8148. How long ought that course to be?—I think 18 months would be sufficient.

8149. Of course you would restrict the course to 18 months upon two suppositions; on the one hand upon the supposition that the curriculum of obligatory studies was reduced?—Yes.

Instru... of you... Artille... officer

8150. And on the other, that the engineer and artillery instruction was continued to the young officers after they left the establishment?—Yes; I consider the greatest desideratum in all military education to be that the instruction should be continued after the cadet becomes an officer.

8151. Some previous witnesses whom we have examined seemed to be very strongly of opinion that it was undesirable to continue the education of an artillery officer in the higher branches of that subject immediately after he had left the Academy, on the ground that a few years later he would be more apt to take an interest in that department of his profession, and more likely to profit by the courses he would be put through at Woolwich; that is rather contrary to your opinion?—My experience is, that unfortunately a few years later he has generally got out of the

groove of intellectual labour of any sort, and looks upon it as a very great task to begin it again, whereas such is not the case with young officers. I speak now from seeing a class of young officers who have just come under me to receive some lectures on military law. I find them very intelligent and very ready to learn. To my great pleasure they ask a great many questions, and are ready with some very acute remarks. I do not think that a few years later I should find the same aptitude for study.

8152. These young officers have come to you immediately after quitting the Academy? — Yes, immediately.

8153. What else do they learn under you in those classes?—In that particular class they learn nothing else under me. I think they ought to do so. I think they ought to go on with some of their studies.

8154. Several witnesses have told us that they considered that the practical application to which officers were introduced after leaving the Academy, especially as excluding further scientific study, was a great advantage to them, and a relief after the severe mental discipline to which they had been subjected at the Academy?—Yes; I wish all their instruction to be practical. I think they ought to have perfectly finished their theoretical education before they leave the Academy. All their studies as officers should be practical.

tary 8155. Have you much fault to find with the Woolwich academy, as it is at present constituted, beyond what you have mentioned?—Not beyond what I have mentioned in answer to the Commission's questions.

8156. Do you wish to enlarge upon any point you have mentioned?—I have only further to say that the officers who come out of the Academy appear to me to be well disciplined, as far as I can see. They are certainly intelligent. I have heard lately at Woolwich that some of the young officers have even complained that they have so little to learn. Having been so long at work and in the exercise of their brains they feel a positive want because they have nothing or very little to learn.

t of 8157. I will now ask you a few questions in connexion with the artillery classes which are under your direction. They are distinct, as I understand, from the Advanced Class?—Yes. In the absence of Colonel Young I have also charge of the Advanced Class.

8158. Do you think that these artillery classes are of practical utility?—Certainly, and I may say of absolute necessity.

8159. Do you think they are conducted on the best system, or could you suggest any improvements?—There might be, possibly, suggestions with regard to some classes, but generally speaking I think that the artillery classes are conducted as well as they should be. With regard to the classes of other officers I should like to make one or two remarks. For instance, militia officers and volunteers are sent down from the Horse Guards.

8160. They are officers of Militia Artillery I think?—Yes. They come in batches of one, or two, or three at a time, and at all times of the year. There is no class into which they can be merged which exactly represents their own capacities. It seems to me that they should be collected together and sent down at certain periods of the year, in which case they would obtain a better and probably more enduring education than they get now. Again, with regard to the officers of the Staff College, who come under me every spring. They are only allowed six weeks, and they are supposed during that time to get a general and fair idea of the manœuvres of artillery, and of the inspection of artillery and various other minor details. They come at a time of the year when it is quite impossible for them to see artillery in the field at all. That is certainly wrong. I also think they ought to be with us a little longer, for artillery is a very large subject.

8161. What should you say is the shortest possible period during which the instruction could be rendered really ample?—Three months. We used to have them for three months, and I think we ought now to have them for as long. But I say especially, they ought not to come until the drills are fairly started in the year.

Capt. C. B. Brackenbury.

4 May 1869.

Department of Artillery Studies.

8162. What month is that?—Practically speaking they begin about this time (May), as soon as the inspections are over.

8163. I think Colonel Young told us that you have something like 100 officers under instruction annually?—Yes; counting the young officers who have lately been placed under our instruction we shall have, I calculate, about 125 annually.

Instruction of young Artillery officers.

8164. What induces the young officers who come to you to come?—They are now ordered to do so.

8165. By the Adjutant-General?—Yes, it must be by the Adjutant-General. An arrangement has been made between the Adjutant-General, the Director of Artillery Studies, and the Commandant at Woolwich as to how the studies of the young officers are to be conducted.

8166. And a certain proportion out of each batch of officers who join are sent to you?—The young officers join the Artillery and Engineers half-yearly in large batches at a time. There are at this moment under my hands, with some absentees, over 20 young officers who joined a few weeks ago, and as soon as they have been six months in Woolwich, or as soon as the next batch is coming, they will go away again. During that time they may be taught a good deal; but my own views go much further, namely, to connect together the Academy and these classes.

8167. You would pass every officer who leaves the Academy through these classes?—Certainly. I should have it perfectly understood what he was to do in the Academy and what he was to do when he got his commission. I am particularly anxious that a young officer should have the chance not only of being set down in a room at a desk to learn something or to be lectured to, but of being called upon to bring forth for inspection some sort of knowledge which he had not before, that is to say, that he should study in his room and be examined.

8168. Is there nothing approaching to a test of his proficiency after he has left you?—I examine them all personally every day. There is plenty of verbal examination, which I believe to be the best system of teaching, especially on a subject of that kind; and I intend to give them an examination when they go away.

8169. That is entirely a matter of arrangement between you and them?—Entirely; in fact, it is left entirely in my hands in this case to do what I like.

8170. Have you the authority in this case to impose any examinations you choose upon them?—I imagine so. I am quite certain if I asked them to sit down to an examination, they would never think of saying No.

8171. You do not give them any certificate?—No, there is nothing to certify for.

8172. Then they are returned to their brigades?—They go for the first time then to their brigades and to their ordinary regimental duties. In the meantime they are attached to different batteries in Woolwich, and they occasionally see those batteries out.

8173. Then who are the young officers who escape this?—There are none now who escape these particular lectures on military law. I should like to see their studies carried further, to a deeper course of military history, and through various other subjects, always being practical military subjects. I imagine that some persons who may have been examined will have brought many arguments to prove how wise it would be to give something like a commission to the cadets at the Academy after a certain time.

8174. That has been suggested to us.—I should be inclined to go only one step further, and say, why keep them at the Academy? and why not give them provisional commissions? Let them be free in their rooms to study or not to study, in other words, to show their capabilities of personal application or not, really as officers.

Capt. C. B. Brackenbury.

4 May 1869.

Instruction of young Artillery officers.

8175. Then you would relegate what is called the final examination at the Academy to a subsequent period, after they had joined the army?—No, I should have a supplementary examination after they had joined the army.

8176. And if they did answer satisfactorily they would gain their commissions? — I should give them provisional commissions before; but until they answered satisfactorily they should not have their permanent commissions.

8177. And if they did not answer satisfactorily?—If they finally failed to answer satisfactorily I should say that the sooner they were out of the military profession altogether the better. But I cannot conceive of the final examination not being answered satisfactorily unless it was from a dogged stubbornness on the part of a young man.

8178. You have been kind enough to enumerate various classes through which all ought to pass, including, besides the lectures on military law, lectures on artillery, on fortification, on practical mechanics, on elementary chemistry, &c. How are those lectures to be dovetailed into the military organization of the establishment?—Such lectures are already given to classes of officers either selected by the Adjutant-General or volunteers who go through particular courses, for instance, the Shoeburyness course.

8179. They are minor departments of that which is known as the Woolwich classes?—Yes, classes of the Department of Artillery Studies.

Staff College officers.

8180. Have you formed a high opinion of the Staff College as an establishment for military education?—I think it is quite as diverse in the nature of the officers who are there as any part of the army on which you might lay your hands. You would find very nearly as different qualities of men represented in the Staff College as in a regiment.

8181. Then you would not say that, as a matter of course, an officer passing through the Staff College is a person of superior mental capacity and intellectual attainments? — Not mental capacity; in intellectual attainments certainly he would be rather better than others, because he has learned a few things, which he might not have learnt otherwise; but as regards mental capacity I think if you were to say that the average of the officers of the Staff College and the average of the officers of the army are about the same you would be right.

Appendix, page lii. Preparatory education for the army.

8182. (*Lord E. Cecil.*) I gather from the printed answers you have sent in to the Commission that you are in favour rather of education before entrance into the army than after?—Yes, school education.

8183. And that you conceive that the education ought to be essentially practical after entrance? — Yes.

8184. And as much as possible before? — The minds of military candidates should first be developed in the same schools as the rest of their countrymen. Then all their military education should be practical.

8185. With regard to the Academy, would you be in favour of anything like a university system, where the professors should have something more of a civilian element in them, and where the cadets should have liberty to attend to those particular studies which they have an inclination for?—There are two choices, I think: one is to make the Academy a school, and the first classes in the regiment a university for that school; the other is to draw your candidates for the Academy from the whole of the country, having the mind of the country, the tone of the country, and the education of the country as much as possible in them; and then put the Academy as nearly as possible upon the university system. Those are the two courses, either of which, it appears to me, may possibly be right. I should prefer the latter, but even then I should make them study in their regiments.

8186. You would like the system of accommodation for lodging and discipline in minor matters assimilated more to that of a civilian university than it is at present?—Yes.

8187. You speak very decidedly as to the abolition of the college at Sandhurst?—Yes, on the strong principle that I do not wish earlier than possible to make a boy into a soldier. I think he had better remain a boy and a young man of the country as long as he can, and then let him become afterwards a soldier of the country, that is to say, the soldier for which the genius of the country fits him.

8188. And if that institution were to be reformed in any way, you think that something approaching to the university scheme I have endeavoured to sketch out ought to be carried out; but on the whole you would be in favour of the abolition of Sandhurst? — Yes, I am in favour of Sandhurst being abolished, because the amount of technical knowledge required is so small before an officer in the line or the Cavalry gets his commission, that I think it is over-balanced by the drawing together of a number of boys, and making them into neither soldiers, nor university men, nor anything else. I cannot quite see how, according to our English modes of thought, the soldiering and the university or school studies can very well go on harmoniously together.

8189. As you express it very shortly and very concisely in your answers, "The army should take its tone "from the nation, not the nation from the army?"—Yes.

8190. You speak of military exhibitions or scholarships being offered to competition at public schools; I suppose you allude to commissions without purchase?—No, I hope it may not be considered too great a lowering of the ideal, but there are very many men who will work if they see something before them really worth having. Now I think that if a man were allowed 50*l.* or 100*l.* a year (as he is from certain schools on going to a university) to take into the army, or into the Academy at Woolwich with him, it would be a very great encouragement for clever boys to adopt the idea of an army life, and I think that many parents who now say, "My boy is clever, he is "too good for the army," would then say, "He is "clever, he will be able to win 100*l.* a year to carry "him through his education for the army, therefore "that is the right place for him to go to."

8191. Would not an extensive endowment of that kind of all the public schools in the country be attended with very great expense?—I daresay it would; but some of the present endowments of public schools might possibly be used for these purposes.

8192. Do you mean civilian endowments?—Yes; they are endowments for the use of those schools, and why should they not be used to spread abroad among boys and young men the love of the defence of their country, which is supposed to be one of the greatest passions of a free man? I do not see anything in the institutions of England at all contrary to that idea.

8193. Then you contemplate an Act of Parliament for the purpose?—Yes, certainly.

8194. But considering the number of commissions which can now be given without purchase, and are given without purchase to candidates passing through Sandhurst, and to sons of meritorious officers, do you not think that if those commissions were distributed amongst the various public schools, that would meet your point?—Yes. I think that would be one very good thing. Perhaps the Commission would allow me at this moment to mention a fact which is within my knowledge on this subject. We know that Austria has been entirely re-organizing herself since the war of 1866. The Minister of War in Austria has entirely the idea I have alluded to, and whatever money he gives for military education, will be given to encourage the schools of the country to bring forward good scholars, who will receive a certain sum of money to assist them in the earlier stages of their military life.

8195. Is the expense to be borne by the State?—Yes. The State is to bear the expense, but the money will be taken away from the old military schools, which were very expensive to the State. It is an economy.

8196. And you think that the whole tone of foreign military thought is rather tending to the abolition of military schools before entrance into the army, and to

the encouragement of military education after entrance into the army?—I think in the moving nations it is. I do not think it is so in France, which appears to be standing very still indeed in matters of that kind. As regards Prussia, I was over there this winter, only for a week, but they told me that they were throwing over as much theory as possible, and teaching their officers as much practice as possible. I am speaking now of the Artillery and Engineers.

8197. But the point is whether they thought that more military education could be acquired after the age of 18 than before?—Yes, certainly.

8198. You think that they felt that strongly?—Yes, and also that those who are acquiring education ought to acquire it voluntarily, that is to say, they should acquire it themselves, though they had to pass examinations; that their work should be their own.

8199. You say very decidedly that one foreign language should be required for the entrance examination to Woolwich, and that a portion of the marks should be given for conversation; do you propose to keep that up in any other way except by a voluntary system during the course at the Academy?—There are very many artillery and engineering books which could very well be read in French. With regard to conversation, I should like to quote the instance of a Hungarian officer whom I asked once, "How is it "you know so many languages?" He said, "I do "not remember the time when I did not speak four "languages." I asked him, "How did you learn "them?" He answered, "It was simply that my "mother and my nurses taught them to me from my "cradle." I believe that the learning of a language, so as to speak it, is perhaps the very easiest of all studies, only it must be taught very early.

8200. In the instance you have named I presume there was a special talent for the acquisition of languages?—It is almost perfectly universal throughout those curious agglomerated races of the Austrian empire. Everybody has to learn several languages, because nobody speaks anybody else's language, and as soon as a thing has to be done, it is done very easily.

8201. What practical courses would you insist upon for every young officer entering the Artillery, before he was pronounced competent to undertake the duties of an officer?—In the first place I should like to strike off some of his study of the details of manufactures at the Academy, thereby shortening the course, before he gets his commission. I find that the amount which is learnt of the Arsenal detail by the officers and non commissioned officers who go for a time into the Arsenal departments to do nothing else is quite marvellous. We have just had the decimal of a class of non-commissioned officers who have been a month in the Arsenal sent up to our office, and it is very nearly unity, it is ·99 in the whole of their examination, and a very large proportion of them have got full marks. Those are merely non-commissioned officers. I think they ought to continue, as they do now, riding; they ought to study, as they have just begun to do, military law; I should like to see them go on with military history, strategy, and tactics, which have been until very lately entirely neglected in our regiment. And then there are all the immense number not only of drills, but more than drills, which are required by an officer who has to know how to handle heavy ordnance. The drills of the field batteries and horse artillery can be learnt afterwards in the field batteries and horse artillery. I should like to show the young officers, as I have done their elders sometimes who have been many years in the service, the details of the different parts of the harness, and so on. It ought to be understood that drill is a very small part indeed of the knowledge that officers should possess.

8202. How long a time would you devote to all these separate practical courses?—They generally receive about six weeks or two months' leave. They could then remain at Woolwich for six months, until the next batch joined. I should then like them to go down to Shoeburyness, to be there for, say, six months, and then, I think, that the year's training which they would have received would have made them, even more than they are now, first-rate artillery officers, and I do not think that a year is too much to ask in order to attain so valuable a result.

Instruction of young Artillery officers.

8203. You think that in that year the arsenal course which is now taught at the Academy, might be taught equally with the other practical courses?—Yes. In that year they should go through the whole of the course as far as it involves going into the arsenal. It would be easy in lectures at the Academy briefly to sketch the general construction of guns, and so on, which would be useful to them, and about which they might make a good many mathematical calculations if they liked.

8204. I suppose these lectures upon guns could be given at any other place than Woolwich, if necessary, and that the practical course at the arsenal would take place after their entrance into the army?—Yes. In the first place the arsenal course of course must take place at Woolwich, there is no other arsenal. Secondly, there is no other such drill place as Shoeburyness, Woolwich being second.

8205. What I am asking you now is, whether the arsenal course could not be better gone through after entrance into the army than at the Academy?—Certainly; and it would be very interesting.

Royal Military Academy. Number of staff.

8206. You mention that the educational staff at the Academy is too strong numerically and too weak influentially; what amount of professors do you think could be reduced, have you ever turned your attention to that subject?—Generally, I have. I was at the Academy once as an instructor, and generally, I think that all, with the exception of one or, at the most, two of the mathematical professors might be done away with, because I do not want the cadets, or only a few of them, to learn mathematics as mathematics; of course the real mathematicians should do so, but none of the others.

8207. You are aware that at present there are 34 professors, and I think 14 executive officers among 222 cadets, which would give one executive officer and professor to about every five or six cadets. Should you propose to reduce this number of 34 professors generally?—Yes; I conceive myself that you might bring it down to very nearly half. I recollect when I was a teacher at the Academy to the cadets, nothing troubled me or disturbed me so much as having a second teacher in the same class-room with me. I could have done the work much better by myself than I could having another instructing in the same class with me.

8208. As to being too weak influentially, do you apply that equally to the military as to the civilian professors?—Yes.

8209. Have you any way of remedying that?—First, in the case of the professors, I should like that the intellectual heads of the Academy should have a stronger opinion as to its government, that they should have more influence, in fact that they should be called into council, which they are not now. I should like to reduce the military staff very much, and to have the lieutenant-governor as really the head of the establishment, having, therefore, immensely more power than he has now, because now everything serious has to be referred. And then I should like one captain to be at the head of the cadets in their military duties; I do not like three captains having all nearly equal power. Then I would give the subalterns as much power as is given by a commanding officer to his captains on service, in fact, what is given by the Queen's Regulations, the right of giving three days' confinement to barracks. I think that a subaltern ought to have the power, if the cadet is to remain a military cadet, of confining him for three days to barracks.

8210. You said that you found that the young officers who came from the Academy had a capacity for learning, and were generally well conducted; may I ask if in your opinion the course of education given at

Capt. C. B. Brackenbury.

4 May 1869.

Royal Military Academy.

the Academy was good, and that they appeared to know thoroughly well the subjects in which they had been instructed?—I think so on the whole. They have complained to me that they have had a great deal too much mathematics. I have asked nearly every one of them, I think, the same question, and they say that they might do in half the time what they do now in mathematics.

8211. (*Rev. W. C. Lake.*) Do the engineers complain of that as well as the artillery?—I have not often spoken to them about it. You will hardly find so many of the engineers complain of it, I think, because on the present system the few who have a real capacity for mathematics will generally belong to the engineers.

8212. (*Lord E. Cecil.*) And hence you are very much in favour of reducing the number of subjects?—Of reducing the number of compulsory subjects.

8213. You think that there would be greater proficiency if there were fewer subjects?—Yes; you want to form an officer, and I think the subjects should be carefully selected with that view, and then those subjects should be carefully studied.

Appendix, page cvii. Artillery Advanced Class.

8214. I see you are also very much against high qualifications in mathematics for entrance into the Advanced Class of artillery officers?—Yes, or rather I am against making them obligatory. I look upon a man of really high mathematical talent as one who should be cherished by every possible means; but it seems to me perfectly ridiculous to suppose that you will sweep men of high mathematical talents into your net in this easy fashion.

8215. You do not think that the inducement or the remuneration is sufficient?—No, I do not. I think if a man has really high mathematical talent, the sooner he leaves the army and goes elsewhere the better for his own sake.

8216. In fact, to use a rather vulgar expression, he might carry his eggs to a much better market?—Yes, I think so. I happened to look last night at the examination of the Advanced Class for April 1867, and two cases struck me very much. The first in mathematics was seventh in mechanism and the steam engine, fifth in metallurgy, second in chemistry, fifth in the professional subject of the royal gun factories, and fifth in the royal laboratory; that is out of seven you must remember. The one who stood next to him on the whole in the class, who was only fourth in mathematics, and therefore below the average of the seven, was first in mechanism and the steam engine, first in metallurgy, third in chemistry, first in the royal gun factories, and first in the royal laboratory. Now these men seem to me to represent the two cases, the mathematician (and he really was something of a mathematician, he really liked mathematics, which is more than most of the Advanced Class do) and the practical man. They have each their separate functions.

8217. You think that the Advanced Class on the whole works well, although you mention that it is a great mistake to have officers so old that fathers of families are treated like schoolboys?—Yes; I do not think that it works as well as it did. I have no fault to find with anybody on that account, but we ought to have eight when we only get six to come in. When out of those six two were disqualified at the last examination, though one of them was allowed to remain because he had been ill, and when there was also a case in which one of the students had to be obliged to leave the class, so that there now remain only four—I do not think that that is quite what the Advanced Class was intended to be.

8218. In short, in order really to render good service to the country, the number ought to be increased, or else the Advanced Class ought to cease to exist?—I think that the number ought to arrive at at least as many as are called upon, that is, the number of eight; and I think it would not be at all difficult to make it arrive at that.

8219. You seem to be decidedly against what I may call the Procrustean system of obliging everybody to come up to a certain standard of attainment?—Yes.

8220. And it is your general impression that a particular talent or excellency in a student ought to be developed as much as possible?—Yes.

8221. (*Lt.-Col. Chesney.*) With regard to what you have said of either abolishing Sandhurst, or retaining it merely for the sons of poor officers, do you not see an obvious objection to a college which is retained only for the sons of poor officers, namely, that those men would probably take a specially low position in the army generally?—I think their place would depend upon their own exertions afterwards. If a man is poor, he takes an exceptionally poor place, but he is able to win a better position afterwards. It is the same throughout all the openings in life.

Adm the I

8222. Do you consider the present entrance examination for a direct commission for the line sufficient?—Only provided that the officer is obliged to study afterwards, otherwise I think it is insufficient.

8223. Would you consider that there was any advantage in having this class of specially trained young men going into the line and Cavalry, or would you prefer having them all come in without having any special military education of any kind?—I should prefer them all to come in without any special education of any kind, but only supposing you gave them a military education afterwards.

8224. Regarding what you have said of the professors at Woolwich, do you see any reason why a military professor should be put in such a position that his authority over the cadets should be less than that of another military man of the same college of the same rank?—No.

Roy Aca

8225. Is not there at Woolwich, or was not there in your time, a good deal of useless petty parading of the cadets for purposes which might be accomplished as well without the parade?—I consider that to be the whole or nearly the whole source of what is called the want of discipline at the Academy. I believe that there is no tendency to a want of discipline among these very fine young fellows as they are, but that a series of petty irritations causes them to be inclined to kick.

8226. May it not be the case also that the existence of these parades is almost the only reason why a separate military staff is required at all?—That is rather a difficult question; I have thought about it, and I am hardly able to answer it. The difficulty to my mind lies in this, that if you put the professors and masters in charge of the discipline, it is apt to bring them down from that very elevated position which they hold over the cadets at present. There is no question that a cadet would ten times rather obey the orders of one of the military instructors than he would the orders of one of the military men not being instructors, simply because he has the highest possible respect for the instructor. He is a man who can beat him at something in fact.

8227. Regarding the system at Woolwich of the constant visiting of the studies by an inspector and an assistant-inspector, who is junior to some of the professors, do you think that desirable?—No; I am for giving the cadets as much free study as possible and testing them at examinations.

8228. Do you not think that if the professors were carefully chosen, the discipline of the classes might be left to them, with the assistance, if necessary, of the senior cadets in the class?—Yes, during study. I never had occasion while at the Academy to put a cadet in arrest or to report him, and I had never the slightest want of discipline of any kind. One had only to say if anything foolish was done, "Do not be foolish, be quiet," and they would be quiet instantly. And that was at a time too when there were some very strong military difficulties.

8229. (*Sir D. A. Cameron.*) Have you thought of any plan for giving education to officers after they join the service?—There is a machinery already in existence for artillery officers.

Instr of lit after the s

8230. I mean for the line, as you are in favour of

abolishing Sandhurst?—Allow me to tell you what is done in Austria, where they have had a terrible lesson. This last summer I met a young cavalry officer in the Austrian service at an hotel in Prague, in Bohemia. He heard my name, and as he happened to have heard it before, he came up and made friends with me, and begged me to come out some miles into the country that night and see his troop the next morning, which I accordingly did; and he told me all about how things were going on. I must tell you that he was a young Englishman, who had been educated for the Academy at Woolwich, but had failed to pass his examination, for he was one of the usual lounging young fellows who fail to pass examinations. What I am going to tell you applies merely to the Cavalry, but if the system can be carried out with the Cavalry I think it may be taken to be able to be carried out with the other branches of the service. The entire Austrian cavalry is now subject to these regulations. First of all a nomination must be obtained from the Minister of War, but the nomination is not at all difficult to obtain. Then the friends of the young man who has the nomination must promise him a small private allowance, 50 florins a month being the amount for the Cavalry, but much less for the other branches of the service. On first joining, or within a year (he is given his choice), he must pass an examination in German (of course he may come from anywhere all over the world), in history, in geography, and in mathematics—not very high mathematics, a very small amount is necessary. Then he has to learn all the duties of a soldier. Among various things he has to learn to clean a horse, and other stable work. But it must not be supposed that he is treated as a soldier, he associates in every respect with the officers. While learning that, he has to be preparing himself mentally for the preliminary examination, if he has not passed it on first entrance. He has his choice of passing it on his first entrance, but if he has not passed it then he must pass it at the end of a year. He afterwards joins a divisional school, where he goes through a two years' course of study to prepare for an examination of a more severe character.

8231. (*Chairman.*) Does he leave his regiment then?—He belongs to the same regiment; he has a choice of two things, he may either remain with his regiment and pass his examination with his regiment, or he may go to what is called a divisional school, where a number of young officers are taken in and taught.

8232. And at that divisional school he remains for two years?—Yes.

8233. (*Sir D. A. Cameron.*) Is the instruction entirely professional there?—I will tell you what it is; I think it is rather too high myself. The subjects which he is taught and examined upon are mathematics (up to trigonometry and including geometry), fortification, history, especially of his own country, and geography, also especially of Austria and Germany. With regard to geography he must know the depth of the rivers at all the more important points in the Austrian empire, the position of fords and bridges, the general geological features, the mountain ranges, and the height of the mountains, the passes, the roads and railways, and all the fortresses in the empire, with their capacities for attack or defence, army organization and tactics of all three arms, especially of his own arm, the particulars of the various weapons in the service, military maps and drawings, military field sketching, pioneer duties, training recruits, exercise of a regiment, the regulations of the army, gymnastics, riding, and some other trifling matters. If you say that that is impossible, I have only to add, that I have since met the young officer I have referred to in Vienna, a very short time ago, and he had passed his final examination with credit, though others had failed.

8234. (*Chairman.*) At what age does an officer join in Austria?—This young man had failed to pass the examination at Woolwich. I think he joined the Austrian service about 19.

8235. How long does he remain with his regiment before he goes to the school?—If he does not come in as a clever fellow and able to pass his examination he studies a year with his regiment, during which time he has to learn certain things.

Capt. C. B. Brackenbury.

4 May 1869.

8236. Then he goes for two years to the school?—First he must be for a time with his regiment; I cannot be sure whether it is a year or six months. Then having got the trick of soldiering, he goes on with his studies; they say to him in effect, "now you "must not let your brains lie fallow, you must work "them too." All this has taken place since the war; because it was considered that there was a want of intelligence shown then which was very often attended with serious consequences.

Instruction of line officers after entering the service.

8237. (*Sir D. A. Cameron.*) Do you think that such a system is adapted to our army?—Not entirely, but something of the same kind. I should like care to be taken that the officers do not leave off studying after they come into the service.

8238. (*Maj.-Gen. Haythorne.*) You say that some of the cadets have told you that they had learned nothing at the Academy?—No; I did not state that they said they learned nothing.

Royal Military Academy. Course of study.

8239. I think you stated something to that effect. I wish to know whether it meant that at the Academy they went over the same ground that they had gone over before?—Yes. In the case of mathematics they very frequently say that they go over the same ground that they had been over before, but it cannot be the case with anything else, because the subjects they are taught are all new to them, except languages and mathematics. The remark would be confined to languages and mathematics.

8240. (*Rev. Dr. Butler.*)—Do you think that there is any reason, beyond the multiplicity of compulsory studies, which leads the young men to get tired of work, and to give up book work after they have gained their commissions?—Yes; I do not think it is because they are really tired of study that they give up book work after they have gained their commissions, but because they have never learned to study of their own individual effort. They have never been called upon to study in their rooms and to bring to anyone the work which they have prepared in their rooms. Their place for study is a lecture hall, or room of some sort with desks in it, exceedingly disagreeable to look at, and associated with many disagreeable things to them, and when they go to their rooms it is simply for pleasure. They seldom connect the idea of their rooms with the idea of work. I think that is quite enough to account for it.

8241. Would you think it desirable so to arrange the hours of compulsory work that there should be a considerable margin of leisure to be either well used or abused according to a young man's disposition?—Yes; I wish to test the disposition of a man as well as his power of cramming a certain amount of knowledge under pressure.

8242. (*Lord de Ros.*) You spoke about the facility with which you thought languages might be taught in a domestic manner, and of a Hungarian officer "who had acquired several languages from his cradle;" do you think that English mothers and nurses could be found to teach foreign languages to babies?—I think that everything must be done by degrees. I have a great belief in the receptive qualities of the English people, and that if once they can be persuaded that there is something for which it is really worth while to learn languages, languages will be learnt, and people will be quite surprised that they never thought of it before. I believe that there are some of the commercial classes in which languages are learnt very much now at an early age.

Instruction of line officers after entering the service.

8243. I have heard of a Polish waiter at Paris, who can talk nine languages, do you think that there is any English waiter in London who can talk three?—I suppose an Englishman has the same capacities as a Pole. I imagine the only reason why he cannot talk three languages is that it has never become worth his while to learn them, or that he has never been put in a position to learn them. A suggestion made by the

Capt. C. B. Brackenbury.

4 May 1869.

Instruction of line officers after entering the service.

former Commission on Education has never been carried out. It was to encourage the study of languages by sending young artillery officers who were linguists to be attached to embassies abroad for a year or two.

8244. As to the comparison between the habits of the English officers and the Austrian officers, whom you alluded to as being sent into the stables to clean a horse and his accoutrements, do you not think that our cavalry and artillery officers know more about stable economy than any foreign officers? Have you ever seen them together?—Yes, but I think English officers have not that superiority over Austrian officers, because some of the races of the Austrian empire are born horsemen; they are born almost outside a horse and they die on a horse; they are all their lives on horseback.

8245. If you go round the stables after a long march will you find anywhere officers so attentive to seeing that their horses are well looked after, so careful in attending to saddles and sore backs, and those little but all important details of stable economy, as our cavalry officers are? Have you had opportunities of seeing that?—Yes. I was for a long time in a troop of horse artillery, and I was in the Crimea. I have made several marches, and I have no hesitation in saying that with the exception of one thing, the saddles being bad, the Hungarian cavalry and the Hungarian artillery would march half as far again as our cavalry or artillery with the same amount of fatigue and suffering. I have seen them do it. I have seen them come in after tremendous marches with comparatively little effect of the march perceptible.

8246. You did not see the saddle taken off, perhaps?—I have seen the saddles taken off; they were not very good (I could tell why, as I have on former occasions), but I never saw a gall upon the back bone.

8247. Or upon the withers?—I have never seen a gall either on the withers or on the back bone of an Austrian cavalry or artillery horse. They were very hardy, and went on just the same, mile after mile, without signs of suffering.

8248. Do you think that an English horse, if he were not attended to as he is with the additional care and attention paid by our artillery and cavalry officers on a march, would be able to bear what you say this hardy Hungarian horse does?—No; because the English horse is not allowed to be hardy.

8249. Do you think it is possible that an officer could acquire more than an ill-digested smattering of knowledge in all the subjects you enumerated as being required for the examination in Austria?—It is very possible indeed, but I am far from saying that I wish us to copy exactly this examination of the Austrian cavalry officers.

8250. You mentioned that the Austrian officers are required to know the depth of all the chief rivers and all the fords in the Austrian dominions. Do you think there is anybody except a bargeman who could tell you all the fords on the Thames between Oxford and London, and do you think that any officers can possibly know all those things?—I think an officer might tell you a great deal more than a bargeman, and the examination is confined to the more important military points. This knowledge of the country has never been neglected in the Austrian service. It was neglected in the Italian army, and the consequence was that in the war of 1866, in Italy, to my certain knowledge, Italian generals with their staffs came to rivers and had to ask the country people where there was a bridge or a ford. Although they had the most beautiful maps in their possession long before the war, nobody had ever thought it worth his while to study the country which they had been trying so long to take. Their utter want of knowledge arose simply from carelessness.

8251. It might be possible to examine an officer upon a given district of country, including the rivers and the fords in that district, but do you think it would be possible, considering the enormous size of the Austrian dominions, that any officer, a general officer or any other, could pretend to know all those particulars with respect to the whole of the countries subject to the Emperor of Austria?—If your lordship saw what has been done there you would be surprised. The change which has taken place in Austria has been very great indeed. I should not have said that it was possible that any young officer could have shown such an intense interest in his profession as this young officer did. When this young Englishman, who had been unable to pass his examination in England, first went out to Austria, he found it very hard work indeed, but it completely took hold of him, he could talk of nothing but his profession—he could talk of nothing but how cavalry ought to attack infantry, and so on.

8252. Do you think that anything but a long experience as a cavalry officer could give a man the least idea how cavalry ought to attack infantry?—I think the more brains can be brought to bear upon that question the better, nor do I think that officers trained under old systems are always the most capable of accepting and investigating new problems.

8253. (*Rev. W. C. Lake.*) You gave some strong reasons against keeping Sandhurst, supposing you had a later examination after entering the army?—Yes.

8254. Do you not think that it might be of advantage, supposing that at Sandhurst everyone could obtain a free commission, that a young man coming from Sandhurst who had been very well educated might be a sort of example, in the knowledge of military subjects, to other young officers in the army, and that the clever fellows, both from Sandhurst and from the Academy, might vie with each other?—I am afraid the vying does not come to much, somehow or other. They do not vie with one another in the knowledge of their profession as a rule.

8255. I do not speak of what Sandhurst is now, but of what possibly Sandhurst would be if cadetships were gained by free competition?—That would be an improvement, but, on the other hand, I very much prefer the studies being carried on hand-in-hand with the duties of the young officer, in which case they are studies which he takes a pride in; in the other case they are studies which he merely learns under tutelage.

8256. Would you be able, upon your plan of giving instruction after officers enter the army, to give much of a high or even good grounding in military history?—I think so. I see no reason why it should not be done in that as well as in any other subject. You would perhaps be obliged to collect your young officers, as officers, in places to be lectured to upon certain subjects for a time.

8257. Would you collect them in colleges?—I do not like the idea of collecting them in colleges. I would rather bring a number of young officers into barracks in a garrison, and let them be doing their regimental duties as far as possible at the same time. The buildings at Sandhurst might be used for that purpose; only let there be a whole regiment, or part of a regiment, or what you might call an educational detachment, or an educational battery there.

8258. Do you mean that you would collect all the young officers of England into several establishments like Sandhurst, after they had served for a short time in the army?—Certainly not. I should like many of them to go abroad everywhere with their regiments. I only mean, let whatever officers are collected be collected in the way I have named, and let there be certain instructors with them when they are with their regiments, to whom they can go if they cannot get on by themselves.

8259. Then you contemplate two systems of instruction, one in colleges and the other by instructors attached to regiments?—I do not like the idea of colleges at all. If you had a great many young officers going in who were unable to learn by themselves, I would quarter them together, not without their men, and have them placed under instruction; but I conceive that if you had an instructor in each regiment, whose credit depended upon whether his young officers passed their examination well or not, you would get not only young but senior officers to learn.

8260. That is the plan you would prefer, namely, having instructors in the regiments?—Yes.

8261. You said something about not wishing to have so much mathematics taught at Woolwich, or at least to have mathematics only for the mathematicians; would you encourage the study of classics for those who showed an aptitude for them at the entrance examination?—I am afraid it would not be of any use continuing classics, you cannot call it a practical subject; but I would encourage them to pass in classics at the entrance examination. I should like to quote one of the best crammers who ever existed, Mr. Taylor, of Woolwich; he passed some men remarkably well for Woolwich; he has retired now. When I was talking to him once, he told me he would rather that a boy came up to him to be taught mathematics who had never looked at a mathematical book in his life, and, provided that he had a year or so to cram him, he would make him pass a better examination than if he had been trained all his life in mathematics.

8262. My question had reference to classics.—Yes; and what I am saying has a bearing upon that. Of course he took it for granted that the boy came up having studied classics; he considered that classics develop the various parts of a boy's intellect.

8263. But supposing you do not think it desirable that after coming into the Academy at Woolwich any of the cadets should learn as much mathematics as at present, would you be disposed for those who have an aptitude for it to substitute classics for mathematics?—I hardly see my way to that.

8264. You might make it the means of developing their minds?—I should like their minds to be developed, but all that should be done before they came into the Academy. I should like them to be 18 or 19 years of age when they come up, and to have passed through the ordinary public school course, with a competitive examination before their eyes.

8265. Do you mean that you would stop then what is generally called the cultivation of their minds, and put them entirely into practical pursuits?—The various practical duties which they are taught, and afterwards called upon to perform, are excellent developments for the mind; they are an excellent means of developing common sense, a valuable possession for an officer.

8266. I thought you were an advocate for a considerable amount of cultivation on the part of officers both of the Artillery and the Engineers?—Yes; before you bring them together in a military capacity at all keep them under instruction as long as you can; I do not care how long it is, provided it does not stop promotion afterwards. Then when you have brought them together let it be to study practical subjects. If you find a few mathematicians among them give them an opportunity of going on with their mathematics; they will be gold to you afterwards, whereas the others will never do you any good in the way of mathematics.

8267. You spoke of free study; what do you apply that notion of free study to?—To almost everything. You cannot apply it to the construction of machinery or anything like an arsenal course. There are some courses in which men go down and see things with the instructor, but with the exception of those I should like to apply it generally. I would apply it to the subjects which are taught by lectures, adopting, as far as possible, the university system.

Capt. C. B. Brackenbury.

4 May 1869.

Instruction of officers after entering the service.

8268. I think you expressed an opinion to the effect that you would not like to have a special class for officers after a few years' service, because you found them too fatigued and inapt for returning to their studies; does not that apply equally to the Staff College?—Yes, it does apply to the Staff College. I cannot properly speak for other regiments than my own; it applies to the Royal Artillery in this way, that, speaking, of course, subject to exceptions, our best men do not go up for the Staff College. Certainly, I have met some of the best men in the army at the Staff College. I need not go further than your secretary for an example; but, on the other hand, there is no question that in my regiment the best men do not go up. When a man has been a certain number of years in the service he has made a kind of name, which he hesitates to risk by failing in an examination against a set of people who have been unemployed and have had time to cram. If the good man in the Artillery fails to pass among the first two Artillery candidates he is rejected, though he may have beaten all the line candidates. Then, everybody says, "My friend, you cannot get into the Staff "College." Such a case has actually occurred. An Artillery officer who passed third out of all the candidates examined, was not admitted because the first two were also Artillery men.

8269. That may be true; but that is a different reason from the one you gave before?—I do not think I ever said there was fatigue.

8270. I think you said they were inapt, or you used some expression insinuating that you thought they got their hands out of study?—Yes, I think they get their hands out of study, and I think you do not want many students at a time; you want only a very few men to be students, but you want to have a general average of fair intellectual development among the whole of your officers. What I strongly object to in our system is that we drive our cadets instead of leading them, and, as soon as they are commissioned, just at the age when young civilians begin the struggles of life for which they have been trained, we leave the young officers a prey to all the temptations of their sudden liberty without demanding anything from their intellects. They learn to be luxurious and self-indulgent, and most of their previous education is as good as lost. On further consideration I should not object to classics being studied at the Royal Military Academy by men who have a decided talent in that direction. But, in that as in all other subjects, you will only get high class work if you offer high class advantages. The encouragements to intellectual men in the army are so small that they may be almost called discouragements. I would also add that there is great danger of Artillerymen becoming too technical in their knowledge. They must be taught that a knowledge of guns, &c., is only the A. B. C. of the military art. The picked men who enter the scientific corps should be encouraged in every way to devote their talents to the study of organization, strategy, and the higher branches of tactics. My recipe for the production of many well-known first-class officers would be "Do not pay "ordinary officers well; you will always get plenty "of them; but offer good prizes for real talent and "energy."

The witness withdrew.

SECOND CAPTAIN A. FORD, Royal Artillery, examined.

Capt. A. Ford.

8271. (*Chairman.*) You are a captain in the Royal Artillery?—Yes.

8272. You have passed through the Artillery Advanced Class?—Yes.

8273. When did you leave it?—In March 1868; I entered the Advanced Class in April 1866, and was two years in it, until March 1868.

8274. What induced you to go into it?—There were certain orders issued, stating that officers who had passed through the Advanced Class would be qualified to hold certain appointments; the hope of obtaining a scientific appointment was my inducement.

Artillery Advanced Class.

8275. Did you receive any appointment?—No.

8276. You had to apply to your commanding officer for leave to enter, had you not?—Yes.

8277. Had you any difficulty in obtaining leave?—

Capt. A. Ford.
4 May 1869.
Artillery Advanced Class.

No, I had none whatever; I merely had to obtain a certificate that I was able to perform my regimental duties properly, and a medical certificate.

8278. Did that certificate include any reference to your ability to ride?—It merely said that I was able to perform my regimental duties properly; as I am in a field brigade it implied ability to ride.

8279. Had you to pass through a preliminary competitive examination?—Yes.

8280. How many officers competed with you?—There were nine officers competing altogether, including one examined in Malta.

8281. Did they all succeed?—No; seven succeeded.

8282. Was it a severe examination?—Tolerably severe for an officer who has had no book work for several years, which was my case.

8283. If all had come up to a certain standard would all have been admitted?—No; I think there were only eight vacancies, but seven were admitted.

8284. But it was incapacity, and not the want of a vacancy, that precluded the eighth from entering?—Yes.

8285. Were you satisfied with the course of instruction that was placed within your reach?—Decidedly so.

8286. Do you feel that you derived great benefit from it?—Yes, certainly; in no other way could I have obtained the same amount of information. I think it is an exceedingly good course. The only difficulty with regard to it is the want of appointments for those who pass through it. I think that men will not be induced to come forward unless there is some provision made for them afterwards.

8287. Was it a disagreeable two years that you spent in the Advanced Class?—No, I enjoyed it very much. At first it was rather disagreeable to put myself under the yoke again in the way I was obliged to do; it was like going back to school.

8288. Do you think that your brother officers took umbrage at your absenting yourself from your regiment for the purpose of entering this class?—No; certainly those with whom I was associated did not.

8289. We have already received from the previous witnesses an account of the course of instruction through which you have to pass; did you take up every subject?—Yes. It is necessary to take up every subject.

8290. Have you any suggestion to make as to any improvement which might be introduced into the course?—I think not. I do not know of any suggestion that I could make.

8291. When the course was over did you rejoin your regiment?—I have never rejoined. Professor Bashforth, who is employed in instructing the Advanced Class, wanted some assistants for his experiments to determine the law of the resistance of the air to the motion of projectiles, and I was one of those who were selected for that purpose. I have been ever since engaged in those experiments, and they are not yet concluded.

8292. There was a final examination at the completion of your course, was there not?—There was one at the end of the first year.

8293. And a final one?—Yes, at the end of the second year.

8294. Was that competitive?—We had to get a certain minimum of marks in each subject, and 6 in the aggregate.

8295. Were the students placed in order of merit?—Yes.

8296. (*Lt.-Col. Chesney.*) In your opinion has the establishment of the Advanced Class caused a good many officers in the Artillery to turn their attention to these scientific subjects beyond the actual numbers who have gone up; we understand about 20 officers in all have entered the class?—I think it has to a very great extent. If there were any certainty of appointments afterwards a great many officers would compete for admission.

8297. You attribute the want of competition that exists at present distinctly to the want of any certainty of advantage from going through the course?—Yes, to the want of certainty of advantage, and the difficulty of taking up book work again, after a lapse of some years.

8298. Are you aware whether it is generally considered that the throwing open of the Staff College has benefited your own regiment, the Artillery?—I think it is the general opinion that it has; I never heard anything to the contrary.

8299. (*Rev. W. C. Lake.*) Do you think that the present habit by which officers, after a few years of service, return to the Advanced Class is a bad one?—No, I think it is a very good one. I think that they can very well go back to work again after they have learnt their regimental duty.

8300. You do not think that practically they have got their hand out of study and find themselves unable to return to their old studies?—I think not, if the intervening time has not been too long.

8301. Do you mean then that you would distinctly prefer the present system, and that you think it has advantages as compared with the plan of their going to the Advanced Class very soon after they have finished their studies at the Academy?—I think it would be a disadvantage for them to go to the Advanced Class soon after they have finished their studies at the Academy, because they would not have had the opportunity of learning their regimental duty properly. I think every officer who goes into the Advanced Class should know his regimental duties thoroughly, and have some certificate to that effect.

8302. Do you think there is anything like a feeling of dissatisfaction amongst those who have gone through the Advanced Class, that they have not gained anything by it?—With one exception the first Advanced Class very soon obtained appointments; but only one member of our class has one, and that of a temporary nature. I believe, however, another is about to obtain one.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

Thursday, 6th May 1869.

PRESENT:

THE RIGHT HON. LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
GENERAL LORD DE ROS.
LIEUT.-COL. SIR CHARLES RUSSELL, Bart., V.C.
LIEUT.-GEN. SIR D. A. CAMERON, K.C.B.
MAJOR-GENERAL EARDLEY WILMOT.
MAJOR-GENERAL HAYTHORNE.
C. S. PARKER, Esq., M.P.
REV. W. C. LAKE.
LIEUT-COL. CHESNEY.

Rev. A. C. Fraser.
6 May 1869.
Royal Military Academy.

The REV. A. C. FRASER examined.

8303. (*Chairman.*) You are chaplain at the Woolwich Academy?—I am.

8304. How long have you been attached to that establishment?—Between 22 and 23 years.

8305. Would you kindly describe to the Commission the general nature of your duties?—My duties lie within a very narrow range. I read prayers morning and evening. Duties chaplain

8306. Where ?—In the cadets' hall ; and I visit the hospital. I have also a weekly evening service. I may say that that represents the whole of my duties proper.

8307. (*Sir D. A. Cameron.*) You have charge of the library ?—Yes, I have charge of the library. *Ex officio* I am honorary librarian, and besides that I have the general religious supervision of the company. Wherever I find opportunity to act of course I do ; and as a fact, I have once a week a voluntary class of cadets who come to me to read the Scriptures. I have, perhaps, eight or ten or a dozen volunteers, or even more, as the case may be, who come to me once a week for special instruction in religion. That is an entirely voluntary matter on their part and on mine. It does not enter into the detail of my specific duties.

8308. (*Chairman.*) What have you to do on Sundays ?—On Sundays I have evening service in the hall ; but I believe that is about to be modified. I do not speak very positively about it, because I think it is in a transition state. A short time ago there was a sort of fragmentary service. We had a certain number of prayers read, but with no sermon, and the cadets stood at attention during the time ; that was all we had in the way of service. Now there is a real *bonâ fide* service on Sunday evening ; but it is without music, it is very meagre, and under great disadvantages altogether. I think that is about to be modified by curtailment.

8309. Where do the students go to church ?—Lately I have been attached to the duties of the garrison church, but that is a thing altogether distinct from my duties as the cadet chaplain, and it has been attended with great advantages. Of course I need not say that I have been acting under very great disadvantages ; it has been exceedingly difficult to do anything as chaplain.

8310. What I do not understand is this, there is this evening service, but is there no official church ?—There is no church nor chapel ; there is no special religious provision in that way for the cadet company.

8311. (*Lt.-Col. Chesney.*) They go to service at the garrison church, do they not ?—Yes. They go to the garrison church, but there is no special church for the cadets in their own place.

8312. (*Chairman.*) Is there no chapel ?—There is no chapel nor place set apart for religious purposes.

8313. Do they go to church voluntarily ?—They are marched to church.

8314. Is there a parade for going to church ?—Yes, for church in the morning.

8315. And is that compulsory ?—Yes. The regulations of the Academy specify that they are to attend two services a day ; one service is at St. George's and the other service is in the cadet hall. I think that it must be evident to everybody that the duties of their chaplain are attended with immense difficulties ; and that it is a defect at present in the constitution of the cadet company that the chaplain is just in the position in which I imagine an officer of artillery might be who might be appointed to a battery without having the matériel afforded to him. I was sent to the Academy originally under very peculiar circumstances. There was supposed to be great need of a clergyman there, and I was sent at that time under what I was given to understand was a provisional condition of things. We were to have service in the hall, for the time being, until a chapel should be built. I presume that nobody would have undertaken such a charge unless he had understood that due provision for the exercise of his office was to be made in course of time. But time passed over and a chapel was not built. I made representations, and several of the lieutenant-governors did their best one after another, but nothing came of it. The matter was postponed ; and at last the building of St. George's church appears to have put things upon a different footing. We appear to have lost the hope of having a chapel built. Lately, for about two years, I have been attached to the duties of the garrison, and I have found the very greatest benefit from it.

8316. In what capacity have you been attached to the duties of the garrison ?—I have taken part with the chaplains of the garrison in the functions at St. George's Church and the Herbert Hospital.

8317. Has that been a voluntary act on your part ?—No, there has been a certain payment. I have had 50*l.* a year from the War Office for doing it ; but now, quite within the last day or two (I think it occurred yesterday), I received a notice that that arrangement was about to come to an end, and that they would no longer require my services, as there are four chaplains there. So I shall again be placed as I was, without a church and without a congregation, and without any real direct ministerial intercourse with the cadets. I am there to do what I can and to make the most of my opportunities ; but it is not difficult to understand that a clergyman owes very much of his influence to the prestige of being connected with a church and congregation and to the one opportunity thereby afforded. There is nothing of that kind in my case ; and therefore I look upon it as a simple impossibility to carry out efficiently the duties of a chaplain there under existing circumstances.

8318. Is there any place set apart for the cadets in the garrison church ?—Yes, they have seats assigned to them, but I do not think that they are very convenient. The sending them to the garrison church is what you may call a *succedaneum* for something that really is required. It is a substitute ; it is better than having prayers in the hall ; but I do not think myself that it answers the due purpose. The cadets are lost in that great congregation. What they want is, I imagine, a religious establishment for themselves, and the sense of that need was involved in the idea of sending a chaplain to them. It appears to me to be quite an anomaly to have a clergyman attached to them, especially for so many years, without giving him the means of carrying out his duties efficiently. I think I am right in saying that there is no establishment of the same kind in England (certainly there is none that I am aware of) without a chapel. I think everybody would agree that very much of the good effect exercised upon the young men of those other places of education, is due to what is done in the chapels.

8319. You have no opportunity of preaching a sermon then ?—None, except, as I mentioned, in the hall.

8320. How often do you preach in the hall ?—Every Sunday.

8321. Is the attendance there compulsory ?—Yes ; but it is a service held in the same place where they dine and breakfast. They have no music ; there is no mixed congregation. The other members of the Royal Military Academy do not attend, as of course nobody would go voluntarily to a service of that kind unless from a high sense of duty. General Ormsby used to go, but simply from a sense of duty. It is not difficult to understand that a service of that kind, without any of those helps to devotion which are found so useful with other people, is not so efficient as it might be. If those accessories are necessary for people in general, I think they must be doubly necessary for young men of the age and under the circumstances of these cadets.

8322. You visit the hospital, I suppose ?—Yes.

Religious instruction, &c.

8323. I daresay it is principally there that you find opportunities of conversing with the cadets on religious subjects ?—Certainly there, and in my own class. I have a certain number of them who come to me for the express purpose of religious instruction.

8324. How many does that class consist of ?—I should say that about 10 might be taken as the average ; of course it is very variable. I should like to say very distinctly that when I went to undertake the office of chaplain, I undertook it under a distinct impression, which impression was conveyed by authority to me, that a chapel would be provided.

8325. Do you think that a fairly religious tone

Rev. A. C. Fraser.

6 May 1869.

Royal Military Academy.

prevails at the Academy?—It has very much improved of late years, as a consequence of other changes which have taken place with regard to the admission. The cadets are now at an age to assume a more independent standing, and those who are religiously disposed are not ashamed to avow it. I think I may say that some years ago it would have been very difficult for any number of them, however well disposed they might have been, to come to me as they do now for religious instruction. There is nothing in the shape of persecution for opinion now; everyone is free to do as he likes. I do not think that those who are religiously disposed are even laughed at by the others, or suffer in any way.

8326. Do you find that it is easy for you yourself to initiate intercourse with any of the individual cadets?—Not of that intimate kind which might be termed religious.

8327. I suppose you find a little difficulty in remonstrating with anyone who is going wrong?—Naturally it requires a good deal of tact to deal with them; but still I find them very amenable to kind advice and remonstrance, and on occasion they take reproof very well. Of course they are more accessible to me in the hospital than elsewhere.

8328. Do you feel authorized to visit them individually, in the same way as the clergyman of a parish can visit his parishioners?—Yes; I can go to them in their own rooms whenever I like. I do not do it very much, because I am afraid sometimes of hitting upon something that I had better not see; but I do it when necessary.

8329. You would not be received with coldness or incivility if you went?—No, certainly not. Your lordship asked me if the tone is reasonably religious; I may say that there are many of them who are very decidedly religious.

8330. Have you any independent intercourse with any of the cadets as their librarian?—Yes, naturally.

8331. Do you mingle at all in their sports?—I do not exactly do that.

8332. You do not play cricket?—No, I am rather past the cricketing age.

8333. I suppose they have all been confirmed?—Nearly all. Of course whenever there is a confirmation notice is given to them, and any who have not been confirmed, and who wish to be confirmed, form a class with me. We have some Presbyterians and some Roman Catholics.

8334. Is there a Presbyterian minister?—There is one in the garrison; there is not one attached to the Academy.

8335. Does he visit the members of his congregation in the academy?—No, not the Presbyterian minister.

8336. Does the Roman Catholic priest?—No, the Roman Catholic cadets go to the Roman Catholic church, but I never heard of the priest visiting them. The Presbysterians also visit the Presbyterian minister, but I never heard of his coming to them.

8337. Is there much venereal disease?—Not anything like so much as there used to be.

Moral supervision.

8338. To what do you attribute that improvement?—I think it is attributable to the improved condition of things among them, most certainly. Very much is done now to keep them within their own bounds, to keep them from straying into the town; they have everything they could possibly desire in the way of provision for their amusement and occupation in the building.

8339. (*Lord E. Cecil.*) With regard to the last answer that you gave, we have understood from the evidence that has been given here, that there are no bounds to the Academy; is that so?—There are bounds of hours. There are certain hours after which they are not free to go out without leave; there are no other bounds but those of time.

8340. I mean bounds of place?—There are no local bounds at all.

8341. (*Lt.-Col. Chesney.*) Is not the enclosure existing still?—Yes; they may not pass that if they are under punishment.

8342. (*Lord E. Cecil.*) They may not go out at night?—They are not allowed to go out after certain hours at night into the town without leave.

8343. In the daytime they may go where they please?—In the daytime they may go where they choose.

8344. (*Lt.-Col. Chesney.*) To public-houses?—No, they are not allowed to go to public-houses, of course.

8345. They are strictly forbidden, are they not?—Yes, they are forbidden.

8346. (*Lord E. Cecil.*) Are there any other places besides public-houses forbidden to a cadet?—Yes, I imagine that a billiard room would be forbidden by the regulations; but, then, as you are probably aware, they have their own billiard room.

Duties of chaplain.

8347. How much time in the day do you calculate that your religious duties take you?—Very little time indeed. The actual reading prayers in the morning does not take many minutes, and reading the prayers in the evening does not take many minutes. Visiting the hospital does not take a long time, as a general rule, and the rest is as it may be. I may remain, or I may not remain; I do what I can. The library keeps me there very much; at least it has done so lately.

8348. Do you think that the chaplain of the garrison, or the chaplain of the Academy as the case might be, might combine the duties of the two together?—Yes, I do, most certainly. One of two things is manifestly right, either the chaplain of the Academy should have a chapel provided for him, where he might assemble together all the people connected with the Academy, and minister to them as their chaplain (there are about 700 persons in all belonging to the Royal Military Academy, not to the cadet company, but masters, professors, and their wives, servants, and so on), or else the functions should be performed by a chaplain of the garrison. I do not see why they should not be combined. I have already stated that I have found the greatest benefit from having been attached to the garrison duties during the last couple of years; but that is now about to cease. I think that I might perfectly well be attached to the church which the cadets attend. They go to the garrison church, and it seems to me to be absurd to divorce the chaplain from the cadets on Sunday. I think he ought to be attached to their place of public worship. I think the chaplain, whoever he may be, ought to be a chaplain to the forces attached to that particular sphere of duty.

8349. How many chaplains are there now attached to the garrison at Woolwich?—There are three chaplains, and a fourth is about to be appointed to an entirely new district. The dockyard is given up, and is to form a new district; new troops are coming, and the clergyman who will be appointed will be entirely taken up with that division. He could not have anything to do with St. George's Church, so that, in fact, there will be three chaplains to St. George's Church, and one to this other district; that makes altogether four chaplains for Woolwich.

8350. Including yourself there would be five chaplains?—Yes; but you may consider it as two charges; there is St. George's Church; there is the Herbert Hospital, which has three services every week; and there is this new district, which will have its church, and its chaplain, and its hospital for its separate division.

Moral influence exercised by the cadets.

8351. (*Lt.-Col. Chesney.*) In your opinion is there a want in Woolwich, as compared with other public institutions, such as public schools and universities, of some personal communication between the student and a special individual among the authorities?—I think that the subaltern officers mix very freely with them; perhaps that meets the want that you allude to. The subaltern officers, and even the captains, associate with them very freely.

8352. Do I understand that each cadet has some particular officer with whom he especially communicates on private matters?—No; but I mean that the

subaltern officers, as a rule, are on friendly terms with the cadets. A cadet may not choose out any one particular officer, and an officer, I suppose, would certainly not choose out a particular cadet; but, as a rule, they are on very friendly and even intimate terms of familiar communication with them.

8353. But their taking a personal interest in a particular cadet is rather a matter of accident than of any arrangement made with that object?—Yes: they belong to their own divisions so far as matters of discipline and duty go. A subaltern has his own division to which he is particularly attached, just as a captain has.

8354. I mean personal knowledge?—That is not a matter of arrangement.

8355. You are evidently of opinion that it would be a great improvement to the tone of the place if there were a college chapel?—I think so: I have always thought so, and I think so now, even more strongly than ever. I am quite sure that that has been the defect in the constitution of the place; the one thing they want is a chapel.

8356. Putting that aside do you think that there has been a great improvement in the moral tone during the last few years?—Yes.

8357. Can you account for that distinctly?—I should account for it by consideration of the improved condition and intelligence of the cadets, and their age, and the consequently greater power of independent action. A cadet now is not ashamed to avow what he knows to be right and to act upon it. In days of yore they were cowed. I think there is a great difference in these points, in fact I am sure there is. I see a good deal of them in hospital; I hear what they say, and I am able to judge of the tone of their minds, and it is a very improved tone.

8358. We have heard it said that Woolwich cadets have no pride in being or in having been a cadet at Woolwich. In your opinion has that been the case?—That lack of *esprit de corps* has been too much a reality; it has been so, I am afraid, to a great extent. I should attribute that also mainly to this very want of which I am speaking, that the religious principle has not been cultivated among them; they have had no place of devotional reunion. I think if you could have got them to be interested in their church it would have been a very great matter, as giving a point of common feeling, just as such feeling exists in a public school or a college; you know what a great deal of good is done among young men by their being led to take an interest in the chapel.

8359. You do not attribute it in any way to a deficiency in matters of education, but rather to the want of a chapel?—I think they have been too hard worked; the hours are excessive; it has been made too much a place of toil to them. As to interest taken in the Institution, I would say that the beginning of correcting the old evil was made when General Wilmot was captain there. He tried to give them an interest in the place, and particularly in the structure, by putting in those windows in the hall. I think they take much more pride in the building now than they did formerly. You asked me the question historically; my answer is, that I think the former feeling has been very much modified, and that the beginning of their taking a pride in the place was exactly when their hall was made an object of pride to them; when they could contemplate it with interest. Now it is very beautiful, and the plans which were then begun have been carried out; for instance, the arms of the defunct governors have been put up; all that tends to give them an interest in the place and to promote high associations. This is also the tendency of all the recent improvements within the enclosure.

Opportunities for religious instruction, &c.

8360. (*Maj.-Gen. Wilmot.*) I do not exactly understand what advantage to the Academy you said accrued from your connexion with the garrison church?—I think my prestige has been very much improved thereby. The cadets see me on Sunday officiating in their midst. It must be evident that a clergyman's influence is owing very mainly to that. I do not think there is a charm about any one man's mere profession, so that if you send him among a number of people, without any of the accessories of his office, he can exercise among them the influences of a clergyman to the full extent; he may do what good he can privately, but when he officiates in a church he brings into play a great many additional associations of clergyman's office.

8361. As a matter of fact you would consider it part of your duty, and your privilege, in fact, to speak as a clergyman and as a friend to any cadet who from any cause had brought himself by his own impropriety into hospital?—If I could find an opportunity.

8362. Could not you always find an opportunity?—There might be cases which would render it difficult. A young man's disposition might be such as to render it difficult, or his mood at the moment. Watching my time carefully I would try to do it with effect; I should speak if I could and do what I could. Moreover I do not always know about the particular cases, in fact lately the cases to which you allude have been very rare indeed.

8363. (*Sir D. A. Cameron.*) Is not there a general reading room at the Academy open to all the officers and cadets?—There are two reading rooms.

8364. Does that give you an opportunity of conversing with the cadets?—Yes, in a general way I can talk with them, but not distinctly as a clergyman. A general reading room would hardly be the place I think for that. Of course I have to avoid the appearance of sermonizing; I cannot catch hold of a young man at any time, but must watch for a suitable opportunity. There would be objections on that score against talking to them in the library on religious matters.

8365. (*Lord de Ros.*) In reference to what you have said as to the objection to prayers without music and not in a consecrated place, are you aware that the riding school has until very lately been always the place where the service has been performed to the cavalry regiments, and also that the parochial clergy have been invariably much gratified at the attention shown by the soldiers and the decency and order of the service?—I am not aware of that, but circumstances would make all the difference. If a riding school is the best place that can be provided, of course all objection would be at once superseded. There was a time in Christian history when prayer was made by a river's side, and that was found to be highly devotional; but when you can have a church the case is altogether altered.

The witness withdrew.

BREVET-COLONEL T. E. LACY examined.

8366. (*Chairman.*) You are Commandant of the Staff College?—I am.

8367. You were formerly Superintendent of Studies at the Cadet College at Sandhurst?—Yes.

8368. When did your connexion with the Staff College commence?—On the 1st of January 1865.

8369. You have been kind enough to give us on paper a short sketch of the constitution of the college and of the nature of its studies, and I will not ask you to repeat what you have already so satisfactorily communicated to us; but I would put this question: On the whole, are you satisfied with the general operations of the establishment?—Yes I am, on the whole, certainly satisfied.

Admission to the College.

8370. I see that you are of opinion that the certificates which officers are required to present from their commanding officers before they can enter the college might be rendered a more stringent test of their practical qualities, but you have some hesitation in deciding as to how that additional stringency is to be con-

Col T. E. Lacy.
6 May 1869.
Staff College.

trived?—Yes; I am not prepared to say how; it is rather a hint that I throw out than a suggestion. This is, in fact, a question rather outside the college; it is a matter more, I think, for the authorities at the Horse Guards than for us.

8371. I suppose the efficient operation of the college greatly depends upon the efficiency of that preliminary test?—It entirely depends upon it.

8372. It might almost be said to be the key of the system?—I think so, and I have always thought so.

8373. The college, in fact, ought always to be provided with first-class material upon which to work; it ought not to be used as a sieve, through which a number of officers are to be indiscriminately passed, some of whom, though, perhaps, they would benefit to a certain extent from the advantages placed within their reach at the college, yet eventually, on account of their not being sufficiently competent to perform those practical duties which are not taught them at the Staff College, do not turn out the best officers for the particular posts to which they are to be appointed?—Yes; and not only the practical duties, but officers may come in who are not perhaps prepared in their general education to the extent that you would wish them to be on coming into the Staff College. I think that it holds out an inducement to men to come in for certain purposes and for certain advantages in their career, who would not have thought of it if they were not able to see that it is to be done with so much comparative ease. I think that the idea of going to the Staff College may sometimes occur to an officer in the way of personal convenience. I do not say that disparagingly at all. An officer thinks that it affords a good opportunity for bettering himself in his profession. He may be married, or he may have other private views, and that in many instances may be the guiding inducement.

8374. Therefore you attach great importance to the application of some preliminary test before an officer is allowed to compete for entrance to the college?—Yes.

Course of instruction.

8375. Are you satisfied with the period of time appointed for the accomplishment of the course?—It has often occurred to me that if the entrance examination was such as I have referred to the course might be shortened.

8376. What would be the shortest period for it?—A year.

8377. And of course the period being so shortened a great number of objections which are now urged, such as those on the score of an officer being so long absent from his regiment, would be obviated?—Yes, to a certain extent. I think I would increase the time for which the passed officer goes to other arms of the service; as a supplementary course, that time, perhaps, might be increased with advantage.

8378. Has the practical course afterwards been diminished since the college was opened?—Yes, I believe so, but not in my time. The object of that I suppose was to shorten the time during which an officer's services are lost to his regiment.

8379. Do you think that commanding officers look with jealousy upon officers absenting themselves from their regiments in order to go to the Staff College?—No; I am not prepared to say so. I have had no opportunities of becoming informed of it. I have heard indeed of some cases in which a commanding officer has been proud of his officer going to the Staff College, and anxious to aid him in going.

8380. I think that you rather deprecate the intensity of the competition for marks?—Yes, after admission to the college.

8381. And you would substitute a system of classification?—Yes.

8382. I see that you are also very anxious that the idiosyncracies and peculiar tastes and talents of the individual officers should be consulted in the opportunities afforded them for instruction?—Yes; first in the admission examination, and afterwards in the course at the college. I think in the admission examination we probably lose a great number of good men who may be men from our public schools and universities, or men who have had a good deal of continental instruction, or men who have had some other opportunities of acquiring a good education, and who may be dismayed, perhaps, by the purely professional subjects of the examination; although they need not be so, because a well educated man is well able, as we have many examples to show, to master the professional subjects at the college.

8383. Then you would increase the range of subjects in which the competitive examination is to take place?—I would alter them in some respects. I think I would admit the classics and general history. I do not know whether I would not go so far as to include polite literature; but the classics and general history should certainly be included, at the option of the candidate of course.

8384. And after he has entered you would decrease the number of obligatory studies?—I think that a plan of classification and a modification of the system of personal competition in marks would have the effect that I allude to in my paper, namely, that an officer would put his powers on to the one or more subjects to which he had a special bent.

Results ing thr the Col

8385. After an officer has passed the Staff College, he becomes eligible for staff appointments, but the number of staff appointments are not sufficient for all those persons who have thus created, as they consider, a claim to share them; but inasmuch as this education is afforded at the public expense, and as very great benefits are conferred upon the individuals themselves by such advantages, would not the proper principle be that those advantages ought in themselves to be considered a sufficient reward, and that officers to whom they have been communicated should not consider that they have any special claim on the nation?—Yes; I think it is not considered that they have a claim upon the nation, at all events it can only be inferred. There is no doubt that staff appointments have been given very liberally to those who have passed the Staff College. On the other hand, there have been men who have left for other pursuits.

8386. There is no general feeling of discontent amongst those who have passed the Staff College, that after having undergone the trouble and discipline of such a course, they are no better off than they were before?—They naturally look of course to having their, I will not say, claims, but their expectation of a staff appointment realized; I think that is in accordance with the language which the Field Marshal Commanding-in-Chief generally uses when he addresses them at the final examination. He points out to them that they must not all expect to get staff appointments immediately, or soon, or indeed, as a matter of course, at all. I have a short return here which shows the number of staff appointments that have been given since the foundation of the college. It appears by this that the total number of officers who have passed through the Staff College since its foundation in 1858 is 144, and the total number who have received staff appointments is 81, showing a difference of 63; but deductions must be made for casualties and deaths, therefore it appears that a very considerable proportion of those who have passed through the college have received staff appointments. But then it must be recollected that out of the 63 who did not receive appointments there were a number of subalterns who were not eligible for appointments. There are instances of subalterns who passed with very great credit seven or eight years ago, who are still unemployed.

Return page c

Pract after the C

8387. Do you think that it would be possible or advisable that after an officer has passed through the Staff College he should be placed under the eye and superintendence of some general officer in command of a military station, and exercised and tested in the duties of a staff officer, and that that general officer should have the power of finally deciding upon his practical qualifications for employment on the staff?—It appears to me that it would require a long time for

such a test. The various duties of the different departments of the staff are so numerous that it would be necessary that he should be under the eye of the general officer for a longer time than could be afforded. There is something of the sort in the present system; he joins a cavalry regiment for a short time and generally in the camp at Aldershot, but that of course does not satisfy what your lordship means.

8388. I suppose it would be a very onerous and obnoxious duty to impose upon any general officer to communicate his opinion upon so delicate and important a point, and thereby, perhaps, to render nugatory the results of the examination?—Yes.

8389. Is instruction afforded to officers in the Staff College with respect to the ambulance, the military train, and all the accessories of military organization?—To a certain extent, but by lecture only. As far as such instruction can be given by lecture, it is given.

8390. (*Lt.-Col. Chesney.*) Combined with examinations?—Yes, with examinations; I mean all instruction other than practical.

8391. (*Chairman.*) What is the term for that instruction?—That is the department that we call military administration.

8392. That is one of the most important departments of all, is it not?—I think it is almost the most important.

8393. Are you satisfied with the amount of instruction given in that branch, or do you think it might be extended and improved?—It might be improved by practice after the lectures, in the way of visiting certain objects, the military train for instance. And perhaps enough has not been taught in regard to the late improvements in military communications, railroads, telegraphy, and so on. Any instruction of that kind, combined with some actual practice and visiting the objects themselves, I think would be an improvement.

8394. Is the commissariat included in the department of military administration?—Yes.

8395. (*Lord de Ros.*) You alluded to the probability of officers obtaining a good deal of improvement by continental excursions; do you not apprehend that many of those officers who go to the Staff College would have been led by their natural ambition to improve themselves in their profession by excursions to the continent?—Undoubtedly.

8396. There is no expense at all incurred by the students at the Staff College, is there?—No personal expense.

8397. I observe you say in your answers that "It "is to be inferred that success at the college is certain "to lead to a staff appointment;" you did not quite mean that, did you?—I think that that may almost be said. I think that if this return I have here were analysed, it would be found that every officer, with the exceptions I have mentioned, and deducting casualties, that is to say, every officer who was in a position to be appointed, has been appointed.

8398. I think you said in your answers that the power of the college was lost, and the public money wasted, in teaching a grown-up man the rudiments of a language; you would think it no hardship that an officer should bring the qualification of a couple of languages to his entrance examination, would you?—No; and I think that in languages especially he should come in prepared to a high standard, and that he should not be encouraged to take up a new language, and to be studying the grammar of a language at the Staff College.

8399. He should keep up what he already knows in languages?—Yes; in that branch particularly. I think that the object of the Staff College should be rather to perfect him in what he already knows, and therefore the examination on admission should be more searching.

8400. Might not that principle be very well carried out by the use of more foreign books in the instruction at the Staff College? As so many excellent French and German books exist upon all military subjects, would not that be a very good means of keeping up his knowledge of French and German?—Yes; the college possesses a library, which is very well supplied with all those works.

8401. I mean that you might actually instruct him through these books in a foreign language, in order to keep him up in his knowledge of it?—In that case it would be necessary that the instructor of that branch of military science should also be a perfect linguist.

Instruction after leaving the College.

8402. Do you think that there is any real practical advantage in officers being sent specially to regiments to study regimental detail? Suppose a staff officer takes an order to a regiment of infantry to form a square, or takes an order to a cavalry regiment to make a flank movement by fours, it is not at all necessary that he should explain to the regimental officer how he is to execute such an order, and would it not be a great interference with the regimental officer in his performance of his duty if he were to attempt to do so?—Your lordship alludes to the supplementary course subsequently to his leaving the Staff College; that would only apply to the case of a cavalry officer who would go to an infantry regiment. I cannot speak positively, but I do not think that it would be such details of drill as your lordship refers to that he would seek to know there. In the first place the time is very short indeed; the mere observation of the system of an infantry regiment would be all that he could be expected to acquire.

8403. Would he not acquire more useful knowledge for his own purpose by attending the movements on a field day at a large camp; would not that more practically represent what he would have to do eventually?—Undoubtedly.

Instruction suitable for staff officers.

8404. You are for keeping up the classics on the general principle of mental cultivation?—Exactly.

8405. Do you not consider geography the most important subject of all for a staff officer?—I consider it one of the most important subjects.

8406. Geography in its military detail?—Not solely; general geography, physical and political geography.

8407. It has been stated to us in evidence that the young Austrian officers are acquainted with all the fords of all the rivers in Austria; as there are about 5,000 miles of rivers in Hungary alone, do you think that that acquisition is at all possible?—No.

8408. As regards the preparation afforded by the Staff College you used the expression "various depart-"ments;" the truth is, the Staff College is intended, I apprehend, to prepare for the Quartermaster-General's department and the Adjutant-General's department, is it not?—I think the Staff College has even wider views than either of the two departments, the Adjutant-General's or the Quartermaster-General's department. I think you look to the Staff College for educating your future general officers, your military administrators, your service in the colonies, and all the varied duties which fall to the share of an officer in our service. I think the objects of the Staff College are of a wider scope than a mere education such as you allude to; at the same time a knowledge of administration belongs to the Adjutant-General's department, at least many branches of administration, as well as military correspondence, and, of course, military history.

8409. Do you think that even the Adjutant-General of the army at the Horse Guards requires any knowledge of military history?—No; but I think that if you are to have a college for the encouragement of these sciences, every officer of the staff would be benefited by a knowledge, first, of general history and geography, and then of military history.

8410. The chairman asked you a question with reference to the details of the commissariat, and whether that subject was at all studied; you, of course, consider it one of the most important parts of the Quartermaster-General's business, since he is in constant communication with the Commissary-General, and can do nothing without him?—Yes.

8411. I should also like to know your views upon the instruction in embarkation and transport by rail-

Col. T. E. Lacy.

6 May 1869.

Staff College.

Results of the College instruction.

way, and the duty of putting troops on board ship?—That forms part of the instruction in administration at the college, in fact it is the principal part of it.

8412. Would any officer of the Staff College know actually how to put men on board ship in the quickest way?—No, nothing more than can be taught by theory.

8413. Would he know how to arrange for the transport of seven or eight battalions of infantry, five or six batteries of artillery, and a squadron of cavalry by railway?—Not without a certain amount of experience; but he would be prepared to profit immediately by any practice he might get.

8414. Do you not think that the principles of these matters might be taught by instruction at the Staff College?—It is taught as far as it can be taught by lectures and examinations on paper. The only practicable extension of it would be by sending the officers away to see what is actually required.

8415. Supposing I told a staff officer who had just gone through the Staff College that I wanted to send three batteries of artillery and a regiment of infantry to any particular place by railway, would he be able to tell me how many carriages would be required, and what arrangements would be necessary for putting the artillery upon the trucks, and all those details?—With regard to railways I think that the instruction in that particular point has not been extensive enough to enable him to do so.

8416. Do not you think it might be made so?—Certainly.

8417. With advantage?—Certainly. I have just alluded to it; I mentioned railroads and telegraphy particularly.

8418. As regards the inclination of some officers not very fit for the staff to go to the Staff College, there may be many who, without any blameable or interested motives, may prefer a studious to an active life, is not that so?—Exactly.

8419. But then they would not be the most fit persons for staff officers, would they?—I do not know whether they would not be very well adapted for certain branches of the staff. I think there is room for all qualities. For studious habits, as well as for the more active duties of the staff. Our officers are employed in many positions in which knowledge so acquired may be turned to good account.

8420. But ought it not to be combined with what we may call efficiency in the field?—Certainly.

8421. If you called upon one of these officers to quit his desk and take his proper position as Quarter-master-General he ought to be able to do it, ought he not?—Certainly; and therefore the course of instruction is made as comprehensive as it is.

System of admission.

8422. (*Major-Gen. Haythorne.*) I see in your written evidence you say that the certificate which is given to officers by their commanding officer should be amplified?—Yes.

8423. In what way?—I confess, as I have just stated, I am hardly prepared to say in what way; it is rather a question for the authorities outside the Staff College than for the Staff College, but my idea was that at all events there should be a more full report upon the officer.

8424. Stating his antecedents in all respects?—Yes, and I have even thrown out the suggestion that there might be a board.

8425. A board consisting of the three senior officers of the regiment?—Yes; or at all events it should be something that would give the certificate less of a formal character.

8426. Do you think that there is any objection thrown by commanding officers in the way of a regimental officer going to the Staff College?—No, I never heard so. The number from each regiment is limited.

8427. Do you not think that they rather encourage an officer in going who has the attainments necessary to carry him through the competitive examination?—I should think in almost every case they do; but of course that is not a subject upon which I can speak.

8428. I would ask you as an old officer of the army?—As an old officer of the army I should say so most certainly, and I have been told by the students at the Staff College that there are cases in which the commanding officer has encouraged them and been proud of their success.

8429. Is it not often the case that the officers who have those attainments and who go up to the Staff College are not so valuable in a regiment as captains of companies as others of a more ordinary kind?—That would be a point which the commanding officer should mention in his report. If he is not a good regimental officer the commanding officer should point it out, as he is encouraged by the certificate to do.

Reports officers a College.

8430. I see you have to send in a confidential report upon the officers on their passing out of the college?—Yes.

8431. Does that comprise a report of their physical fitness and special fitness in other respects for the staff?—It is quite of a general nature. There are besides the reports of their examinations, and monthly reports during the time they are at the college. This confidential report is of a general nature, not in the shape of a return.

Course o instructi

8432. (*Sir D. A. Cameron.*) If the period of residence at the Staff College were shortened, as you suggest, would it be absolutely necessary to give up instruction in some of the subjects now taught at the college?—If more advanced knowledge was required at the admission examination it would not.

8433. Would it be desirable, do you think, to give up instruction in languages?—I think so, to a certain extent certainly.

8434. Is not the system of marking in languages very unequal, because some examiners mark more liberally than others, and is not injustice sometimes done to a student in that way?—Very possibly it may be so, but that remark does not apply to languages only.

8435. For that reason you would give up the system of marks at the final examination altogether, and classify the students?—Yes, and throughout the course. The marks, I suppose, would still remain the machinery by which the professor would make his classification, but they would not be published either to the individual or to the other competitors. They would be recorded as a justification of the place that was given to the candidate in the class, but they would not be communicated, as they are now, almost from day to day.

8436. Do you think that instruction in geology might be abolished with advantage?—You will recollect that in the first report on the Staff College in 1857, it was proposed only to have evening lectures on geology and experimental sciences, given by the professors at the other college. They appear afterwards to have grown into branches of instruction.

8437. I am thinking particularly of the period of residence being shortened. There are now so many subjects that it would be most difficult to include them all in one year's course; therefore, might not the instruction in geology be abolished?—I must say that I have not a very decided opinion about a one year's course. I merely mentioned it in reply to the Chairman.

8438. Are the officers in the Staff College practised in sketching on horseback?—No; at least only so far as they may do it themselves.

8439. Would it not be advisable to give them practice in sketching on horseback?—Yes. I presume you mean instruction in it.

8440. Or make them execute sketches actually on horseback?—In reconnaissances it is supposed that in many cases they must use their horses.

8441. Is not it the fact that some of the officers of the Staff College are not on horseback six times during the whole of their period of residence?—I will not say six times, but many of them are not on horseback often, except at a particular season of the year. At the season of the year when the reconnaissances are going on they are more frequently on horseback.

I should also except the riding school, of course. The reason is, in fact, that they have not horses.

8442. Is not there a great deal of time spent in teaching the officers when they join the college the elements of military drawing and geometrical drawing, and would it not be advisable that they should come to the college with a certain amount of knowledge on those subjects?—I have just alluded to that in part of my evidence. I think the time occupied over the desk in line drawing, and so on, is a very great waste of time indeed.

8443. That could only be remedied by obliging them to come to the college with a knowledge of those subjects?—Yes.

8444. (*Mr. Parker.*) You think the competitive examination at entrance an important part of the mode of admission?—Yes.

8445. And you think it would be better in it to do more to encourage general education?—Yes.

8446. And to test natural ability?—Yes; it would be better to test natural ability rather than to draw out certain professional knowledge which can be acquired, as is well known, with great ease by a system of preparation for a few months before the examination.

8447. And for that purpose you would give a wider choice of subjects?—Yes; I should like to see a wider choice of subjects.

8448. Especially in the direction most encouraged in the public schools, particularly classics?—Yes.

8449. You think that if you laid the foundation, with such qualities as general education and natural ability, the Staff College itself ought to build on that foundation rather than to expect a special preparation in professional subjects?—Yes.

8450. On one or two points I understand that you make an exception to that rule; for instance, in the matter of drawing, which you want as a special preparation for the studies in the college, you would require a tolerably high standard?—Yes.

8451. And in modern languages, you would decline to receive a man who had not qualified himself in the elementary knowledge of modern languages?—Yes.

8452. So as not to be embarrassed with the teaching of elementary drawing or the elements of modern languages?—So as not to be embarrassed with that teaching in the subsequent course.

8453. In the final examination, if I understand rightly, you would follow rather the Oxford system than the Cambridge, the system of placing men in certain classes rather than placing them individually?—Yes; rather than placing them in an individual order of merit. I think that is more adapted to men of that age.

8454. Would you object to leaving it to the discretion of the examiners to effect that classification by such means as they found most practicable, or would you tie them down to produce, in case of inquiry, the number of marks?—I would tie them down to producing the marks to justify the places they have given.

8455. Are you aware that at Oxford in classifying candidates in some subjects the examiners make no systematic use of marks, but simply place a candidate in the first, second, or third class, according to their general estimate of his work?—I was not aware of that; but, as I said before, I should prefer the other method.

8456. Of 144 officers trained at the Staff College 81 have received appointments; can you say how many are still subalterns, and therefore could not yet have been appointed?—I have a return here, in which one column states, "Number and present rank of officers now in the service who have passed through "the college, colonels, lieutenant-colonels, majors, "captains, and subalterns, 126," which corresponds with the 144, with some casualties excepted. Then in the next column there is the number of those in the last column who have received staff appointments, colonels, 3; lieutenant-colonels, 5; majors, 17; captains, 46; and subalterns only 2 out of the whole number, that is, out of the 126 officers.

8457. Upon the whole, do you consider that a fair proportion of those who have passed through the college have already received appointments?—More than a fair proportion. I believe that if the return were analyzed it would be found that every officer, except those who has been in a fair position to receive it, with the exception of the subalterns, has either received a staff appointment, or has declined it, or has given up the opportunity.

8458. (*Lt.-Col. Chesney.*) Or he may have gone to India?—Yes; but staff appointments are given there.

8459. (*Mr. Parker.*) Would you say that the expectation of staff appointments should be not so much considered as a reward for labour which they have gone through at the college, but should rather result from recognition of their fitness for such employment?—Yes.

8460. Would you think it desirable to leave always a certain number of staff appointments for persons who have not passed through the college, to meet the case of fitness being shown otherwise than through the Staff College?—I do not think that that would be possible, or consistent with the system by which staff appointments are given. There is already an exception for proved ability in the field.

8461. With the exception of proved ability in the field you would be disposed, in course of time, to confine the staff appointments to those who have passed through the college?—I think that that is in the regulations. This is the regulation: "As soon as the "college shall be in a position to supply all vacancies "in the staff of the army no officer shall be appointed "to the staff who shall not have passed the final exa- "mination at the college, with the exception of those "of the Royal Engineers and those substantive field "officers who attained, before the 1st of January 1860, "the rank of lieutenant-colonel" (that is a terminating exception, of course), "and in every case excepting "officers of proved ability in the field."

Examination without residence.

8462. (*Maj.-Gen. Wilmot.*) Can an officer who has not been educated at the Staff College come up for examination competitively with those who have been educated at the college?—Not now, that was the case at its foundation.

8463. Do you think that that was an undesirable arrangement?—I was not well acquainted with the college at the time it prevailed, therefore I cannot speak with confidence, but I imagine from its having been abandoned that it was not found desirable.

Course of instruction.

8464. With regard to the riding, I think the officers at the Staff College ride three times a week?—Twice a week.

8465. During the whole period of their course there?—Yes.

8466. Could not one of those days be utilized in the way that has been spoken of with regard to field sketching?—It is only for an hour in the day that they ride, but I think a great improvement might be made by an alteration in the mode in which riding lessons are distributed throughout the course.

8467. Looking at the present circumstances of the country, and all countries, are the officers taught the construction of locomotives so as to be able to work one?—No, certainly not.

8468. Would you not think it a desirable thing that an officer should be able to do so?—There are so many things desirable.

8469. It is one of the great means of transport now?—Of course one may say that everything is desirable, the difficulty is to get it within the limits of a course.

8470. (*Lt.-Col. Chesney.*) There are occasional failures, are there not, at the final examination, and also at the first year's examination?—Occasional, but rare.

8471. Would it not be rather a hard duty to put upon the Commandant of the Staff College, to make

Col. T. E. Lacy.

6 May 1869.

Staff College.

him the personal means of rejecting an officer for physical disability?—Yes.

8472. Might not that object, however, be attained if each officer was tested by an acting appointment on the staff, for three months of the summer season, under a divisional general?—Certainly.

8473. Do you see any great objection to that course being pursued, just as officers are now attached to other arms of the service?—The only objection is the general objection to removing an officer for so long a time from his other duties, or from his regiment. You have a supplementary course at the end of the course at the Staff College; you would then have another course at the beginning.

8474. Did we understand from you that some of the officers have a difficulty as to keeping horses while at the college?—Yes.

8475. Supposing that a college of this kind is continued, would not it be very desirable that each officer should have from the Government the means of keeping a horse?—Yes.

8476. And that he should be positively required to do so?—Yes.

8477. (*Lord de Ros.*) He is allowed forage at present, is he not?—Yes.

8478. (*Lt.-Col. Chesney.*) Is it not the case that the present servant's allowance is so totally inadequate for the maintenance of the servant, that that constitutes the difficulty in keeping a horse at present?—That constitutes the principal difficulty, and the original purchase is the other great difficulty, because it must be recollected as is evident from the principles laid down at the foundation of the college, that the college was intended to be open to officers of all means, and officers have joined to whom it was perfectly impossible to keep either a horse or a servant.

8479. Regarding the proportion of married men in the college, could you give the Commission any idea of about the number of married men out of the 30 students there are now?—From a guess I should say from a fourth to a third, but there are rather fewer than usual at present. The proportion is never less than a fourth, and seldom greater than a third.

8480. Do we understand that you consider that the practical course, after the college course, of six weeks with the other branches of the service is somewhat too short for its objects?—In the first place it is too short, and in the next place it is at the wrong season of the year.

8481. It should be in the summer, in fact, always?—Yes; it is at a season of the year when so little is doing.

8482. Supposing the Staff College continued without any promise or understanding held out that any advantage should be derived beyond an educational one for officers who had passed through it, do you think that there would be any competition for entrance into it in the army generally?—Little or none.

8483. Might there not with very great advantage be a small allowance made for the increase of the practical instruction at the college, by way of larger reconnaissances and surveys than there are at present?—An increased allowance has been applied for every year for the last three our four years, and on the last occasion the answer was that the question could not be decided until this Commission had made its report.

8484. For what amount did you apply?—190*l.*

8485. That 190*l.* was intended to enable you to teach the senior half of the students more reconnoitring?—Yes.

8486. Is your library much used at the college for purposes of private reference by the officers?—It is very much used.

8487. The only expense charged upon the officers at the college is for the library, is it not?—Yes; there is an entrance subscription to the library of 3*l.*

Final examination.

8488. Of late there has been a change introduced in the college examinations, by which no personal mention is made by the examiners of any officer for extraordinary proficiency in a subject; do you consider that desirable?—That is so; there was a change about three years ago.

8489. Would you give your opinion as to the effect of the change, was it desirable or not?—I think it was desirable.

8490. You think it desirable that there should be no mention made of an officer for extraordinary proficiency?—Yes; there should be no mention made, or at all events if mention were made, it should be in very exceptional cases indeed. It grew to this, that every man wanted and expected to get some mention made of him.

8491. If your system of classifying were adopted, would it not be the case that putting men in the first class would supply that want which there seems to be?—Yes; I suppose that in a system of classification the classes in each particular branch would be combined afterwards at the final examination for a general classification.

8492. You consider that the system of classifying into distinct classes would be better than any system of personal mention and the use of marks?—Yes, I think so. As to the use of marks, I mean in that particular way; the marks would be still useful to the professor as a machinery for judging of the relative merits of the candidates.

Appoin to the

8493. Do you consider that it is any grievance to the class of officers at present going through the college that the general staff of the army is open to them only and not the personal?—No.

8494. They do not look to the latter?—No; as to the personal staff, the individual general officer must always have a great deal to say to that.

8495. Have any of the students from the Staff College found employment as mentioned in the last paragraph of the warrant in the topographical department of the War Office?—Yes; there is seldom a final examination, I think, without one or more being recommended; one, at all events.

8496. Is there any time fixed at present as to when the college will be considered in a position to supply all vacancies in the staff of the army, except as concerns officers distinguished in the field?—No; it has often been wondered why that particular sentence should still occur in that paragraph of the regulations.

8497. Regarding the general effect of the institution of the Staff College upon the education of the army, are you of opinion that it has been the means of promoting the general desire for education among a certain number of the younger officers of the army?—Most certainly; and I speak not only from my experience of the Staff College, but from my experience as a staff officer at one of our great military stations, in which I several times acted as an examiner under the Council, and I had an opportunity of observing that an incentive to study had been supplied by the Staff College.

8498. Can you conceive of any system by which in time of profound peace officers nominated to the staff can be supposed to be chosen efficiently by nomination for the junior branches of the staff?—I can conceive of a system of nomination to be followed by a system of education at the Staff College. I do not say that I advocate it, but I can conceive of such a modification of the present system, as that there should be selection in the first instance and then a college examination, as is the case for many of the civil departments of the State, I think. There might be selection in the first instance instead of open competition. I do not advocate it, but such a system is possible. There might be a recommendation from commanding officers or general officers, and then a selection might be made by the Field Marshal Commanding-in-Chief, to be followed afterwards by a qualifying examination at a college like the Staff College.

8499. In that case you would follow the selection by a stringent qualifying examination?—Yes; but I do not say that I advocate that as against the present system.

8500. (*Sir Charles Russell.*) Have you any opportunity by confidential or other reports of informing the Commander-in-Chief when any officer studying at the Staff College is not likely to prove a useful staff officer, though he may have been diligent there and have obtained his certificate?—We forward monthly reports of the progress that officers have made in their studies and the degree of attention that they have paid, and their attendances; but there is nothing of that kind.

8501. There is nothing analogous to the system of confidential reports that exist in regiments?—No, it is confined to one report only at the end of the course.

8502. And is that report at the close of the course of a confidential nature?—Yes, it is entitled a confidential report.

8503. It contains, I presume, allusion to the general fitness of the officer?—It does.

8504. Do you think that without doing away with the test examination, if, instead of an officer coming only by the certificate of his commanding officer, he were attached to the staff of one of our large camps for a short time in order to test his riding and his capacity for carrying a simple order in an intelligible manner, you would probably relieve the Staff College of some officers who fail in these particulars?—It appears to me that that would be a very good thing. I think I have answered that question before in the affirmative, my only remark being, that it would prolong, of course, the time during which an officer would be removed from his regimental duties; that is the only objection I see to it. It would be in other respects most excellent: it would stand in the place of the commanding officer's certificate.

8505. Do you not think that a month would be quite ample time to test such capacity; I should myself think a week would do?—Yes, if taken up seriously by the person whose business it would be to report upon it; I should think a month would be ample.

8506. (*Lord E. Cecil.*) Are you quite satisfied with the position of the Comandant of the Staff College in his relation to the Governor of the Royal Military College?—Perfectly satisfied.

8507. You would not have any Board of management to decide questions of study or discipline over which the Commandant should preside, and which should report to the Governor, or to any other authority that might be pointed out?—As regards study, I think that it might be a useful thing to have a Board which would be a kind of Council of Education on the spot, but that would probably supersede the functions of the Council of Military Education to a certain extent.

8508. Has the Council of Military Education much to do with the Staff College?—It has the entire control I should say of the educational branch of the establishment.

8509. Then do all matters of education go from the Governor of the Royal Military College to the Council of Military Education, because I see from your printed answers, that on all matters as well of study as of discipline the Commandant reports to the Governor of the Royal Military College?—Yes.

8510. Do such questions as may be proposed by the Commandant to the decision of the Governor of the Royal Military College go afterwards for approval to the Council of Military Education?—Yes; on subjects of study.

8511. So that the decision of the Governor of the Royal Military College is not final?—No, not upon these subjects.

8512. Do you not think that it would be far better that the Commandant under such circumstances should report direct to the Council of Military Education?—I see no advantage in that course.

8513. You think there is no disadvantage in all matters of detail on education going through so many hands?—No, I think not.

8514. Would you tell the Commission what the duties of the adjutant at the Staff College are?—In the first place the adjutant has all the usual duties of the adjutant of a regiment as far as officers are concerned; then he gives assistance to the commandant in every point, both with regard to discipline and to studies; then there are general matters of discipline connected with the building and the social arrangements of the officers, their mess for instance. The officers have a mess as large as a regimental mess, and it is very difficult, indeed impossible, to find an officer under the Commandant, except the adjutant, to perform the functions performed by a mess committee in a regiment.

8515. Might not the students themselves form a mess committee?—It has been attempted, but it takes too much of their time, and not only that, they have not a sufficiently permanent interest in it; their residence being so transient they have not the same interest in it that officers of a regiment would have.

8516. You speak of the disciplinary duties of the adjutant; do you mean that there are parades of the students and that he drills them?—No.

8517. Would you describe precisely what his disciplinary duties are?—They are nothing whatever in the shape of parade or drill. It is his business to look to the order of the establishment, and of the building.

8518. (*Lord de Ros.*) Is not it rather the quartermaster's business to look after the building?—There is no quarter-master to the Staff College.

8519. (*Lord E. Cecil.*) You speak of the order of the establishment; do you mean that in case there was a riot among the officers he would be the person to look after them?—No.

8520. (*Lord de Ros.*) He in reality performs the quarter-master's duties?—Partially.

8521. (*Lord E. Cecil.*) I think it was stated in one of the papers that the quarter-master of the Royal Military College attended at the Staff College and did the duties of quarter-master?—Yes.

8522. That being so I suppose none of that kind of duty would fall to the lot of the adjutant?—Some only.

Staff of professors.

8523. You state in your paper that there are "eight "professors, one for each branch of instruction, with "an additional instructor for mathematics, instruction in "natural and experimental sciences being supplied by "the professors of those branches at the Royal Mili- "tary College." Do you see any possibility of reducing the staff of professors?—The staff of professors can not be reduced without reducing the subjects, for there is only one professor for each branch, with the exception of mathematics where there is an additional instructor.

8524. Was not it the case in the old senior department at Sandhurst that one professor gave instruction in two different subjects at once?—I believe so, and more than two.

8525. Have you any reason to suppose that the officers who passed through the senior department at Sandhurst were worse educated than the officers who pass through the Staff College?—I have certainly no reason whatever to suppose that; I take it that the question is whether they were as well qualified for staff officers or not. They were not so carefully or so elaborately instructed, but they may have shown themselves as well qualified for staff officers.

8526. Do you see any possibility of reducing the number of non-commissioned officers and civilians attached to the Staff College?—There is only one non-commissioned officer.

8527. There is a quartermaster-serjeant I observe?—He is the only one.

8528. Might not that duty be done by the quarter-master-serjeant of the Royal Military College?—I think not.

8529. Then as to men servants, do not the officers bring all their own servants with them?—Yes.

8530. Their regimental servants I mean?—No, they do not bring them.

Col. T. E. Lacy.

6 May 1869.

Staff College. Expenses.

8531. Are the students at the Staff College in any way better provided with allowances than they would be in their regiments?—No.

8532. Are they not so well off?—No; In the first place they are deprived of their soldier servant. To be sure they get in lieu of it a very inadequate allowance to supply his place, but that is a considerable loss to them.

8533. Is it not true that in former days in the senior department at Sandhurst officers contributed to their own expense?—They contributed a considerable expense fee, I think it was 30*l.*

8534. Do you not think that the advantages of a good staff education, with the prospect of a staff appointment in the future, would be a sufficient reason for recurring to the old system of officers bearing a certain portion of the expense of their own education?—I have never well considered that subject, but I can imagine that it might be done without any great hardship to the officers in the service; I think it is a fair claim on them.

8535. In short, the State at the present moment offers very considerable advantages, and in return for these advantages officers might naturally be expected to pay some small contribution?—I think so, but then that would exclude certain officers (and some such have joined the Staff College) who could not bear that expense.

Accommodation.

8536. The accommodation in the Staff College buildings is much larger than the students require at the present moment, is it not?—It is.

8537. Is the whole of the building used?—No.

8538. What is done with the remainder?—It remains vacant. The whole of the rooms for educational purposes, the halls of study, and the mess rooms, and so on, are used; it is only the personal chambers of the officers which are vacant to a certain extent.

8539. What number of students do you suppose the building would hold if it were full?—40.

8540. Only 40?—Only 40.

8541. I see in the estimates there is an item of allowance in aid of mess funds, 170*l.*?—That is the regimental Regent's allowance calculated for the Staff College.

Foreign tours.

8542. The allowance to a professor travelling on the continent was 26*l.*, according to the estimates?—Yes.

8543. Do you not think it would be extremely beneficial if a larger number of officers were allowed to travel, and if this particular item were increased for that purpose?—There is only one professor of the Staff College concerned in that allowance, namely, the professor of military history, and his time, of course, is limited to the vacations.

8544. What I want to know is, whether you think it beneficial that a large number of officers should travel, and that the expenses of a professor should be provided for in the estimates, in order to enable the students at the college to travel with that professor?—I think it is very desirable, certainly; it is a matter of expense.

8545. In short, you think that the sending abroad of a class yearly under the charge of a professor or an officer of the establishment would be attended with advantage to the State?—I should be afraid that the time would hardly be found for it in the course. The professor to whom that allowance is made goes abroad during vacation time, but as I understand your lordship, this would take away the students during the term time.

8546. I should propose that they should travel during their vacation time?—Then it would be no longer a vacation. I have no doubt they would like it. I make no question whatever that it would be an advantage; it is a matter of expense.

Entrance examination.

8547. Do you consider the entrance examination to the college hard or not, for I observe that half the candidates who come up fail?—I do not think that it is a hard examination.

8548. Do you account for the failures from competition, or from a defective military education?—I should think from the competition. It does not assume that they have had any previous military education. Whatever military education they may have had must have been either at the cadet college at Sandhurst or at the preparing schools.

8549. From your present knowledge and previous experience of the students, are they in the habit of going to cramming establishments before they come up to the Staff College?—I believe in almost every case. I would not call them all cramming establishments, but every officer intending to be a candidate for admission to the Staff College finds it necessary to go for a short time to one of these schools for preparation.

8550. So that in point of fact he must be absent from his regiment two years, as well as the time that is necessary to enable him to read up for the examination at the Staff College?—Yes; and then a quarter of a year is the time necessary for him to be attached to other branches of the service afterwards.

8551. In all it makes his absence from the regiment three years or more?—About three years.

8552. I see there is no English composition required at entrance, do you not think that it is very important that an officer should be able to write a good report before he is admitted into the Staff College?—Certainly. It is provided for in the admission examination by the essays on military history that are called for.

8553. And do you not think that it would be a great improvement if military correspondence was taught in the course at the college?—I think that the instruction in military history is sufficient to supply that; it gives the habit of writing on military subjects freely.

8554. I see that military geography is mentioned as one of the subjects at entrance, does that include more especially the military geography of the United Kingdom?—No, it does not.

8555. Do you not think it very important that an officer should know the military geography of his own country before that of any other?—I think that at the age at which an officer is admitted, he should hardly present himself at all for admission if he has not a competent knowledge of the geography of his own country, and a good deal more than that.

8556. I am speaking of military geography, because that is, as you are aware, one of the subjects for the entrance examination?—Yes.

8557. You take it for granted that an officer knows the military geography of his own country?—Yes.

8558. And he is simply examined in that of other countries?—Yes.

8559. You say in your printed paper that the C instruction is not calculated to bring out special in talent; do you think that that arises from the method of instruction now followed, dividing the day into minute portions, and obliging the officers to occupy their minds on a variety of subjects in the course of each day?—Yes; the remedy that I imagine for all that is the doing away with personal competition for marks.

8560. I see Captain Schaw is in favour of students being attached after leaving the college to the Royal Engineer Establishment at Chatham to go through a course of field works, &c; do you think that that would be advisable?—Very advisable as far as their military education goes. There is still the question of the loss to the army of their services during that time.

8561. Is any allowance made for a man who has a special proficiency in one subject at the examination, in languages, for instance, or mathematics, always presuming that in the other subjects of examination he is not so proficient?—No, there is not.

8562. Do you not think that if you had a very good linguist, or a very good mathematician, it would be of advantage to encourage excellence in that particular study by passing a man simply for his great proficiency in that one study?—Yes, certainly, supposing him to

have a moderate knowledge of several other subjects, but a proficient knowledge of that particular subject.

8563. Even if he had an elementary knowledge of other subjects?—Yes, a moderate knowledge of other subjects.

8564. Do you agree with what has been stated in some of the answers to the Commission that telegraphy would be a good thing to be taught?—It is difficult to say what branch of military knowledge it is not advisable to teach. Most certainly it is advisable to teach telegraphy.

8565. If officers generally come up tolerably well prepared in the general subjects of education, would it not be possible to give more instruction in the practical subjects of their profession during the two years' course they have at the Staff College?—Yes.

8566. Are you quite of opinion then that a great improvement might be made in giving more practical education of that sort?—Yes.

8567. (*Rev. W. C. Lake.*) Are you entirely satisfied with all the arrangements for the domestic and social convenience of the students at the college?—Perfectly satisfied.

8568. (*Sir C. Russell.*) Are camp duties at all practically taught in the course?—To a certain extent; they are taught in the first place by lectures from the professor of administration, and then, during the period of reconnaisance in the autumn, an exercise is given in the laying out of a camp.

8569. The practical laying out of a camp?—No, the posting of the quarter guards, and the rear guards, and so on.

8570. Does it go as far as the construction of a simple field kitchen?—No, it does not go into those details.

8571. (*Lt.-Col. Chesney.*) Are not the vacant quarters in the Staff College at present partly utilized by the government in some way, for instance, for the Royal Military College?—Yes, one or two rooms, by the Governor's kind permission, have been given temporarily to officers of that College, and there is another that, with the Governor's sanction, I have allowed to be used as a room for landscape drawing, which is taken up as a subject out of the course.

8572. Then the college is not very much too large for its actual purposes as it stands at present?—No.

8573. Referring to the period when the senior department gave certificates to officers qualifying for the staff, is not the variety of military subjects studied at the present day by military men greater than it was at that time?—Much greater.

8574. (*Chairman.*) I suppose you have had no difficulty in maintaining discipline?—None whatever; the occasions on which my interference is called for in matters of discipline are extremely rare.

8575. You have had no cases of drunkenness?—Never.

8576. Nor quarrelling among the young officers?—Nor quarrelling among the young officers. There may be occasionally disputes which it may be necessary to arbitrate, but these cases are extremely rare.

8577. I do not quite understand what is the limit to the Staff College. How many vacancies are there in the Staff College?—Fifteen occur every year.

Col. T. E. Lacy.

6 May 1869.

Staff College.

8578. Is that a limited number?—Yes, the establishment of students is 30, and 15 go out at the end of every year, and 15 are admitted to succeed them. There is a slight variation in these numbers from the fact of officers of the Marines and Marine Artillery coming in. They come in as supernumeraries; therefore, instead of 30, it would be more correct to say that it varies from 30 to 33.

8579. What is about the proportion of candidates for admission to the number admitted?—I have it here (*producing a pamphlet*). The Council say in their last report, with reference to the admission examination, "On the present occasion 28 candidates "presented themselves for examination, of whom 21 "were examined at home and seven abroad. Three of "the above failed in an obligatory subject; of the "remaining 25 two officers of the Royal Artillery and "13 of the Cavalry and Infantry who stood highest on "the list, have already been recommended to his "Royal Highness for admission to the college."

8580. What became of the others?—The others failed; we do not hear of them again.

Reports on the students.

8581. You send monthly confidential reports of the individual officers in your charge?—Not of their individual conduct or progress, only of the frequency or infrequency of their attendance at study, to give a general view of their application or otherwise.

8582. In those confidential reports you do not enter into the question of an officer's efficiency or capacity?—Not in the monthly reports; the monthly report is rather of the nature of a return.

8583. Are you required at any time during the course to forward a report in which allusion is made to these special subjects?—At no other time than at the end of the course.

8584. Of what nature is your report at the end of the course?—It is of a very general character.

8585. It does not enter into the general qualifications of the officer?—Yes, it does, as to whether his tastes are in any particular direction; whether his proficiency at the examination has been in languages or any other branch; whether he is of active habits; whether he has popular manners. It is a report of a very general nature.

8586. If you had occasion to entertain misgivings as to the general qualifications of an officer, and if you were to mention that fact in this report, would it have any effect upon his subsequent appointment?—I should think so. It must be recollected that every officer has come with a very high character in the army, and with a certificate from his commanding officer that he is perfectly qualified in certain respects, so that it ought to be on very rare occasions indeed that such a thing would occur.

8587. We have had it in evidence from previous witnesses that not very much reliance is to be placed upon these certificates of commanding officers?—Yes.

8588. Inasmuch as it is part of your instructions to send this report, you have no choice left to you?—No.

8589. Any opinion you have formed of an officer's intellectual capacity you do report?—Yes.

The witness withdrew.

Brevet-Colonel E. B. Hamley, C.B., Royal Artillery, examined.

Col. E. B. Hamley, C.B.

8590. (*Chairman.*) You are a member of the Council of Military Education?—Yes.

8591. And you were formerly the professor of military history at the Staff College?—Yes.

8592. For how long did your connexion with the Staff College endure?—Upwards of six years; from its establishment to 1864.

8593. Previous witnesses have insisted upon a point on which you lay very great stress in your answers, namely, the want of a *bonâ fide* character, which too often attaches to the certificate supplied by the commanding officers to those who compete for admission to the Staff College, and it would appear that the strict and *bonâ fide* character of that certificate is almost the keystone to the whole system. You have suggested that the certificate instead of being granted by the commanding officer should be granted by a board of officers?—In addition to that of the commanding officer.

Appendix, page cxix.

8594. Perhaps you would explain that idea a little more fully, for it is a very important suggestion?—The commanding officer is very often averse to parting with his best officers; he would rather keep them in his regiment; and, on the other hand, if there is an

Col. E. B. Hamley, C.B.

6 May 1869.

Staff College.

officer whom he would rather not have in his regiment, he would promote his departure in any way he could I think advantage is sometimes taken of the Staff College to answer that purpose.

8595. Would a board of officers have opportunities of ascertaining the character of the officer to whom they were to grant a certificate?—They would certify nothing whatever as to his character and habits, only as to his regimental qualifications.

8596. The board of officers would be members of his regiment, I presume?—No; I would prefer that they were not. I would prefer that they should be members of some other regiment or of the staff.

8597. But their previous acquaintance with him or opportunities of forming an opinion about him would be very slight, would they not?—Yes; none whatever. He might be a perfect stranger to them.

8598. Are those qualifications capable of any test, except observation?—They are capable of absolute proof. The board might examine him as they do now examine officers for promotion; and they might further, if it was thought proper, test his qualifications by seeing him placed in charge of the movements of troops.

8599. So that it would amount, in fact, to an examination?—Yes, to an examination, independent altogether of personal knowledge.

8600. And in that examination there would have to be included his horsemanship?—That might very easily be tested. He could be sent to a regimental riding school, if it were thought necessary, beforehand. But I do not think that that is of very great importance, because they are taught riding at the Staff College.

8601. Then the Staff College and the successive tests to which an officer is subject may be supposed to be a very sufficient and accurate proof of his intellectual qualifications. Do you think that after he has passed through the college there would be any possibility of submitting him to a still farther test as to his then practical qualifications as a staff officer?—I think that that would hardly be desirable; it would have a tendency, I should think, to lower the college.

8602. It has been suggested that they should be put in the position of staff officers under the eye of some officer of superior rank in the army, and that he then should be called upon to express an opinion as to their qualifications after they have passed through the college, and before they obtain their final certificate; you do not think that that would be desirable?—I should be quite content myself with those guarantees that I have suggested.

8603. But you attach great importance to them?—Very great, because the most formidable objections that have ever been made to the Staff College are that it allows officers to pass through who have proved themselves incompetent in matters in which their incompetence might have been and ought to have been ascertained before they ever joined it.

8604. I see that you state, that in your opinion a certain proportion of those who pass through the Staff College are in no respect above the average level of the army?—That is my opinion.

8605. That of course argues a very great defect?—I think so. I think none should be admitted to the college who are not above the average.

Course of instruction.

8606. You are of opinion that more extensive instruction should be imparted in what may be called the administrative branches of military instruction?—Yes.

8607. That would include the commissariat and the organization of the transport for the sick, &c.?—No; I do not know that. That is attended to at present under the branch of military administration. I am not aware that there is any deficiency in that respect.

8608. Then your remark refers more to the transport of troops and matériel, and to embarking and disembarking troops?—In trains by railway; it has special reference to railways. That can only be known by experiment, and I think the students ought to see those experiments performed.

8609. And you are also anxious that the students should have the opportunity of being employed as staff officers while they are passing through their course?—I should think, if there is no military objection to it on the part of the authorities, it would be a very great advantage.

8610. And, in common with the previous witness, you are also rather inclined to doubt the expediency of introducing a personal competition amongst the students at the Staff College after they have entered it?—There is now a great deal of competition. I should like to see that in a great measure abolished.

8611. The substitute of classes has been suggested. You would, I suppose, agree in that?—That is, I imagine, the only alternative.

8612. But the entrance examination must be competitive?—The entrance examination must be competitive, as it is now, because there are always more competitors than there are vacancies.

8613. Would you be inclined to increase the subjects of the entrance examination, by introducing amongst them such as form part of a liberal education, for example, the classics?—I think a sufficiently wide field is already offered.

8614. With reference to Woolwich; on the whole, are you satisfied with the system and the organization of the Academy?—I am very well satisfied. I think it is working very well at present.

8615. (*Lord E. Cecil.*) You mention in your printed paper that you think subordination, activity of mind and body, industry, urbanity, habits of observation, and promptitude of thought and of decision are all elements of the character of a good staff officer. Is it not most difficult to test these qualities by any system of examination?—Yes; but the commanding officer's certificate would provide for some of them, subordination, for instance.

8616. But further on you suggest that the certificate of the commanding officer may not be quite full enough or quite correct enough, and that a board of field officers would be perhaps a better authority to test the qualifications of a staff officer than a commanding officer himself?—I did not propose that the board of officers should refer at all to those qualifications of character, but only to the regimental qualifications. I proposed that the Commandant at the Staff College should decide as to the matter of character from his own observation.

8617. Would you be in favour, under such circumstances, acknowledging the difficulty of testing these particular qualities, of having a report sent from time to time by the Commandant of the Staff College of the individual qualities of each officer?—No; I should think one term would be quite sufficient to satisfy him; it had better not be kept hanging over the officer, I think.

8618. But does not the selection of staff officers for those particular qualities you have named suppose a certain amount of talent, of which a commanding officer is not always possessed, in the way of an appreciation of individual qualities?—The commanding officer does not select; he gives his sanction to those who themselves wish to come.

8619. But is it not in itself a very difficult thing, without prejudice, favour, or affection, to choose a man out, and say that he possesses such and such qualities?—Very often it would be very difficult, because commanding officers do not always know all their officers. A commanding officer may have been so short a time in command of a regiment that he may be very imperfectly acquainted with all his officers.

8620. Has it not often happened that a man under difficult and trying circumstances has developed such talents as you have named, which were never supposed to exist in him beforehand?—I can give no opinion upon that any more than anybody else; it is very likely.

8621. Instances have been known in warfare of

men who were generally unpopular in their regiments turning out exceedingly good commanding officers; is not that the case?—I do not know. I cannot tell you, really; I should think it was rather against a man.

8622. Are you generally satisfied with the system of instruction at the Staff College as it was during the time you were there?—It has been much amended since I was there. I have left some time now, five years.

8623. I am to understand, then, that you were not satisfied with it at the time you were there?—I do not know that I was dissatisfied with it altogether, but I think the alterations which have been made since are for the most part improvements.

8624. Do you think the education sufficiently practical at the present time?—I have suggested some particulars in which I think it might be made more so. Two very important improvements have been made in the system of instruction since my time; the one is, allowing the students to dispose of subjects finally, or parts of subjects, at the end of the first year; and the other is, limiting the number of the subjects in which they are finally examined.

8625. I see you mention that the construction and use of the field electric telegraph as taught at Chatham is of immense advantage; would you be in favour of students going through such a practical course as is taught at Chatham altogether? — No, certainly not; it is applicable only to engineers.

8626. You do not think it is applicable to the staff?—No; they are taught quite enough of engineering, I think, at the Staff College.

8627. In the matter of encamping troops, do you think that the students at the Staff College understand the practical duty of pitching a tent?—More than that; I think they have been taught the mode in which encampments are formed.

8628. Do you think that at present they understand those practical duties so as to be able to perform them?—No, they have no opportunity of doing it to a great extent; for that reason I have suggested that a brigade should come there, as it does sometimes, and that the students at the Staff College should be exercised in encamping, among other operations.

8629. (*Lt.-Col. Chesney.*) You do not intend by your remark made in the first paragraph of your suggestions, to say that the average students of the Staff College are on a level with the average of officers in the army, but that a proportion of them are?—A proportion of them are.

8630. You are decidedly of opinion that such a course as is gone through at the Staff College would improve men in their qualifications for the staff, supposing the standard high or only moderately high?—In any case it would make them much more valuable as staff officers.

ali- 8631. Do you consider that there would be much difficulty in testing a man who had got a staff certificate under a general officer as to his physical fitness and energy, those having been the qualities referred to by most of the witnesses as having been found wanting in some staff officers?—I think it would be found practically very difficult, unless there were some general officer selected for the purpose as being specially reliable in such a case, and who had ample opportunities of judging.

8632. Do you not think that at a place like Aldershot they could be attached to the general in command, in the same way as they are now attached to the cavalry and the artillery after finishing their course?—I think a goodnatured man would always give an officer his certificate.

8633. It has been mentioned in evidence that a good many of the students do not keep horses, owing to the want of assistance received from Government for the purpose; do you think it would be an advantage that every officer at the Staff College should not only have the means allowed him, but be made to keep a horse?—I think they should be encouraged in every way to keep horses, and that they should not fail to do so merely from want of private means.

Col. E. B. Hamley, C.B.

6 May 1869.

Staff College.

8634. Another suggestion which has been made is, that every candidate for the Staff College should be tested for a month or thereabouts under a general officer, to see if he is likely to prove efficient in carrying messages; would you attach any importance to such a matter as that before entrance?—No; I think it would be rather a cumbrous mode of proceeding. If you create too many of these complications, I think you might create also a prejudice against the Staff College.

8635. At present there can hardly be a doubt that particular men do leave who are not very useful, say, as brigade majors, and who are not what they ought to be in physical qualifications; can you suggest anything by which that physical fitness and energy which are so much desired can be tested, beyond the board of officers you have spoken of?—That, combined with a strict certificate from the Commandant subsequently.

8636. Has the Commandant at the Staff College at present, or as you knew it, sufficient means of judging of that physical fitness and energy?—I think he has abundant means of judging of the industry and the mental energy of those who come under him.

8637. I spoke of physical energy?—You can hardly separate the two at the Staff College. You can hardly imagine a man there physically indolent and mentally active.

8638. Then you would prefer rather the continuance of that than to seek the same opinon from a certificate of a general officer given after leaving the college?—Yes; I should much prefer the plan I have proposed; in fact I think if it were properly carried out it would be a sufficient guarantee, and the simplest you could have.

8639. Regarding the present system of attaching officers to regiments, we have heard that to attach a cavalry or an infantry officer for six weeks in the middle of winter to the artillery at Woolwich is a mere waste of time; what is your opinion upon that point?—No doubt it is utterly insufficient at present.

8640. You look upon the diminution of the time in those courses as an evil?—As a rule. I am aware that there are objections to extending the time in point of expense and in point of keeping men longer away from their regiments.

8641. (*Maj.-Gen. Wilmot.*) With regard to what you are saying about the physical qualifications, there are a certain number of horses, are there not, attached to the establishment?—They are only for the use of cadets and Staff College officers for riding in the school.

8642. If that system was extended so that the Commandant might make use of those horses to take the officers at the Staff College sketching on horseback, and riding about the country, would not some means be given of judging of the physical qualifications of the officers?—You mean, I suppose, that the horses should be public property; I have not considered that. I think it would be upon the whole preferable that the horses should be the property of the officers at the college themselves.

8643. Are there not cases in which an officer could not afford to keep a horse of his own?—Yes; then you must give him the means of keeping a horse. There are arrangements in the Artillery, and I believe also in the Cavalry, for buying troop horses on joining at a certain price, and returning them again when the officer leaves; possibly that arrangement might be extended to the officers at the Staff College, but I cannot say, as I have not thought about it. This is merely an impromptu observation of mine.

8644. But you think if it could be done it should be?—Yes, I think there would be great advantage in it. I should like to see every officer not only keep his horse, but use it and hunt.

Qualifications for admission.

8645. With regard to the certificate of the commanding officer which is required before entrance to the Staff College, do you think it would be of any

Col. E. B. Hamley, C.B.

6 May 1869.

Staff College.

assistance if, instead of the regulation being that a certificate should be sent, certain specific and carefully prepared questions were issued by the Horse Guards, and were answered by the commanding officer?—I think that would come to exactly the same thing in the end.

8646. Then, in fact, upon this particular point, which is considered the keystone of the whole, there can, in your opinion, be no guarantee at all?—No guarantee at all, or a very trifling one.

8647. It depends upon the qualifications of the commanding officer himself in fact?—Yes, exactly; some commanding officers will give an honest opinion, and others, perhaps, who can, will not in that particular case because they want to get rid of their least efficient officers. Of course, a commanding officer can scarcely prevent a man from coming to the Staff College; all he can do is to discourage it.

8648. If the commanding officer were obliged to answer certain specific questions, would it not be more difficult for him to avoid giving the information which is required to the Commander-in-Chief?—He would have to evade a greater number of questions in such a case. According to the present plan he gives it all in a lump.

8649. (*Mr. Parker.*) Do you think it would be possible to shift the responsibility from the commanding officer to the authorities at the college by receiving information in detail from the commanding officer on the candidate's fitness, and then letting the authorities of the college decide whether, upon that information, he was a fit person for a student or not?—The authorities at the college would have no means of testing his regimental qualifications; that is my object in suggesting a board of officers, that they might test the regimental qualifications of candidates. It would be better that those qualifications should be reported upon before he joins the Staff College than after, because else you may have some men come in who would be sent away, and the numbers of the Staff College would be constantly diminished. Whatever you can get a guarantee for before the student joins, it is better to have that guarantee.

8650. According to the present system the certificate must either be given or withheld by the commanding officer; but such a board as you propose might give information upon which the authorities of the college would either give or withhold the admission; would that work well?—If your meaning is that the board should give detailed information and leave the authorities of the college to judge whether they would have the man or not, I must say no. I think it would be rather a roundabout way of arriving at the same result. I would leave the board to decide upon the regimental qualifications.

8651. Then the board must either say Yes or No, that the officer is or that he is not fit for admission?—Yes, regimentally. It would be better, of course, that you should be able to accept the whole certificate as it stands before the candidate joins; but as you cannot do that you must supplement it in some way. I propose to supplement it in the matter of habits and character by the observation of the Commandant.

8652. Would such a certificate as you propose be of any further use, except just as a means of passing him into the college?—Not at all.

8653. Would you put it on record at all?—No, it should only be for his admission.

8654. Then it would make a board in the regiment share with the commanding officer the responsibility? Not a board in the regiment.

8655. It would make a board of officers share with the commanding officer the responsibility?—Yes, and they would have no such interest in the matter as the commanding officer may be supposed to have.

8656. How are they to ascertain the regimental qualifications of the officer, by an examination?—There is an examination for promotion which might be extended; he would be examined before a board at a table, say, but he might also be tested by being seen with a regiment in the field.

8657. Do you think that the plan of the three classes which you have suggested for the final examination would be applicable to this examination in regimental qualities?—Not at all.

8658. Then the report would simply be either that he does or that he does not possess the requisite qualifications?—Yes.

Course of instruct

8659. (*Sir D. A. Cameron.*) Under the present system the officers at the Staff College are absent from their regiments more than two years. Do you think it would be possible, by reducing the number of subjects taught at the college, and by raising the entrance examination, to shorten the period of residence to one year?—I hardly think it would, I think that two years is necessary to digest all the information. I daresay you might cram a sufficient quantity of information into an officer in one year, but I think it better that he should have two years to digest it.

8660. Do you think that it is absolutely necessary to teach languages at the Staff College?—No, I think not.

8661. If the instruction in languages and in geology and chemistry were abolished, and if the instruction were confined to purely military subjects, do you think that more than one year would be required?—I think it is very short already. There are many officers who have already passed in languages and do not take up either chemistry or geology, but I do not think they find they have a great deal of time to spare more than the others.

8662. (*Lord de Ros.*) Sir Duncan Cameron put a question to you in which he pre-supposed a good deal of information to be brought to the college in the first instance, and on that ground he proposed to reduce the period of residence there; did you quite follow that?—Yes, I understood that. In that case the entrance examination must be raised very much. I doubt whether you would get the requisite number of officers to come and compete in that case.

8663. Do you not think that it would be better to have a few compete who were far advanced in useful information, than a great many smatterers?—I do not think they are smatterers now.

8664. Referring to your remarks with respect to not making languages a necessary part of the examination, do you think it would be possible, if an officer brought a certain knowledge of French and German, to teach some subjects in French and German so as to keep him up in his knowledge of those languages, for instance, reconnaissance and reports?—I do not think it at all desirable. I think it would be a complication which would have very little result.

8665. As to the field reports, do you not consider that it is an absolute necessity that if an officer is to make a good report of tracts of country of five or six miles it must be done on horseback, and that he could not do it in any other way?—He can do it in another way if he takes a longer time about it, but it is better that he should be taught to do it in the way in which he will do it on service.

8666. And on service he cannot do it in any other way than on horseback?—He will do it on horseback.

8667. You would consider time to be of great value in reconnaissance in an enemy's country?—Certainly.

8668. As regards mounting the officers, I believe at present the horses are detached from the regiment of cavalry at Hounslow?—I can hardly tell you that. I believe, indeed I know, they are taken from several regiments.

8669. Do you not think it would be much preferable to take them from the general depôt of the cavalry at Canterbury, and have them selected there properly, and have them inspected by the officer who inspects at Aldershot, so as to have useful horses sent to the Staff College; not the worst horses from every regiment, but such horses as it would be an improvement to ride?—I think that is a matter for the consideration of the cavalry authorities. I cannot give an opinion upon it.

8670. I think you made some observation about the necessity of teaching transport by rail; you think

that very important, do you not?—I do; very important.

8671. You think it important that a staff officer should know how much railway plant would be required for moving a battery of artillery?—I think that that is known already.

8672. Do you think they would all know that?—It would be generally known. I think he should see troops embarked and disembarked in trains; he should see platforms made in places where there were no platforms before; he should learn the rate at which successive trains can be despatched with safety, otherwise it would be impossible to call upon him to make arrangements for a great movement by rail.

8673. As regards embarkation in vessels, would you have them instructed in the tonnage, and the amount of accommodation, and the stowage, required for a certain number of men on board ship?—He is taught that already in the branch of military administration at the Staff College.

8674. Do you think that if you sent one of these officers to embark a squadron of cavalry he would be able to put the horses on board ship in a great hurry?—That is generally a matter upon which there is no such pressing hurry as there is in the matter of railway transport; it is not necessary to be so exact. I have no doubt that any intelligent officer could very soon learn it.

8675. Are you aware that a difficulty was found on the occasion of the embarkation from Varna in finding officers who could do it well?—Yes; but that was because of the want of material. They had nothing but a few Turkish boats that they could lay hands on and fit up for the occasion besides the men-of-war's boats. But if you had the cranes, and wharves, and all the appliances which are to be found at Woolwich it would be simple enough.

8676. Is it not very improbable that you would ever find those things abroad where you wanted to embark or disembark?—Yes; there you are very dependent, I should think, upon the sailors.

8677. Do you not consider that it should be part of a staff officer's education to know the practical points necessary for the quick and orderly embarkation of troops?—He is taught all that theoretically, but whether it would be of any very great practical value or not to see it done I cannot say. It would be better, perhaps, that he should not sacrifice much of his time in learning that.

8678. Would you call it a sacrifice of time?—If you sacrifice anything else for it it is.

8679. You have suggested that a brigade of infantry, a battery of artillery, and a regiment or part of a regiment of cavalry should be placed for a time under the Commandant as brigadier, and the duties of the staff performed entirely by the students; would it not be preferable to send the students to the camp instead of bringing the camp to them?—I do not think so, because you would be very dependent upon the ability of the brigadier.

8680. A man who might be very competent to be Commandant at the Staff College might not be perfectly familiar with the handling of all kinds of troops?—He might or he might not. I think he would be all the better for having the knowledge.

8681. Would it not be a great disadvantage if he was not; would he not in that case be a blind leader of the blind?—It would be much better to run the risk of the Commandant not being able to do such things, than to trust to the chance of the brigadier being the right man to instruct the officers of the Staff College.

8682. (*Rev. W. C. Lake.*) Do you think that the Staff College is, on the whole, a very great benefit to the army?—I think so.

8683. Will you briefly state the general grounds upon which you think so?—Because I feel sure that any general officer who was called upon to choose his staff would much rather take officers who had studied the subjects which are taught at the Staff College than others who had never done so. He would find it an incomparable advantage, for instance, to employ staff officers who were accustomed to topographical drawing in making reconnaissances. A man who could do that, who had studied military administration, who had read military history, and learnt all these other subjects would be of infinitely more assistance to him than any officer he might select without knowing his qualifications.

Col. E. B. Hamley, C.B.

6 May 1869

Staff College.

8684. Are you or are you not aware of any facts which materially qualify that advantage?—You mean that the officers who pass through the Staff College are not so good as they might be. I have said that I think a certain proportion are not above the average of officers in the army.

8685. When you were at the Staff College did you notice many or any officers who passed the Staff College with credit, but who were obviously deficient in some practical qualities necessary for staff employment?—Yes; I have noticed some who passed with credit, and who were at the same time deficient in some of the qualities necessary for a staff officer.

8686. Do you know of any means that now exist by which the authorities could indicate, either publicly or privately, that they considered any officers who had passed the Staff College to be unfit for employment upon the staff?—No.

8687. You know of no means by which that could be indicated now in the case of officers who have already passed through?—I suppose the character of those officers will be pretty well known from the reports of the generals under whom they have served.

8688. It is not a question of general character, but as to the possibility of indicating any physical defect or any quality which might unfit an officer who was able otherwise for service on the staff?—Service in time of peace is so different from service in the field that the one is hardly a criterion of the other. Consequently it will always be difficult, even when you get the general's report, to know the real value of a staff officer in war.

8689. Are you aware whether there are any communications made by the authorities of the Staff College indicating in some cases want of fitness for employment on the staff?—I have never seen a report made by a Commandant, but they do make such reports, and of course it is quite open to them to state the defects of the officers.

8690. Do you believe that such reports are made?—Yes, I believe that these reports are made by the Commandant.

8691. (*Lord E. Cecil.*) Much has been said of the anomalous and even invidious position which the Council of Military Education holds as regards its relation to the authorities at the War Office and the Horse Guards, the military colleges, and the Staff College. What is your opinion—do you think that its authority in educational matters should be curtailed or increased?—I think it works very well as it is.

Council of Military Education.

8692. Is it not the fact that with regard to the colleges there are several channels through which every communication goes before it is finally placed before the Council of Military Education or the Horse Guards, as the case may be?—No, I think not; I think everything comes direct from the college authorities to the military secretary, and thence to the Council. Formerly everything came direct from the college authorities to the Council, but it was at the request of one of Sir Duncan Cameron's predecessors, I think, that the military secretary was interposed as the channel between the two. He did not wish to communicate directly with the Council.

8693. We have in the printed answers which have been supplied to us by some of the witnesses such sentences as these:—"The Academy groans under "the weight of a triple government; one (itself "heavily loaded) at Woolwich, a second at the "Council of Military Education, and a third at the "Horse Guards." It has also been stated in evidence that the Commandant of the Staff College before he makes any changes in matters of study is obliged

Col. E. B. Hamley, C.B.

6 May 1869.

Council of Military Education.

to send a report to the Governor of the Royal Military College, who sends it on to the Council of Military Education, and it is supposed that even the decision of the Council of Military Education is not final, but that it has to go on to the Horse Guards and the Secretary of State for War. What I should like to know is, whether the facts I have stated are correct or not, whether the Council is or is not supreme in educational matters, and what is the number of channels through which everything passes before it is finally decided upon?—The positive recommendations of the Council are almost invariably attended to upon such subjects.

8694. To whom does the Council of Military Education owe allegiance, to the Horse Guards or the War Office?—The Council communicates in the first instance always with the military secretary for the Commander-in-Chief, and the Commander-in-Chief on certain subjects passes on the recommendation whatever it may be to the Secretary of State for War; but I do not recollect any case in which any obstruction has been thrown in the way of improvement by either the Horse Guards or the War Office, except on the ground of expense.

8695. Then you are of opinion yourself that there is no disadvantage attending these constant communications to different authorities before a matter of study or discipline is decided?—No further disadvantage than a little loss of time; beyond that no practical disadvantage has occurred, because I am not aware that any obstacle is thrown in the way. Discipline is not under the Council unless it is specially referred to it.

8696. I presume that the professors of the various colleges are selected by the Council of Military Education; is not that so?—Yes, that is the case generally; it is not the case altogether at the Academy.

8697. Perhaps you would explain where it is and where it is not the case?—As regards Woolwich, the Council of Military Education make their recommendation on the previous recommendation of the Lieutenant-Governor of the Academy. A great many of the officers employed are officers of artillery and engineers with whom he has personal acquaintance, and of whose qualifications he has more knowledge than, perhaps, the Council could readily obtain from any other quarter. The usual course is for him to make his recommendation, which the Council generally, after inquiry of some sort or other sufficient to satisfy them that it is a good appointment, themselves recommend.

8698. What is the mode of selection pursued by the Council generally?—In the first place a notification is issued that a certain appointment is vacant, and that officers or others will be wanted to fill it. The applications come to the military secretary from the candidates, who generally also forward their testimonials. These are all forwarded to the Council, who deliberate upon them and select the person they think the best qualified, generally after a personal interview, and thereupon make their recommendation to the Commander-in-Chief through the military secretary, and it is presently confirmed.

8699. In the event of the incompetency of any one individual professor being reported, what body is it, or what authority is it, that decides upon his dismissal?—It is very difficult to procure the dismissal of incompetent people, that is one of the great defects of the system. Just now we have obtained some facility for doing so, by limiting the period of service of those officers who are professors either on full or half pay to six years. They can be reappointed at pleasure on special grounds of qualification, consequently you have only to abstain from reappointing them, allow them to leave, and then get rid of them. You are not now saddled for life with an incompetent professor. That relates to officers. With respect to civilians, we have no means of dismissal that I know of.

8700. Have you any suggestions to make to the Commission by which the simplification of such a proceeding might be effected?—Yes; I think that where the authorities of the college are decidedly of opinion that a professor is incompetent, either from length of service or from want of ability, and whenever they satisfy the Council of Military Education on fair evidence that it is so, the removal of the professor might thereupon take place.

8701. I will just ask you one or two questions with regard to the especial duties of the Council; what amount of time is devoted to educational matters which concern the military colleges and the Staff College, and what amount of time is devoted to the army schools by the Council?—These are different departments which are taken by different members of the Council. The process is, the questions connected with the colleges come to one member, we will suppose, and questions connected with the schools to another, miscellaneous business to another, and whenever anything out of the ordinary routine comes before any member he confers with all his colleagues, either by a minute paper or more commonly personally. There is not a certain number of hours of each day told off for each department, because the work is uncertain, it is not constant.

8702. How many times a week do the Council meet?—They meet every day, they are sure to be in conferences of some sort together, either formal or informal, every day.

8703. And there is sufficient business to occupy them?—There is always some business before us that could not well be neglected.

8704. From official correspondence, which is in print and has been supplied to the Commission, it appears that the number of members of the Council was increased in 1858 and that shortly afterwards the army schools were placed under its control. The inference is that before that time the business was not nearly as great as it is now; is that so?—I cannot give you any information about that. I know nothing about what the state of the Council was at its first constitution. App page

8705. The Council is composed principally, is it not, of military members?—Yes.

8706. But there is one civilian?—There is one civilian.

8707. Does he attend constantly?—He does not attend constantly; he does not live in London. We send papers to him occasionally, and he comes up to the examinations.

8708. How often do those examinations take place?—I mean all the examinations for admission either to the army or to the Military Colleges.

8709. How often do they take place?—They are uncertain. Sometimes there are examinations for direct commissions, three or four a year, the Woolwich examinations are twice a year, the Sandhurst examinations are twice a year; that makes eight; the Staff College examinations once a year; that makes nine.

8710. So that the civilian member does not, as a rule, come up more than nine times a year?—Yes, I think he comes up oftener than that; we see more of him than that.

8711. I suppose there is no compulsory obligation to attend upon the members of the Council?—In this way there is, there are memorandums to be signed every day which are generally signed by all the Council who are not on leave.

8712. Is there a secretary to the Council?—Yes.

8713. Will you tell us the number of clerks?—There are eight.

8714. I suppose their duties are principally connected with the army schools?—No, not altogether; there are the military libraries and the recreation rooms, one clerk attends to those; and there are the colleges. Then there are copying clerks who copy whatever matter has to be written out. They are not all specially connected with the army schools. There is probably not more of actual writing to be done about the army schools than about the other branches. I could not off hand say whether it is less or more, but I can

say that there is a great deal of business to be done by the clerks irrespective of the army schools.

8715. Does the Commander-in-Chief preside on any special occasion or at an ordinary meeting?—The Commander-in-Chief told the Vice-President that he would always be happy to come if his presence was required on any occasion, but we have not hitherto requested His Royal Highness to do so.

8716. He bears the title, does he not, of *ex officio* President of the Council?—Yes.

8717. You have no suggestion to make in any way as to the Council of Military Education, either as to its powers or its relation with the authorities?—No; I do not think that the Council have any reason to complain of obstruction in any way.

8718. You think that it works thoroughly well?—Yes, I think so.

8719. (*Rev. W. C. Lake.*) I understand you to say that the civilian member of the Commission attends about nine or ten or a dozen times in the year?—Yes; perhaps a dozen times in the year.

8720. What is his salary for that?—I think it is the same as the others, 600*l.* a year.

8721. Was he appointed on the distinct understanding that he was to attend only nine or ten times a year, do you know?—He was appointed long before I came to the Council; I cannot tell you what the understanding was. He has been a long time a member of the Council, and a very long time a member of different educational establishments in the kingdom.

8722. The tenure of the other members is five or six years, is it not?—It is now said to be limited to five years.

8723. Do you know whether the civilian member was appointed on the same footing in that respect as the others?—Certainly not.

8724. It was an unlimited tenure in his case?—The five years rule was not in operation at all at the time he was placed upon the Council.

8725. Is there no understanding then that the civilian member is expected to attend more than nine or ten times a year?—Whenever we have any measure upon which we should like to take his opinion, or upon which we think we ought to take it, we send the papers to him, if it is a matter that admits of that delay, and he writes his opinion upon the subject.

8726. That I presume is of only occasional occurrence?—Yes, only occasional.

Col. E. B. Hamley, C.B.

6 May 1869.

Council of Military Education.

8727. In fact you occasionally send him papers, and he attends nine or ten times a year?—I cannot exactly tell you the number of times; he may come to the office to see the Vice-President at times when I am not present. I should not like to say how often he comes.

8728. And for that amount of work his salary is 600*l.* a year?—I believe so. That you can see in the estimates.

8729. (*Lt.-Col. Chesney.*) Regarding the appointments and the promotion of professors at the colleges, is not it the case that at Woolwich there has been a claim to promotion from instructorships to professorships by seniority which has not existed at Sandhurst?—I do not think so. I do not think the Council of Military Education would recognize any such claim. Whether any such claim has been put forward or not I do not know, nor is it much to the purpose, because it would not be admitted.

8730. But the appointments at Sandhurst have been made in a more open way than those at Woolwich, have they not, they have been thrown more widely open to competition?—Yes; because the military professors at Woolwich are all taken from the two scientific corps, but that is not the case at Sandhurst.

8731. Although there is no claim recognized at Woolwich, is not it the practice that the senior instructor is made professor?—No, I cannot say that it has been the practice since I have been at the Council. If it has been so of late it must be because the senior instructor was fully competent. There is no question but that seniority forms a very fair ground for promotion if there is not incompetency, but if there were undoubtedly some other man would be taken.

8732. But you do not recognize any claim to promotion by seniority as a matter of right?—We do recognize seniority as a claim, or rather as a ground, for promotion.

8733. Not a positive claim?—No, it is a ground for promotion.

8734. With regard to removing the civilian professors, is not there a special difficulty arising from the fact that they come under the Civil Service Act?—That I do not know.

The witness withdrew.

Captain H. Schaw, Royal Engineers, examined.

Capt. H. Schaw.

Staff College.

8735. (*Chairman.*) You are professor of fortifications and artillery at the Staff College?—Yes.

8736. How long have you been connected with the Staff College?—For five years.

8737. You were formerly instructor at the Royal Engineer Establishment at Chatham?—I was there for six or seven years.

8738. You have made two criticisms in regard to the Staff College in the replies you have sent to us; you say that "Some who enter are not fitted "for staff duties, and some who would make excel-"lent staff officers are deterred from competing by "the present system;" can you suggest any remedy for the first of these defects?—The remedy that I have suggested is, if possible, to make the certificate signed by commanding officers a little more distinct, and to supplement that by a committee of the senior officers of the regiment recording their opinion of the probable fitness of the candidate as replies to queries; I think that would be the most definite way of putting it.

8739. But the very qualities with respect to which you desire to test him are those which are rather to be discerned by observation, than by any questions on paper?—I mean that the questions should be for the senior officers to reply to, not for the candidate.

8740. It has been suggested that an officer, after passing through the Staff College, should be placed under the inspection of some general officer of the army in command of troops, and required to perform the duties of a staff officer, and if he failed to satisfy the officer in command, a report to that effect should be made to the Horse Guards; do you think that that would be a practicable method of testing him?—I should think it would be practicable, but it appears to be rather late to decide upon this point. I should think that his probable fitness might be decided before his entering the college. After he had passed through the college, and the country had been at the expense of educating him, it would seem almost late to find out whether he was fit for the duties of a staff officer or not.

8741. You would give to the officers a greater choice of subjects, and try to give a larger scope to their special idiosyncracies, rather than subject them all to one system of examination?—Yes, that is my idea. I think you could bring out individual gifts more strongly in that way. It would be better to try and improve what a man has got than to try to give him what he never can have.

8742. (*Lt.-Col. Chesney.*) One objection that has been raised to certain officers placed upon the staff from the Staff College has been a want of activity; do you think that that kind of thing could be tested before they entered the college?—I do. I think that in the regiments they came from their degree or activity of mind and body must be pretty well known, and that the opinion either of the commanding officer alone, or the senior officers, or perhaps even all the officers of the regiment, would be quite sufficient upon

Capt. H. Schaw.

Staff College.

that subject if one could get at it pretty clearly and honestly.

8743. It has been represented that the officers have not the means universally of keeping a horse, and that there is a loss in that respect as regards their riding, except in the school?—I think that that is a very great defect; I have mentioned it in my replies. I think in doing their out-of-door work they ought all to be mounted.

8744. In fact, to have a perfectly efficient Staff College you would have every officer provided with the means of being mounted, and make him be mounted?—Certainly.

8745. (*Mr. Parker.*) I wish to understand exactly the effect of the replies to these queries which you propose should be signed by a committee of senior officers; do you contemplate that the authorities of the college should exercise any discretion in the matter, or that the result of the queries should be that they must definitely take the man or not according as the officers reported; would you leave any discretion to the authorities of the college in judging of these queries?—Yes, I would, certainly. One might suppose that there might be a case in which a valuable man was not a favourite in his regiment, and that the replies were unfavourable towards him, and from some other source it might appear that he was a man who would be likely to make a good staff officer; therefore I do not think that these replies should be made absolutely binding, but only a guide for selecting the best man.

8746. Do you think that both for commanding officers and for this board of senior officers the responsibility of selecting would be rendered less invidious if the authorities of the Staff College could take part of the responsibility; might the board say in such and such respects he is fit, and in others not so fit, and leave a part of the responsibility to the Staff College?—It is difficult to answer that question. If one had implicit confidence in the judgment of the commanding officer, it would be best to leave the responsibility entirely with him, but as that is not always the case, it would be best to reserve some right of selection, and only to take the opinion of the commanding officer and the senior officers as very strong evidence in favour, or the reverse, of a man who proposed himself as a candidate.

8747. Do you think it would be an advantage that they should report more in detail upon the qualifications of a candidate in answer to definite questions?—Yes, I do, because I think the answers might be very vague; in fact, the present certificate signed by commanding officers does not appear to me to be sufficiently distinct. A commanding officer might sign that certificate with a very little stretch of conscience, and yet the man so certified might be really inefficient for the staff. My object in proposing queries is to make it as definite as possible, in order that the replies both from the commanding officer and from the board of senior officers should be so clear as to leave no doubt of their own opinion, at any rate, as to the fitness of the man for the staff.

8748. If the answers are both definite and perfectly *bonâ fide*, it follows, does it not, that some one must exercise a discretion upon those answers?—I suppose the Commander-in-Chief would exercise a discretion.

8749. That would be part of the scheme you would suggest?—Yes, that would be part of the scheme.

System of instruction.

8750. You speak in your paper of allowing officers to take honours on subjects of study selected by themselves; would you approve of doing that, as some other officers have suggested to us, by instituting classes, so that the candidates should be put into the first, second, or third class according to merit?—Yes, I think that is the best system. I think I used the word classes, that was my idea. The first remedy I propose is that they should be classed in different subjects, and that the best of them should take the first class in mathematics or the first class in French or German, or whatever might be the subject they excelled in, or if they excelled in a number of subjects they might take the first class in all those subjects.

8751. Do you think it would be desirable to accept a limited number of first class places in lieu of a larger number of lower ones?—I should very much prefer to have men who were really good in some one thing or in several things, if possible, rather than men who knew a little of a great many things.

8752. You would, therefore, encourage a man to pass out knowing a good deal of a few subjects?—Yes; knowing a good deal of a few subjects, rather than a smattering of a great number.

8753. You think that would be practically advantageous for the purposes of the service afterwards?—I do; I do not think you will alter a man in the Staff College. He was either fit for a staff officer or not before he entered. He may improve himself in certain particulars at the college, but you cannot form a man. All men are not cast in one mould; you can only improve a man in what he has got; you will do more for him by trying to do that than if you try to form him according to a certain mould which you consider the best for a staff officer.

8754. In other matters which are necessary you would have only a qualifying examination, as I understand?—Yes, only a qualifying examination.

Qualif of can

8755. (*Sir D. A. Cameron.*) Would it not be likely to produce discord in a regiment if the officers were called upon to pronounce upon the fitness of a fellow officer for the staff?—Yes, if all the officers were called upon to do so; I only proposed that a portion of them should do it.

8756. (*Lord de Ros.*) Would they be field officers?—Yes, field officers; I do not think it would do to extend it to the junior ranks so as to include men of a man's own rank. I think it would be better for it to be kept in the hands of the senior officers for fear it should create discord. If it were carried down to the lower ranks of course the vote would have to be by ballot, which would be introducing rather a republican principle. I do not suggest that.

8757. (*Maj.-Gen. Haythorne.*) In fact, if the certificate was worded in proper language, containing specific answers as to specific qualities by the commanding officer, that would generally be sufficient, would it not?—Yes, no doubt it would generally; it ought always to be sufficient.

8758. In its present shape it merely states the general opinion of the commanding officer?—Yes. If that were made more definite it ought always to be sufficient if you had the opinion of the commanding officer; but inasmuch as commanding officers are not always men whose judgment you can depend upon, I thought it would be an additional check to bring in a board of senior officers.

8759. It says at present that he is to report upon his possessing the chief qualifications of a staff officer. Many different commanding officers would have different views as to what the chief qualifications of a staff officer are?—Yes; I suggested putting in "energy of mind and body, personal influence with "his men and his brother officers, and good manners "and address," instead of "character, habits, and "disposition."

8760. (*Lord de Ros.*) In reference to ascertaining the fitness of an officer before he quits his regiment, what would you say to the proposition that in every half-yearly confidential inspection report made by every commanding officer to the district general, he should be required always to name one or two officers whom he thought suitable for the staff. Would not that be a kind of check upon any compromise, and would not the repetition of the same name in several successive confidential reports rather insure its being a safe selection?—I should think that it would act as a check upon it.

8761. Do you not think that it would also rather exonerate a regimental officer from any invidiousness in the selection, if this rule were adopted?—I understand your lordship to mean that the same person, namely, the commanding officer of the regiment,

would make these continual confidential reports, and would also when he was called upon, in the special case of a candidate for the Staff College, make a report upon his fitness.

8762. Referring at the same time to his former reports; do you think that that would answer?—I do not see any objection to it.

8763. Your remarks show that you know how great a variety of qualifications are necessary for a staff officer, and that no bed of Procrustes would do to lay him down upon. Do you not think that it would be an advantage, as compared with the present plan, to have a very decided separation of the studies in the Staff College, and to let one man go upon languages, another upon fortification, another upon reconnaissance, and so on?—That is quite my idea—that a man's peculiar qualities should be brought out; that you should not try and form every man in the same mould, but that you should try and bring out the peculiar qualifications each man already has and cultivate them to the utmost.

8764. As regards the advantage of foreign languages to officers, do you think it would be possible in your own branch to teach the theoretical part of fortification partly in the French language, and to require from the officers short essays or notes on fortification in French; would that work well?—It would require a good knowledge of French in the professor to begin with, and as there is an instructor in French it would seem perhaps to be taking part of his work. The officers do at present read books on fortification in French and German; they are referred to French and German books to study the subjects in, and if they have any knowledge of the language that tends of course to assist them in keeping it up.

8765. Do you not think that it would be an advantage to have a regular tour made abroad by a few of the Staff College officers to study the application of fortification to the suburbs and additions which present difficulties in the case of almost every town that has to be fortified?—I think it would be a very great advantage, the expense of course is the only objection.

8766. Might not the expense be brought to something very small if the tour were among the towns in Belgium, and other towns within a very short range of this country?—I do not think it ought to be an insurmountable objection at all; the expense need not be so very great, and the advantage would be very considerable.

8767. I observe that you say in your answers that you think more practice in rapidly executed projects for defence and attack of posts, reconnaissances, and surveys would be of advantage. You consider that the officers must be mounted, do you not?—I do.

8768. Do you think it would be an advantage to have a set of horses belonging to the college instead of borrowing the worst horses from the different regiments, and to have those horses regularly inspected from Aldershot and supplied from the depôt at Canterbury?—I believe that that is the system on the continent, that the officers are mounted upon the horses belonging to the college. It seems to work well there, and I can see no reason why it should not work well with us.

8769. There is a difficulty at the Staff College in that respect, is there not?—Yes, there are no horses provided. The officers have to find their own horses, and as they are only there for a short time and have to sell their horses on leaving, and as many of the officers are not monied men, there is a practical difficulty, no doubt.

8770. Might not there be some arrangement for them to buy their horses at a certain price when they come and return them when they go; do you think that that would be feasible?—That would make the horses their own for the time being. I think that would be feasible.

8771. (*Rev. W. C. Lake.*) I think you laid down the principle with regard to education at the Staff College that it would be a good thing to cultivate each officer's peculiar talents and qualities, did you not?—Yes, I did.

Capt. H. Schaw.

6 May 1869.

Staff College.

8772. Would you extend that to keeping up the study of languages?—Certainly, because some very good officers have a great genius for languages and not for anything else.

8773. Is not the main business of the Staff College to form a staff officer, and, therefore, might it not be said that the work at the Staff College should be almost entirely practical military work?—Yes; but to be a good linguist is a very practical advantage, for a staff officer might be placed in positions where a knowledge of languages would be most useful, and where he might not require a knowledge of military drawing, for instance, at all.

8774. Might you not say that nine-tenths of the work at the Staff College should be of a practical military character; I mean that rather as a sort of deduction from the rule which you laid down, as it seemed to me rather too generally, that you should cultivate each man's particular qualities?—I believe you ought to have in each man who is a staff officer a competent knowledge of military subjects. I think in the present state of military knowledge you might almost ensure that at his entrance; at any rate you might insist that he should acquire it whilst at the college.

8775. Are you not stating the necessary military requirements which you imagine the Staff College to bring out at a very low point?—I do not think that I am; I think that every officer in the service ought to have a sufficient knowledge of military duties generally. A staff officer, perhaps, ought to have them pre-eminently, but every officer in the service ought to have them, and if you have a selected body of men for the staff, it would be better that you should be able to find amongst them men who are really good at particular subjects, than that you should have men who are only mediocre at a number of subjects. It must be more valuable, I should think, to a general, to have such men at his command.

8776. I only mean this, when you lay so much stress upon developing the various talents of the officers, and amongst them (what undoubtedly is essential) the knowledge of languages, must you not always bear in mind that the special object of the Staff College is to give distinct practical military teaching?—The root of the answer to that question is to know what are the duties of a staff officer,—what he is really required to do. On service his duties are very various, and I believe that you might select men for those various duties according to their qualifications, and get the work better done, than if you tried to get every man up to a certain standard.

8777. (*Lord de Ros.*) You are aware that that is what is done. A general officer on service always appoints his staff for the particular purposes for which they are most useful; for instance, the staff officer sent with a flag of truce would necessarily be a linguist?—That is my idea, and that should be carried out as far as possible.

8778. (*Chairman.*) Are you of opinion that the course at the Staff College could be shortened at all?—I think it could; I have not considered the matter very fully.

Length of the course.

8779. What is your general impression upon the subject?—I think it could be shortened.

8780. To what extent?—I think it could be shortened to one year, but I am not quite sure that it would be advisable to do it always.

8781. Would that be done by omitting some of the subjects which are now taught?—By omitting some of the subjects, by omitting languages, for instance, which I do not think can be taught very well at a college.

8782. And by requiring those subjects which you omit from the course to have been acquired previously?—Yes, previous to coming there, or by omitting part of my own subjects, not making it obligatory upon every officer to go through the whole of the course they now go through with me, that is to say, forti-

Capt. H. Schaw.

6 May 1869.

Staff College.

fication and artillery. There might be a limited course for them all, and a more extended one for those who have a genius for that sort of work and prefer working at it.

8783. (*Rev. W. C. Lake.*) I understood you to say some time ago that you would wish languages to be taught at the Staff College?—If the time remains as it is at present, I believe that a portion of the time might be advantageously devoted to the study of languages; but if it were considered, for other reasons, better to shorten the time, I suppose that languages could be better omitted than any other subject, because they could be acquired no doubt better abroad than they could at the college.

8784. (*Lord de Ros.*) Supposing that these varieties of qualification are admitted to be necessary, do you think it would answer to have two periods for which officers might stay, so that some would stay for one year and some for a year and a half, those who went into the more abstruse subjects remaining longer, and those who picked up quickest the practical subjects going away sooner?—I should think it would lead to practical difficulties in the working of the college if you had officers there for different times. But it would require a good deal of thought to see how far it could be worked out.

8785. (*Chairman.*) What per-centage of officers who have passed through your hands would you designate as not being so well fitted for staff duties as you would have desired to see them?—My impression would be, about a fifth, or 20 per cent.

The witness withdrew.

Adjourned to Tuesday next at twelve o'clock.

Tuesday, 1st June 1869.

PRESENT:

THE RIGHT HONOURABLE LORD NORTHBROOK IN THE CHAIR.

LORD EUSTACE CECIL, M.P.	MAJOR-GENERAL HAYTHORNE.
GENERAL LORD DE ROS.	C. S. PARKER, Esq., M.P.
LIEUT.-COL. SIR CHARLES RUSSELL, Bart., V.C.	REV. DR. BUTLER.
LIEUT.-GEN. SIR D. A. CAMERON, K.C.B.	REV. W. C. LAKE.
MAJOR-GENERAL EARDLEY WILMOT.	LIEUT.-COL. CHESNEY.

Maj. C. Adams.

MAJOR C. ADAMS examined.

1 June 1869.

Staff College.

8786. (*Chairman.*) You are Professor of Military History at the Staff College?—I am.

8787. How long have you been in that office?—Just one year.

8788. You were formerly in the Austrian army?—Yes.

8789. For how long?—13 years.

8790. Did you see any service with the Austrian army?—Yes; I saw comparatively a good deal of service there. I was present throughout the operations in 1848 and 1849 in Italy, and I was connected with all the other principal movements of the Austrian army during the ensuing years in Holstein and the Danubian Principalities.

8791. You also, I think, commanded a regiment in the German Contingent?—Yes, eventually. I went out to the East as senior major, but succeeded to the command before the regiment was disbanded.

8792. You were also at the Military College at Sandhurst?—I was.

8793. In what capacity?—First as instructor of Military History, and afterwards I succeeded Colonel Chesney as Professor of Military History.

Appendix, page cxxii.

8794. You have given us the benefit of your observations on paper upon the subject of the Staff College?—I have.

Qualifications of candidates.

8795. I gather from them that you do not see any way of introducing a more stringent form of certificate for officers before they are admitted to the Staff College?—I should lay no stress whatever upon the certificate. I should make the matter one of stern military duty.

8796. On the part of the commanding officer of the regiment?—Yes.

8797. Do you mean that there should be more responsibility placed upon him with respect to recommendation than there is now?—Decidedly.

8798. Do you mean that some step should be taken by which he should be made to feel the matter to be of more importance?—Unquestionably. That it should be insisted upon as a duty.

Course of instruction.

8799. You are in favour of restricting the course of instruction at the Staff College?—I am.

8800. Would you exclude languages?—I think languages most important, but I doubt whether they are acquired to any very great extent at the College itself.

8801. You would probably make the knowledge of languages a condition for entry?—Yes; the knowledge of one language certainly; and I would advocate a different mode of cultivation of language subsequently.

8802. What mode would you propose?—Residence for a certain period in the country for European languages, France or Germany.

8803. You would not attach importance to the knowledge of a foreign language which was acquired at the Staff College itself?—I think that very little is acquired there in the way of languages. I think that it is very difficult to acquire them at the Staff College.

8804. Some of the remarks in the paper with which you have favoured us seem to show that you are opposed to personal competition by marks?—Very strongly.

8805. But further on you say that you would advocate competition for honours in the several subjects. Why do you suppose that the same objection would not apply to one as well as to the other?—I fancy that men are brought into personal contact, and that they struggle for place. You find that different men excel in different subjects, and they have no objection to compete in one subject against each other, or to compete for class. But if you mass a number of subjects together, and so form one general system of personal competition, I think that it is practically open to many objections.

8806. Is your objection on account of the interference which is produced with the education, that is to say, that under the present system a man applies his attention to a subject merely for the sake of getting marks, and without any other benefit to himself; is that the great objection which you have, or is the objection more from the bad feeling which is produced between officers?—That is partly so, and I think that it diverts the attention of a man from a

special subject for which he has a natural taste to a great many other subjects which under the present system he must take up, so that he cannot so much concentrate his thoughts upon the one subject for which he is fitted as he would do under a competition for honours in several subjects.

8807. You suggest that officers who have passed through the college should be attached to the staff of the several camps?—Yes.

8808. For how long would you attach them?—It would depend very much upon the course of exercises pursued at the camp.

8809. For example, under the present system at Aldershot, what advantage would be derived by an officer being attached to the staff there?—I do not think that the Staff College gives any training for the staff of Great Britain in time of peace; I think that practical training is necessary to acquire the special duties demanded of staff officers in our camps. An officer is now taken from the Staff College and placed on a peace staff appointment, and is very much judged of by his immediate capacity for that office. I have heard opinions expressed as to the ability of men who have left the Staff College for the post which they have undertaken, as though they had been specially prepared for it; the training of the Staff College is for war, and not for peace. The staff appointments in the field are the exception and not the rule.

8810. What they would learn in the camps would be the duty of a staff officer during peace?—Yes, no doubt.

8811. Do you consider that the instruction in field fortification at the Staff College is sufficient at the present time?—I am hardly in a position to judge of that.

8812. Are there any other observations which you would like to make to the Commission with respect to the Staff College which are not contained in the written answers which you have sent to us?—I have not my mind upon any special subject at present.

8813. (*Lord E. Cecil.*) Are you thoroughly satisfied with the course of instruction at the Staff College; do you think it sufficiently practical?—It depends upon the length of staff training which is permitted to an officer during his service. If you restrict the course of training to two years probably you ought to introduce more practical subjects. I myself consider that the period for training staff officers is very much curtailed in this country. I think that you would find in other armies on the Continent that they consider it very difficult to condense into so short a period so many subjects and such a variety of knowledge as a staff officer requires. If you commence a course, and wish to devote a certain portion of it to theory and a certain portion of it to practice, you must act and legislate in the matter accordingly. For myself I do not think at all that the course at the Staff College at the present time is too much devoted to theoretical subjects, provided that you afterwards give an officer an opportunity of learning those practical subjects which are undoubtedly necessary.

8814. From your experience abroad of a staff officer's education, are you in favour of extending the time for the instruction of an officer at the College. I refer to his total period of training?—I should unquestionably give him more time to master the peculiarities of other arms of the service, and for training in other subjects. I believe that an officer is now attached to artillery and cavalry if he happens to be an infantry officer.

8815. How long do you think that the practical course should be?—I should say that an officer would require fully six months, in addition to the period already allowed to him, for the study of telegraphy and railway systems, and other modern appliances.

8816. (*Sir C. Russell.*) Would you prefer that the education at the Staff College should be almost entirely theoretical, and that afterwards at the camp or at some similar place, for a portion of the duty, instruction of a thoroughly practical kind should be given?—I think that some of the subjects are now more or less of a practical character, my own subject is the only essentially theoretical subject. Field fortification is already professed there, and you have hand drawing and surveying. I think that the proper purpose of the Staff College is to instil the principles of these various subjects which are professed, but if you can connect them with practice, so much the better. Some of the other duties which I have specified in my written evidence I think would be much better practised where you have instruments for doing so than where you have not. I think that all the practical duties of a staff officer would be much better practised in camp if the theory is previously understood.

8817. Then you do not propose to separate the course of instruction, making it at the Staff College of a shorter period than it is at present, and confined almost entirely to the book part of the knowledge, and having the actual open air duties of a camp taught afterwards?—I am quite certain that you cannot curtail the present course at the Staff College with advantage. Take my own subject: A man comes to the college with a very poor knowledge of military history, and he has to master a portion of the subject in the course of two years; it has taken me ten years to learn very little of it.

8818. You are not for shortening the period?—Distinctly not.

8819. (*Lt.-Col. Chesney.*) I understand that you think that a great want is more practical training after leaving the college?—Yes.

8820. Do you think that it has been an evil that the time with each arm has been shortened to six weeks? Do you consider that time too short?—It would depend upon the period of the year at which the officers were attached to these arms; whether they were in full exercise or not. I think that an officer who has learnt a good deal of his profession may learn a great deal in six weeks if he is attached to an arm of the service at a proper period of the year.

8821. You are in favour of excluding a class of men who are deficient in activity and energy upon certificates before entering the college?—Yes; I look upon the commanding officer as being the only judge of a man's ability and fitness for the staff.

8822. (*Sir D. A. Cameron.*) Would you recommend any change in the examination for admission? Are you satisfied with the present character of the examination?—To speak honestly, I am not thoroughly acquainted with it.

8823. Do you generally find the students of the Staff College, as far as your subject is concerned, highly educated men?—Some of them are very able men indeed.

8824. Does that apply to the greater portion of them?—I can hardly say that.

8825. (*Rev. W. C. Lake.*) Do you consider that within your experience there have been many officers at the Staff College who, supposing that the commanding officer had exercised a strict selection, would not have been there?—I have only been at the Staff College for one year, but I certainly think that there are officers in the different batches who have barely sufficient claim to the important offices which they may be called upon to occupy.

8826. And you think that in this respect the plan which you have suggested in your answers to Lord Northbrook would have a beneficial effect upon the general results of the Staff College, I refer to the commanding officer exercising a strict judgment as to the officer recommended by him?—I have no doubt of it. I have seen the system exercised more or less practically.

8827. If I understand you rightly, you object to competition between officers upon more than one subject?—Yes; I object to making a general competition.

8828. In that case, how could you have any competition at all at the Staff College?—You might have an examination to classify the men.

Maj. C. Adams.
1 June 1869.
Staff College.

8829. Would you allow a choice of subjects?—There are compulsory subjects.

8830. Would you allow any choice of subjects besides the compulsory subjects?—I should not myself do so.

8831. Do you think that the education given in the Austrian army to staff officers is a high and good one?—It is excellent.

8832. Comparing it with our present education, as given at the Staff College, do you think that the English system of teaching is as good?—I do not think that we have yet had time to establish a course of sufficient value. I think that it is a very difficult matter to establish a permanent training institution for staff officers; it takes time, and you cannot expect to do it at once; you require, perhaps, another generation of instructors to get the full value.

8833. Is the Austrian system of education for staff officers based upon the system that they should rather acquire an acquaintance with the duties of a staff officer in time of peace than in time of war?—No; it is essentially a war training. The capacity of our officers, I think, is very much judged of by the peace appointments which they hold. I view the Staff College itself as entirely a training institution for war.

8834. (*Lord de Ros.*) With reference to the superior training which you allude to of the officers of the Austrian staff, do you suppose that that superior training has been a system organized in consequence of their great failures against the Prussians, or do you think that they possessed at that time officers of great capability who were in those armies which so signally failed?—It is notorious that they possessed officers long ago in the Austrian army of very great ability; their system of training is not dated from 1866, and no operations could have been more skilfully performed than those in Italy in 1848 and 1849, in which I took part; they were worked entirely by the Austrian staff.

The witness withdrew.

The Rev. J. F. Twisden, M.A., examined.

Rev. J. F. Twisden.
Staff College.

8835. (*Chairman.*) You are Professor of Mathematics at the Staff College?—Yes.

8836. How long have you held that appointment?—Since the Senior Department received its new organization, and was called "the Staff College;" that is, from February 1858.

8837. You were, before that time, at the Cadet College?—Yes; I was for about seven years at the Cadet College.

Appendix, page cxxi.

8838. You have given us your opinion in writing upon several points connected with the Staff College; those points seem to be principally, as far as I understand your views, that you think that the knowledge of mathematics which is possessed by an officer when he enters the Staff College is not sufficient?—As a rule, not by any means, but quite the reverse.

Mathematical instruction.

8839. In order to obviate that objection, would you propose to raise the minimum of mathematics required when an officer enters?—I should question whether you could do it; the amount of mathematical knowledge required to obtain a commission is so extremely small that I doubt whether it could be done. I believe that the Council of Military Education has found it difficult to insist upon more than the first four books of Euclid, arithmetic, and algebra to the end of simple equations.

8840. Then you propose to make an acquaintance with a certain portion of mathematics compulsory upon officers during their course of study?—Yes, I think so.

8841. At present it is not so?—It is not. There is a very brief course which is compulsory, but it is so brief that it need not be considered.

8842. Will you state to us exactly what you would consider should be the first course, and which you would make compulsory?—The principal elements would be these, certain parts of algebra beyond simple equations, the doctrine of similar figures equivalent to the sixth book of Euclid, the mere elements of solid geometry, and sufficient of trigonometry for solving triangles and calculating heights and distances, the principal rules of mensuration, and the elements of the laws of force, what you might call the elements of natural philosophy. "Mechanics," is what it is called, but it is much more properly described by the name which I have given to it.

8843. Will you explain a little more fully to us in what manner you think that mathematics require protection, as you express it, in the examination?—I think that among officers, and particularly among officers whose scientific acquirements are slight, there is a very great tendency to say "so and so is of no use," and under the notion that practical work is more useful, to put it on one side; whereas I conceive that no officer can study such subjects as surveying and fortification, and artillery, unless he has somehow or other received a previous grounding at all events in the elements of mathematics.

8844. Then do you consider that to make that first course compulsory would be a sufficient protection for mathematics, or would you propose something more?—I should hesitate to propose more, but I may mention that Sir Howard Douglass (whose evidence I have referred to in my memorandum) would undoubtedly have considered that more was necessary. I think that looking at the acquirements of the Staff College officers, as they have been since I have noticed them, it would be unwise to insist upon more, but I think that every encouragement should be given to their acquiring more, particularly the branch of practical astronomy.

8845. In what way would your proposal that the subjects in which the officers were instructed should be taken as a whole be of advantage in respect of mathematics?—I do not think that it would be of any advantage in respect of mathematics simply. If I remember rightly the following case occurred very shortly after the Staff College was reorganized, namely, that one officer had passed in everything else and had failed in one subject, which I think was mathematics, and, in consequence, he was considered not to have passed through the Staff College, and it was felt to be a very great hardship. Now I think it very undesirable that a case which is looked upon as a hardship should not be avoided if possible. It is plain, too, that under the proposed rule a slight acquaintance with one subject would be compensated for by proficiency in other subjects.

8846. Then you would not require any minimum in each subject, but a minimum in the aggregate number of marks?—I think that that would be found to work better.

Exam

8847. With respect to the examinations, your opinion is that the examinations should be conducted by examiners independent of the professors?—Decidedly. The public examinations on which the final classification depends should be entirely in their hands. Or if not entirely, certainly very much more than is at present the case.

8848. Will you explain to us how the examinations are conducted with regard to your own subject, namely, mathematics?—Speaking with regard to the first or lower course of mathematics:—There is a college examination at the end of the first half year; this is conducted by the professor and has no influence on the public examination. At the end of the second half year there is a public examination; if an officer makes more than a certain minimum in it, he carries forward his marks and drops the subject; if he fail to make the minimum he is examined by the professor at the end of the third half year, and by the public examiner at the end of the fourth half year. Exactly the same is true of the advanced course; and of astronomy except that in astronomy the professor acts as public examiner. The examination in the instrumental work in astronomy depends upon fine weather,

and therefore perhaps it could not be done by a public examiner, but the paper work could certainly be done by him.

8849. How is the final examination conducted?—The two Christmas examinations are the final examinations.

8850. Are there any marks for the examinations at the end of the first and third terms?—No.

8851. Are there marks for the first Christmas examination?—Yes; as the arrangement now stands if a certain proportion of marks are obtained at the first Christmas examination, the marks are carried on, and the subject is dropped.

8852. Is the officer allowed to continue his mathematical studies under those circumstances, after having got the minimum number of marks?—He is allowed to do so, but he never does so; if he has passed in the lower course he might go on with the advanced course, and possibly would do so.

8853. Would he then get marks on the second Christmas examination?—Yes, if he did not take up more than seven subjects, but it would be otherwise if he did take up more than seven subjects. The first course of mathematics would count as one subject, and he would be allowed to take up the second course as a second subject, but if this made his number of subjects more than seven the marks would not count. What an officer would generally do who passed his lower course at the end of the first year, would be to take up the course of astronomy in the second year.

8854. In your own branch, as far as I understand your evidence, the examination, with the exception of astronomy, as regards the instrumental work, is conducted by independent examiners?—The whole of the examination in astronomy is in my hands.

8855. But the whole of the rest of the examination is conducted by independent examiners?—Yes.

8856. Then your observations in the paper which has been sent to us refer rather to the other subjects than to mathematics?—Yes.

8857. Do you see any objection to the marks at the first examination being carried on to the second?—I am afraid that it would not do to give all the marks at the final examination, the subjects would be numerous, but still I should think as a rule that a single examination at the end of the whole course would work better, but there would certainly have to be exceptions made.

8858. Looking at the matter broadly, it would appear that to test the efficiency of officers at the end of their study by an examination conducted by independent examiners would be desirable, and that that principle would be a sound one?—Yes, I think so; but there might be special exceptions made.

8859. Are there any other subjects besides the first course of mathematics which are dropped at the end of the first year?—Any language may be dropped, provided more than a certain minimum of marks has been made at the first Christmas examination, but so far as I am entitled to an opinion I should say that that is an extremely undesirable regulation. Even if an officer's knowledge of French or German be considerable, it is still an advantage to him to have an opportunity of practising conversation and composition under the professor to the very end of his course.

8860. In your paper you recommend that the marks should not be communicated to the officers; for what purpose is that?—Because when a professor is the examiner who assigns marks he is very subject to pressure. The tendency of an examiner, however impartial he may wish to be, is to make as good a case as he can for the persons whom he knows and is in daily contact with; and without supposing for one moment that any professor has ever consciously given wrong marks, still I think that it is very undesirable that the marks assigned should be made the subject of conversation at all.

8861. That relation between the professors and the pupils at the Staff College would appear to form an additional reason for having independent examiners?—Very much so. I may mention that in my own case I once marked some of my officers for their practical work in astronomy, and I talked over with them my marking, but I found that it was so extremely objectionable that I have never communicated since anything more than the bare marks assigned, for the purpose of avoiding the pressure which I have mentioned.

Rev. J. F. Twisden.
1 June 1869.
Staff College.

8862. Do you give marks for the notes taken in lectures?—Certainly not; to do so is most objectionable.

8863. Are there any observations which are not contained in the paper you have sent to us, which you would wish to make respecting your branch of the studies at the Staff College?—No. I think that I have given in that paper the heads of all that I have to say.

8864. (*Lord de Ros.*) You are of course aware that the military engineer requires a far more thorough and detailed education than can ever be obtained in two years at any college?—Yes. Mathematical instruction.

8865. Do you see no risk at the Staff College of forming an inferior engineer instead of a useful officer for the Quartermaster General's Department? If you attempted to form a staff officer in two years, and to teach him so much of the engineer's province, would you not be trenching on that province, and forming a bad engineer?—I do not know to what extent our course runs level with the course of instruction of engineers.

8866. If astronomy be regarded as a part of the military art, should we never have heard of officers failing on service for want of it?—I do not know whether you might, or might not, but I may mention that I believe that officers in Australia have been employed who were trained for that particular department at Sandhurst.

8867. Are you aware that Sir George Murray, who was probably the best Quartermaster General who ever distinguished himself in the British army, knew nothing whatever of astronomy?—All that I know of Sir George Murray is, that he was a student in the Senior department.

8868. Did he learn astronomy there?—I am not quite certain of the course as it then stood, but I think that astronomy was a part of the course.

8869. (*Sir D. A. Cameron.*) I think you have stated that the officers at the Staff College enter with a very insufficient knowledge of mathematics?—I think that in very many cases they do.

8870. And you think that it would not be desirable to raise the qualification for admission?—I think that the Council of Military Education have considered that practically they could not do it; but that would be a point for the Council of Military Education.

8871. Do you think that it could be done gradually? Has it not remained the same since the establishment of the Staff College?—No. The very elementary parts of mathematics have been struck out of our course since the formation of the Staff College; that is to say, the first four books of Euclid, arithmetic, and algebra to the end of simple equations; that is done because the Council consider that they can insist upon every officer who comes in knowing so much.

8872. Is it not the case that at present an officer may obtain very nearly his qualifying number of marks before he goes up for his final examination?—I have understood so; namely, that officers frequently go up with a perfect certainty that they cannot possibly fail; that they have made so many marks during the course of their two years study, and that the final examination is a matter of comparative indifference to them; so I have understood, and I believe it to be the case. Examinations.

8873. Do you disapprove of examinations by the professors at the college in every subject, as well as in your own?—Yes, meaning examinations for final competition, but there may be one or two exceptions. For instance, one clear exception would be in the instrumental work in astronomy, and there might be one or two others, but I think that the function of the

Rev. J. F. Twisden.

1 June 1869.

Staff College.

teacher and the function of the public examiner should be kept as distinct as possible.

8874. You appear to think a single examination at the end of the course preferable to the present periodical examinations by the professors; supposing that the latter were carried on by independent public examiners, would you then object to them?—Not so strongly, but I think that then there remains the objection that you prevent a man who can keep a large amount of knowledge together, and has it all well in order and can produce it, from having the advantage which he ought to have.

8875. (*Lieut. Col. Chesney.*) On the whole, do you see any objection to laying down the principle that there should be simply the two public examinations during the course, and that all these small examinations should be omitted?—I do not see any objection to that but quite the reverse. I understand, of course, by small examinations, those that occur from time to time during the course and are made to count as part of the final examination. The only two exceptions which I think might possibly be made, would be that chemical manipulation must be done in the laboratory, and therefore I do not see how the professor could be dispensed with there; and as regards the instrumental part of the examination in astronomy, I may mention that the instrumental part of the examination in astronomy, when I have a moderately large class, takes pretty well every fine day during the months of August and September; it necessarily extends over a very long time, and I think that it would have to be done by the professor.

8876. You would object, I presume, to the system of giving marks for notes taken down of lectures?—Most strongly. If there is anything which belongs to the work of a teacher, as distinguished from that of an examiner, it is looking into notes taken at lectures.

8877. Has it struck you that the amount of practical work which is done by the senior class is a very small proportion of the whole—I refer to the practical work which is done away from the college in the way of reconnoitring; has it ever struck you that it is very small as compared with the length of the college course?—That is one of those points which I should not be likely to notice, but I consider that it is, perhaps, comparatively small.

8878. You would not let the system of the first year's separate examination interfere with the instruction in mathematics. You would have the instruction carried on through the whole year or two years?—I think that if every officer were obliged to go through the lower course of mathematics, it might be desirable to allow that course, when passed, to be done with. I suppose that a perfect arrangement would be that every officer coming into the college should bring the lower course of mathematics with him; but I have always understood that that cannot be insisted on.

8879. Are you not aware that there is some practical difficulty in getting a man to work steadily for a whole year in a subject in order to come up for examination at the end of that year?—Yes; but I think that that would be met by college examinations, which would be reported upon, but which would not be counted in the final competition. I think that if such examinations were well conducted and reported on, and that if, where the work of an officer was ill done, it were severely commented upon by the proper authorities, a sufficient importance would be given to the examinations to induce officers to prepare for them. Besides there is nothing better, with a view to the final examination, than to have practice in examination work during the course of the year.

8880. Then possibly you would retain a part of the intermediate examinations, but would make them merely qualifying?—Yes. I may mention that my own practice in teaching has always been this,—before the final examination, for some six or eight weeks, I have discontinued lecturing, and have practised the officers in answering questions, and then have talked over their answers with them, in order to prepare them for the examination; and I think that that is a most useful part of the work.

8881. Do you see any difficulty as regards the Staff College in sending out men classed instead of placed; for instance, giving certificates of the 1st, 2d, and 3d class?—I see no objection to it, provided that there is a sufficient number of classes to discriminate. I think it would probably be better than assigning an exact number of marks to each officer. I ought to add that in that case it would not be necessary in a bad year to have a first class at all.

Mathe instruc

8882. (*Lord E. Cecil.*) Did you say that an officer might drop mathematics altogether if he passed a good entrance examination in mathematics?—No; I propose that at the end of the first half year he might drop that subject if he passed his examination.

8883. Do you think that there would be any advantage in allowing an officer to pass once for all in mathematics, on entrance into the college?—I should think that it would be better to let him have an opportunity of going rapidly through those subjects with the professor, before the examination, but if he had no taste for mathematics, I think that it would be better that he should pass, and have done with it, provided that he could do so.

8884. Would not it give him more time to devote to other studies?—Yes. I think that the higher branches of mathematics should be voluntary.

8885. Provided that an officer passed in the highest course of mathematics which you have named, you would be quite in favour of his dropping the study altogether during the time that he was at the college?—Yes.

Syster marks

8886. There is one portion of your paper which I do not quite understand, perhaps you may be able to throw some light on it. You state that the best way of preventing anything like a smattering of knowledge would be by striking off a proportion of marks from those gained upon each subject, and basing the classification on the remainder?—Yes.

8887. Can you explain at greater length what you refer to?—Perhaps I should explain a little more clearly what I intended to convey if I took it with regard to a single subject. Supposing that the lower course of mathematics counts for 400, and supposing that the rule is made that when the examiner has assigned his marks, the clerk should then strike off 100 from every sum total, the remainder would represent much more accurately the relative merit of the work sent in, and of course any one who fell below the 100 would simply count nothing. Every person who has conducted an examination knows that the first 100 marks in any subject are very easily obtained, and that the last 100 marks are obtained with very great difficulty. It is quite plain, if you strike off the first 100 marks, that if one student gets 150 marks and another gets 350, they will then stand in the relation of 50 to 250, and that will very much better represent their knowledge.

8888. Would not it depend very much upon the system on which the examiner examined?—I do not see that it would, because an examiner invariably assigns his marks to each individual question. The object of using marks, as I conceive, is that the examiner may confine his attention to each individual question, and estimate the value of it, and not form a sort of general idea of the whole, which he might otherwise do. I may mention that the suggestion was in use two or three years ago, and I believe is still acted upon, in the Indian Civil Service Examinations; they strike off, I forget whether a proportion, or a definite number of marks.

8889. You have taken the idea from the Indian Civil Service Examinations?—Not only from them but from seeing how very unfairly the present system works. For instance, the following case occurred at the last examination: two officers were passing an examination in the same subject, and in that subject 240 marks were required to be made; one officer made 235, and the other 266, the officer who made 235 simply dropped his marks,

and the other counted the whole 266, which was clearly a grievance of the most serious kind.

8890. You state in the last page of your remarks, "Any officer who cannot get through the Staff "College is clearly a man of inferior ability." Do you not think that that is rather a sweeping assertion?—No, I think not.

8891. Surely an officer might have practical military talent who perhaps might not be able to pass a good examination?—Such a case has never occurred in the last 11 years.

8892. That is from your knowledge of the Staff College, but I am talking of your knowledge of the profession generally?—Every officer is a man of education to begin with. The assertion might possibly require qualification if men were promoted from the ranks, and if you had men who were not men of education at all, but being men of education, I cannot conceive of any man with the most moderate ability not getting through the Staff College if he steadily applies himself for the two years.

8893. Does it not often happen that there are men who have not the smallest mathematical talent but who are very distinguished in other branches of military science?—But then there is no reason why an officer who is virtually ignorant of mathematics should not pass, and pass very high. You are not obliged to take up mathematics in the Staff College at present. The first four books of Euclid and simple equations are required, and I believe that they are required for getting a commission at all.

Rev. J. F. Twisden.
1 June 1869.
Staff College.

8894. (*Sir D. A. Cameron.*) Three are required?—The first three books of Euclid are required, not the first four.

8895. (*Rev. W. C. Lake.*) Do you mean that, as regards the entrance examination into the Staff College, any officer of very moderate abilities who applied himself to the subject would be able to pass it?—I have had no experience of the entrance examination, but I should think, judging from some of the officers who from time to time have got in, that the mere fact of passing into the Staff College does not prove very much as to an officer's abilities or acquirements.

The witness withdrew.

Captain E. M. Jones, 20th Regiment, examined.

Capt. E. M. Jones.
Staff College.

8896. (*Chairman.*) You were in the Prussian service for some time?—Yes; I was in my earlier career in the Prussian service.

8897. You passed through the Staff College?—Yes.

8898. In 1858?—Yes.

8899. You were also adjutant?—Yes; I was adjutant at the Staff College.

8900. And you are now the Professor of Military History?—Yes, at the Cadet College.

8901. I suppose that you are in constant communication with the Staff College?—Yes, I see a good deal of it.

8902. You have given us in writing your opinion upon certain improvements which you would suggest in the working of the college?—Yes, I ventured to do so.

8903. Are there any other points which are not contained in your written answers which you would like to bring before us?—I do not know that there is anything more than I have told you already. I have not gone much into things. I have given my answers very generally.

8904. First you say that it would be worth considering whether the selection should not be restricted to officers who had been doing duty with their regiments for a considerable period immediately before the examination. Do you think that the conditions which are now laid down under the regulations, namely, that an officer must have had five years' service, and if he is a subaltern must have passed his examination for his troop or company, are not sufficient?—I think that they are sufficient in the direction in which they go; but they do not seem to me in any way to meet the great objection which there is to cramming. The object of the suggestion which I make is to prevent officers having an advantage by cramming which others have not. For instance, officers abroad have not the same facilities which officers at home have.

8905. Do you think that an officer would get leave from his regiment in order to cram for an entrance examination into the Staff College?—They undoubtedly do so, though I believe that leave is never given when applied for *for that purpose*.

8906. And you think that that is an evil?—I think that it is a very great evil.

8907. On the same subject, touching the examination, you, I presume, from one of your answers, would raise the minimum standard in lower mathematics, so that an officer who had passed the examination at entrance need not study mathematics any more during his time at the college?—I did not propose to go into the exact standard which should be made, I did not consider that that came within my competency, but I think that it is desirable that there should be no occasion to study mathematics at the College, except for those officers who wish to pursue the higher branches of the study.

8908. That would involve including a greater knowledge of mathematics at entrance?—I do not know that it would require to be carried much further, but I confess that I think that the knowledge of lower mathematics which is now required before a man can pass out of the College might be required at entrance, and that the qualifying minimum should be very high.

8909. You think that every officer should have a good knowledge of riding before entering the Staff College?—Yes.

8910. You state that some knowledge of French should be required of candidates; but is it not the case that, at present, some knowledge is required of candidates either of French, German, or Hindustani?—Yes.

8911. Do you think that that knowledge is not sufficient; would you raise the minimum?—I would slightly. My intention in that answer was to point to the degree of knowledge, which I do not consider of any great consequence to a staff officer as bearing directly on his duties, but which is a part of the general education which anyone ought to have; that is to say, the ability to read with facility an easy French book.

8912. You recommend the institution of a Staff Corps: what do you mean by the term "Staff Corps"?—I mean something like the Indian Staff Corps: that a man should not be kept on the strength of a regiment, supposing that he has passed through the College with distinction, but that he should have then the option of being something like what is at present called unattached.

Institution of a Staff Corps.

8913. What work would you give him to do under those circumstances?—That is rather a broad question, but I cannot help thinking that a great deal of work might be found which is not found at present. For instance, I suppose that we look forward to certain changes in the Reserve Forces. I think that there is a very large field there which does not at present seem to be at all worked. In foreign countries, in France and in Prussia, staff officers are employed to a very great extent in ways in which they are not employed in England; there is a great deal of work connected with the War Office, and, without going more into particulars, I think that there are a variety of ways in which men might be usefully employed. I omitted to allude to India, where there is a large field.

8914. Then you think that as soon as a man had passed through the Staff College he should leave his

Capt. E. M. Jones.

1 June 1869.

Staff College.

regiment, and join some Staff Corps which should be formed for all staff purposes?—I should recommend that going into the Staff Corps should be optional with an officer, and that he might do so if he liked, but that it should not be compulsory. It seems to me that the great difficulty under which we are at present is to afford sufficient inducement for the best men in the army to go to the Staff College, and if entrance into a Staff Corps were made compulsory, I think that it would to a certain extent prevent good men, who have a chance, for instance, of purchasing in their regiments, getting on as well if they went into a Staff Corps as if they stayed in their regiment; therefore, I do not think that it would be well to compel them to go into a Staff Corps, and to sacrifice their prospects. I think that the great thing is to give every possible inducement to the best men to go to the Staff College.

8915. For instance, the knowledge derived at the Staff College would be exceedingly useful on service to a brigadier, and so on?—I think that in Prussia the great majority of the officers who are taken for regiments are those who have been through the Staff College. I do not think that every one is fitted for the post; I think that it requires very peculiar qualifications to enable a man to be a good commanding officer. If we ever come to, what has been suggested, the selection of officers for command of regiments, I think that the Staff College would give very valuable data as to what were the qualifications of an officer.

Examinations.

8916. Do you think that there are too many examinations at the Staff College?—No, I think not on the whole; but I speak with a good deal of diffidence with regard to the work which is now actually going on at the Staff College, because I have not been directly connected with it for about a year, and of course I do not accurately know the immediate details in those respects; but, as far as my experience in teaching goes, I think that the examinations are exceedingly valuable to the teachers themselves, as showing what the men whom they are teaching want.

8917. Do you think that the annual examinations should be carried out entirely independently of the professors, or that the professors should be associated in any way with the examiners?—I do not think that that is a very material point. I think that the opinions which professors are enabled to form of officers who are under their tuition are very valuable, and I think that some means ought to be found for getting their opinions; but at the same time I think that, as regards the principle, the examination on which a man's marks and the report upon him depend should, at all events mainly, be conducted by independent examiners.

8918. Do you think that the system of carrying on marks from preliminary examinations to the final examinations, is a good or a bad one?—I think that it is a very bad one.

8919. What objection have you to it?—I think that it tends to make the work superficial. A man works up a thing just for the moment, and he does not care to have got it thoroughly into his mind,—as long as he gets sufficient knowledge of it to pass for one particular examination, he then knows that he can drop it; and I think that it necessarily affects the study very much. A man should learn at the Staff College what he does learn in such a way as to last him for the remainder of his service.

Duties of the adjutant.

8920. (*Lord E. Cecil.*) You held the office of adjutant at the Staff College, did you not?—Yes.

8921. Do you think that the office of adjutant is necessary?—That is a very large question. I think that at times it is necessary. I think that the duties which fall upon the adjutant at the Staff College are duties which it is very difficult to describe in words; but I think that there is a field there for a man of tact, and especially under certain circumstances which do not arise every day, but which may arise any day, to do a great deal of good, or perhaps I should rather say to prevent a great deal of evil.

8922. What are his principal duties?—His duties, as one generally understands his duties, are simply to keep all the official correspondence and records of the place.

8923. Could not a clerk do that just as well?—He could do a great deal of it; but it has always been my principle, when dealing with officers, that anything of a confidential nature should not go through the hands of a clerk. Now things of that sort do occur at the Staff College, and I think that they ought not to be done by a clerk.

8924. In instances of that kind I presume that the commandant would write the necessary reports himself, would he not?—He certainly might do so; as far as the amount of work goes there is no reason why he should not do so; but I think that there are certain things which another man cannot do so well as the adjutant, from the manner in which he is brought into contact with the students.

8925. With the exceptions which are mentioned in St the Regulations, would you oblige everybody who is m qualified by examination for a staff appointment to go through the Staff College?—Am I to understand by your question that you refer to all staff appointments, including the personal staff?

8926. No; I merely speak of staff appointments with the definition which I think is applied to them in the Regulations, namely, the Adjutant General's and Quartermaster General's departments, and brigade majorships?—I think that every staff officer ought to have the qualifications of a man who had passed through the Staff College, but I do not think that it is absolutely necessary that those qualifications should be gained at the Staff College.

8927. Supposing, for instance, that the military education of the army generally was very much improved, and that something like the Prussian War Schools was instituted, would you not allow officers to qualify once and for all for the staff service?—I should be inclined, if it were possible, to have a system of qualification at the Staff College, without going out in honours, and without taking distinction in any particular subject, but a system of simply qualifying and showing oneself to be a competent officer in all points which a staff officer ought to know, and which I do not think could fairly come within the instruction given in a War School. I think that the teaching at the Staff College ought to be higher, and that anybody who was about to hold the responsible position of a staff officer ought to qualify himself for a superior appointment.

8928. You are in favour of an officer being allowed optionally to go into a Staff Corps. Do you not see some objections to a Staff Corps in keeping officers a long time away from their regiments?—If there were no other occupation for officers but what they could find in their regiments I should see very great objections. I think it a very great objection, and a very great pity, that a man should be idle for a long time. But if work can be found for him I do not see any great objection to it.

8929. I do not know whether you are at all conversant with foreign military opinion, but one has heard it stated that in France military opinion is rather against a Staff Corps. In your opinion is that so, or not?—I think that what you have stated is the case in France, but I think that there is a great deal of prejudice in France.

8930. What is the opinion in Prussia?—I have not any late experience of Prussia.

8931. As to inducements towards entering the college, do you not think that it would be a good thing to allow every officer who had passed through the Staff College to join his regiment, giving him some extra reward in the shape of increased pay where a staff appointment could not be found for him?—That is a difficult question to answer on the spot, but I must say that I think that there are very great objections to it, and I do not see the advantage of it. I should wish to be understood as speaking with extreme diffidence, because it is a point which I have not previously considered, but I think that it is

exceedingly objectionable to put an officer in a regiment, giving him certain distinct advantages over his brother officers while he is doing exactly the same duties.

8932. The advantage that would accrue from such an arrangement would be that an officer, by rejoining his regiment, would be in no danger of forgetting his regimental duty?—I think that if an officer goes to the college thoroughly well disciplined, and thoroughly conversant with his regimental work, it is not of so much consequence that he should be doing his regimental duty.

8933. You have no other form of reward to propose which might induce officers to compete for the college more readily?—I cannot say that I have given attention to the subject.

8934. It has been suggested that officers might pay something towards the expenses of their education at the Staff College considering the boon which they receive from the country; would you be in favour of that plan or not?—I am inclined to think that it would be a good thing so long as the payment was not so large as to debar those from coming whom otherwise it would be desirable to have.

8935. You look upon the boon as being very considerable?—I think that it is unquestionably very considerable.

8936. (*Lt. Col. Chesney.*) It has been stated that there is a great want in the college in as much as a number of officers go through it without being mounted during the whole, or a part of the time. Would you oblige every officer to keep a horse while he was there?—I think that every officer ought to be mounted; I will not exactly say that he ought to keep a horse, because I think that it is possible that cases might arise in which an officer might receive some assistance in providing himself with a horse; but I think that every officer ought to be mounted, and I think that all the reconnaissance work should be done mounted.

8937. Then the fact that officers are dismounted you so far consider a loss to the service?—I think so.

8938. The servant's allowance given to officers in lieu of their regimental servants is considered very inadequate, is it not?—It is inadequate.

8939. (*Sir D. A. Cameron.*) Is it not the case that the officers at the Staff College live at a greater expense than they would if they were with their regiments?—I do not think so.

8940. When they are with their regiments they have the advantage of a soldier servant?—In that respect they are at a greater expense at the Staff College; but otherwise I do not think that they are so; the messing is very much about the same I think as it is in the majority of regiments, but undoubtedly the expense of a servant is considerably more.

8941. If officers had to pay for admission to the Staff College, would it not shut out a great many poor officers, and perhaps very good officers?—I think that it might occasionally make it difficult for a poor officer to go through the college; but I think that that would not apply to many officers.

8942. What would be the advantage of making an officer pay for going to the Staff College?—I think that if an officer seeks to go through the college it is not unreasonable that he should show his willingness to make some sacrifice for it, and more particularly if the fact of having gone successfully through the college is to carry with it some advantages, which I think it decidedly ought to do. In my opinion an officer ought then to show himself ready to make some sacrifice.

8943. Is it not exceedingly difficult with two-thirds of the officers in the army to live with their regiments on their present pay?—It is so notorious that I think that officers of the army do not go into the army to support themselves.

8944. Is that not an argument against making them pay for going into the Staff College?—Yes; but I think that the advantages of making them pay something (not too much) are greater than the disadvantages.

8945. (*Mr. Parker.*) In selecting officers for the college you say that certain definite questions might be put to the commanding officer, and the field officers of the regiment. With whom would you place the responsibility of judging of the answers to those questions, so as to say whether or not they should entitle an officer to be admitted?—I fancy that the responsibility of the thing must eventually rest with the Commander-in-Chief.

8946. You contemplate that the officers of a regiment should not say merely whether the candidate in question was qualified or not; but that they should give a detailed report of what he was, and that the authorities at the college, or the Commander-in-Chief, should judge of that report?—I think that the questions should be definite on certain definite points, and that the answers should be definite on those points.

8947. But to gather the total effect of those definite answers, a discretion must be left with some one, and you think that it would be with the Commander-in-Chief?—I am not sure that I quite understand what the object of the question is.

8948. Under the present system the commanding officer reports either that a candidate is or is not fit for admission to the college, and therefore the responsibility rests with him?—Yes.

8949. But you propose that there should be definite questions, and definite answers in detail; and then the question arises who should judge of those answers, in order to say whether the candidate should, or should not, be admitted; does it not?—Yes. I suppose that it would rest with the Commander-in-Chief.

8950. Practically, who would be the person under the Commander-in-Chief to carry on that routine?—I hardly think that I can answer that question. I suppose that it would depend upon the Commander-in-Chief himself.

8951. You would have it transmitted to head quarters; you would not have it decided at the Staff College?—No, I think not.

8952. (*Lord de Ros.*) As regards the best means of arriving at the fact, whether an officer was fitted or not for admission to the Staff College, what should you say to having a regulation in the service that the half yearly regimental confidential reports should always contain the names of certain officers whom the commanding officer considered suited to go to the Staff College; and that no one should be recommended whose name had not appeared in such confidential reports for less than two times?—I think that one of the suggestions which I have made is very nearly that. I think that that is a very good plan.

8953. As regards a suggestion which has been made of putting staff officers into regiments as commanding officers, do you not think, considering the habits of our officers, which are so different from those in any foreign services, that it would be thought a most intolerable hardship to a major who had been in his regiment for 25 years to be told that he was to have a staff officer put in over his head on account of his mental qualifications. Put yourself into the position of a major?—I do not suppose that it is very satisfactory for an officer, under similar circumstances, to be purchased over.

8954. When he enters the army does not he bargain for that; is not it a part of the understanding upon which he enters the army that the system of purchase does exist? But would the injustice of the selection of a staff officer to be put over his head ever have been contemplated by him as a possibility?—I do not think that it would be fair to introduce a change of that kind *without some notice.*

8955. Do you think that there is any real analogy between the Prussian service and ours as to the habits and brotherhood of officers? For instance, at this moment we see in the papers every day accounts of regimental dinners where all the officers who have

Capt. E. M. Jones.
1 June 1869.
Staff College.

served in the regiment for years meet; could any such system as that be carried out in the Prussian service, or in any foreign service?—In the Prussian service I think that it could.

8956. Have you ever heard of its being done; that is to say, the officers of a regiment in Prussia within the last 40 years meeting together in a body and entering into that sort of convivial gathering?—I cannot say that I know an instance of it, but I know sufficient of the Prussian service to say that it is not improbable.

8957. Admitting that the mess system is a mainspring of our regimental system, a great source of harmony, and a preventive of quarrels, does not it present a great contrast to the frequent duelling and quarrelling which takes place among the officers in the German service?—The mess system exists in Prussia.

8958. Is the duelling system altered?—The duelling system exists in all the European armies, but during three years there was only duelling once in the regiment in which I served.

8959. Is not duelling a common practice among the officers in Prussia?—No, it is not common.

8960. Is it not common among the men?—No; I never knew an instance of it. Among the students in the German Universities it is, I believe, common to a degree, but then it is very different from duelling in England.

Instruction for the staff.

8961. As to general staff instruction common to all, are you not aware that the duties of Quartermaster General, Adjutant General, and Military Secretary are completely and essentially different?—I think that up to a certain point the instruction to prepare for all duties which may devolve upon a staff officer may be the same, beyond that certain point they branch off.

8962. To what extent do you consider that the duties of the Adjutant General and the Quartermaster General run parallel? I propose to you an army on service with the Adjutant General's department and the Quartermaster General's department; do the duties in any way run parallel?—I did not apprehend that that was the meaning which the question that I answered just now bore. I thought that your question bore more upon the instruction given at the college.

8963. Yes; but if the instruction given at the college is a preparation for service, which I apprehend it is intended to be, I wish to know in what respects you see any parallelism between the duties of the Quartermaster General, who has entirely to do with the geographical movements of the army, and the duties of the Adjutant General, who has entirely to do with the discipline of the army?—In the first place I do not think that any instruction can actually represent *all* the duties which officers may be called upon to perform on the staff; but I cannot help thinking that the object of a staff college is in a great measure to prepare an officer to undertake *any* duties which may fall upon him.

8964. Do you think that it would ever occur that the Adjutant General's staff should be converted into the Quartermaster General's staff?—I think that many officers have acted both upon the Adjutant General's staff and the Quartermaster General's staff.

8965. Are you aware that in the French service General Officers constantly take what are called "officiers d'ordonnance," that is to say, orderly officers, from the regiments to supplement the deficiencies of their Staff Corps officers?—That is new to me.

8966. (*Rev. W. C. Lake.*) Speaking generally, should you give it as your opinion that the Staff College has encouraged a good deal of the study of military art amongst officers in the army?—So far as I have the means of judging, I think that it has decidedly done something in that direction; I am not prepared to say how far, but to some extent I think that it unquestionably has done so.

Res Col

8967. It has awakened a certain amount of competition?—Yes.

8968. Do you also think that the officers who have been through the Staff College have themselves been materially benefited in their knowledge of military matters by doing so?—I should think that they unquestionably must have done so. It is a thing of which one can hardly speak except from one's own experience, and I can say for myself that I found the Staff College very valuable.

8969. You think that it has given officers a knowledge of their profession?—I think that it has given them a knowledge of their profession in certain things which they would not otherwise have had.

8970. By "certain things" you mean bearing upon their profession?—Bearing on their profession, and in other ways.

8970*a*. (*Chairman.*) Were you on the staff in India?—I was on the personal staff. I never held an appointment on the general staff. I repeatedly acted for officers of the general staff who were attached to the division where I was, but I never held an appointment regularly. At one time I acted as Assistant Adjutant General, and on two or three other occasions I acted as Assistant Quartermaster General.

The witness withdrew.

Capt. A. L. Walker.
Staff College.

Captain A. L. Walker, 99th Regiment, examined.

8971. (*Chairman.*) You have very recently left the Staff College?—Yes, at the end of last year.

8972. Did you pass through the whole course?—Yes.

8973. How did you pass out at the end?—Fourth, I think.

8974. What benefit do you think you derived from the two years during which you were in the Staff College, did you derive much?—Yes; I think that I had my attention directed to a great many military subjects, and parts of military education and science which I should never have heard of probably unless I had been there, at any rate I should never have got a knowledge of them.

Course of instruction.

8975. In what branches particularly do you think that you derived most advantage?—I went in myself chiefly for military subjects. I left mathematics entirely alone, and I devoted most of my attention to military history, what is called military administration (which includes a great many things), surveying and military drawing, and fortification. I paid most attention to those subjects, and it was in consequence of the attention which I paid to them that I got the marks which I did, because I only took up one extra subject.

8976. Did you take up any language?—I failed to pass in German; I passed in French, but I was three marks under what would pass in German.

8977. What knowledge of mathematics did you acquire?—I did not do any at all except a short course which one is obliged to do, and which is absolutely necessary to enable one to perform certain things in surveying and fortification.

8978. Did you find that sufficient to enable you to carry out the elementary subjects?—I fancy that I knew those particular things before quite sufficiently. I did not do any astronomy for instance, and it is absolutely necessary to do astronomy in order to take a high place. I beat one man who took up astronomy; but you are allowed to count astronomy for a place beyond any other extra subjects.

8979. Do you think that the system by which officers who pass through the Staff College are placed according to the results of the marks which they get in the examination is a good or a bad one?—I do not like it at all. I should do away with marks altogether. I should have a system of classes, putting officers in the published lists according to the seniority of their regiments, and then if they had passed in any particular subject I would have it put

after their names, if they had passed a good examination in French, or geology, or mathematics, or whatever extra subject it might be.

8980. Would you divide them into more than one class on passing out of the college?—I would have first and second classes in passing out for each subject. If an officer did not get into the second class, I should not have a third for him. I think that the first class should only include those who passed an excellent examination in those subjects.

8981. You would divide them into first and second classes?—Yes.

8982. As regards the examination, so far as we understand it, the marks which determine the place of an officer on passing out of the college are partly composed of marks given by professors?—Yes.

8983. Do you think that that is a good system?—I should think that the professors must have a great deal of trouble in giving them. I would rather see it done otherwise.

8984. Would you think it on the whole better that the examination should be conducted by independent examiners?—I think so.

8985. Was there sufficient instruction in riding at the College when you were there?—I do not think that there would ever be sufficient instruction to a man who could not ride if he went there at the age of 28 or 29, which is the average age. In the case of those men who could ride, I think that their time was very much interfered with by having to go to the school when their time could have been otherwise occupied.

8986. Is a good horseman obliged to go to the school?—Yes, during the whole time, and he practically loses two mornings every week whilst he is at the Staff College. That applies to the infantry men, the cavalry and artillery men do not do so.

8987. Would you say that a man who could not ride ought not to go to the college at all?—Hardly, as there are certain duties on the staff which do not require riding.

8988. Or at any rate you would say that a man should show a knowledge of riding beforehand?—A certain knowledge of riding. How much riding is necessary is a very open question. The riding consists in trotting round the school, and a little sword exercise. It is no fault of the riding master, but you cannot teach riding in the school unless it is a daily matter. You can go through a similar course of riding in three months by riding daily; but if it is spread over two years, lessons being given twice a week, as it is now, you may not have a full attendance of officers, and you cannot do those things which otherwise would be done; you cannot do a double ride for instance.

8989. Have you joined your regiment?—No, my regiment is now on its way, or about to be on its way from the Cape.

8990. Do you think that officers who have passed through the Staff College would be able, or would be glad to give assistance in some way as regimental instructors to officers in their own regiments in certain subjects for examination; or do you think that that would be unpopular?—I dare say that many of them would be very willing to do so. I do not think that it would be a very popular thing, and I think that it would be extremely difficult to carry out.

8991. (*Lord de Ros.*) How many years have you been in the army?—Twelve.

8992. (*Chairman.*) Assuming that the instruction to which I have referred was voluntary, do you think that it would make a difference?—If the men held a paid position in the regiment, I think that it would be extremely difficult; it might be done, but I think that they would be open to so much criticism afterwards, that few men would be able to fill the post; some would be able to do so, but they would afterwards be in a different relation to men to whom they had lectured two hours before.

8993. My question was based on the assumption that the examinations for promotion should be more strict than they now are in entirely military subjects, such as field fortification for example?—Certainly I should not care for such a post myself; I would sooner give the instruction voluntarily; some men would do it, but I certainly should prefer to have nothing for it; I do not believe that we are at all ready for it at present.

Capt. A. L. Walker.

1 June 1869.

Regimental instruction of officers.

8994. In what way do you mean?—I think that officers would laugh at the instruction; the feeling of the army is not yet sufficiently turned to those points of education to listen to these things; the lecturer would lecture sometimes to two or three people, or possibly to nobody at all; officers would not take sufficient interest in the matter.

8995. Do you mean that officers do not take interest in knowing how to fortify buildings, or to protect their men?—A great number do not. I fancy that many men would read it up, and would be inclined to criticise the opinion of the lecturer, and to say that their own reading would teach them a good deal more.

8996. (*Rev. W. C. Lake.*) Had you studied a good deal before the examination for the Staff College?—I had the advantage of having been a cadet at Sandhurst at the time when I went to the college and that made my work easy.

Staff College.

8997. Did you go to a crammer?—Yes; before going to the college, as I had such a very short time to prepare, and as they go very much into elementary subjects, you are obliged to do so, if you want to make sure of passing.

8998. In what position did you pass out of Sandhurst?—When I was there it was a perfectly different system from the present.

8999. I suppose that you found the knowledge which you had obtained at Sandhurst sufficient, without gaining very much more, to enable you to pass the entrance examination?—No, because there were so many years between that I was obliged to be brushed up again. Of course I found that the knowledge which I had gained at Sandhurst was of a great deal of use to me.

9000. You said that your study at the Staff College had induced you to turn your attention to a great many things, such as Military History?—Yes.

Course of instruction.

9001. Do you think that the same effect has been produced upon your brother officers who have been at the Staff College?—I certainly think so.

9002. Then you think that the Staff College tends to promote a good deal of study in the army generally?—I think so.

9003. With regard to mathematics, have you any opinion as to whether mathematics are too far studied at the Staff College or not?—I should let people study as much as they liked, but I would not give any advantage to people who studied mathematics over those who did not. I think it a great loss of time for a man of 30 years of age to be solving problems.

9004. But you think a certain course of elementary mathematics necessary?—Yes.

9005. You would be disposed to say, let the examination in mathematics be confined to the entrance examination, and let nothing be done in that subject afterwards?—Yes.

9006. Except in the case of officers who had a taste for mathematics?—Yes. Passing a sufficiently high examination for the topographical department now necessitates a previous knowledge of mathematics, and so it would in any different system.

9007. Is the amount of mathematics which is now insisted upon as a necessity felt to be rather a nuisance amongst the officers at the college?—I do not know that. You are not obliged to do any at all. I was not obliged to do any; but I do not see why those who do it should have any advantage over those who do not.

9008. (*Lord de Ros.*) With regard to foreign languages, you said that you passed in French and failed in German?—I just failed in passing in German.

Capt. A. L. Walker.

1 June 1869.

Staff College.

9009. Do you think it desirable to teach French or German at the Staff College?—No.

9010. Would you say that it would be sufficient that an officer should come to the Staff College with such a knowledge of French or German as would enable him to make his way as a traveller?—Yes, but you cannot have a *vivâ voce* examination. I think that it is undesirable to teach languages to officers who have no previous knowledge of them.

9011. You would require as part of the entrance examination a certain knowledge of the language in order to enable an officer to make his way abroad?—Certainly. He must make up his deficiency in speaking by very good writing.

9012. At the Staff College was there any theoretical instruction as to putting horses aboard a ship, and as to embarkation and disembarkation?—Yes, theoretical instruction.

9013. Was there any instruction as to the arrangements for conveying troops by railway?—None.

9014. As regards reconnaissance, from your experience in the army do not you consider that it is almost impossible to have a good system of reconnaissance except by mounted persons?—Quite so.

9015. Would you suggest that there should be a staff of horses expressly for the use of the students, or would you give them forage for their own horses?—I should certainly be inclined not to give them a staff of horses, I would let them provide their own. You might possibly increase their allowance in order to provide themselves with them.

9016. As regards the necessity of a knowledge of riding for a staff officer, do you not consider that when we recollect that in any foreign expedition the English army when it lands is almost immediately in the face of the enemy, and that the field officers and adjutants have not their horses carried for them, but are obliged to buy whatever they can get hold of on the spot, a little manége instruction could be of great use to them, as enabling them to train the raw horses which they acquired in this way, so as to make them available for riding with the troops?—I would not do away with the manége instruction, but it does not produce any advantage as carried on now.

9017. You object to the manner in which it is carried on, but not to the thing itself?—Yes.

9018. Would you make the actual question of being able to ride tolerably a point for examination at entrance?—I certainly think that that ought to be done, or else that the certificate ought to be more explicit as to riding.

Regimental instruction of officers.

9019. With regard to the question of instructing officers, you appear to be rather of opinion that it would be the blind leading the blind, that the instructors might be criticised, and that the officers might think that they knew better than their teachers. Have you not observed in your regimental service that officers who pretend to have a very high knowledge of drill are often criticised by others?—Yes; but they are not paid in any way for teaching drill to their brother officers, so the criticism loses its sting.

9020. You think that it would expose the officers to criticism?—Yes, at present. In the course of a few years it might be otherwise.

9021. Do you think that officers would be found to act as instructors of persons of their own age, and who were on the same footing as themselves, and whom they met on the same footing in every way?—I do not think that they would now. They pay very little attention to the musketry instructors. They do not pay much attention to the lectures.

9022. Do you not think that the higher and more mental instruction proposed to be given by the instructing officer would be very different from the more mechanical work, such as musketry instruction?—Musketry instruction is mechanical; but there is a certain amount of theory in connexion with musketry instruction which I do not think is listened to.

Staff College.

9023. (*Sir D. A. Cameron.*) You disapprove of the present system of marking?—I do.

9024. Is it not the case that the examiners in languages mark very differently, and that it is easier for an officer to get a number of marks in one language than in another?—Different examiners in languages mark differently. I think that some mark very low and that some mark very high.

9025. Is it easier to get marks in languages than it is in military subjects?—It depends upon what your previous knowledge of languages is.

9026. Is it not the case that some officers neglect military subjects for the sake of getting marks in languages?—I certainly think so.

9027. Is it not the case that unless an officer comes up very high in mathematics he has no chance of a high place in the final examination?—That is the case.

9028. With regard to the officers of the Staff College giving instruction in regiments, supposing that an officer's promotion were dependent upon his passing an examination in military subjects, would he not then be very happy to attend the lectures of the instructor?—If those examinations were carried out as they are put down in the Queen's Regulations, the officers would be very glad, I think, to receive such instruction.

9029. (*Dr. Butler.*) Is one of your objections to competition at the Staff College that it leads to overwork among the officers?—That certainly was not my objection, but I suppose that that is the reason why officers do overwork themselves.

9030. You would say that overwork is one feature of the officers in the Staff College?—I think that many of them certainly do overwork themselves.

9031. You think that their health seems to suffer, and that they appear to lose spring?—It is not an objection which I have made myself, but I believe that some officers certainly do overwork themselves there.

9032. Do you speak from your own observation of your own contemporaries?—Yes; I have been there with 45 officers, so that I have had a tolerably good chance of seeing them.

9033. And it struck you that a certain proportion of them were overworked?—Yes, and I can suppose no other reason than competition. I do not know what other reason they had. Some certainly ruined their health; two men who came with me, for instance, and so much so, that I think one has left the service and the other is going to do so; they have not done any active service since. I presume that competition made them work.

9034. (*Maj.-Gen. Eardley Wilmot.*) You have stated that it is necessary to take a high place in mathematics, in order to take a high place in coming out?—It is.

9035. Do you mean by that that a man can take a high place in mathematics and a low place in military subjects and can yet come out high?—Certainly.

9036. (*Lt.-Col. Chesney.*) Supposing the system of marks to be done away with, you would prefer a first and second class, as a matter of principle, to having a qualifying certificate?—I think that if a man passed very high he should be placed in the first class; that is the reason why I should have a first class.

9037. You would reserve the first class merely as a special distinction?—Yes.

9038. Would you besides that put a notification against the name of a man if he was specially distinguished in a single subject, say knowledge of a language for instance?—Certainly, as regards every extra subject which he took up besides the military subjects; if he passed a good examination in it I should notify it after his name in the list.

9039. You are aware that in the Indian army list if a man passes a high examination in one of the native languages it is always noted against his name for life?—Yes.

9040. Supposing that each officer at the Staff College was obliged to keep a horse during the whole time of his service, would it be unfair to ask the

commandant specially to report upon his riding qualifications?—I do not think so, but you would be obliged to give the commandant some opportunity of seeing him.

9041. (*Sir C. Russell.*) Did you go through the course of musketry instruction at Hythe?—No.

9042. When you spoke of the feeling which was entertained as respects the system of musketry, you alluded to the musketry instructors being rather looked upon with a want of respect?—I do not think that officers pay attention to their lectures.

9043. Do you attribute that to a want of knowledge in the instructor, or to an insufficiency of real interest in the subject in which he is called upon to instruct?—No fault of the instructors, probably, but want of interest in their hearers. It depends upon the men. Some men know as much as the instructor, and they lead others to think that they do also, who know nothing about it. Others think that they can read it up as well, and that it is not worth while to listen to the instructor. Generally officers, as cadets, do not work more than they can avoid.

9044. Do you think that that is owing to officers who have been for a considerable time in the service objecting year by year to be put through the A B C of the musketry instruction, whether they know it thoroughly or do not?—The longer an officer stops in the service the less inclined, I think, he is to listen to the musketry instruction.

9045. That is because he has been over and over again in each year through the same course?—Yes; it is so simple, and the officer knowledge of the subject already, and it leads the best men to be very apathetic when they hear a lecture.

9046. Supposing an officer of high attainments, say of the rank of captain, was appointed to a regiment to instruct in field fortification and practical military subjects, together with a modern language or something of that sort, do you think that he would be treated in exactly the same manner as the musketry instructor now is?—I think that he would at present.

9047. Can you explain why such a feeling does not exist towards the adjutant of every regiment?—The adjutant does not teach theory. Practical work is so very different from head work; people are always inclined to think that in the latter they know as much as their neighbours. I suppose that that is the only reason to which it can be put down.

9048. Taking that view, I suppose that you imagine that no system which could be devised for the instruction of officers of the army after they entered the service would improve the feeling?—I do not go so far as that; I think that one might be introduced with great advantage.

9049. You have evidently thought over the subject, have you any idea how it could be introduced?—I do not think that there is any better way than Sir Duncan Cameron suggested, namely, making the examinations for lieutenants and captains more real.

9050. Would you give them, beyond that, no aid to acquire the instruction, or how would you suggest that they should acquire the practical instruction?—If it was found necessary to give these men assistance in obtaining instruction, I think that it should be done; but the regular duties might be too much, and the commanding officer might make a fuss about it. I should ask colonels to co-operate. I do not think that we are at present quite ready to appoint these instructors, and to pay them.

9051. You have a decided opinion that it would not be worth the cost of appointing a captain instructor to every regiment?—I think that it would be so eventually, but not at present.

9052. (*Lord E. Cecil.*) Have you ever turned your attention to garrison instruction; do you think it possible that officers could go through a practical course of instruction at camps?—It would possibly be the best place to begin with paid instructors.

9053. You think that that plan would be more feasible than regimental instruction?—It would certainly be the best plan to commence with.

9054. (*Chairman.*) You have seen many officers who have been through the Staff College?—Yes.

9055. Is it the general feeling among the officers who leave the Staff College, that they have a fair chance of obtaining staff employment?—They know that they shall get it at some time or other. I do not fancy that they look very hopefully to it; they know that they must get it sooner or later.

9056. Is there any feeling of dissatisfaction against that state of things?—Yes; I think that it keeps officers from coming in; they have some sort of idea that they are not certain of employment. In one of the first paragraphs in the Queen's Regulations, under the head of "Staff," you will see that if a vacancy in the Staff occurs abroad the appointment is "in general" only to be given to an officer who has passed through the Staff College, but not always, although eligible in point of rank; but it appears to me that the appointment should always be given to an officer who has passed through the Staff College, if eligible.

9057. Do you think that a military secretary and an aide-de-camp should pass through the Staff College?—I think that every staff officer should do so.

9058. Is there any other way besides staff appointments in which you can suggest that advantages should be given to officers who had passed through the Staff College?—No.

9059. Do you think that it would be right to give an increase of pay to officers who had passed through the Staff College, or do you think that it would be considered invidious by other officers in the regiment?—I think that you might lighten their expenses in the Staff College, or that you might give them something when they came out, it does not matter which; but I do not advocate a regular increase of pay; it costs them a certain amount of money, there is no question of it.

9060. Have you your own servants?—We have private servants.

9061. (*Lord de Ros.*) Supposing that there were at the college pensioner servants, say one to every three officers, would not it answer better?—He could not look after horses as well.

9062. A cavalry pensioner would be perfectly competent to do so, would he not?—Perhaps he might. I think that that would be rather too much for him to do.

9063. (*Lord E. Cecil.*) Would not such a boon be very small?—I do not think that it would be quite sufficient to cover all one's expenses.

9064. Would not officers look to some remuneration or reward in the future rather than in the present?—I do not think that officers would care so much as to the money which they spent at the college, so long as their position was certain when they passed out of the college.

9065. (*Lt.-Col. Chesney.*) Are you aware that there has been an instance, very recently, of an officer leaving the Staff College to take up an aide-de-camp's appointment in Ireland?—In Dublin. I think that I did hear of it. I think that the present examination for aides-de-camp, if it was carried out strictly, should be a difficult one for aides-de-camp to pass. The examination is not carried out, as everybody knows, neither that examination nor any of the others.

9066. The examination outside the college you think is made too easy at present to be any serious check to officers going upon the personal staff?—Yes.

9067. (*Rev. W. C. Lake.*) With reference to a suggestion which has been made that the officers at the Staff College should contribute something towards the expenses of the college, your own opinion would be strongly adverse to it?—My opinion is certainly against it. It costs a man a certain amount of money to go through it now, taking the whole thing in one way and another.

9068. And you think that many officers would be deterred from going to the Staff College through being

Capt. A. L. Walker.
1 June 1869.
Staff College.

unable to pay the expense?—Yes. I do not see how a man can at present go through the Staff College under 100*l.* over his pay.

9069. (*Lord E. Cecil.*) You include the preparatory course of education?—Yes; I should think that very few got through with that amount; it is impossible for it to be done under that. It is a very difficult thing to show how the expenses are incurred.

9070. But under an improved system of education, cramming for entrance into the Staff College would not be necessary, would it?—It would in some subjects. I fancy that it would be necessary in the grammar of languages, and in arithmetic, and mathematics.

9071. Then you do not see your way to doing away with cramming?—No, if you have a competitive examination, you must always cram for a competitive examination. If you get 50 marks beyond your neighbour you get in, and you can do so by getting a smattering of geology, or a smattering of chemistry.

9072. Then do you think that cramming is one of the results of the competitive examination?—I should say that there is no doubt of it.

9073. (*Lt.-Col. Chesney.*) You are aware that officers have entered the Staff College direct from India, Burmah, and other very distant stations?—Yes, but that is rare now. In many instances they are trained in England before going abroad. A man of course may have opportunities out there to learn particular subjects.

9074. (*Maj.-Gen. Wilmot.*) In the case of cramming do you mean to say that they go to crammers?—If you go to a crammer it is a much easier process; you are directed to the thing in which you are weakest.

9075. You would not call it cramming if a man without the assistance of any crammer got up a subject which he had learnt before?—Hardly, but there is an advantage in going to a crammer.

9076. (*Lord E. Cecil.*) Is it fair, under such circumstances, to look upon cramming as one of the necessary parts of an officer's competitive examination?—An officer of course can get into the college without going to a crammer, but if you are in England it is the best thing for you to do.

9077. I understood you to say that a considerable part of the 100*l.* which was spent went in cramming?—Half of it probably would do so. I put 100*l.* as the very minimum of extra cost in passing through the college.

9078. (*Rev. W. C. Lake.*) The cramming which you are now speaking of you do not consider to have been an injurious intellectual process, do you, but merely a means of getting together knowledge which you had a good deal lost?—I do not think that it does one any particular harm; as a rule it is carried on for a very short time, only a month or two months, before going to college.

9079. Does it do any harm at all?—Yes, occasionally. There are two officers who came to the college with me who have certainly lost their health from over work.

9080. I am not speaking of it as bearing upon health, but as being a bad process for the mind altogether. It is sometimes objected to cramming that it does harm, and in some cases it does, but I apprehend not the cramming which you went through before going into the Staff College. What is your opinion upon that point?—It was the only way of getting that knowledge altogether.

9081. (*Lord de Ros.*) I suppose that the principal object of your going through the operation of cramming was to find out by the experience of the crammer whether you were competent to go up at the time?—Yes, and to pick up anything which one had forgotten. Some men have to pick up a great deal of fresh knowledge.

The witness withdrew.

Adjourned to Friday next, at 12 o'clock.

Friday, 4th June 1869.

PRESENT:

THE RIGHT HONOURABLE LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., in the Chair.

LORD EUSTACE CECIL, M.P.
GENERAL LORD DE ROS.
LORD NORTHBROOK.
LIEUT.-COL. SIR CHARLES RUSSELL, Bart. V.C.
LIEUT.-GEN. SIR D. A. CAMERON, K.C.B.
MAJOR-GENERAL EARDLEY WILMOT.
MAJOR-GENERAL HAYTHORNE.
C. S. PARKER, Esq., M.P.
LIEUT.-COL. CHESNEY.

Major G. D. Barker.
4 June 1869.
Staff College.

BREVET-MAJOR G. D. BARKER, 64th Regiment, examined.

9082. (*Chairman.*) You are Deputy Assistant Quartermaster-General at Portsmouth?—Yes.

9083. You passed out of the Staff College first on the list in December 1866?—Yes.

9084. And you were adjutant of your regiment for two years and a half, and interpreter for upwards of four years to three regiments in India?—Yes.

9085. Do you consider that you derived great advantage from the time which you passed at the Staff College?—I do.

9086. Have you any suggestions to offer to the Commission with regard to any alteration which you think desirable in that establishment as regards either the course of studies or any of the arrangements connected with it?—I consider that it might be an advantage if a little more attention was given to practical subjects,—for instance, eye sketching and reconnoitring,—than is the case at present; beyond that I do not know that I have any suggestion to make.

9087. You obtained an appointment in consequence of having passed through the Staff College?—Yes.

9088. And I gather that you entirely approve of the Staff College as an institution?—Quite so.

9089. (*Lord E. Cecil.*) Are there no alterations of any sort which you can suggest, which you think would be of benefit to the service, except those which you have mentioned?—I think that as regards the admission to the college some alteration might be made with advantage as respects the men who are admitted. I do not think that under the present system, in all cases, the men best fitted for the staff are admitted into the college.

9090. Upon what ground do you say that?—Partly from my own observation of the men who have been there, and partly from what I have heard in regiments of the opinion which is held by regimental officers regarding some of the men of their regiments who have gone to the Staff College, and have not been looked upon as the best regimental officers, who, I consider, are always the best officers for the staff.

9091. How would you propose to remedy that?—The only way which I can suggest is by making the certificate which is required from the commanding

officer rather more stringent and definite. There is now a certain vagueness about it, which enables a commanding officer to sign it in cases where he otherwise would not do so. I also think that a longer period of service should be required before officers are admitted into the college.

9092. What number of years after entering the army do you think should be the limit for competing for the Staff College?—I am inclined to fix it as high as 10 years, or almost double the number of years at present required.

9093. Would not that act rather badly by making the staff officers generally older in the higher ranks than they are at present, and is it not one of the first qualifications of a staff officer that he should be active and young?—Yes. As a rule an officer enters the army at about 17 or 18, and perhaps 10 years may be a little too high to fix as a limit. I should say that perhaps eight years would be better; adding the two years for the course at the college, this would enable an officer of from 10 to 12 years service to get a staff appointment; he would then be about the age of 30, which I think is a good age for an officer to commence his staff service.

9094. Would you alter the system of examination in any way?—It is difficult to see how it could be avoided, but limiting the competition to one officer of a battalion is, I think, sometimes prejudicial; and, as was the case in my own regiment, not allowing an officer to go from a regiment to the Staff College when two officers are already upon the staff is, I think, disadvantageous. A regiment may contain the best man in the army for the staff, but yet as long as two officers are holding staff appointments he cannot even compete for the college. It is not now pure competition in the whole army, for there are many who in this way are debarred from competing.

9095. Surely in the regiment itself, to supply those two vacancies, there must be a sort of competition before the commanding officer recommends an officer as fit to enter the Staff College?—Yes, if they happen to be all three together, and simultaneously thinking of becoming candidates; but for many reasons this will frequently not be the case.

9096. Have you any suggestion to offer as to the system of marks given for examinations at the college. Do you think that it is as perfect as it should be?—It is not quite perfect, but I have no particular suggestion to make upon it. I was very well content with the system while I was there.

9097 Do you think that the system of instruction at the Staff College in riding is good?—No; I think that it requires amendment.

9098. Would you require an entrance examination in riding?—I think that it would be very desirable. At present the certificate which is required from a commanding officer is worded "good, fair, or indifferent rider;" and, quite irrespective of whether he is good or indifferent, he is allowed to enter the college. The good and the indifferent riders enter the college as such, and probably leave the college much in the same way.

9099. As to the manner in which languages were taught, were you satisfied with it?—I was not quite satisfied with it.

9100. Do you not think that it is one of the first qualifications of a staff officer that he should be able to speak one foreign language well?—Certainly.

9101. Do you think that that is provided for at the Staff College?—I do not.

9102. What would you suggest as a reform in that study?—The chief thing which struck me was that there was not sufficient attention given to colloquial instruction in the languages.

9103. You would have the examinations more *vivâ voce* examinations than at present?—Yes.

9104. We have had some evidence with respect to the adjutant of the college. Do you think that there is any necessity for such an office?—I think that there is a necessity for an officer subordinate to the commandant; whether he is second in command or an adjutant is perhaps immaterial.

Major G. D. Barker.

4 June 1869.

Staff College.

9105. You think that there are sufficient duties in correspondence and discipline to employ such an officer?—Yes; since he also gives assistance to the commandant in the general superintendence of the institution.

9106. (*Lord Northbrook.*) Does your opinion of the certificate of the commanding officer, which is given to an officer who is admitted into the Staff College, imply that officers go to the College who are hardly fit for the staff?—Yes.

9107. Would you think that it would be a good thing to give the commandant of the Staff College a power to report, after a certain time, whether an officer is fitted for the Staff College or not?—Yes, I am quite of that opinion.

9108. Are you in favour of the system of competition by which officers pass out in the order of merit determined by what they have done at the Staff College?—I am individually in favour of it; but I have heard a great deal of discontent, and it is a question whether it might not be better to have a competition for classes, three or any number of classes, on leaving the college, instead of having individual comparison. I think that it would perhaps lead to less jealousy than the present system of individual competition.

9109. From your experience when you were at the college, did you know any cases in which the fact of there being competition induced men to study subjects for the sake of getting marks which really did them no good?—I should hardly go so far as that, but I think that it is an objection to the system of competition that an officer is perhaps liable to look more to what will give him marks than to what would be most for his benefit.

9110. Do you think that the system of examinations at present is good, or that the examinations should be entirely by independent examiners, and that no marks given by the professors in the course of study should be allowed to count?—I am in favour of the present system of giving marks by the professors. During the time that I was at the Staff College it generally gave satisfaction. I seldom heard of dissatisfaction.

9111. For instance, we have been told that in some cases a man at the Staff College would, in consequence of the number of marks which he had received in the preliminary examinations of one sort or another, have little or no inducement to study for the final examination, inasmuch as he would be certain of passing. Do you know of any case of that kind?—No, I have not known that. I think that the system has been altered since I left, but I am not aware to what extent.

9112. Do you think that sufficient inducements are held out to officers who pass through the Staff College with respect to giving them staff appointments, and, if not, do you think that any change might be made in the Regulations in order to employ such officers more?—I think that it would be a great advantage if officers were obliged to pass through the college before obtaining any staff appointment, including those on the personal staff, aides-de-camp and military secretaries.

9113. Do you think that the limit of rank is too stringent in the Regulations?—If the required term of previous service was increased, I should say that the limit of rank might be modified, that is to say, that a lieutenant of 10 years standing would be quite as good a staff officer as a captain of the same standing in the army.

9114. You would rather take service in the army than rank?—Yes.

Garrison and regimental instruction of officers.

9115. If the present requirement, as laid down in the Queen's Regulations, which requires an officer before he is qualified for promotion to the rank of captain to pass an examination in field fortification and reconnaissance, was strictly carried out, thereby necessitating more instruction to be given to officers for the purpose of passing that examination, have you ever thought how that instruction could best be given, whether by having an officer for each regiment as a captain instructor, with an increased rate of pay, or

Major G. D. Barker.

4 June 1869.

Garrison and regimental instruction of officers.

by having instructors at the camps, or by any other mode?—I think that at camps it would be better to have a school of instruction, as is the case at Aldershot; but there are many positions in which a regiment is liable to be situated where they would not have the benefit of a school, and where I think that such instruction might be given with great advantage by any officer who had passed through the Staff College. As a rule, where a school of instruction may be available, I should say that it would be preferable to giving the instruction regimentally.

9116. From your knowledge of the army do you think that the office of regimental instructor would be one which officers would like to hold, and that it would be well looked upon by the other officers of the regiment?—Quite so.

9117. You anticipate no difficulty in that respect from officers not liking to take that position?—Not at all.

9118. (*Sir Charles Russell.*) Do you think that the average number of men who pass through the Staff College would be capable of imparting such instruction as has been suggested by Lord Northbrook?—Yes, I should say so, but not all. The average would be capable of doing it.

9119. The average, but not the bulk?—Yes.

9120. By the average you, I suppose, mean half?—Yes, or perhaps more than that. I know some whom I should hardly like to recommend for such a post.

9121. Supposing that a modification was introduced into the certificate, you are not aware of anything in the instruction which is now given which would prevent the officers who passed through the Staff College from being so qualified?—No.

Staff College.

9122. (*Lt.-Col. Chesney.*) It has been suggested that either the certificate of a board of field officers, or separate certificates from each field officer, should be required to certify to the physical fitness and character of a candidate for the Staff College. Do you think that that would be an advantage as an addition to the commanding officer's certificate?—I think that there would be some objection to carrying that out. It would be difficult for the majors of a regiment to give a contrary opinion to that of their commanding officer in such a matter.

9123. Then would you rather incline to an independent board of field officers?—I should be more inclined to that.

9124. In such a case a staff officer might form one of the board?—Yes, I think so.

9125. You see no objection to that?—I see no objection to it.

9126. From what you have said are we to gather that you see no objection to an officer, if nominated for the personal staff, being obliged to go through the whole course, or a short course, at the Staff College; you think that it would not be unfair to require him to pass through the Staff College?—Not at all. I consider that the personal staff should be chosen, not merely with reference to times of peace, but with reference to actual service in the field, and that it is equally necessary that men on the personal staff should pass the Staff College as well as others, and that they should be prepared to assist in any of the duties of the staff when required.

9127. And you think that that would be a decided advantage to the service?—Yes.

9128. With regard to the instruction of officers in their regiments, if it took place at any time before the rank of captain would there not be an opportunity of almost every officer meeting with such instruction in some large garrison?—I hardly think so, because a regiment, as a rule, stays at a camp for one summer, or for a year, and it is only a limited number who can be spared at one time from their regimental duties. There is, I think, no certainty that all could have an opportunity of passing through a school; though it might be the exception where they had not an opportunity of doing so.

9129. Would it not be an advantage to the service generally if the Staff College certificate was recognized in India as well as out of it?—Decidedly, but I am of opinion that in the last few years it has been very much recognized. There is a paragraph in the Queen's Regulations which, I think, applies equally to command in India as to all other commands as regards the selection of Staff College graduates for the staff. It is, I think, a paragraph on the first page of the Staff section.

9130. (*Major-General Eardley Wilmot.*) With regard to riding, it does not appear that the intention of the certificate was to reject a man because he is a bad rider?—No, it appears not.

9131. In the case of a man being looked upon as an indifferent rider is more attention paid to his instruction than to those who are considered good or fair?—I imagine not.

9132. With regard to the certificate of the commanding officer, what do you think of a system by which a great number of very distinct and definite questions would be asked of the commanding officer, and by which there would be a printed form which he had to fill up?—I think that that would be a very good plan. Under the present system the commanding officer has to sign either to everything or to nothing, and he hesitates a long time before he will destroy an officer's prospects by refusing to sign the certificate.

9133. (*Sir Duncan Cameron.*) Do you think that the subjects of military administration and legislation are well taught at the college; is not a good deal of time lost in lecturing upon the details of the subjects?—Yes, I consider that time is lost.

9134. Some of the lectures might be printed, and circulated among the students, and read in their rooms?—Yes I think so, with great advantage, especially the lectures on military administration.

9135. I think that there are five subjects which every student at the Staff College is obliged to take up at the final examinations; but he is not obliged to get marks in each of those subjects; is there not some inconsistency in that rule?—Yes.

9136. He is only obliged to obtain the aggregate number in the five subjects, but not to get marks in each of the subjects; but he is obliged to take them all up at the examination?—The system has been to a certain extent altered since I was there; my impression is that formerly it was not so, but that a certain number of marks were necessary to be obtained in every subject before they were counted.

9137. Do you think that the aggregate number of marks, namely, 1,800, is sufficient for a qualification out of an aggregate of 3,900; it is not quite one-half?—It is not too high; I should be inclined rather to raise it than to lower it.

9138. (*Maj.-Gen. Haythorne.*) Are you satisfied with the entrance examination?—Yes, with the exception that I think that the minimum standard is fixed too low; for instance (although it has, I believe, never yet happened, owing to the number competing), an officer might procure entrance to the college by simply obtaining five-eighths of the marks in mathematics and one-third of the marks in some language, say Hindustani or German. He need take up no other subject whatever, and yet he would be qualified for admission to the college, and would obtain admission if among the first 15 on the list.

9139. Do you think it advisable to require a thorough knowledge of one European language in the entrance examination, so that it should not be carried on in the after course at the college?—Yes, I think that would be very advisable.

9140. (*Lord de Ros.*) As regards the expenses of the college, did you find any difference, one way or the other, from your regimental expenses; did you find that you were put to more expense or less expense during your residence at the college?—I was put to rather more expense, but to no very great extent.

9141. As regards providing a horse, did you feel that expense much?—Being a field officer, I had my own horse.

9142. As regards the allowance for servants, would you approve of having a certain number of selected pensioner servants who had served in the cavalry regiments attached to the college as grooms and servants, for instance, one to every three officers?—Yes; I think that it would be very desirable; at present that is one of the great expenses.

9143. Private servants are very difficult to get there, and are difficult to manage when they are there, are they not?—Yes.

9144. As regards foreign languages, I believe that you have stated that you do not think that they can be originally taught at the Staff College although they can be kept up; you could not commence French at the Staff College, could you?—The classes are so arranged that it can be commenced there, but it is very desirable that a man should go to the college well grounded in languages.

9145. Is there any instruction given at the college, either theoretical or otherwise, in the embarkation and disembarkation of troops?—Yes.

9146. Such as you have found an advantage at Portsmouth afterwards?—Yes.

9147. You found yourself prepared for it to a certain degree?—Yes.

9148. With regard to the movement of troops on railways, was any instruction given on that subject, namely, as to the quantity of carriages required, and the mode of getting cavalry, infantry, and artillery on to the railway; you have had to do that at Portsmouth, have you not?—Yes, and I have gone thoroughly into the subject; but I can hardly say whether the instruction was given at the college, or whether I acquired it since. I think that it is not part of the course.

9149. Would you reduce the mathematical instruction at the college to a less amount?—No. It is optional to take it up, and I do not consider the course too high.

9150. As to admission, you think that the commanding officer's certificate cannot always be quite depended upon. What should you say to having it a part of the half-yearly confidential reports from regiments (which confidential reports you are familiar with), that certain officers should be named in two successive reports before they should have any title to enter the Staff College, and that the inspecting officer should at his inspections, to a certain degree, examine those officers. Do you think that that would relieve the commanding officer of some of his responsibility, and ensure more certainty?—Yes; I think that it would be a very good plan to resort to.

9151. Do you not think that it would be very inconvenient to take a number of officers from a regiment; to strip a regiment, for instance, of several captains on foreign service?—Yes; that is one of the objections to our system.

9152. Of what use do you think that the Staff College education can be to a brigade major or an aide-de-camp; what duties which they perform would require any high amount of education beyond languages?—They might often be called upon to do things which are not exactly within their special province. I consider that any officer on the staff might, at any time, be required to reconnoitre and to send in a plan of reconnaissance, although that is a special duty of the Quartermaster-General's department.

9153. In the same way as any regimental officer might be called upon to do it?—Yes.

9154. Not more?—I think that the general would look more to his staff officers for it.

9155. How would he supply their places if he applied them to those extraneous purposes?—I was only speaking of short work; but as regards brigade majors I consider that all vacancies in the divisional staff should be filled by selection from among them, their posts being filled in turn by regimental officers who have passed through the college.

9156. As regards the duty of an aide-de-camp, I suppose that writing a good letter, and carrying a correct message, and riding tolerably well, and a certain amount of discretion and judgment, would be the principal qualifications for which you would look in him rather than any high science?—Yes.

9157. As regards the admission of officers to the college, in the case of an officer who has never had a pencil in his hand, is it not a very uphill business to instruct him in field drawing and reconnaissance?—Yes; I think that that ought to be one of the obligatory subjects at the entrance.

9158. As regards riding, do you not consider that the principal object should be to teach the officer the first handling of a horse, and the earliest elementary matters connected with it, inasmuch as when an adjutant of infantry, for instance, lands in a foreign country, he is obliged to provide himself with a country horse, and it would be an immense advantage to him to be able to train that horse to his own purposes?—Yes.

9159. More than trotting about a riding school?—I quite agree with you.

9160. (*Mr. Parker.*) If the personal staff should be required to pass through the Staff College, do you think that they should pass through the whole course?—I should recommend it.

9161. And do you think that their certificate should be made dependent upon competition?—Yes, I am of that opinion.

9162. If a power were given to the authorities of the college to dismiss any officer from the establishment on the ground of unfitness, do you think that practically it would be used; do you think that they would resort to such a measure after an officer had received a certificate of fitness from his regiment?—It would probably be only done in extreme cases.

9163. (*Lt.-Col. Chesney.*) Are you aware that officers at present occasionally fail at the probationary examination at the end of the first year?—I am aware that the power to dismiss officers, who so fail, exists, but I do not at the present moment recollect any such cases.

9164. You are aware that there is the power, and that it may be exercised occasionally?—Yes.

9165. (*Lord E. Cecil.*) Did you go to a crammer before you passed into the Staff College?—I was a candidate for entrance into the Staff College twice; on the first occasion I did go to a crammer for two months. On the second occasion, two years afterwards, I did not go to one but studied by myself.

9166. Do you think that that is a very general practice among candidates before they go up?—I think that it is.

9167. Would not one of the advantages of superior instruction to be given in camps or in regiments be that the necessity for going to crammers would be done away with?—Yes; to some extent.

9168. (*Maj.-Gen. Haythorne.*) It has been stated by an officer that it cost him nearly 100*l.* to go through the Staff College, including the preparation for it; did you find that the expense of an officer was greater there than in the regiment?—I have already answered the second part of the question, namely, that it was slightly more expensive; but the great increase of expense which was incurred in the case to which you allude must have been in the preliminary education before going to the college, probably the payment to a cramming school.

9169. And, as a rule, that is a general expense incurred by officers going into the Staff College?—As a rule I should say that it is by those at home.

The witness withdrew.

Lieut. E. Baring.

4 June 1869.

Staff College.

Lieutenant Evelyn Baring, Royal Artillery, examined.

9170. (*Chairman.*) You are a lieutenant in the Royal Artillery?—Yes.

9171. And you are at present at the Staff College?—Yes.

9172. You entered the Staff College second on the list in February 1868?—Yes.

9173. Are you satisfied with the general arrangements of the institution, as regards the instruction which you are receiving?—I think that it might be very much improved.

9174. Will you mention to us the respects in which you think that it might be improved?—In the first place I think that it would be a very good thing to do away with competition.

System of competition.

9175. On entrance?—No; not on entrance. I am merely talking of the system at the college. Officers do not like to compete against one another, and I do not think that there is sufficient reason for making them do so. It is certainly no practical test, and I do not think that it is any sure intellectual test. I think that men might be mentioned for honours in different subjects. When they had passed out it might be said that so and so had passed a very good examination in military history, or in any particular subject. I am further of opinion that in the event of the competitive system being continued at the college, officers should only be allowed to compete in the same subjects. At present each examiner takes a different relative standard of merit; it is thus impossible to compare one examination with another.

9176. Would you object even to a division into classes according to merit?—I have heard that suggested, but I hardly think that it would be a good thing. I think that it would be an invidious distinction.

9177. You would abolish competition altogether?—I think so. I would let the names be published to the army in the order of their seniority, and with notes to say what any particular man distinguished himself in.

Course of instruction.

9178. Is there any other suggestion which you have to make?—I think that the whole of the instruction might be made very much more practical.

9179. Will you explain that answer a little further?—I think that everything which does not bear in some way upon the actual duties of an officer in the field ought to be done away with. For instance, as regards mathematics, I think that the entrance examination is a guarantee that a man knows as much of mathematics as he is ever likely to want. I have with me the examination paper for mathematics; a great many of the questions are purely theoretical, and do not bear in the least degree upon any practical duties. Mathematics take a great deal of time and trouble, and when learnt, I do not think that they are of much use to a Staff officer. The study of that subject is certainly voluntary.

9180. If it is voluntary, and if there was no competition, of course you could have no objection to its introduction?—If it was entirely voluntary, and if there was no competition, and if officers had not to qualify for the topographical department by passing the higher course, I do not think that you would find an officer to do it. Out of my own lot there are only two officers doing it, namely, myself and another, and as far as I am concerned I should certainly not do it except that I want to qualify for the topographical department.

9181. For the topographical department you would consider that it would be necessary?—I do not exactly know what are the duties in the topographical department, but I should imagine that it is not necessary. The only part of higher mathematics having a direct bearing upon anything practical is that portion which relates to the scientific part of a very accurate survey. If such a survey was ever made I think that you would always have a trained staff of engineer officers to do it. It does not, I think, come under the duties of a staff officer.

9182. The marks obtained in this subject are allowed to count towards the final result in the present competitive examination?—Yes.

9183. And therefore there is a direct inducement to officers to devote a considerable portion of their time to it?—Yes; there is a stronger inducement in mathematics, because in mathematics we get 500 marks and in everything else 400 marks. Mathematics is more difficult; but the chief special inducement to do higher mathematics is that we cannot get recommended for the topographical department unless we do them. If you took that inducement away I think that you would not find any one to do them.

9184. Is that the only study which you would describe as being unpractical?—No. I think that geology might with advantage be entirely done away with, as well as a certain portion of chemistry. For instance, telegraphy, I think, ought either to be taught at the college, or else officers should be sent to Chatham to go through a course of it; but I look upon all the time spent in analysing compounds in the laboratory as wasted, that is to say, that a man's time might be more usefully employed.

9185. Is there any other subject upon which you wish to make any remark?—As regards military administration I do not think that nearly sufficient attention is given to that subject.

9186. Can you give us an idea as to the amount of attention which is given to military administration?—There is only an hour a week. There are two classes, the senior and the junior classes, and each of them receive one lecture a week of an hour.

9187. What kind of examination have you to pass in military administration?—We have to pass several examinations entirely upon the notes of these lectures. We pass three of those examinations each year, and at the end of the year we pass an examination which is set by the public examiner, and has not special reference to the lectures which we have received, but to military administration more generally.

9188. Does military administration include the commissariat department?—Yes; but as there is only one lecture a week of an hour we cannot go very much into it. For instance, railway transport is not touched upon, yet it is one of the most important subjects.

9189. Are you taught anything connected with the administration of the sick and the wounded in the train of an army?—Very little. For instance, last year the arrangements of the Prussians were just alluded to, but it is a very large subject, and it is quite impossible to teach it in one lecture a week for nine months in the year. The constant examinations in this subject I do not think are of much value. Officers cram up for an examination just a few hours before it comes on, and then forget all about it. I think that the system of writing essays which is pursued in military history might be very well adapted to military administration, and that it would give a more thorough knowledge than is obtained by the cramming which is now resorted to.

9190. I suppose that military administration is one of the most important subjects for a staff officer to be acquainted with?—I should think that it is the most important subject. I cannot fancy anything more important.

9191. Have you any other suggestion to make?—As regards making the study more practical, we do schemes for the defence of villages and houses and positions, but I do not think that we do nearly a sufficient number of them; we only do three of them, and they are not rapidly enough done. For instance, the other day I was told to defend myself against an attack which was to be made in six hours, and I had a whole month to do it in.

9192. Are you exercised in the points connected

with the entrenchment of an army in the field, such as was practised during the American war?—Yes; in those schemes which I speak of. Some sappers are attached to the Staff College, who show us how to throw up fieldworks, stockades, &c.

9193. Is the practical instruction which is given in those subjects really useful?—Yes, I think that those schemes for defence are excellent, but that there should be more of them.

9194. Are you exercised in outdoor work?—I have not done much of that; I only began it last February; it has been all artillery work. I think that it is very good of its kind, but there is very little of it. If mathematics, geology, and so on, were cut off, I think that a great deal more time might be devoted to the other subjects. For instance, in military topography the only thing which we have to do this half year is to make three eye sketches with a pencil and a ruler, without any instruments, and besides that we have to make a road joining two points at a certain distance apart. I think that there ought to be, instead of one road, half a dozen. All the printing and getting up of plans carefully is time thrown away, and instead of three eye sketches I think that fifteen or twenty might be done.

9195. There seems to be a pretty general opinion among the witnesses whom we have examined that a certain proportion of the officers who pass through the Staff College are persons who in certain respects are hardly qualified to prove efficient staff officers, even though they pass a good examination; do you coincide with that opinion?—Certainly.

9196. Various suggestions have been made in order to winnow the applicants for admission, such as a more stringent certificate to be required from the commanding officer, and that opportunities should be given after the officer has passed his examination, of testing his capacities as a practical staff officer, and that if his qualifications should prove unsatisfactory there should be facilities for returning him to his regiment. Have you any suggestion to make upon this head?—I have written out an answer upon that subject. The questions sent to me by Mr. Hozier were practically divided into three heads, first, the desirability of a Staff College; secondly, the system of admission to the college; and thirdly, the system of instruction pursued at the college. In reply to those questions which relate to the first and second heads I beg to offer the following remarks:—

1. I entertain a very strong opinion that the Staff College, imperfect though it be, is much better than no college at all. A large proportion of the officers of the army receive their commissions direct; they know nothing of their profession beyond the ordinary routine of military duties; not only is it not insisted on that they should obtain some theoretical knowledge of a soldier's duty, but, with the exception of the Staff College, scarcely any opportunity is afforded to them of gaining such knowledge should they be willing to do so. It is indeed often the custom to regard such knowledge as of little value. In answer to this, I can myself bear witness to the fact that during the recent war in America almost all the men who rose to distinction in the Federal army, either as generals or as staff officers, were well-educated men, most of whom had been through West Point, and who to sound practical experience added a considerable knowledge of the theory of their profession. That some knowledge beyond that gained by ordinary regimental duty is necessary to a staff officer scarcely, I think, admits of argument. Did no Staff College exist we should be forced to fall back upon the old system of selection for staff appointments. No less an authority than the Commander-in-Chief has stated that to select officers to command regiments would be almost impossible in the English army; the difficulty of selecting untried men to be staff officers would at least be as great as that of selecting officers to command regiments.

2. If then a Staff College is necessary, it becomes a question whether the present system of admission is the best possible. I regard this as the most difficult, and, at the same time, as the most important part of the whole question, for if a man when he enters the college already possesses the natural qualities which would render him a valuable staff officer, I have not the least doubt that he will be much improved by a course of study at the college; but if he does not possess those qualities, the best system which can be devised will never supply the want of them. The present system has one great merit; no suspicion of favouritism can be attached to it; a man is judged fairly by a certain standard, although that standard may be an imperfect one. On the other hand, it must be admitted that an officer may pass a good entrance examination; an excellent education may subsequently be given to him, but still there is no sufficient guarantee that he will not form an inefficient staff officer. I have been thrown on duty with a good many staff officers who have passed through the college, some very good, better I should say than the average of officers who would be employed under a system of selection; others, on the contrary, very bad. Since I have been at the college, I have been thrown intimately with about 50 officers destined for future staff employment. If I may presume to pass an opinion, I should say that about one third of these would make excellent staff officers, about one third mediocre, and about one third would from one cause or another be unlikely to form useful staff officers. Taking this view of the case, although the system cannot be called a perfect success, it cannot, on the other hand, be termed an absolute failure.

3. The question is, how can those who are admitted to be incompetent be excluded? If the Commission can devise a system by means of which this can be done they will undoubtedly have conferred a great boon on the service. I do not believe that any certificate will have the desired effect; means will always be found to evade it. My reason for saying so is that the certificate which is at present required most explicitly states that, in the opinion of the commanding officer, the officer about to compete possesses the qualities likely to form a good staff officer. If colonels can be found who will sign this certificate with reference to some of the officers who have passed through the college, I say that it is hopeless to think that a certificate can be framed so as to afford a check such as that which every one who has considered the subject deems necessary. In default of any better system, I should be inclined to think that it would be as well for the present to allow officers to enter the Staff College by competition, that is to say, under the existing system, and that it should be left to the commandant of the college to form his opinion, and to report confidentially on the probable practical worth of each individual officer. His estimate of each man would be independent of a purely intellectual test, and would probably be a correct one. What a staff officer wants is a large amount of common sense, and a fair amount of professional knowledge; on the latter he may be judged by an educational standard, and on the former, the commandant, after an acquaintance of two years, would be competent to report. Many might object to such reports being confidential; neither do I see any absolute reason why they should be so, but every officer when he comes to the college should fully understand that if the commandant thinks fit to report unfavourably of him, without alleging any particular act which would tend to disqualify him as a staff officer, he would have no ground for complaint. If it be urged that such a system would place an undue power in the hands of one man, who may of course err unintentionally in individual instances, I would answer that in taking untried men on trust it is unavoidable to have recourse to the opinion of those who are acquainted with them, and that it would be better to trust to the opinion of one man of known ability than to many who might take wholly different views of the qualifications necessary to form a good staff officer. The latter would be the case if the commanding officers of regiments were called on to

Lieut. E. Baring.

4 June 1869.

Staff College. Inducements to enter the College.

report more fully on each officer who presents himself for admission to the college.

4. It is often urged against the Staff College that the best men in the army do not offer themselves for competition, and that many of those who do so only wish to shirk their duty, or avoid going to an unpleasant station. Some few are doubtlessly actuated by some such motive, but I think they are in a decided minority. At the same time I freely admit that the Staff College is unpopular in the army, and that many of those who would be the best qualified to make efficient staff officers do not offer themselves for competition. This is certainly the case in my own regiment. There are, however, particular considerations on this point which apply to the artillery, and not to the rest of the army. The chief reason why so many good officers refrain from competing is, in my opinion, the uncertainty of the reward. As long as a chance remains that an officer can receive a staff appointment, either by interest or merit, without going through the college, many of the best officers will prefer to take their chance of getting an appointment by these means, rather than go through the two years' work at the Staff College. The fact that no officer can hope to get a staff appointment in time of peace unless he passes through the college is not even yet sufficiently recognized throughout the army. It is very desirable that it should be so; nothing would so much tend to improve the class of men who come to the college. Again, it is a very general opinion amongst officers of the army, that on service the system would be disregarded, and that staff officers would be appointed by selection, as was formerly the case. Now I think that even on service it should be distinctly understood that no officer who has not been through the college should be appointed to the staff unless he be considered by authority as decidedly superior to any Staff College man who may be available. In deciding the claims of two candidates equally fitted for an appointment in the field, I think that the preference should always be given to the Staff College man. Unless this be done, officers will always imagine that in the event of war their individual personal qualities will supersede any claim resting on Staff College education.

5. I would also suggest that officers for the personal staff of generals should be chosen from amongst Staff College men. I am aware that there are objections to this, and that it would meet with considerable opposition, but on the whole I think it would be a very good thing; it would certainly tend very much to improve the class of officers who offer themselves for competition. If thirty instead of fifteen officers yearly were allowed to enter the college, I see no reason why in a year or two general officers should not be able to choose as good and even better officers, to act on their personal staff, from those who have passed through the Staff College, than they can get at present by the system of selection from regiments. I think that to oblige the personal staff to pass through the College would be an excellent reform. I should like to refer to the evidence which was given in 1855 before a Committee of the House of Commons with regard to the personal staff. Sir George Wetherall and Sir Howard Douglas were both of opinion that some special education would be of the utmost use to an officer serving on the personal staff of a general.

9197. (*Mr. Parker.*) If you increased the number of officers who were sent to the Staff College in that way, do you think that each one could look as confidently to an appointment as at present?—I think so. If the personal staff were sent to the Staff College, it would very largely increase the number of appointments at the disposal of the Commander-in-Chief.

9198. You connect your plan of increasing the number in the College with your plan of including the personal staff?—Certainly; otherwise I do not see any object in increasing the number; fifteen officers a year are quite enough to supply the present staff of the army.

Qualifi of can

9199. If you laid on the commandant the responsibility of judging of the personal qualities of officers, would you assist him by certificates from the regiments?—Yes. These certificates might also be given, but I have little confidence in them. I have never heard but of three instances of officers being refused certificates.

9200. Do you think that if the proposal were adopted that instead of a general certificate there should be a system of detailed answers to questions it would get over that difficulty?—It might do so to some extent, but I have no confidence at all in certificates.

9201. (*Lord de Ros.*) You have stated that you have no confidence in personal certificates; but supposing that upon every half-yearly inspection of a regiment, in the confidential inspection report the names of certain officers were returned as suitable for the staff, and that when the inspecting officer made his inspection he questioned those officers, do you think that it would be a good thing?—I think that it would be an excellent thing. I do not think that the certificates should be done away with, but I think that the commandant should be called on to report fully on each officer. The commanding officer's certificate may possibly help the commandant in arriving at a fair conclusion.

9202. Are you aware that the confidential report has been a thing in existence in the army from all time?—Yes.

9203. And also that it is referred to constantly at the Horse Guards, with reference to the character of officers; for instance, upon courts-martial?—Yes. As regards the staff officers, I think that the confidential report on each individual should be very much more detailed than as regards officers who are not appointed to the staff.

App to th

9204. As regards the selection of the staff from regiments, are you aware of the great advantage which has always been found on service of being able to apply to a division, or a brigade, for an officer competent to act as quartermaster-general, and that after fair and reasonable trial of three or four weeks, or so, it has been the practice either to retain the officer on the staff, or to return him to his regiment, with a civil acknowledgement, without hurting his feelings, and at the same time avoiding incumbering yourself with an unfit officer for the staff?—That has been the practice.

9205. Do you see any objection to it? Is not there an advantage in being able to take an officer, and try him, and see whether he can do, and either to return him or to keep him?—I certainly think so; but I think that he ought to be chosen from amongst those who have passed through the Staff College.

9206. I am speaking of a period when you are on service; the practice has hitherto been to take an officer from his regiment and to try him, and if he is not fit to send him back, and if he is fit to keep him?—Certainly. I think that the first appointment of any officer after he leaves the Staff College should be probationary, and if he was not found to be a good officer that he should be sent back to his regiment.

Inst the

9207. You have very properly mentioned the necessity of a great distinction between preparation for a staff officer and preparation for an engineer. I apprehend that you mean by that that the staff officer would be sent to take a general view and notion of a position, and that then the engineer would come into play, the same as in the Torres Vedras Lines, on some occasions?—Certainly.

9208. But you do not see any reason for a staff officer being made into a half-bred engineer?—Certainly not. I think that some part of the instruction in fortification at the Staff College tends rather too much to the training of an engineer officer. For instance, a good deal of time is lost in drawing plans of permanent fortifications. If in practice such plans

had to be executed, they would be drawn by engineer and not by staff officers.

9209. You think that a staff officer should be able to take a view, and to report upon the general features, but that he should not go into details?—Yes.

9210. Would you be in favour of the system which was at one time proposed, of sending parties of officers to go round the foreign fortresses, in Belgium, for instance, and to make notes and reports upon those fortresses?—I think that it would be a very good thing to send officers abroad, but I would hardly send them to the fortresses. It would, I think, be an excellent thing to send officers to Bohemia or Italy, for example, and let them bring back reports and plans of what they saw.

9211. What would you say to sending out two or three officers to a neighbouring village, and make them give, in five or six hours, a rough sketch of what they would do to strengthen that village against an attack upon a particular side?—That is what I wish to advocate; that is done now; but instead of its being done in five or six hours, much more time is taken about it.

9212. Would you not also approve of its being done by successive parties of officers, who should make their reports of their views, and thus ascertaining who were in error and who were right. Would not that be a check upon it?—I think that it might be done, but I do not see any particular advantage in the plans being made separately.

9213. With regard to American officers, were not those comparisons made with men who had been attorneys, apothecaries, horse-dealers, schoolmasters, and men extremely unlikely to be suited to the situation?—I rather think that there were officers of the regular army who did not go through West Point, but I am not quite certain of that. There were a great many officers whom I used to meet out there who seemed to know well their regimental duty, but nothing more. The staff officers, on the contrary, were mostly men who had studied their profession.

9214. (*Maj. Gen. Haythorne.*) Do you recommend any change in the entrance examination; do you not think that a fair knowledge of one European language would be desirable?—I certainly think that it would be much better than a smattering of two or three languages.

9215. Do you not think that simple geometrical drawing ought to be previously acquired with the view of saving time afterwards?—Yes; but I think that almost all officers know it.

9216. But it is not required in the entrance examination?—It is not.

se. 9217. Do you find that there is a greater expense in living at the Staff College than with your regiment?—A little, but not very much. If an officer keeps a horse he is rather at a disadvantage; he gets neither a groom nor an allowance in lieu of one.

9218. Do you not think that every officer should keep a horse?—I think that every officer ought to be obliged to keep a horse.

9219. (*Sir Duncan Cameron.*) Would you approve of some cavalry pensioners being employed at the Staff College?—I think that it would be a very good thing. In fact, some way of giving grooms to officers cheap should, I think, be adopted.

9220. When you spoke of the topographical department, did you refer to the department which has its office in London?—Yes. When an officer goes to the Staff College he is told that if he passes an examination in higher mathematics he will be recommended for the topographical department.

9221. Are the duties of the officers who are employed in the topographical department of a nature which requires a very high knowledge of mathematics?—I do not know whether they are or not. I do not know what their duties are; but I imagine that a knowledge of the calculus, or of conic sections, is not absolutely necessary.

9222. It is hardly worth while giving instruction in the higher branches of mathematics for the purpose of qualifying officers for the topographical department?—I should think not. I do not know whether the knowledge has ever been found useful to anybody in the department; but I should think that it is quite useless.

Lieut. E. Baring.
4 June 1869.
Staff College.

9223. (*Lt.-Col. Chesney.*) If your proposal that every officer should actually keep and use a horse were made essentially a part of the college system, do you think that it might tend to cure the defect with which the college has been charged of turning out men not able to ride?—I think that it would do so to a small extent. There is a riding school at present, and I think that fewer complaints of bad riding would be heard if officers were required to go to the riding school every day at first, instead of extending the course over two years, as is the case at present; those who were good riders might be dismissed, and those who were bad riders might be kept on for the two years.

9224. At present it is the simple matter of expense which prevents a great number of officers keeping a horse?—Yes; it is entirely that. It must be a great inconvenience not to keep a horse.

Qualifications for admission.

9225. (*Sir Charles Russell.*) Do you think that it would be a check to the inefficient men to whom you have referred getting into the college if they were attached for a short time previously to admission to the college to the staffs at the camps, so as to test their power of riding, and their power of conveying a message intelligibly? My object would be to test whether a man had naturally that gift, which he could hardly acquire from being taught, namely, the power of conveying messages intelligibly during a field day, for instance?—When he came, who would have to say whether he was qualified or not?

9226. He would simply be attached to a division, and the general commanding the division or brigade would certify that having employed him on so many days he was a fair rider, and could convey messages intelligibly, and had no defect of eyesight; in fact testing him in those subjects which are at present supposed to be covered by the commanding officer's certificate?—I think that that would be a very good thing, if you were perfectly certain that the officers who report upon those who wish to enter the Staff College would be quite sure to state their opinions freely. When an officer comes, and asks his colonel for a certificate, he does not like to refuse him, and I imagine that it would be very much the same if an officer was attached, as you say, to a brigade or division. At present, if an officer cannot obtain a certificate, he is probably exceptionally inefficient.

9227. Would not the same difficulty apply to the commandant at the Staff College, if commanding officers generally, in such a responsible position, feel a difficulty in giving a veritable report of the officers?—I think hardly so much so, because the commandant would feel that it was his special duty to do this, and that he had no other duty.

9228. I presume that the general commanding the brigade, having tested in the way which he thought fit the capacity of the officer, should send up a confidential report stating under various heads what he found?—I think that that would not be at all a bad thing. If you can only get officers to report fairly and conscientiously on the capabilities of whoever is going to compete for the Staff College, that is all one wants; but it is a very difficult thing to do. From good nature, or from one cause or another, officers very often do not like to report unfavourably.

9229. Of course you are aware that a great many commanding officers have not really an opportunity of testing officers in the way which I propose?—No; but I think that every commanding officer really knows what each officer in his regiment is worth. I can hardly believe that some of the men who have come to the Staff College have not been known by their commanding officer to be men who would be likely to form inefficient staff officers. It is from that circumstance that I form my bad opinion of certificates. I have seen men who have come with

Lieut. E. Baring.

4 June 1869.

Staff College, College course.

certificates, and it is in some instances impossible to reconcile the certificate with the man.

9230. (*Lord Northbrook.*) Would you propose, in striking out certain subjects from the course, to make the course shorter, or to leave it as it is?—I think that it ought to remain as at present, namely, two years. When I first went to the Staff College I thought that it was rather too long, but I do not now think that it is.

9231. Have you any observations to make upon the present system of examination; do you think that there are too many examinations?—I think that there are far too many. I think they tend to make the knowledge acquired superficial, and that they encourage cramming rather than sound study.

9232. Do you think that the position of a man in passing out, or his certificate on passing out, if the change which you propose was adopted, should depend entirely upon an examination independent of the professors of the college? I mean that no marks given by the professors should be allowed to count as a part of the qualification in passing out?—I think that no marks at all should be given by the professors at the College. I think that as much as can be should be done by the public examiners.

9233. You think that the examination should be independent of the professors?—Yes.

9234. In respect of your own corps, are not many of the subjects which are taught at the Staff College subjects which a man must learn at Woolwich?—Certainly; that applies, for instance, to the course of artillery. I should strongly recommend, that instead of going through a course of artillery at the Staff College, where there are very few opportunities of learning it, every officer should be sent to Shoeburyness for about a month. It is impossible to learn anything about modern artillery without seeing the actual guns. I think that the time occupied in that way might be much more profitably employed at the College, and that after the officers had completed their course they should be sent to Shoeburyness for a month, and should also be attached for a month to a field battery.

9235. Do you think that men who had gone through the examinations for the artillery should be exempt from the Staff College?—No; I went through all those examinations, and I found that when I went to the Staff College there was a great deal that I did not know.

9236. (*Lord E. Cecil.*) I understood you to say that in some subjects the theory was better taught than the practice; do your remarks apply to pontooning and bridging?—I think that that is very well taught indeed.

9237. Practically as well as theoretically?—Yes; but there is not enough of it. If you cut out mathematics, geology, and chemistry, which are the subjects which more than anything require hard study, I think that you would have much more time to devote to those other subjects.

System of admission.

9238. Do you think that the officers of the army become candidates for the College too soon, and would you increase the length of service before they were allowed to compete as candidates?—That is rather a difficult question. They have now to be five years in the army before they enter the College. It is very difficult to get a man after he has been, say 10 years, in the army, to come back to his books again. Perhaps the time might be increased with advantage by a year or two, but not more than that.

9239. Would not that objection very much apply to five years as well as to ten? A man may lose all his knowledge in five years?—So he may, but I think that a man of 25 would be more likely to take up his books again than a man of 30. I had not done anything of the kind for 10 years when I went to the College, and I found it very irksome beginning to learn mathematics again.

9240. It has been suggested in one of the papers which have been sent to us that officers should be allowed before coming to the College to elect whether they would serve on the adjutant general's staff or on the quartermaster general's staff, and that having so elected an officer should be especially brought up for that branch of the staff; would you be in favour of that suggestion or not?—I have never thought of the subject at all; but at first sight it seems rather a good thing.

9241. You say in the paper which you have read to us that many of the best qualified officers in the army do not offer themselves?—Certainly.

9242. Supposing the military education of the army to be very much improved, would you allow officers generally to compete for staff appointments without going through the Staff College, that is to say, would you allow them to pass the final examination, and to compete with the students at the College, without going through it?—I do not see why an officer should be forced to go through the College if he can at once pass the final examination. Great care should, however, be taken that his standard of knowledge does actually come up to that of an officer who has been through the course of studies at the College. The papers published at the end of each year represent imperfectly the test to which an officer at the Staff College has been subjected. Many of the subjects, from their practical nature, cannot be embodied in a paper. Every officer then who passes direct for the staff, should be called on to show that his knowledge of these subjects is as great as if he had passed through the College. On the other hand, I think that if this were done, few officers would pass the examination. A few years ago officers were allowed to pass the final examination without going through the Staff College, but I believe that I am right in saying that only one did so.

9243. Would not such permission give some inducement to officers to prepare themselves for the staff without going through the College?—Certainly.

9244. Do you think that the subseqnent inducements for going to the Staff College are sufficient?—Hardly; because the certainty of getting anything is not sufficiently clearly understood in the army.

9245. (*Lord de Ros.*) With respect to the practical testing of the fitness of an officer to compete for the Staff College, supposing that it was part of the qualification that an officer should be named in two successive half-yearly confidential reports as fit for the Staff College, would it not be a great security that the inspecting officer should also call out that officer, and examine him in the handling of his troop or company, and give a real certificate, after examining him in the presence of the other officers, who would be able to judge whether the particular officer acquitted himself well, or not, in what he was called upon to do by the general officer?—You refer to drill?

9246. Yes?—I think that that would be a very good thing, but it would not be sufficient.

9247. Would it not show him to be a good regimental officer?—I have known many a man who is very good at drill, but who at the same time would not make a very good staff officer.

Ins the

9248. (*Chairman.*) Have you any suggestions to make with regard to the teaching of languages at the Staff College?—I think that at present there is not nearly sufficient attention given to them. At present there are 12 hours a week during which the professor of French attends, and nine hours a week during which the professor of German attends, who lives at a distance. It is very desirable to teach officers separately, because they are very differently advanced. I think that either languages should be taught very much more at the Staff College, or else hardly taught at all, and that officers should be sent abroad to learn a foreign language. Of course there is a good deal of difficulty in sending them abroad, because you must take care that it is not made an excuse for officers going abroad and learning nothing at all; but I think that some arrangement might be made to prevent that. In India officers get what they call a moonshee allowance, that is to say, if a man passes

his examination in Hindustani, he gets his expenses in learning paid according to the scale in which he passes. I believe that even fair examinations are very difficult, and that as much as 100*l.* is paid if an officer passes a very good examination. If officers were sent abroad, after passing the Staff College, and were made to give reports upon any subject which presented itself abroad, and then came home, and passed a very difficult examination, I think that it would be fair to compensate them for any expenses to which they had gone, and it would do away with the professors at the Staff College, and thus cost the country no more. A man may now pass a very fair examination, and yet be almost useless if sent to the Prussian or any other foreign army. At present the standard of knowledge in languages is not high.

Lieut. E. Baring.

4 June 1869.

Staff College.

The witness withdrew.

Brevet-Col. W. O. Lennox, C.B., V.C., Royal Engineers, examined.

Col. W. O. Lennox, C.B., V.C.

9249. (*Chairman.*) You are at present instructor in field fortification at the Royal Engineer Establishment, and you were formerly upon the quartermaster general's staff at Aldershot? When you were at Aldershot I believe that you superintended the classes which were established there?—I superintended the Survey Class till November 1865.

9250. For what period of time was that class in operation under your superintendence?—I was there for three and a half years, but I cannot quite say how long the classes were going on, and how many classes there were. I have not a record of the number of them.

9251. Will you describe the nature of the classes?—The officers once a month applied to join the class and they received instruction for one month; they were relieved from all duties, and they learned surveying (without theodolites); I afterwards got the time extended from one to two months; sometimes there were two officers, and sometimes there were as many as ten or twelve—I am speaking of a good many years ago.

9252. Do you remember how many officers passed through your hands?—No.

9253. Were there some dozens?—Yes; a great many more than that, I should think, during the whole time. Regular reports were sent up monthly to the Horse Guards, and the officers' work was sent up.

9254. Did you consider that two months was sufficient to enable them to acquire what you thought was requisite?—I think that two months was very fair.

9255. You thought that at the end of two months, with ordinary attention, an officer could become a practised field sketcher?—He would have sufficient knowledge of surveying to be able to go on and improve himself; he would know how to improve himself.

9256. Were the classes popular?—I think that it depended a great deal upon the commanding officers.

9257. Were the commanding officers at all jealous of their officers being detached?—No; but it threw heavier duty upon others. We had sometimes quietly to talk over the commanding officers.

9258. During the interval for which those officers were relieved from their regimental duties, did the officers apply themselves zealously to the studies on account of which they were relieved from duty?—Yes, as a rule, they decidedly did so.

9259. It was a genuine proceeding?—Yes. I will not say that there were not exceptions, but, as a general rule, I decidedly think that it was so.

9260. The instruction administered to these classes was solely in field sketching; it did not comprise any instruction in throwing up field works or entrenchments?—Only in surveying.

9261. I suppose that instruction in those branches might have been introduced pretty much on the same system?—Decidedly.

9262. Do you think that it would be advisable to attach a military instructor to the regiments in the service, for the purpose of teaching the rudiments of field fortification, &c.?—I think that it would be better to have officers at certain large stations to do it, who would not only teach surveying, but also what is popularly known as spade drill, and field-sketching and field-works, and who could assist officers in carrying on their education upon any points.

9263. In fact you would be glad to see the classes over which you presided at Aldershot extended in their operations, and established at various large stations?—Yes; but I think that the system might be improved. At Aldershot, although an engineer officer, I was on the staff, and not under the Commanding Royal Engineer. I think that if the instruction was to include engineering work it would be better that it should be carried on under the Commanding Royal Engineer.

9264. Of course if the idea was developed it would have to be systematised much more than was done at Aldershot?—Yes. I could not have done anything in field-works, for I had no tools or materials, they being in charge of the engineers.

9265. As you are connected with the Royal Engineer Establishment at Chatham, I will ask you whether you have any improvements to suggest in that establishment?—I think that the Royal Engineer Establishment might be much more utilized than it is, for the instruction of the army generally. Up to last year there were three depôt battalions at Chatham; I imagine that they were originally placed there because all the drafts for India were embarked at Gravesend, and all the time-expired men and invalids came to Gravesend; circumstances are now altered, and drafts embark at Portsmouth, and invalids land there; if there were regiments at Chatham, instead of depôt battalions, our instruction would be better, and we should also be able to instruct the army in many things which would be very useful in the field, namely, in sketching, in escalading, in siege and field works, and in many other things. This could be done if there were regiments instead of depôt battalions, or if the system were adopted which was in operation some eight or ten years ago, of having detachments from regiments sent down to Chatham to be instructed in siege or field works. I should like to pass as many regiments through the course as possible, or as many detachments from regiments as possible. I, myself, think that the plan of having regiments at Chatham would be the best. I should prefer Chatham not being a drill station at all; Aldershot and other garrisons should be drill stations, and regiments while as Chatham should be specially employed on siege and field works. I should like to see siege works carried on as the Prussians carry them on. We are for instance, very deficient in knowledge of the best disposition for guards of the trenches; in our service nothing of that sort is laid down, but in other services it is laid down. Our army has never any opportunity of learning their duties at sieges, &c.

Royal Engineer Establishment.

9266. (*Lt. Col. Chesney.*) With reference to the practical service which you have seen in the field, will you give us your opinion as to whether a candidate for the staff ought to have any training at Chatham as a part of his education for the staff?—I think that it would be very advisable. The more the services are thrown together, and see of each others' work, the more knowledge is gained by all parties.

9267. From your knowledge of Aldershot, you see no practical difficulty in establishing classes at all large stations for teaching officers, if the authorities were so inclined, so that both field sketching and field engineering might be taught, up to the point mentioned in the Queen's Regulations?—Just so.

Instruction of officers in the service.

9268. And I understand that you think that that could be much more effectively done by some sort of station or garrison schools than regimentally?—Yes,

Col. W. O. Lennox, C.B., V.C.

4 June 1869.

Instruction of officers in the service.

I decidedly think that that would be better, at present. I do not think that at present an instructor would have sufficient work among the officers of one regiment, until the desire for instruction became more extensive.

9269. (*Maj.-Gen. Wilmot.*) How would you meet the case of a regiment abroad? Would you in India form such stations as you speak of, as well as in England?—I have not thought of that point; but it would be certainly more difficult in India, on account of the weather and the heat. They are not in the habit of doing anything in the middle of the day. One might easily manage it, I fancy; but I have not thought of India or the colonies.

9270. Have you been in Canada?—No.

9271. You would like to see the same system in all places where the army was stationed, and not only in England?—Certainly.

9272. (*Sir D. A. Cameron.*) In your opinion how long would it take to put an officer through a useful course of instruction in all those subjects which you have suggested? Would you excuse him from all regimental duty during the time that he was under instruction?—Yes. I think that the officers want a little encouragement to do anything out of the way.

9273. How long do you think that it would take?—I think that two months would be enough for survey, and twelve months would be quite enough for a full course of useful subjects, including field works; but if we had a system of instruction carried on at large stations, I fancy that the generality of officers would gain quite sufficient information about field works and entrenchments, because their regiments would have thrown them up.

9274. (*Maj.-Gen. Eardley Wilmot.*) What arrangements would you make at Chatham for the instruction of officers and men in regiments, if possible?—I think that there are two ways of doing it at Chatham, either to have entire regiments, or else detachments from regiments, as was once the case under Sir Thomas Trowbridge. I should like to see a siege carried out every year, in which the infantry would take part as the covering party and guards of the trenches, and also as working parties throwing up batteries, parallels, &c. This would all be in connexion with the instruction of our own men in siege works, in sapping and mining. By that means I think that three regiments a year, if not six, could be instructed in field and siege works. It would be hard work, but I think that we might even have two sieges a year at Chatham; it would enable a greater number of regiments to be passed through a course. If the army is to be instructed in siege and field works at Chatham, it would be advisable to have an Engineer general in command of that district, as he would naturally take more interest in such works than an infantry general.

9275. (*Sir D. A. Cameron.*) Do you think that it would be advisable to compel every officer of the army to go through a course of instruction in field sketching, and field fortification and bridging, and those subjects?—No; but the regiments, I think, should be ordered on working party for siege and field works as a matter of duty.

9276. But you would make the instruction to officers voluntary?—Yes; I would make voluntary anything (survey, for instance,) which was not done as a part of the regimental instruction.

9277. (*Maj.-Gen. Haythorne.*) Do you see any reason why there should not be a Staff College established in India, in which all officers should go through a modified course before receiving a staff appointment in India?—I do not think that a Staff College is required; I think that all officers might be instructed without it.

9278. Do you mean in India, or generally?—Generally.

9279. Then you think that the Staff College is of no use?—I do not think that it is necessary. A great deal of the knowledge required by a staff officer might, I imagine, be gained by the officer himself, and tested by examinations. I have not been at the Staff College myself, so I do not know exactly what is taught there.

9280. Do you see any other objection to the establishment of a Staff College in India; is there any difficulty in point of climate?—There would, I think, be no difficulty in carrying on instruction for the staff. The question is whether you are to congregate a large number of officers together to gain it, or whether it is to be gained by themselves.

9281. There is no reason why a course of thorough instruction in subjects in which officers have to qualify should not be given in India in the cold season, or are there places where it could be done all the year round?—I do not think there is the slightest reason against it. I was only in India for two years, and I found no period at which I could not go out during the daytime. I was for five years in Ceylon, so that I have been for a fair time in a hot climate.

9282. (*Lord de Ros.*) You have alluded to the question of officers educating themselves. I think that you dwell a good deal upon the principle of an officer instructing himself, rather than making him too much of a mere schoolboy?—Yes, if there is an instructing officer who can assist him, and can point out where he can get any information he requires, and can tell him what books are the best; I think that it is desirable that an officer should be able to avail himself of such assistance.

9283. It has been proposed to have in each regiment a captain attached as a sort of general instructor. From your knowledge of the service, are you not of opinion that there would be very great difficulty in getting the officers to accept such a person as that? Would there not be a distrust of him, would he not be criticised, and would it not be considered that it was the blind leading the blind? Would you not rather prefer instructional establishments at the principal stations, consisting of two or three officers, rather than having it done regimentally?—I should prefer station instruction to regimental instruction.

9284. You probably think that there would be a difficulty from the officer's familiarity with his comrades at the mess, and his possible inequality to them at drill and in the field. Although he might be a very good and clever man, he might possibly be inferior in many points, and would therefore lose the advantage of those points in which his instruction would be effectual. Do you think that it would be possible to have in the regiments a captain attached as a regimental instructor? Would it be possible to give him sufficient influence to render his instruction of sufficient effect, or would it be better to have instructing establishments at stations?—I think that it would be better to have station instructing establishments.

9285. Would you not keep up the distinction which now exists between the staff and the engineers? Do you consider that the two should be mixed together. Do you not think that you might have a very bad engineer, although you might have a very good staff officer, and *vice versâ*? Do you think that within two years at the Staff College you could train a staff officer so as to be both a staff officer and an engineer?—No. Two years at the Staff College would not make an officer into an engineer.

9286. As regards the proposed stations for instruction, there would of course be some exceptional parts of the world where you could not establish them; but if you had them in most of the great stations, would it not be reasonable to expect that the army would be innoculated with this system?—It might reasonably be expected to be so.

9287. As regards an officer who is taken to be instructed in field surveying, would you not have some test applied to him in the first instance as to whether he had an aptitude for it? Would you take any officer at random to instruct him in surveying?—I would take any officer.

9288. Might you not throw away a great deal

of time in instructing an officer who had no aptitude for looking at the country generally?—It would only be a portion of the time which was wasted; one officer out of a class, perhaps.

9289. Would not the proportion be rather large of those officers who had not an aptitude for it?—I do not think that people who had no aptitude would apply for it.

9290. As regards the siege works which you propose to be undertaken, I suppose that you think that it would be of very great value to introduce more communication between the line and the engineers in regard to siege works?—Yes; it would make them understand each other. Our men on service have to direct working parties. At Chatham at present they are simply employed in throwing up works themselves; as each of our men is supposed to be able to direct, it would be advisable that they should have opportunities of doing so.

9291. With reference to the improvements in gunnery, and particularly as regards guns in fortresses, I suppose that that matter is more than ever important? I suppose that the trench works are now more than ever difficult?—Yes; you decidedly want entrenchments which must be thrown up rapidly. I should like frequently to get parties of infantry at Chatham to see how quickly they can get cover; one of our men has got cover in five minutes. I can get cover for a single rank of infantry in a quarter of an hour. With our own men, for a single rank, we got cover in five minutes, and for a double rank in eleven minutes, and we got a perfect trench under the hour. Infantry should be practised at obtaining cover.

9292. Must not the parallels in future be more sunk in the earth against these heavy guns?—Yes; and the parapets of batteries must be thicker.

9293. For that reason you would wish to have more communication between the engineers and the line?—Yes.

Col. W. O. Lennox, C.B., V.C.

4 June 1869.

9294. (*Mr. Parker.*) Do you think that practically any officers would by self-instruction qualify themselves as highly as the Staff College now qualifies them for the staff?—I think that they could qualify themselves to the extent which is necessary.

Instruction of officers in the service.

9295. If, for instance, they were to be examined together with officers who had been in the Staff College, do you think that any of them would stand as well as those who had gone through the course at the college?—I presume not.

9296. They would not have had the same opportunities of studying these subjects?—I do not think that a staff officer need be a good mathematician. I think that the points which are necessary the officers could learn quite sufficiently by themselves, with assistance, without going to a Staff College to acquire them. It does not require an extraordinary mathematical knowledge to make a staff officer.

9297. Do you think that it is necessary to carry mathematics for a staff officer to the calculus and conic sections?—I do not think that it is necessary for a staff officer. I think that it would be a very great advantage if officers of all branches of the service were allowed to come to Chatham to learn things there, and to see what was going on. Officers are allowed and are encouraged to go down to Shoeburyness, and to see all the experiments; but there is no encouragement for officers to come to Chatham.

9298. The staff and the appliances at Chatham would be sufficient to do a good deal more work?—There might be a little extra staff required, but very little.

9299. The extra expense would not be considerable?—It would, I think, be very little.

The witness withdrew.

Major-General Sir E. C. Warde, K.C.B., Royal Artillery, examined.

Maj.-Gen. Sir E. C. Warde, K.C.B.

9300. (*Chairman.*) You are now, I believe, in command of the Woolwich District?—Yes.

of

9301. The young artillery officers after they have left the Academy at Woolwich are for some time under your observation?—Yes, for six months.

lery

9302. Will you have the kindness to explain to the Commission the nature of the instruction which they receive, and your general impression with respect to it?—They go through a course of instruction in the Repository, which includes all artillery machines and gun drills of every description; they attend lectures on military law and on other subjects under the direction of the Instructor in Military Studies, Colonel Young, and during the other periods of the day, when they are not thus engaged, they are instructed in their military duties as officers in whatever branch of the service they may be for the time attached, either mounted or dismounted.

9303. Do you approve of the system?—I think that it is an admirable one; it is really reverting to the old system. Officers have been in the habit for some twelve years past of joining wherever their particular battery was stationed, and it might probably happen that a young man on joining found his battery at Hull, or at any other out of the way place, where there was but one battery, and where it was impossible that he could get any professional instruction, and the result has been that officers have sometimes been for years in the service and have learnt next to nothing.

9304. Have you any suggestions to make as to any improvements which could be introduced into the system of the artillery classes during these six months? For instance, do you think that six months is the best period?—I should myself very much prefer its being extended to 12 months. I think that six months is quite the minimum.

9305. Would there be any regimental objections to extending it to 12 months?—There would only be this difficulty, that possibly the services of those officers might be required with their batteries elsewhere, but I do not think that that difficulty ever existed in olden time. There is another very material object gained by these men joining at head quarters, and remaining there for some time, namely, that they get some little notion of military discipline, which otherwise they would not have the means of learning. They join the Academy now at such an age that they cannot get the education which they used to do in olden time, when they came younger; and we find that when they join, as they now do sometimes at the age of 21 or 22, it is very difficult to instil military discipline into their minds; they come with preconceived ideas, and they do not really know what military discipline means.

9306. (*Lord de Ros.*) As regards the period of their entrance, do you see any difficulty in limiting it to an earlier age, and not allowing them to join the service after 19, for instance?—That would be the best arrangement which could possibly be made.

Royal Military Academy.

9307. What age would you name for entrance to the Academy?—From 15 to 17. I certainly would not extend it beyond that. The worst thing, on every account, which has ever been done for the ordnance corps has been increasing the ages of the lads joining. If you get a boy of 14 or 15 you can teach him anything; he is a boy, and he feels that he is there for the purposes of instruction; but if they are men of 18, or 19, or 20, as they sometimes are, it is a difficult thing to instruct them as boys.

9308. If you reduced the age you would reduce the qualification?—Yes, that would be an immense advantage.

9309. In that case would not a lad be better taught in that which he now brings?—Yes. There is one evil, and I think that it cannot be otherwise as long as the system of competitive examination lasts. Before that system was introduced young lads who

Maj.-Gen Sir E. C. Warde, K.C.B.

4 June 1869.

Royal Military Academy.

it was known were to come to the Academy received what is considered a liberal and a general education for an English gentleman. They went to a private or public school, and they learnt classics, history, geography, and languages, and every branch of instruction; but now the moment that it is known that a young man is to join the ordnance corps or the Academy at Woolwich he takes up five subjects. They look for those subjects in which they think that they can get the greatest number of marks, and they work them up, to the total neglect of every other branch of education. We have had instances of young men joining the regiment who knew no more of history than the child unborn, and when they meet other people in after life in general society they meet them at a very great disadvantage, and I think that that is a very serious thing.

9310. What means would you propose of obviating that objection?—I would have the examination general. They go chiefly into mathematics before they enter the Academy, and still more so afterwards, to an extent that is of no use to an officer in his profession, and the result of officers being obliged to give so much time to the high mathematics is that they neglect other subjects which would be of far more use in society and in their profession also.

9311. You would, I suppose, think that a more general and liberal education would be less likely to injure the health by over-study of abstract science?—Yes; and it would do away with those places which are called cramming schools.

9312. Would you see any objection to such a system?—None whatever. I would give a boy an advantage who had passed in the highest position in all those points of education which it is generally understood that he should know.

9313. Would you include the classics?—Yes.

9314. Both Greek and Latin?—Yes. There are very many reasons why that knowledge opens a man's mind, and enables him to read, and gives him information upon Roman and other history which otherwise he would know nothing about.

9315. You think that that classical training has the effect of turning his mind afterwards in a desirable direction?—Certainly.

9316. (*Sir D. A. Cameron.*) Would you abolish the system of competition altogether for admission into the Academy?—Yes.

9317. Then upon what principle would you admit young men into the Academy?—I would have a qualifying examination.

9318. Whom would you nominate as candidates; would it not be a matter of interest altogether?—It must be so to a certain extent.

9319. Was not it the case formerly that the cadets at the Academy were the sons of officers of the artillery and the engineers, or the greater proportion of them?—Certainly not.

9320. Do you think that the cadets at the Academy at present, make worse officers than they did formerly?—Most undoubtedly they do. I do not mean to say that their attainments are not as high or higher, but I think that they have a want of that military discipline which soldiers require, and I think that in endeavouring to obtain a higher degree of mental proficiency there is a loss of military discipline; they do not understand it. If a lad gets an order he questions it, and cavils at it, and turns it in his mind as to whether it is right; formerly such a thing as questioning an order never entered a man's head. If they join the service with those ideas they can never each discipline if they do not know it themselves.

9321. Do you not think that there might be some difficulty in reverting to the old system of nomination?—Possibly; but I have not sufficiently considered that subject, as it never occurred to me until I knew that I was coming here to be examined.

9322. (*Maj.-Gen. Eardley Wilmot.*) Do you not think that with the present age many of those things to which reference has been made might be included at the Academy?—I think that it would be very difficult. They possibly might, but I do not think that there would be the same facility as at an earlier age.

9323. We have it in evidence that the young men who now join the Engineers do not show the want of knowledge of discipline to which you refer?—If such is really the case, the Royal Engineers are more fortunate than the Royal Artillery; but, without wishing to impugn in the slightest degree any evidence that you may have had before you, I strongly suspect that as these young men are all brought up together, we run pretty much in the same track.

9324. Regarding the discipline which you have spoken of as formerly existing at the Academy, do you think that that very strict military discipline is calculated to make better officers in after life?—Considerably. I regard it as the best training for a soldier.

9324*a*. (*Lt.-Col. Chesney.*) A very frequent objection which is made to the admission to military academies at an advanced age, is that officers get discontented afterwards?—Yes.

9325. Is it not the case that that is not so much an objection at the time, but rather a difficulty in dealing with the officers after they leave the Academy?—That is a very great objection; but it is not so great an objection as the one which I mentioned in the first instance. The great evil of the ordnance corps is in the age of which men are before they arrive at rank. I got my commission when I was only 17 years of age. Young men are now getting it at 22.

9326. As regards the real training and the actual practical education for a young artillery officer, is it not much better to give it chiefly at Woolwich after he has got his commission?—I think so, certainly.

9327. You would continue his education at Woolwich very much in the same way as that in which a young engineer is trained at Chatham?—Yes.

9328. (*Lord de Ros.*) With reference to what is taken up at the competitive examination, supposing that instead of the quantity of subjects and the amount of learning taken up, the test was to be how well what was taken up was executed; for instance, in taking up the history of England, if a boy who should thoroughly well understand the very elementary history were allowed more credit than one who had gone deeper into history, but who had not such a knowledge of the elements, do you think that it would be an improvement?—I certainly think so.

9329. Do you think that that system could be more introduced into the competitive examination by having fewer subjects?—The competitive examination now only takes up five subjects.

9330. Does not it go deep into some of those subjects?—Yes.

9331. Do you not think that if it went less deep into those subjects, and that if the test was how those subjects which were not so deeply taken up were executed, it might be an advantage?—I should think that it might.

9332. (*Chairman.*) When you allude to the questioning spirit in which the young officers are supposed to receive an order, is it actually observable in the young artillery officers who have come under your observation?—Certainly.

The witness withdrew.

Adjourned to Monday next at 12 o'clock.

Monday, 7th June 1869.

PRESENT:

THE RIGHT HONOURABLE LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., in the Chair.

GENERAL LORD DE ROS.
LIEUT.-COL. SIR CHARLES RUSSELL, Bart., V.C.
LIEUT.-GEN. SIR D. A. CAMERON, K.C.B.
MAJOR-GENERAL EARDLEY WILMOT.
MAJOR-GENERAL HAYTHORNE.
C. S. PARKER, Esq., M.P.
REV. DR. BUTLER.
LIEUT.-COL. CHESNEY.

LIEUT.-GEN. WILLIAM F. FORSTER, K.H., examined.

Lieut.-Gen. W. F. Forster, K.H.
7 June 1869.
Royal Military College, Sandhurst.

9333. (*Chairman.*) You are Military Secretary to His Royal Highness the Duke of Cambridge?—I am.

9334. One of the first duties of this Commission was to inquire into the constitution and management of the Royal Military College at Sandhurst, which we have done. Have you any recommendation to make with regard to Sandhurst?—As far as I am able to judge (I was brought up there myself), I should say that it is a very excellent institution. I do not mean to say that it could not be improved, but I think that it is very well adapted for the purpose for which it is intended.

9335. One of the chief difficulties at Sandhurst arises apparently out of the element which is composed of those lads who come up to Sandhurst, and after a few weeks residence find that they have no chance of obtaining a commission without purchase, and who then give it up as a bad job, and lapse into idleness, and it appears that it is that element in some degree which vitiates the institution. If that element could be got rid of, one of the principal defects in the institution would be removed?—I do not see how it is possible to rectify it, because in the same institution there will always be some boys superior to others, both in intellect and assiduity. You will always have some idle boys. It is only the idle boys who are complained of.

9336. That peculiar unsatisfactory element seems not to exist at Woolwich?—I will not draw any comparison between Woolwich and Sandhurst; I am not sufficiently acquainted with the system at Woolwich Academy to do so. But I should think that that difficulty would be very much overcome by making it a matter of necessity that the boys should make certain progress every half-year, and if they did not come up to the mark, I should say give them their *congé*; that would be, I think, the best mode of proceeding; but as to legislating upon an assumption that there will not be a certain number of idle boys at any establishment, I am afraid that it is an erroneous argument altogether.

9337. The idleness, where it exists, seems to result rather from the absence of a proper inducement to work?—There may be something in that. On the other hand, I think that certain improvements might take place in giving the rewards at Sandhurst. For instance, we will say that the first twenty boys on the list as competitors will get commissions without purchase. It is very hard that the twenty-first boy, who may be within one mark of the one above him, should pay 450*l*. Therefore I think that it is perfectly possible to have a graduated scale; the question is where the money is to come from. Taking those boys who come out with the greatest number of marks short of what we call the A list (which is the list to which commissions are given gratis), I think that the first ten or twenty boys, or a certain proportion of the A list (those who qualify for commissions by purchase), might be allowed to obtain commissions at a reduced price, the remainder to pay the full value of 450*l*. I do not know that this point has ever been mooted before. It may be an original idea, or it may not; but in thinking it over I have always considered it to be a very hard thing that a boy who had really deserved well of the college should find that by losing one or two marks such a very great hiatus should be created between him and the boy above him.

9338. Do you think that supposing it were possible to insure to every cadet who entered Sandhurst a free commission, provided that he passed the requisite examination, the prospect of that advantage would be sufficient to enable us to require from the youths who entered such an establishment obedience to the necessary discipline and the amount of application which it would be desirable to impose upon them?—I think that there should be a difference. I think that I would make this sort of distinction, that I would hold out to those boys who had shown zeal and assiduity and attention, combined with good character, during the time that they were at the college, the inducement that on leaving the college their commissions should date from their becoming cadets. I think that that would be a great stimulus.

9339. But you would consider that the prospect of obtaining a commission would be a sufficient advantage to induce youths to enter Sandhurst, even though strict discipline were insisted upon, and a pretty severe examination required?—Certainly.

9340. Do you think that if that character were given to the constitution of Sandhurst it would deter the sons of gentlemen from entering it?—That is a part of the business which is now inexplicable to me. When I was there it was very aristocratic, compared with what it is now. Boys constantly came from Eton; and we were allowed to remain at the college for a certain time, say six months, after obtaining a commission, and, as well as I can recollect, there were about 25 youths who were absolutely officers of cavalry, guards, and the line so situated; which had a very good effect, for this reason, that they had a very great interest in the other cadets, and set them an example in conduct, because they knew very well that if they transgressed they would lose their commission. I am sorry to say that I had a brother who did lose his commission for throwing stones at a professor who had offended him, and he was immediately superseded. Very strict discipline was kept up, probably stricter than there is now. Why it has fallen off with regard to the number of the sons of the aristocracy I cannot say; but it appears to me that it is not the establishment it was. We were 412 in those days.

9341. If by the alterations which we should be inclined to propose we succeeded in infusing into the establishment an atmosphere of greater industry, and a higher system of education, it might perhaps act quite in the opposite direction, and might be an additional inducement?—I think that the more difficult we make it fewer people will send their sons there, because they will have recourse to the examination for direct commissions at Chelsea.

9342. At present a cadet who has given up all expectation of obtaining a free commission, if he is withdrawn from Sandhurst, is no worse off than he was before, because he can then get a direct commission?—Yes; he is worse off. In the first place he has lost the time passed at the college; 2ndly, he will have to purchase his commission; 3rdly, he will have to pass an examination for a direct commission, and may possibly be too old for the army when it comes to his turn.

9343. The question is whether any advantage which could be offered to a cadet at Sandhurst would be

Lieut.-Gen. W. F. Forster, K.H.

7 June 1869.

Royal Military College, Sandhurst.

sufficiently great in itself to render its loss a matter of concern to the individual?—Any advantage offered to such cadet would be a very serious matter if lost.

9344. The loss of a free commission would be thought a serious matter? It would be considered a very great prize by a very large proportion of the British public?—Certainly.

9345. Of course you are of opinion that it is very desirable that officers of the army should have an acquaintance with one or other foreign language?—Yes, most decidedly.

9346. Undoubtedly no foreign language is learnt very colloquially, unless the person learning it is abroad?—No.

9347. Do you think that it would be possible to allow officers, or to allow the cadets, either at Sandhurst or at Woolwich, to go abroad to learn a language as they do in India? We have had evidence from a witness that in India an officer is detached from his regiment, and that he is allowed a certain sum of money in consideration of his acquiring a native language, and the payment is graduated according to his proficiency?—You must look at the reward which they get from that. They get staff and civil appointments in India. They must understand Hindustani before they are put upon the staff in India. There is there a great object to gain; but unless we hold out an advantage to young men, I think that it must entirely depend upon themselves and their parents as to whether they will go abroad to study languages or not. A great many go abroad upon my recommendation to themselves and to their parents and friends. They say "We shall have six months to "spend abroad to be taught the language." I think that there is great room for improvement in the knowledge of languages.

Staff College.

9348. Do you think that that could be done with regard to the officers who pass through the Staff College?—When an officer has passed through the Staff College he will be guided by what he considers most beneficial to himself, if he has the means and inclination to pursue the study of foreign languages. A great number of officers would do it, but I think that it might be abused, because I am not sure that at the Staff College itself persons have not the object of getting away from their regiments; and I think that it must remain with the young men themselves, but that you might hold out some lure to them. That would be a matter for consideration. It would be a very great advantage to a man; good linguists amongst officers of the army are the exception, and not the rule. I do not think that our officers are, generally speaking, well instructed in that respect.

Appendix, page lxxx. Instruction of officers in the service.

9349. I see, from the replies to the questions with which you have been good enough to favour us, that you are of opinion that officers, even after they have joined the service, might have facilities extended to them for instruction in military subjects?—Yes.

9350. You do not anticipate any difficulty in the establishment of such military classes at the great stations, such as those to which you have referred in your evidence?—No; I should strongly recommend them, but I think that it should be taken in hand with a great deal of care, and that there should be a very sufficient investigation, because in some regiments there would be no necessity for an instructor, inasmuch as he would not have anybody to instruct; it must be all voluntary, inasmuch as, in my humble opinion, it cannot be coercive.

9351. A certain amount of instruction at present is obligatory?—Yes; that is on promotion.

9352. Might not the other branches be rendered obligatory under the same conditions?—I think not; when an officer is examined for his company, if the examination is a *bonâ fide* one, I think that he is a very respectable member of society in every way as far as education goes. Perhaps there might be the addition of one or two subjects. I think that I have mentioned in my paper, strategy and military drawing. I do not think that an officer requires more; I think the army is rather an idle profession, excepting in the field. I am afraid that officers do not take a great deal of pains with themselves after they have left the Staff College unless they get employed. Young men entering the army do not read sufficiently; they generally speaking have no thirst for knowledge.

9353. In such practical subjects as the placing of a house in a state of defence, and the fortification of the head of a bridge, and practical subjects of that kind, which are essentially connected with the military profession, would not instruction be received with avidity if the officers had a chance of obtaining it?—Possibly so. The Regulations require when a lieutenant is examined for the rank of captain that he is to have a sufficient knowledge of fortification.

9354. (*Lt.-Col. Chesney.*) Fortification and reconnaissance?—Yes.

9355. (*Chairman.*) Is it not very vague?—Yes; you cannot go very deeply into fortification in a limited time, but every one should, in a very short time, obtain sufficient knowledge to know how to throw up a *tête-de-pont* or to fortify a house.

9356. We have it in evidence before us that a distinguished officer in our service found himself with a considerable body of officers and men in India, and the safety of himself and of the officers and men under his charge depended upon the security of the head of a bridge, but there was no officer but himself who knew how to fortify it?—I think that that is very extraordinary; I daresay that there would not be another case where the same ignorance would be displayed; it would depend very much upon the circumstances of the case; one question is how long ago it was.

9357. It was during the mutiny. Another point which has been suggested to us, is that, in addition to the instruction afforded at the military stations of which you yourself approve, there should also be attached to each regiment in the service an officer who should stand in the situation of a military instructor. That proposal has been made both in lieu of the classes at the stations, and also in addition to the classes at the stations; what would you say to that suggestion?—That would depend upon contingencies. As I said before, there are some regiments in which I daresay you would find more officers who would receive that instruction, and in others less. It would be of no use having military instructors if you had nobody to instruct. The question is what number of officers should be required to send in their names as being willing to receive the instruction; because it would not do to go to expense, with very little benefit; but I think that it would take.

9358. In the first place it would constitute a considerable number of prizes in the army?—I think that it would produce great emulation, because some people do not like to be at a discount when other people, by employing their time, have shown a great degree of knowledge and information; it would give a great degree of superiority, which I think would create a spirit of emulation amongst those who were inferior in knowledge.

9359. Of course a great deal of the success of any system, whether the present system, or an amended system, would depend upon the *bonâ fide* character of the examinations to which these officers were subjected, and there seems to be a great difficulty there. I daresay that you could give us some useful suggestion upon that head?—We have no examinations beyond the rank of captain; and I must say that if the duties of the board are properly fulfilled I do not see that there is much more to be required.

9360. Do not the boards act very unequally?—I do not know how the word "unequally" applies.

9361. I should imagine that the standard of efficiency required would vary according to the constitution of the board?—You mean to say that one board might consist of three very intelligent officers, and another board might consist of officers not quite so intelligent. Of course there must be different characters of officers.

9362. And it would be desirable to establish some system whereby an absolute uniformity, both in the standard and in the rigour of examination, should be introduced?—Yes, I think that that would be very desirable.

9363. We will now come to the Staff College. The great defect in the circumstances connected with the Staff College would appear to consist in the fact that the examinations which are required by the Staff College course are not a complete test of an officer's fitness for a staff appointment; that he may pass a brilliant examination, and yet may practically turn out to be a very inefficient staff officer in the field?—You mean from physicial disability.

9364. From the want of presence of mind and from not being able to ride, and so on. How is that difficulty to be got over?—I do not know how it is to be got over; but a man with a certain quantity of education must be superior to a man who has not it. If they do not derive a vast deal of information at the Staff College it is their own fault. I must say that if I knew an officer's character and that he possessed knowledge and was active and intelligent and a good horseman, with a good eye for a country, I should not make it a *sine quâ non* that he had been at the Staff College. One man may possess more energy than another, and he may be more zealous. There may in my opinion be a great many clever fellows who may be book-worms, but nothing beyond, and who would not make good staff officers.

9365. There is the difficulty. Everybody would be inclined to admit that after an officer has undergone the discipline of the Staff College he has a *primâ facie* claim for employment on the staff?—Yes, that is so.

9366. But of course if that fact merely implies the possession of only a quantum of the qualifications necessary for staff employment it is very clear that a more complete test of efficiency ought to be applied?—If an officer passes through the Staff College creditably, he fulfils the purpose for which he went there.

9367. It was not at all in deterioration of the Staff College that I addressed the question to you.—I think that the Staff College is a very excellent establishment, and that a great deal is to be learnt there, but I do not consider that it is an absolute requisite. Lord de Ros and myself remember what an outcry there was, after the Crimean war, regarding the inefficiency of staff officers.

9368. (*Lord de Ros.*) It was a most senseless outcry.—Having been at the senior department of Sandhurst myself, I do not see any very great improvement in the Staff College now over what was the senior department of the college. Still we must submit, more or less, to popular opinion.

9369. (*Chairman.*) At present I believe that no staff employment is given except to an officer who has been through the Staff College?—That is not quite so, because staff employment is given to those officers who have proved themselves efficient in the field, and who have established a good character as staff officers. They are not very often employed, but they are available, and every now and then they are employed. The Commander-in-Chief is desirous of employing officers who have been to the Staff College; but there are cases in which officers who have proved themselves efficient in the field, and have proved themselves to be good staff officers, are employed without having been there; they have established a character, and are available for such employment.

9370. Another objection which has been put very strongly before us is the fact that very often the best officers in the army, and those who will probably make the most efficient staff officers, have a repugnance to enter the Staff College?—That is possible.

9371. And the reason why that is the case is stated to be the uncertainty of obtaining a staff appointment after the Staff College has been passed?—There is no uncertainty as far as regards the lower grades, that is to say, the captains. There are no appointments on the general staff of the army for subalterns. There are very few field officers who will go to the Staff College, but it must be remembered that we have very few staff appointments for them; it is a very limited field. I think that the captains have all, sooner or later, been employed, and I think that, very justly, the Duke of Cambridge takes them all according to their standing on the list as they pass their examination. If a regiment is abroad you cannot bring a man home to take his turn, but he would take his turn if a vacancy offered at the station where he might be, or when the regiment came home again. There must always be some little of what are called grievances, but that is in consequence of the nature of the service altogether; and I believe that there is as much impartiality as possible, and if they are reduced before completing their term of five years they are always re-appointed for the purpose of doing so.

Lieut.-Gen. W. F. Forster, K.H.

7 June 1869.

Staff College.

9372. If we were to constitute these station classes and these regimental instructors there would at once be created a considerable number of appointments, perhaps not of a very valuable character in themselves, but which would probably soon be considered as very coveted prizes, especially for subaltern officers?—I do not know how they are to teach languages. I do not think that you would find officers to undertake it, and I do not think that you would find officers capable of doing it. There is a great difference between a man having a general knowledge himself and conveying that knowledge to others. I doubt whether you would get a sufficient number of officers to become teachers of fortification and military drawing.

Garrison and regimental instructors.

9373. I think that we must leave languages out of consideration for the present?—I am afraid that you must entirely give them up.

9374. I do not think that that subject of instruction was in my mind when I addressed the question to you?—It would not come within the category.

9375. That is of instruction in purely military subjects?—Yes.

9376. To how many would the staff of instructors at the great military stations to which you have alluded amount?—There would be Dublin, Portsmouth, Plymouth, Chatham, Aldershot, the Curragh, and Malta and Gibraltar.

9377. (*Lord de Ros.*) And Canada?—There will be very few troops in Canada.

9378. (*Chairman.*) And India?—I cannot offer any opinion as to India.

9379. How many instructors would you have at each of those stations?—That would depend upon the number who were to be taught. You must have one superior man, and there must be some discipline at the large stations; and then I do not see that you should have more than one if you had regimental instructors besides.

9380. We will say in round numbers, including India, that there would perhaps be 20 instructors?—I am very unwilling to offer any opinion upon that point, but I should think that ten would do for our own purposes, out of India.

9381. Supposing that these appointments were constituted, do you think that it would be possible to obtain the services, we will say of 100 officers who had qualified themselves for such situations by passing through the Staff College, and who would be willing and capable of acting as military instructors?—That question requires some consideration. Of course as time advances, and as you keep up the Staff College, you will have a greater facility.

9382. I mean taking that probability into account?—I should say that the difficulty would be less as time advanced, because of course you would have a greater field to select from.

9383. And would not the prospect of obtaining such appointments act as an inducement to officers to qualify?—I think so. I take a broad view of these matters. If a young officer gets a staff appointment of that sort, which would be permanent, the first thing which he does is to marry, which is the very worst

Lieut.-Gen. W. F. Forster, K.H.

7 June 1869.

thing which can happen to a young officer. He naturally begins to think of his family, and how to provide for them.

Garrison and regimental instructors.

9384. (*Lt.-Col. Chesney.*) Is it your distinct opinion that there would be a difficulty in introducing any regimental system of instruction?—There is no difficulty if you get students. The difficulty is in getting the students. In some regiments I think that you would be more successful than in others. I do not know that the cavalry will study. They are generally men who have the means of employing themselves in other pursuits, which may not be so beneficial, though more agreeable, and they are generally better off in a pecuniary point of view.

9385. If the number of places of instruction which you propose were gradually increased would it not be almost certain that every officer would have an opportunity, before he wanted to qualify as captain, of attending at one of those places?—He would have every opportunity, but the question is whether he would take advantage of it. I think that to give officers a stationary appointment is a great a lure.

9386. The objection has been made that, if the instruction was only given at stations, officers would not get to those stations. But supposing that the number of schools which you have recommended were established, and perhaps a few added, would not every officer in the army in a few years be quartered at one of those places?—Probably so; but some regiments might never have such an opportunity. In case of emergency in time of war you could not do it at all, and it must be given up. That was the objection which was held to having *only* garrison military instructors, namely, that a regiment, for instance, in Ireland is for three or four years detached, and you can do nothing there. If you are detached you must have one regimental instructor.

9387. Looking at the matter in another point of view, do you not think that such instruction would be rather more valued, or sought after, if it was given at a general garrison school than if it was attempted at a regimental school?—I do not see why they should not go together; I do not mean to say that it should be by one and the same instructor, but there might be the two systems. You might give it a trial in garrisons, and might have your regimental instructor, and then the question is, as I said before, whether the regimental instructor would have enough to occupy him; but it might be managed, I think, by a little arrangement.

Royal Military College, Sandhurst.

9388. (*Sir. D. Cameron.*) You have alluded to the decrease in the numbers of the cadets at the Royal Military College; may not that be accounted for in this way, that in your time and in my time the cadets remained there for three years, and sometimes four; whereas now they remain for only three half years; and in fact a greater number of officers pass now into the service through Sandhurst than was the case in our time?—Yes; that is of course the case, because more free commissions are given; I think that in one year we gave upwards of 80. As the army is reduced the requirements are naturally not so great. In those days of which I speak, and when there were 412 cadets, the army was much larger than it is now, and it was during the time of a war; there were bloody engagements every now and then which swept off a great number of officers.

9389. But the number who passed through the college was actually not so great then as it is at present?—I do not know; I do not mean to say that the 412 cadets all got commissions.

Instruction of officers in the service.

9390. With regard to giving instruction to officers after they enter the service, supposing that that instruction was of a very simple practical character, would you think it unreasonable to make it compulsory upon an officer?—I am quite against it, because I think that if it is voluntary every man will enter into it with much more heart than if it is compulsory. A good deal is compulsory now; for instance, the examination for a company is compulsory; but it should be strictly carried out.

9391. (*Maj.-Gen. Haythorne.*) Nothing more would be required than that, if it was properly carried out, and therefore making it compulsory is no new thing, if the instruction is confined to those subjects which are contained in the Queen's Regulations for promotion?—You have an object in making it compulsory, because a man cannot get his promotion without it, as stated in the Queen's Regulations now; but the other must be voluntary, because, as far as I now understand, we do not see any particular reward which is to be given for officers studying; it is more for their own immediate benefit and gratification than anything else. If you hold out a reward to an officer, and say that an object is to be gained by studying, it will naturally be a stimulus, but I think that there must be something of that sort; I tried it without it, but of course everybody has his own interest in view, and you will do more if you hold out a reward than without it.

9392. Does it ever happen that officers fail to pass this examination, and are passed over in promotion?—Yes; they fail, and they are passed over. There are instances of it. There are very many instances in which they do not qualify, but it certainly is a strong case to pass them over. They are often given, if possible, a little time to improve their knowledge and then to pass.

9393. I suppose that a man must be very wanting indeed before so stringent a measure as that is applied to him?—Yes; but notwithstanding that, there are some instances in which men are passed over. One cannot account for it, but they do happen, although not very often.

Staff

9394. With reference to the certificate of the commanding officer with regard to the entrance to the Staff College, it appears in evidence that, in spite of that certificate, many officers do enter who are not fitted for the staff?—I think that that is a matter which requires the greatest consideration. In my opinion the certificate ought to be enforced to the fullest extent.

9395. Do you think it desirable to make the certificate more stringent, and containing replies to more questions?—I do not know that I would have it more stringent, but I would see that nothing required was either slighted or overlooked.

9396. Are the general officers of the district concerned in any way in the certificate?—The general officers do not examine the parties. The certificates are sent through the general officers.

9397. But the general officer is in no way responsible for the certificate?—I think not. You are now alluding to the certificate for entrance to the Staff College. I have heard of officers being sent there who were near-sighted, and that has been considered a disqualification.

9398. Do you think that if general officers reported in their confidential reports on the officers who were recommended for the Staff College, it would be an assistance in any way?—The Commander-in-Chief gets a report of all the various qualifications of these officers who have passed the Staff College. Some may be more adapted for one position, and others for another. Some men are better at the desk, and others are better in the field; some are good at both. There is a very elaborate report.

Royal tary Sandh

9399. (*Lord de Ros.*) When you were at Sandhurst were not the cadets very much younger, and more susceptible of early training?—Yes; and I think that it was a great improvement.

9400. Did not the Peninsular war draw off many cadets within a few months of their going to Sandhurst?—I do not recollect that. They could not get a commission at Sandhurst until they had arrived at a certain stage of study, and then they might have got it by interest or by purchase.

9401. When you were at Sandhurst there were no special prizes or inducements to study, as has been lately proposed?—In those days they gave commissions as they do now, but they give a great many more now than they did then. There are no

commissions without purchase in the army given now excepting to boys who pass through Sandhurst, and those who rise from the ranks, and therefore the Commander-in-Chief has no patronage as regards commissions without purchase.

9402. Would not the promotion of cadets by antedating, as it were, their commissions, and by their being actually considered to be in the army before they joined their regiments, be thought rather a hardship upon those who had direct commissions?—It depends upon whether your object is to make the officers of the army go through Sandhurst or not, because it would very naturally have the effect of filling the college if you gave them those advantages.

9403. What should you say to subjecting Sandhurst, in the same way as a regiment, to a half-yearly confidential inspection by a selected general officer, not as to the studies, but as to the discipline and riding, and all the outdoor work, the accommodation in barracks, and the management and delinquencies of the young men?—I do not think that the governor, who has always been a general officer of high rank, would approve of that; I certainly should not.

9404. Would it not be something analogous to the case which has constantly occurred of the Inspector-General of Cavalry inspecting a regiment in a district commanded by an officer very far superior in rank to himself?—That certainly does happen, but you must recollect that cavalry officers and infantry officers are not exactly brought up in the same school, or in the same drill. An infantry officer may be a very good officer, but he might not understand cavalry practice.

9405. As to the possibility of instruction in languages, would it be possible or desirable that that should be a point of examination for admission into both Sandhurst and the Staff College; and might not that induce parents and guardians to send their sons *en pension* abroad for a short time, by which they would acquire a greater insight into the language, and at much less expense than in any other way?—I certainly think so.

9406. As regards Sandhurst, the French master positively stated that colloquial instruction was not allowed him; he said that it was not a part of the instruction?—It is not laid down.

9407. He said that, according to the instructions, he could not occupy half an hour in colloquial teaching?—It is not laid down in the regulations.

9408. I understood him to say that it was not permitted?—I think that there must be some mistake. If the professor and a student converse together, what is to prevent their discussing matters in French?

9409. To go to the Staff College; as there never has been on service any difficulty it finding staff officers from the regiments, does not that fact imply that many officers employ their leisure for purposes of study and improvement more than is generally supposed?—I do not think that they do so. I think that practically there are just as good staff officers who have never been in the college as those who have; and I would not lay much stress upon the education at the Staff College.

9410. Supposing a riot to break out at this moment in Ireland (not a very unlikely thing), do you think that any regiment employed would find itself destitute of officers capable of strengthening a bridge or defile?—I should hope not.

9411. As regards the prizes which are supposed to be necessary to induce officers to go to the Staff College, do you not think that emulation in the army leads our officers more forward than any actual idea of gain? does not it even lead the common soldier to acts of courage and endurance in the field? he does not calculate upon his pension at the moment of action, but he is led on by emulation?—Yes; but there is not the same ambition in a common soldier as there is in a high-minded gentleman.

9412. Would not the ambition be the greatest inducement to an officer, and much greater than any money reward?—But ambition carries a great deal without. Ambition carries the desire to have a high post, and a high post is better paid than a minor one.

9413. As regards the engineers and the staff, do you not think that there ought always to exist a completedistinction between their respective requirements?—Yes; officers of the engineers should possess more scientific knowledge.

9414. As regards the unwillingness which is supposed to exist on the part of officers to join the Staff College, may not a man prefer trusting to the education which he has given himself to such as he believes to be given at the Staff College, and may he not also be reluctant to quit his regiment, if he is a good regimental officer and is devoted to it?—Yes; but you must have a proof of his education. A man cannot know how far his own knowledge goes until it is put to the test.

9415. The regiment, you will agree, must always be the grammar of a good officer?—Yes.

9416. Supposing an excellent regimental major to be well qualified for any duty, would you not think it a great hardship that a staff officer should be preferred to him merely because he had studied specially for two years?—I think not; the other man might have done it if he had thought proper; it is optional and it in fact is open to all, and if certain men take special care to prepare themselves in the qualifications of a staff officer I think that they should have an advantage. It depends entirely upon themselves.

9417. As regards the scheme which has been suggested of regimental instructors, do you not apprehend that a military instructor in a regiment would often find himself in a false position? Would the captains accept such an anomalous member of their mess? Would not the officers prefer to place themselves under a station establishment, rather than under an individual with whom they were living in familiarity?—I do not myself see any difficulty on that subject.

9418. As regards the examination papers for promotion to the rank of captain, if the questions are supposed not to have been stringent enough, is it not sometimes the practice of the Horse Guards to return them to the regiments, and to require the questions to be carried further?—Yes; that now rests with the general officer of the district or the adjutant-general.

9419. Do you think that you could get a better assurance as to the qualities of an officer who desired to enter the Staff College by having him mentioned twice running in the confidential inspection report of the inspecting general, and also examined at the regimental inspections not only in moving a company but in posting a company, say for the defence of a village or farm buildings? The proposition is that no officer should be recommended simply by the commanding officer as fit for the Staff College, but that he should be able to show that he had been twice mentioned in the half-yearly confidential report as fit to enter the Staff College?—It would very much amount to the same thing, because he would be equally recommended by the commanding officer.

9420. But would not the inspecting officer test the opinion of the commanding officer?—It would be very necessary and very proper that he should be perfectly satisfied in his report of the officer, but I think that he might take his own means of ascertaining it.

9421. (*Mr. Parker.*) We have had a proposal that instead of commanding officers certifying candidates as qualified for the Staff College, the commanding officer, as at present, and with him also the field officers of the regiment, should reply to certain definite questions which bear upon the qualifications of the candidate?—That would infer that the statement of the commanding officer, *per se*, is not sufficient; it is done by the commanding officer now, but perhaps you would like to have it strengthened by a further opinion.

9422. (*Lord de Ros.*) That was the object of my question, namely, the strengthening of that certificate.—I do not see any objection to it. If there is any idea that in the present recommendation the qualifi-

Lieut.-Gen. W. F. Forster, K.H.

7 June 1869.

taff College.

cations are not enforced or kept in view to the amount to which they should be, I should have no objection to the other two persons being joined in it. But that would very seldom happen; it would only be for a certain portion of the year. Excepting in the drill season there are only two field officers present with a regiment, and you must take into consideration detachments and so forth; but where it could be carried out I do not see any objection to it; it might perhaps give a greater security.

9423. (*Mr. Parker.*) Some of the proposals which have been made to us, I think, contemplate that the responsibility of decision should be transferred either to the Horse Guards or to the Staff College, and that these departments should have before them a detailed report coming from the regiment. At present the commanding officer simply certifies that the candidate is fit to enter; but according to these proposals, without deciding whether he was fit or not fit, the details of his qualification in various respects would be given?—There might, perhaps, be questions which would be answered in detail. I do not think that there can be any objection to that.

9424. In the parallel case of the civil service, the Civil Service Commissioners collect information in detail in that way, but they are themselves responsible for deciding whether the answers are satisfactory or not?—Yes.

9425. Do you think that it would be possible in the case of the Staff College to make any one, either at the Staff College or at the Horse Guards, responsible in the same way for deciding, upon that information, whether to receive or not to receive a candidate?—Do you allude to the certificate as far as qualifications go?

9426. Yes.—I suppose that unless the instructions were carried out the certificate would not be considered a valid one; that is my impression.

9427. That is to say, the answer to each separate question must be satisfactory, or otherwise the document would be refused?—I think that, as the matter at present stands, categorical questions are not put, but that a general statement is made. If you are going to alter that, and to have a string of questions to be answered, it will alter the present arrangement. The present arrangement is that the commanding officer gives a general statement with regard to his opinion of the candidate, and that is not questioned by anybody; there is no reference beyond that; it must be taken for what it is worth, and of course it is always accepted.

9428. If the system were changed, and if these answers in detail were given, who would be responsible for deciding upon them?—I do not know whether it would or not be the Council of Military Education. I daresay that they would be consulted if there was any suggestion of this sort made; they would, I think, have to be referred to.

9429. Do you think that the limitation to receive only two officers from a regiment at one time works well?—It is only one from each regiment; but you must recollect that probably that regiment has other officers on the staff. It may be employed on hard duty in a bad climate, and absent officers throw additional duty on those present with the regiment.

Regimen instructi

9430. (*Sir Charles Russell.*) You are generally favourable to the system of regimental instruction?—Yes.

9431. And you see no difficulty in its being generally carried out in the army?—I think that it would be rather bold to establish it at once. I would try it first. Before you decided that every regiment should have a regimental instructor I would try the effect in great garrisons, and see how it worked. If it was a failure it would then not be a very serious thing, if it was a success you could advance it. My hope is that it would be a success.

The witness withdrew.

Lieut.-Gen. Right Hon. J. Peel.

7 June 1869.

Amalgamation of Woolwich and Sandhurst.

LIEUT.-GEN. the RIGHT HON. JONATHAN PEEL examined.

9432. (*Chairman.*) At one time there was a very strong feeling entertained by persons who interested themselves in the subject of military education that it might be desirable to amalgamate Woolwich and Sandhurst. Has such an idea ever occurred to you?—I think that it was submitted to me by the Council of Military Education during the time that I was Secretary of State for War, and it was thoroughly gone into by the committee on military organization in the House of Commons, of which Sir James Graham was the chairman, and of which I was a member. The proposal went, I think, much further than a mere amalgamation of Sandhurst and Woolwich. The question was, whether all candidates for admission into the army should not pass through one great military school. That would do very well in time of peace, when you have a fixed establishment, and an average number of vacancies every year. You might so regulate your school that you might supply the number of officers required, but of course it would break down the instant that a war occurred, and it would also have this disadvantage, that it would prevent any persons who did not originally select the army as their profession from entering it afterwards. Any person who was intended for another profession, and who had become older than the age for the first admission to this school, would be excluded. At the same time, (though I do not believe that your Commission could enter into the subject), I think that it might be a desirable plan to do away with the purchase of first commissions, and make every candidate for admission into the army pass through a military school.

Staff appointments.

9433. One of the great difficulties which has struck us, is as to what kind of practical test you can apply to an officer who is a candidate for admission to the Staff College, that he not only possesses the intellectual qualities which will enable him to pass a good examination, but that he also possesses those practical and physical qualifications which are equally necessary for the discharge of his duties on the staff. Nearly every witness whom we have had before us has made suggestions upon the point, and some have proposed one thing, and some another; but to all of them there has appeared a very considerable difficulty in providing any means of testing those particular qualities?—I think that there are a great many qualities in a staff officer which no lessons can teach, and one officer is naturally more fitted to be a staff officer than another, although they may be equal in point of education. The only improvement which I think I could suggest would be this. It appears to me that the Queen's Regulations lay down everything which is necessary, if the commanding officers of regiments do their duty in instructing the officers in the manner laid down by them; and if the examinations for promotion, instead of being carried out by a board of field officers or others, were carried out by examiners specially appointed for the purpose, the examination would be very different. I look upon examination for promotion as merely qualifying, and therefore I should make it perfectly obligatory; but I would go beyond that, and allow a man to say, "I wish to go up for "honours," or "I wish to be examined in some-"thing much higher, and to become a candidate for a "staff appointment." I think that then you might have regimental officers who, from their character as regimental officers and from their attainments, might very fairly be selected as staff officers, without any Staff College at all.

Instruc officers service

9434. Although, according to the Queen's Regulations, a certain amount of technical and practical knowledge is required of the officers before they attain their promotion, yet it has come out very

clearly, from the evidence which we have had, that with regard to those particular subjects the regulation is almost practically a dead letter. The question is whether an examination on these subjects might not be rendered as obligatory as an examination in those points which solely apply to regimental duties?—I think that it would be unfair to make anything obligatory which goes beyond a man's duty. If he volunteered to be examined, and if he went up for a higher class, and was in a position to go through a higher examination than was requisite for mere promotion, I would give him an opportunity of doing so. It is so long since I was in the army, I perhaps am not so competent to speak upon the subject as others, but it appears to me to be almost impossible to reconcile the two requirements of the day. There is a great outcry (in the House of Commons, particularly) for an increased number of promotions from the ranks. There would then be two classes of officers, one a very highly educated class of men, and the other a set of men who would be much older, and perhaps superior in knowledge of mere regimental duties, but would not be so highly educated. I cannot see how you could ever expect those two classes to amalgamate well together, and it would be a very hard case if those men who had risen from the ranks were to be submitted to an examination in field fortification and field sketching, for promotion, and it would be equally hard if they were not submitted to the same test as other officers.

9435. Might not regimental officers, even subaltern officers, find themselves in a position, in Ireland, for instance, where they might be required to fortify a house or village; would it not be advisable that they should receive instruction in such elementary matters as that?—I consider it to be the bounden duty of the commanding officer to see that it is so. I should think that he had very much neglected his duty if he had not so instructed his officers. I consider that a man who has to command even a section of a company should be able to place that section in a state of defence.

9436. Do you think that the Council of Military Education works pretty well?—Yes, in fact I was very much indebted to them for their services.

9437. With regard to Sandhurst, would you recommend that a recurrence should be had to the old system under which cadets held commissions while they were still resident at the college?—I do not know that I should do so. During the time of war there was a great pressure for officers, and many cadets obtained commissions when they were very young, and when peace was proclaimed remained at Sandhurst; but I think that there are many commanding officers who would prefer a good Eton boy or a good public school boy for their regiment to any other. A good regimental system is preferable to any previous technical knowledge.

9438. A knowledge of military administration is a very essential part of a soldier's education?—I was a member of the Royal Commission on Courts-Martial, and there we recommended strongly that officers should be instructed much more than they now are in all points of courts-martial and evidence.

9439. When I used the term "administration" I meant especially to include the commissariat and the care of the sick?—The system appears to me to change every day. I do not know what the present system is with regard to the commissariat.

9440. At what period of his career does a young officer acquire a knowledge of how the party under his command is to be fed, and how the sick are to be transported?—He must depend a great deal upon the quartermaster of his regiment. It is very seldom, I should imagine, left to him to provide for it.

9441. But still is it not a thing which he ought to know?—If there was no provision made for it, I should think that he was a very bad officer if he did not take immediate steps to procure what was necessary. It is his duty to see that his men are well provided for.

9442. It is not as if the administrative branch was a totally separate arm of the service like the engineers or the artillery?—No. You must recollect the very delicate position in which an officer would be placed; he is under regulation, and he cannot go one step beyond that, without having to pay the expense of everything which he does. He has no authority for it. If I were a commanding officer, I should advise an officer to be very cautious as to how he went beyond the Regulations.

Lieut.-Gen. Right Hon. J. Peel.

7 June 1869.

Instruction of officers in the service.

9443. The reason why I have asked that question is because we have had it in evidence before us that in foreign armies they appear to pay very great attention to those subjects?—Perhaps they have not War Offices. I am only judging of my own experience in this country as to the effect if anybody goes one step beyond the Regulations; but I think that he is a very poor officer who will not take the responsibility upon himself when he is placed in a position which requires him to do so.

9444. (*Sir Charles Russell.*) Have you ever considered whether it would be expedient to give commanding officers in regiments any assistance in the way of a military instructor in a regiment, to be an officer of his own battalion, with a view to teaching practically some of the duties which are laid down in section 4, and especially paragraph 161, of the Queen's Regulations, such as the duties of outposts, patrols, a knowledge of field fortification, and of reconnaissance generally?—I think that, as I have before suggested, if one of the officers of the regiment said "I will go in for a higher thing than mere qualification for promotion, and for being one of the military instructors," it would be holding out an inducement to officers to try and obtain a higher class than they would do for mere promotion. I think that it would be a very great advantage if you had an officer in the regiment in whom the commanding officer had confidence, but I would never relieve the commanding officer from the responsibility of being answerable for his officers being properly instructed.

9445. If you were given the choice between on the one hand having such an instructor, an absolute officer in the regiment and under the control of the commanding officer, and on the other hand detaching officers from their battalions to garrison establishments of instruction, which of the two plans would you prefer?—I would make the examiners perfectly independent. I would make them officers selected by the Council of Military Education or by the Commander-in-Chief, or whoever it was, to examine the officers for promotion, more particularly those who had a greater ambition and wished to go through a stricter examination than mere promotion required. I think that you would obtain more from that than from having instructors, as has been proposed, at some of the garrison towns. Very much would depend upon whether a regiment had that opportunity. They might have it at some places, but I think that there are places where they would not have such an opportunity.

9446. Then, upon the whole, you think that it would be better to let such an instructor be a regimental officer, than to deprive officers of the advantage of such instruction in case of their being quartered as you have pointed out?—Yes. I would never relieve the commanding officer from the responsibility, and if he had an officer of his own, in whom he had confidence and who had passed the examination, and if he wished to depute the instruction to him, I would give him the opportunity of doing so. I think that now the *cadres* of regiments are so strong that there might be supernumerary duties.

9447. You would not think it necessary to have an additional officer to the regiment, but you think that a captain might be deputed to conduct this instruction, and that the senior lieutenant should for the time being act?—He might be a regimental officer. I think that the second major, if he was qualified for it, might be very well deputed to carry that out.

9448. Would you consider that additional pay should be given, and if so, have you any idea whether it should be in the proportion which is given accord-

Lieut.-Gen. Right Hon. J. Peel.

7 June 1869.

Instruction of officers in the service.

ing to rank for staff pay and allowances?—I think that every person who does his duty well ought to be well paid for it; and I should consider that the very circumstance of a person having passed the examination, and having been appointed an instructor, if he performed his duties well, would be a qualification for a staff appointment. I think that there should be some small addition to the pay, the same as you make to an adjutant or anybody else in that respect.

9449. In about the same proportion?—Yes.

9450. (*Lt.-Col. Chesney.*) In these days of camps of instruction, with the general tendency which there is to concentrate our troops in masses, do you not think that there are facilities generally speaking for teaching most officers all that they require better at the large garrisons or camps?—Yes, if you could always insure that all regiments had the same advantages. I consider a good officer to be a man who goes wherever his regiment is ordered. A regiment may be in the West Indies or at some other place, and may be excluded from those advantages, and it would be very hard to say that those officers should be worse off than others.

9451. (*Sir D. A. Cameron.*) I think you said that you thought that officers might educate themselves in a great measure for the staff without the necessity of a staff college. What facilities would you give to officers to obtain a higher kind of knowledge so as to qualify themselves for staff situations?—Do not officers now go to staff situations from their regiments without that first year at the Staff College?

9452. (*Lt.-Col. Chesney.*) That was the practice formerly, but not now. It is done away with.—I am answering questions of which I have no knowledge. I think that we have had some very good staff officers without any of that extra knowledge.

9453. (*Lord de Ros.*) You have suggested the second majors as assistant instructors in the regiments; is not that from the opinion that a captain would hardly be accepted by his comrades on account of his familiarity with them, and that the rank would rather disqualify him from being an instructor to his comrades?—I should look upon the officers as being anxious to obtain knowledge. It would be necessary for their promotion for them to obtain a certain amount of knowledge, and if they went in for the higher honours which I have mentioned, I do not think that it would much matter who was the instructor, because I would not make that obligatory, but it would be voluntary, and there would be no hardship whatever.

9454. Do you not think that the first condition of the value of an officer is that he should command the confidence of those who come to him?—Certainly.

Council of Military Education.

9455. Referring to the Council of Education, there is one civilian at 600*l.* a year attached to the Council; do you not think that an equally good man could be got from the army without going to that extent, or appointing a civilian at all?—As I was the person who appointed the civilian I will tell you the circumstances under which Canon Moseley was appointed. At the time when Canon Moseley was appointed there were I do not know how many vacancies for commissions in the cavalry and for commissions in the army, because of the number of rejections which had been made by the severity of the examination. Canon Moseley was at that time one of the examiners at Woolwich, and I sent for Canon Moseley and pointed out this to him, and the first thing which he said to me was, "You buckle your belt too tight." He said, "You should spread the subjects in which you "examine over a greater area, so that boys at a "public school should be able to pass the examina- "tion, and that it should not be necessary for them "to pass through the cramming schools, which I "think are the greatest blot in the existing system of "examination." That was one of the reasons which induced me to appoint Canon Moseley, having been a great supporter of competitive examination, and I certainly never regretted having appointed Canon Moseley.

9456. You have alluded to the difficulty of the promotion of men from the ranks on account of their having had a different class of education altogether from that of other officers. Are you aware that in the French service a very great inconvenience has arisen from what are called the *parti du sous-officier*, who set themselves against the officers?—No. Instruct officers.

9457. In confidential inspection reports the general certifies as to the fitness of the senior officers of each rank for promotion?—Yes.

9458. Might he not certify in the same way as to the fitness of the next officer who was about to be recommended for entrance into the Staff College?—Yes, he might express an opinion.

9459. With regard to the examination for promotion, do you think that it would be better to have it conducted by garrison boards instead of by regimental boards?—Yes. I think that it would be better to have fixed examiners. It appears to me that now there must be a very different examination to which one man is subjected from that to which another man is, and I think that there is very great difficulty in carrying on the examination.

9460. You have alluded to the difficulty, and the great objection when regiments are at detached stations, of giving them the advantage of attending these instructing boards. But supposing that instead of leaving the station, an officer who wished to acquire that instruction was attached to another regiment in one of the camps or garrisons to do duty with it, do you think that there would be no objection to it; that is to say, that supposing instead of giving him leave and taking him altogether off regimental duty, he was attached to another regiment where there were these advantages, and that he should do actual duty, according to his rank, in that regiment?—I should see no objection to it if there was an opportunity of doing it, but the regiments themselves are very much detached, and they are split up into different companies; it is not as if there were regiments together.

9461. As regards a general school, would it not cut out many officers who would be valuable for war purposes, and is not the admixture of a certain class of officers, for instance, the elder sons of country gentlemen, a very great regimental advantage as regards habits and manners, and regimental *esprit de corps*, although they may not be men who intend to make the army their actual profession?—Yes; but I do not see that they would be at all precluded from going through this military school. General tary sch

9462. Supposing that an officer had been at the university, and was 21 years of age, and that a war broke out, would you not be uncommonly glad to get him?—Yes.

9463. But would he not be shut out if he had to go through a school at the age of 17?—Yes; but any peace establishment must break down upon the occurrence of war, just the same as upon the breaking out of the Crimean war, or any other war; you would extend the age and do away with the examination, and you would alter the standard. My suggestion only applies to the time of peace, with a fixed establishment and an average number of vacancies; and I think that if all officers passed through a military school they should be admitted at from 13 to 14 years of age by an examination which might be passed by boys direct from the public schools; that at the end of a year and a half there should be another examination, quite equal in severity to the present one, for admission to Woolwich; and that the number of vacancies at Woolwich should be filled up by those who passed the highest, the remainder to be passed into another college for admission into the other branches of the service.

9464. With reference to what you have said of commanding officers having a general preference for a well-conditioned Eton boy, would you not give every encouragement which you could for continuing that system? If you obliged everybody to go through a college, would you not take away this boy from

Eton in order to pass him through the college?—Yes, if you had a military college at all; but the question is whether you would have a military college at all. I believe that a musketry instructor would much rather have a man who could not shoot at all than one who could shoot a little, he having to teach him.

9465. Am I to understand that you think it advisable not to force every man through a military college, into which he must come at a certain age?—I have not a decided opinion, I only mention what was recommended by the Council of Military Education, and what had been discussed before the Committee on Military Organization.

9466. (*Mr. Parker.*) If you placed boys at so early an age in a military school I suppose you would not make the examination for admission technical, but more general?—Just so, as regards the examination for admission. The examination from the military school into the college would be purely technical.

9467. If you took them at an early age would you give them time at the school to continue their liberal education?—Yes; and that was always the case. At Sandhurst they were taught French and German and the classics, and they had every opportunity of learning those subjects; but they naturally confine themselves to those points which are more likely to secure their obtaining their commissions, such as mathematics.

9468. On the other hand, at Woolwich you would have the instruction, I suppose, if it were retained as at present, purely professional?—I should have the examination out of this Military School quite equal to the standard for Woolwich, and they should go through exactly the same as they do at Woolwich now. I do not suppose that you could improve that education.

9469. If Woolwich were retained as it is at present, would you make the examination there also of a liberal kind, such as boys from a high class in a public school could pass with ease?—I should propose to take them younger, and that there should be a longer time. I think that the examination for Woolwich is now so high in mathematics and other subjects that a boy could not go from a public school without going to a cramming school in the meantime, which I think is objectionable. At one time there was one college in Dublin which was almost the only one which passed anybody, and I think it very objectionable.

Lieut.-Gen. Right Hon. J. Peel.

7 June 1869.

Preliminary Military Education.

9470. Would you think it a sound principle to lay down in general, that the education at the public schools and the examinations at these military colleges should, in one way or other, be made to meet each other?—Yes; I think that the public schools ought to study and would study to teach youths what was necessary for their wants.

9471. If they were giving such an education as they ought to give there ought to be no necessity for going to an intermediate crammer?—No.

9472. A boy at present entering at Woolwich takes a high place from his knowledge of classics, or from his other liberal education; and under the present system he loses that advantage when he leaves the college, because no marks are given for proficiency of that kind. Do you think that might be a little modified?—I think that what you want to know when he enters is that he has a certain amount of capacity, whether it is shown in mathematics, or in classics, or in anything else; but that afterwards, when he goes out of the college, you want professional knowledge. Allowing him in the first instance to count his classics when he goes in there is not quite the same thing. That shows that he is a clever boy, and that he is just the boy whom you want; but when he goes out of the college what you want to know is that his education can be applied to his profession.

9473. I think it has been generally admitted, as a principle, that the leaving examination should be almost entirely professional; but one or two witnesses have suggested that a youth should be allowed some credit for his marks on coming in, in order not to make so much contrast between his coming in and his going out?—He goes in with these high qualifications, and it shows that he is a clever boy. What you want to know when he goes out is, with what amount of professional knowledge he goes, say, into the artillery. I should think that a clever boy would very likely distinguish himself more than another.

The witness withdrew.

Adjourned to Saturday next, at 12 o'clock.

Saturday, 12th June 1869.

PRESENT:

THE RIGHT HONOURABLE LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
GENERAL LORD DE ROS.
LORD NORTHBROOK.
LIEUT.-COL. SIR CHARLES RUSSELL, Bart., V.C.
LIEUT.-GEN. SIR D. A. CAMERON, K.C.B.
MAJOR-GENERAL EARDLEY WILMOT.
MAJOR-GENERAL HAYTHORNE.
C. S. PARKER, Esq., M.P.
REV. W. C. LAKE.
LIEUT.-COL. CHESNEY.

GENERAL THE RIGHT HONOURABLE LORD STRATHNAIRN, G.C.B., &c., examined.

Gen. Lord Strathnairn.

12 June 1869.

9474. (*Chairman.*) The Commission are very anxious to obtain the benefit of your opinion upon several points which have been brought to their notice. I do not propose to trouble you with any of the minute details which are connected with the various educational establishments existing in the country, but I will ask you generally whether you think that it would be possible and desirable that a greater degree of instruction in such practical subjects as field fortification, &c., connected with the profession, should be communicated to young officers after they have joined the army?—Yes; It is most desirable, and perfectly feasible. The Duke of Wellington, with his usual sagacity, introduced field fortification as part of the examination, qualifying officers for first commissions. This examination was done away with, I am at a loss to imagine on what grounds, when the competitive system was introduced. A knowledge of field fortification is indispensable for officers; instruction in it, founded on *practical* principles, should be re-introduced and form part of military education. When I say "practical," I mean as connected with the duties of cavalry and infantry officers in the field. For instance, the defence of a bridge, which must be held; of a house, or houses flanking it; protection of a position by entrenchments, traced according to, that is, taking advantage of, configuration of ground, with the view to cross or cumulative fire; and engineering obstacles to render a road impassable, or protect a position, bridge, or houses.

Examinations for promotion.

9475. From the evidence which we have received, it would appear that, although by the Queen's Regulations officers are required to pass an examination on their promotion in what might be called certain

Gen. Lord Strathnairn.

12 June 1869.

Instruction of officers in the service.

practical subjects, yet as a matter of fact that examination has become a dead letter ; and even according to the letter of the Regulations the examination does not appear to be so extensive as might be desirable. Therefore we wish to know whether in your lordship's opinion that examination might be extended to the elements of field fortification, field sketching, and such matters as are connected with the defence of a house, or of a bridge, &c. ?—I perfectly agree with the Commission that the examination of officers, even according to the letter of the Regulations, is not, by any means, so extended as it should be in "practical "subjects," and that it has become a dead letter. That this is the case is proved by the inability of numerous officers, although there are many favourable exceptions, whom (on inspecting their regiments) I call out to perform movements in the book—to say nothing of their ignorance of the object or strategy of these evolutions. For this deficiency there *is* the excuse that strategy, the practical illustration of these evolutions, is not to be found in the book.

There can be no doubt on this head ; I myself and my staff, general and personal, observe the mistakes as they occur. Memoranda are sent, after the inspection, to the commanding officers of the regiments for their instruction, and copies are kept in my office.

It is needless to remark that these officers have passed the first and successive examinations, and that, therefore, they must either have been improperly passed, or that they have not kept up, or been made to keep up, the requisite instruction.

These mistakes consist in officers giving wrong words of command, and being unable to execute necessary and often the simplest movements. Some officers of long standing, and even commanding officers, are ignorant of the simple, but important detail—the difference between a change "*of front*" and a change "*of position.*"

I have observed some improvement latterly, which, I think, is owing to officers having compared notes as to my system of inspection, and also to a General Order of 1868 embodied in the new edition of the Queen's Regulations, enjoining general officers to be more minute in their inspection.

General officers should not limit their test of officers at inspections to merely, as is the custom, calling on them to drill the regiment "as they like." The consequence of this is that movements are learnt by rote *for the occasion.* Inspecting generals should also *name* movements for execution which would ensure a general knowledge of them.

The fact of examinations having become a dead letter, as regards utility, arises from the instruction being theoretical in place of practical, and from the general relaxation on the part of the Boards of Examination. I know of a case when a commanding officer would not recommend an officer for promotion, on account of inefficiency of drill, in which the Board had passed him as efficient. There are other cases of officers passing in the written examination as to evolutions, but failing when called on to execute them practically in the field.

As regards successive examinations, qualifying officers for promotion, I am of opinion that, on the principle of increased knowledge being exacted for increased rank and experience, they should be required up to the rank of lieutenant-colonel commanding a regiment. This system would very much put a stop to the pernicious practice of "cramming," as it is called, for *one* examination; and to the necessary consequence of officers imagining that their education is completed, and gradually forgetting the knowledge which they have acquired so hurriedly, and with so little interest. Successive examinations lead the officer to carry his thoughts and studies to the highest grades for which his capacity qualifies him—a tendency which will be encouraged and strengthened when strategical is combined with theoretical and mechanical instruction. The great desideratum is to excite an interest in the subject of instruction.

Amongst "practical subjects" stands prominent strategy—that is, the art of war—which from its first to its highest grades is more indispensable, but yet more neglected, than any other subject. A practical experience of 10 years' chief command of the armies in India and Ireland has proved to me that this requirement is almost wholly lost sight of in our service. The reason is clear ; strategy, even to its lowest grades, is not taught in the book of Regulation Instruction for all arms ; nor is it an element in either the first or successive examinations of officers for entrance into, or promotion in, the army. The book of Evolutions teaches the mechanism of military movements for the field ; but, fully as it enters into the details of their execution, it is, with a few unimportant exceptions, wholly silent as to their object—that is, strategy, without which mechanism is useless. No strategical reason is assigned in the book for movements, whose sole object is the reality of war, in its lower and higher grades. For instance, no object is assigned for "deployments," "changes of front or position," "retreats by alternate bodies," "firing volleys by companies from the centre," &c. The vast advantage of the earliest fire is not explained, much less inculcated ; and as the military student is *not taught the object* of these movements, he is necessarily left in the dark as to their adaptation for war.

Want of quainted with practical

Hence, at my inspections, in India as well as in Ireland, of regiments, when I have asked officers the object of evolutions in the book, or called on them to perform simple strategical movements adapted to them, I have found that they are ignorant of their use, or the advantage to be derived from them in operations. I have seen good and clever officers move a regiment in a superior manner during a whole inspection ; but every evolution was disconnected with the other—not combined with, or covered by light infantry movements and skirmishing, which are the *sine quâ non* of field movements—and not enlightened by a ray of service object. In changing a front, they think only of the execution of the movement, not its most important object in the field—that is to attack or resist an enemy, endeavouring to turn a flank. Consequently, officers often open fire from the wrong, that is, the last formed flank, of which the result is, that the enemy is not opposed by the earliest fire, that of the company of formation ; and valuable volleys are lost which might have caused destruction to an enemy, the loss of their commander, or, at any rate, have checked their aggressive movement. A further disadvantage of this tardy fire is that the successive formations of the new front are not covered by fire. I need not say that the fractions, coming into the new line, are comparatively defenceless—infantry more so than cavalry.

I will cite two cases of the want of practical strategy in officers of artillery. It is clear that if it exists amongst the officers of a highly educated and scientific arm, the absence of it in the line is not to be wondered at.

In the first case I requested a clever officer of artillery to change, diagonally, the front of a brigade for action, on its centre. He did so : but instead of commencing the earliest fire from the two guns of formation, he gave the latest fire from the outward flanks. I observed to this officer that he had sacrificed the valuable fire of 10 guns. He acknowledged his error, which now, for the first time, occurred to him.

Exactly the same mistake was made by an officer commanding a brigade of artillery at home.

As regards retirements, officers—never having been taught in their drill book that the retreat of a whole body before, and with their backs simultaneously turned to, an enemy is a fatal error, which invites attack—*retire* a line without the protection of skirmishers, or alternate bodies who front, and oppose the enemy, while the other half retreat. It is almost as great and ruinous a mistake to *advance* to an attack without support, which suggests an attack on the flanks, and deprives the first line of support, moral

and physical. I say moral, because the importance of the soldier's *morale* is an indispensable element of strategy, and must ever exercise a great influence on its combinations. And although it should always be present to the mind of a commander, it is not mentioned or inculcated in our books of instruction. The French, as I saw in the Crimea, attach great importance to this essential, avoiding carefully all causes which lower, and promoting those which raise it. The *morale* of the best troops is affected when an army is compelled to retreat; and it suffers still more when they see that they are unprotected, and in the weakest position possible, that is, with their rear turned to the enemy. Officers and soldiers should be taught that they only retreat to turn again; and that if the first line is checked in its advance, the second carries them through the difficulty. In the same way, troops advancing to storm a work or a breach, require the material aid and confidence inspired by a support.

How important are these simple precautions, and how disastrous is their omission, is proved by the records of our wars. Every reverse we have had in India or elsewhere may be traced to the neglect of the rules of simple, rather than of high strategy—troops advancing or retiring in suspected hostile ground, without reconnoitring it; or unprotected by advanced or rear guards, or skirmishers; attacking a strong or fortified house with infantry only, when artillery was at hand.

As officers are uninstructed in the first principles of practical, or field operations and movements, they are equally in the dark as to those of a higher order, or which are *connected with ground*—such as the second line, or support, changing front to repel an attack on the flank of the first and attacking line; covering the retirement of a broken army with artillery and cavalry, so placed on *favourable ground* as to enfilade and attack one or both flanks of a pursuing enemy; turning movements by a second line, covered by *ground* which neutralizes the long range of scientific artillery and fire arms. These destructive arms give a vast additional importance to ground and strategy, which protect troops from the fire of an enemy's front, and bring them upon a flank; whilst a well-devised "feint" attracts the attention of the former.

As regards échellon, very rarely a junior, and not often a senior, officer explains to me its advantages, and yet there is no movement which strategy requires more frequently in the field.

Abroad as well as at home, at my inspections, time after time commanding officers, and officers called out by me to drill their regiments, have executed a variety of movements, sometimes with perfect mechanism, but without combination or object. This was not limited to regimental movements, but extended also to those of brigades and larger bodies.

One movement, which was at that time in the book, was invariably practised as the test of regimental efficiency in drill, "a change of front to the "rear on the centre of a battalion in line." It still exists in the cavalry, but has been discarded from the infantry drill book. The service—the war—object of this movement is to resist an enemy who suddenly surprises the rear of a line; the defence, therefore, should be as instantaneous as the attack. But it is difficult to say whether this ancient movement, which dates from the days of Dundas, is more characterized by its slowness and complication, than by its entire absence of the means of defence. All the fractions of a regiment cross each other in helpless confusion, rendering defence or attack impossible, and presenting a flank to an enemy. Right about face, and a volley, are the only remedies against such an unpardonable surprise.

I left in England, in 1857, another movement, a cavalry one, although not in the book, in universal favour and practice—the attack by successive squadrons from the front of a column. This movement is, like the former, utterly opposed to every rule for the employment of cavalry, and has no other recommendation but its picturesque effect. It is in column, which is forbidden under fire. It has to go over obstacles insurmountable to cavalry, and which throw them into wild confusion—dead and wounded men and horses. As soon as the attacking squadron reaches the enemy it wheels outwards and retires—bad training for the man, and still worse for the horse. The training of cavalry to wheel outwards, when attacking squares, was one of the causes of the loss of a great battle, which for the time entailed the fall of a kingdom.

Instruction of officers in the service.

With respect to field sketching, I am a great advocate for its cultivation—but with practical adaptation; some officers sketch very well, others moderately; but, in neither case, do they combine the portraiture of ground with a description of the military positions which that ground affords. Without reconnaissances war cannot be carried on; but they lose much of their value if they are unaccompanied by a correct field sketch. Ground is strategy—that is to say, the latter is dependant on the former.

9476. What machinery would you be inclined to employ for the communication of instruction in the subjects to which you have referred?—After a mature consideration of this query, the solution of the important question, which it involves, appears to me to be perfectly feasible.

Defective state of professional instruction at present.

I think that the first step should be to remedy the deficiencies which I have pointed out in the Book of Infantry Evolutions, that is, the almost entire absence in it of strategy or object.

This fault, which leads officers to confine their ideas to the barrack yard and the parade ground, and not to elevate them to the great realities of war, would be remedied by unfolding to them that knowledge which, hitherto, has not been imparted to them. I am bound to answer, frankly and fully, the questions of the Commission as to the inefficiency of military instruction. But it is only fair to officers whose deficiencies I mention, to state my belief that they are to be traced to a mistaken education. I except, of course, officers who have neither liking nor capacity for the service. As I say more fully further on, British officers possess inherent qualifications for the army, with which those of other nationalities are not gifted.

The error of mechanism, unaccompanied by object, appears in the very commencement of the Infantry Book, in the Bayonet Exercise. No application is assigned to its numerous thrusts, guards, &c. This weapon, always important, has lately become more so. Our regiments go through this drill particularly well; but neither officers nor men are taught its object, or that dexterity in it renders broken infantry or surprised skirmishers more than a match for cavalry. A practical position is not included in the exercise which renders the *sword arm* of the cavalry soldier useless, and enables his infantry opponent to give him a dangerous thrust in the *near side*. In foreign armies infantry practise this exercise against cavalry, or a figure on horseback, and are taught all its utility and advantages. The French have brought it to a high degree of practical efficiency; and their army, since the experience of the Crimean campaign, have acquired great confidence in the sword-bayonet as a war weapon. Their patrols used it, with much effect, in nocturnal encounters, in defence of their trenches against surprise. At Vienna I saw an infantry soldier who had received the gold medal for killing with the bayonet in action two cavalry soldiers, and wounding and capturing a third.

The desideratum then, in the sense of the proofs I have given of the insufficiency of the book for war, is to assign to its evolutions a service application and object, which a system of byegone days had not taken into consideration, at a time when parade movements, and military organization altogether, were not tested in the field. Every movement in the book has its object. When both are combined, strategy is taught. This combination should be supplemented in the present book with appropriate diagrams. The

Gen. Lord Strathnairn.

12 June 1869.

artillery and cavalry have each their book of Field Exercise. But, like that of the infantry, they are equally deficient in strategical adaptation to service.

Instruction of officers in the service.

In reply to the query of the Commission, which I am now answering, I would propose "to employ for "the communication of instruction in practical sub-"jects," the following plan.

Suggestions for an improved system of instruction.

The improved system of instruction should be organized under the following heads:—

I.—Simple strategy.
II.—Combined movements of the three arms—tactical and strategical—with turning movements, feints, surprises, reconnoitring, and field sketching, &c.
III.—Hill warfare, camp organization, and duties in the field.
IV.—Field fortification.
V.—Military administration.
VI.—Geographical strategy.
VII.—Military *morale*.

Head I. should comprise the three present books of Field Exercises and Evolutions for the three arms, thoroughly revised, and *supplemented*, as I have described. Some false movements in them should be eliminated. These three books might remain, as at present, distinct; but as they only teach isolated drill, special to each arm, they would come under Head I.

I would compile the remaining heads in one or two additional volumes; the subjects of them, generally speaking, being common to all arms.

I would make the "Heads" the text-book for purely military subjects, for *first* and *successive* examinations. The Commission, of course, distributing the subject of each examination, as they might deem best, and supplementing languages, &c.

I.—*Simple Strategy.*

Simple strategy.

The following queries under Head I., relating to the infantry, will exemplify the new system of strategical evolutions and instruction, and of the test, to which the candidate would be subjected. The queries will, of course, be made applicable to the other two arms.

Examples.

(A.)—Outflank an enemy in front of your battalion, showing the intention as little as possible, and without exposing a flank.

(B.)—From the last movement turn the enemy's flank, without exposing your own to enfilade.

(C.)—A battalion, covered by skirmishers and supports, changes front the 8th of a circle to a flank. State the objects of this manœuvre, and its execution.

(D.)—A regiment in line has to retire over a causeway in rear of its extreme left. State how this should be done, and cover it with all available fire.

(E.)—The regiment has debouched from the causeway into the open. Show the best and quickest front, and cover the formation with the *earliest* fire.

(F.)—The right flank of a battalion is threatened; state the requisite defensive and offensive formation, with the earliest fire.

(G.)—A battalion has to march through a suspected or hostile country; what precautions should the commanding officer take?

(H.)—Cover a brigade retiring with a battalion in skirmishing order.

(I.)—When skirmishers approach cover, what should they do?

(K.)—How does an officer commanding a small infantry escort clear a crowd of rioters obstructing his passage through a village?

(L.)—How should he disperse the rioters, when they assault him violently and close on him?

(M.)—How should an escort effect a passage through a defile, blocked up by a barricade, and the commanding sides held by rioters?

For brevity I will not multiply these examples. I have said sufficient to show the advantage of adapting theory to war.

These are clear examples of *simple* strategy, with which every officer ought to be acquainted; but before finishing this head, I shall, with the view of making the instruction as clear as possible for a young, and not very apt, intelligence, put it in what may be called a *negative* form.

It may be hoped that when a student has learnt what he *ought not*, he will be led to reflect on what he *ought*, to do. For instance,—

1. *Never retire a regiment, simultaneously, before an enemy; or without cover.*—Disregard of this principle was the cause, not many years ago, of one of our greatest disasters in India.

2. *Never expose a flank to an enfilade.*—Disregard of this principle, on the part of his antagonist, enabled the Duke of Wellington to win one of his greatest battles.

3. *Never attack in column.*—Disregard of this principle caused the annihilation of the Russian columns at Inkerman.

To add an interest to the instruction, I would adduce from campaigns instances of the utility and success of the strategical movements of a battalion in war. The following are instances of the success of a batallion:—

1. The battle of Maida is an old but excellent example.

2. The success obtained at Vimiera by the change of front of a wing by a British regiment.

3. Lord Clyde's celebrated change of front on the centre of a regiment, which did so much to retrieve the day at Chillianwallah.

II.—*Combined Movements.*

Combined movements of the three arms.

The same absence of object or practical utility which characterises the three books of exercise for artillery, cavalry, and infantry, accounts for the total absence of instruction for the "combined movements "of the three arms," although it is superfluous to say that, in war, operations cannot be carried on without their combined action, and that the want of instruction on this head must place the army, which is without it, in a very disadvantageous position.

The instruction also for movements in two lines is meagre and insufficient.

Therefore, both in India and on my arrival at the camp of instruction at the Curragh in 1865, I had to organize combined orders of battle, positions, and movements for the three arms in *two lines*. A general officer, who had been at the Curragh for more than two years, told me that he had never seen or heard of two lines. I need not say that an order of battle in one unsupported line is unpardonable, in a strategic sense.

The following were the characteristics of those field days:—

There was no real, only a *supposed* enemy, and without a real one it is impossible to represent the reality of the field. The field days were without object or plan. Nothing was taught, therefore nothing could be learnt. False and unpractical movements were performed, which, if before an enemy, must have been followed by disaster. As no book or code of instructions existed for combined movements of the three arms, they acted frequently irrespectively of each other—the infantry advancing and performing continual changes of front; the artillery unsupported in its original position, and without escort, remaining in action against the first enemy; the cavalry moving against another, but now abandoned front. The results of these changes of front and enemy, and movements without cohesion, were that the three arms attacked in opposite directions, and fired, only too often, into one another.

The representation of war was rendered still more unlike reality by the irregular position and movements of the military train. Instead of being in rear of the second line, ready to administer the "first cares" to the wounded, it placed itself in the most dangerous position, between the cavalry, covering the retreat of the main body, and the

supposed enemy. When I addressed the officers before the next field day, on the mistakes of the preceding one, I observed that amongst them were the novel movements of the military train, which were such that instead of performing their special duty to the wounded in a place of security, they would have been knocked over by projectiles, or taken; unless the cavalry had neglected their orders to cover the retreat, and at great risk to themselves, taken care of them.

One of the false movements practised was the position assigned to cavalry in rear of, and close to, the first line, which became engaged and exposed to a heavy fire from the enemy, which it returned with an incessant fire. Thus, unnecessarily, exposed to the enemy's fire, the cavalry, to assist the infantry, were brought through its intervals, breaking its own formation, as well as that of the infantry, and attacked to the front in one line, without, 1st, the freedom of action on its flanks, which is the *sine quâ non* for cavalry, and 2ndly, without a second line in support.

These errors may also be attributed to the absence of all instructions for the combined movements of the three arms for an order of battle, or for manœuvres in the field in *two* lines.

I would, therefore, recommend—

1st. That a book of Field Exercise, movements, and manœuvres, most used in war by large bodies of the three arms in two lines, with strategical adaptation, should be compiled with appropriate diagrams.

2nd. That officers should also be examined for qualifying examinations in this book, of which the next queries may be taken as examples.

3rd. One of the military ameliorations most required is the assimilation, as far as possible, of artillery, cavalry, and infantry words of command. So great and useless is now the difference, that it causes the same difficulties which result from foreign languages. And the best officers of the three arms constantly tell me of the disadvantages to themselves and the field days which ensue from their being placed in command of an arm of which they do not know the words of command, that is, the language. They say, and I agree with them, that this diversity in the words of command is likely to cause the failure of an operation. When an order is to be transmitted, it has to be given in two or three different ways. The assimilation would obviate another essential difficulty—that the infantry words of command are so unnecessarily long, that some of them are rarely, if ever, correctly given. A long word of command is a great disadvantage in a critical moment. The infantry commands are frequently double in length those of the cavalry, although the arm is simpler.

Queries under Head II.

(A.)—State the conditions for the distance of the second from the first line, as well as those for the formation and position of a second line.

(B.)—What is a good evolution for a battalion, which, for an attack, has all the advantages of a line, without the drawbacks of a column, and at the same time none of the disadvantages of a single line—affording supports, reserves, &c.?

(C.)—State the conditions for the relative positions of the three arms in two lines, with reference to horse artillery, field batteries, cavalry, and infantry, and the reasons for these various positions?

(D.)—If the object is to concentrate the greatest amount of fire, or a converging fire on a particular point of the enemy's position, how should the artillery in the first line be disposed?

(E.)—How should artillery be placed on rising ground so as to obtain cover from it?

(F.)—The enemy's infantry has been broken by artillery and infantry fire: how should the cavalry, being as much as possible under cover from fire, be disposed so as to fall on the flank of the enemy, and in what formation should they attack, their right wing being "en l'air"?

(G.)—How should horse artillery, cavalry, and field artillery, cover the retreat of the main body in two lines?

(H.)—A force has to advance across a suspected plain or unenclosed country: dispose it with advance and rear guards, skirmishers, and videttes, making use of the three arms?

(I.)—How should a force in two lines best oppose a front attack and another on its right?

(K.)—How should a beaten first line retire on a second?

Gen. Lord Strathnairn.

12 June 1869.

Instruction of officers in the service.

The following are instances of the utility of a second line:—

1. When part of the first line at Waterloo was driven in, it retired, and made a stand on the second. If there had not been a second line, it is impossible to tell how far the first might have retreated.

2. The support of the second line of the allied army ensured their success at the Alma.

Negative Examples.—1. Never attack without a support or second line. Disregard of this principle was the main cause of the failure of a great assault in a recent campaign.

2. Never leave a village or cover on the flank of your position unoccupied. Disregard of this principle was the cause of a disaster which brought on the siege of Lucknow.

3. Never attack an enemy's position without skirmishers, or reconnoitering it. The non-observance of this axiom compromised half a battery of horse artillery in the Central Indian campaign.

4. Never leave the approaches to the position of an army unsearched, and unwatched, by cavalry patrols and videttes. Neglect of this precaution was the cause, on a recent occasion, of the loss of a kingdom; and on a subsequent one, of an unfortunate peace.

Feints, Turning Movements, Surprises, Reconnaissances.—It is needless to enter into the advantages to be derived from these elements of strategy, so recognized are they by the ablest generals, and by historical records of wars; but no instruction regarding them exists in the English service.

Minor operations of warfare.

It may be well to make a few brief remarks regarding them, adduced from my own experience.

I was first made aware of the practical effect and advantage of feints, when serving with the French army in the Crimea. No movement, however distant or improbable, was made by a body of Russian troops without causing corresponding sensation and precautions in the French camp. This taught me to consider the real advantages of feints. They are, that, as it is impossible for a general to know whether the movement is a feint or real attack, he must take precautions to meet it—that is, he must weaken the parts of his position, not threatened by a feint, to protect the one threatened, which, of course, renders attack on the parts denuded more feasible. For instance, if his right is threatened, he is tempted to weaken his centre and left.

The conditions for the success of feints are the following:—

1. To give an air of reality to the feint in order to promote the weakening of the points of the line or position which are to be the objects of the real attack. For example, to cause a movement to be made in the centre as if in support of the feint.

2. A feint should not so disconnect itself from the main body as to cause it to be cut off.

3. The moment of the feint to be so timed that advantage can be taken of the weakening of the enemy's line, and that the real attack be made before the discovery of the object of the feint.

4. Should, however, the enemy have divined the real object of a feint, and consequently have strengthened the point of the real attack—thus weakening their line opposite the feint—the feint may be converted into a *real* attack.

As I have gone into this instruction as to feints, in consequence of none being given in the books of

Gen. Lord Strathnairn.

12 June 1869.

Instruction of officers in the service.

instruction, it will not be necessary to adduce queries in illustration of them.

Turning Movements.—As I said before, in treating this head, the advantages of turning movements are so fully recognized, that they require no illustration. But it may be well to note a special one. They involve the enfilade and attack of the enemy's weakest point, his flank and his rear.

For the same reason, as in the case of feints, I shall omit illustrative queries and merely make a few observations respecting turning movements, in the shape of conditions.

1. They are equally advantageous for all arms, and one condition is as indispensable for them as for feints—*secrecy*, and correct information.

2. As a rule it is better to make a turning movement from the second line, because it is concealed by the first line, and able to take advantage of the features of ground.

General L'Admirault, commanding at Châlons, told me, and I saw myself, that the French usually made their turning movements from the second line.

3. The first line should be prepared, without making any ostensible movement, to co-operate with the attack of the turning movement, which necessitates the next condition.

4. The watches of the officer commanding the turning movement and his staff, should be set exactly with those of the general commanding, and of the quartermaster-general and staff, when the turning movement is made at a distance, and out of sight of the main body.

I experienced in India, and at the Curragh, that non-simultaneousness of action between the movement of the main body, and the turning movement, compromised not only the success of the manœuvre, but also the safety of the turning column.

5. The turning movement to be so concerted and combined that its safety shall not be endangered.

I owe valuable instruction on the subject of turning movements to an admirable strategical paper, given me by Lord Raglan, for communication to the French Commander-in-Chief on the advantage of a turning movement to assist the siege of Sevastopol. Subsequently, when doubts were expressed as to the feasability of continuing the siege, I wrote a paper, approved by then Colonel, now General Trochu, showing that the siege ought to be continued, accompanied by a turning movement. The paper was communicated to the French Government by Lord Cowley, and approved by the Emperor of the French, who telegraphed his approval of it to Marshal Pelissier.

I may observe, in practical illustration of the value of feints and turning movements, that the march of the Central India field force from Bombay to the Jumna would, in consequence of the overwhelming number of the enemy and our ignorance of the country, have been impossible if a constant use of them had not been made, of which the following are one or two examples.

The fort of Rathghur was taken by occupying a long wooded ridge, from which the artillery fired directly on the east face, and enfiladed the north, which was also attacked from its front.

The south passes into Bundlecund were forced by making a feint against the northern pass—Maltone—two marches off, which caused the move to it of the Rajah of Bampore with 10,000 of his best troops, most of them Valaites (Affghans). I was enabled to strengthen and give probability to this feint by detaching with it field artillery and cavalry, which I could not have employed in the hilly passes. I rendered the feint still more deceptive by requesting the commissariat to order provisions for a large body of troops along the road to Maltone; all of which was reported by the disaffected population to the rebel leader.

These ruses may enter into the instruction for feints.

Reconnaissance of the enceinte of Jhansi showed me that I could turn and enfilade with a 24-pounder the southern defences, crossing its fire with the 18-pounder in the front attack. This enabled me, not only to sweep the interior of the front defences, but to burn with carcasses the abattis and timber with which the enemy made a retrenchment to defend the breach.

At the action of the Betwa the enemy had advanced with 20,000 men to relieve Jhansi. My front was so small, as I had to continue the siege, that I must have been out-flanked if I had not moved, rapidly, against their flanks horse artillery and field guns, with their escorts.

Gwalior was taken by turning movements directed against it from no less than three points, two of them by troops brought from more than 100 miles distant.

Surprises.—Surprises should be conducted very much on the same principle as turning movements, for the more a turning movement is a surprise, the better. Their first conditions are secrecy and correct information.

There cannot be a better instance of, or instruction for the proper management of a surprise than the ably conducied manœuvre of Lord Hill in the Peninsula against Arroyos de Los Molinos. The whole of the French force stationed there were surprised, and made prisoners of war.

Reconnaissances.—Reconnaissances are not only advantageous, but positively indispensable; as without them the ground of the enemy's position and manner in which he defends it cannot be ascertained, nor the operation for attacking him decided on.

Instructions but meagre exist on this head in our service. I have already furnished to the Commission ample details at to the objects which should form the subjects of reconnaissances; I will only add that the peculiarity of the service necessitates the employment of selected officers of good judgment and experience.

The French divide reconnoitring into—

1. "Reconnaissances."
2. "Reconnaissances forcées."

The former are made with a view not to attract attention, and therefore with as little show as possible.

It is said that Napoleon, posted and dressed as a sentry, on one bank of the Danube at Ulm, reconnoitred the position and movements of the enemy on the other.

"Reconnaissances forcées" are made with cavalry and even horse artillery, a body of infantry following in reserve, as was the case on occasions when I accompanied the French in the Crimea. They are employed when the necessity of acquiring information regarding the enemy's position requires their sentries, outposts, and even supports to be driven in.

The tactics of the Cossack outposts and sentries, on one of these occasions, guarding the entry into one road leading to the valley of the Baidar and of another to a ford of the Tchernaya, are worthy of notice. To mislead the reconnaissance they scattered in every direction, uniting afterwards at a pre-arranged rendezvous in the rear.

Field sk ing.

Field sketching has already been mentioned in the answer to Question 9475 in connection with reconnaissances, of which it is a necessary accompaniment. For no one can bear in mind all the varieties and features of ground he observes in a reconnaissance unless he makes a note of them at the time, by sketching. Some valuable officers possess a perfect organ of locality, than which nothing can be more valuable; but they do not possess the mechanical talent of drawing. In such cases a description, with numbers denoting the ground, should be accepted.

A paper which I have already furnished to the Commission contains the fullest details of points which should form the subject of a reconnaissance. All those relating to ground, and consequently to strategy, should be delineated by sketching. Nothing, therefore, on this head remains to be added.

III.—*Hill Warfare, Camp Duties, &c.*

Hill wa

There are no instructions in the English service for hill warfare or camp duties in the field. Hill

warfare is a most difficult operation of war; so much so, that many of the hill operations which have been conducted in India have failed; and that successes have been checquered with reverses. With the view to remedying this, as much as possible, it is best to consider the difficulties of hill, especially mountain warfare, such as in the Himalayas.

1st. The heights of the mountains render it most difficult for men unaccustomed to mountains to ascend them *without* a load; the addition, therefore, of rifle, ammunition, and accoutrements increases the difficulty, particularly if they have to carry any kit, however small.

Conditions for the passage of a mountain defile are that the high ground bordering the road must be occupied to prevent the enemy holding it, and firing into the column from commanding heights.

2ndly. If the mountains, and their spurs, bordering a pass or defile be rocky and wooded, the obstacles to an advance are much increased.

Transport is another very serious embarrassment in hill warfare. The narrow pass soon becomes blocked up with a long line of baggage animals, which invites a turning movement against the rear; and as the kit of the troops who ascend the high ground on the right and left of the pass must be carried, the means of transport become more embarrassing than in other ground where the transport resources are greater. The only transport practicable in mountains are men and mules. A mule in mountains can only carry 180 lbs. Wheeled transport of any description can, on no account, be allowed. The French would not even permit a *vivandière's* cart to go with a turning movement with which I was in the valley of the Belbec. One, however, did get in and stopped the column for hours, till it was burnt.

Officers and men must carry the least possible amount of baggage, and when it can be done, make "abris" of trees in lieu of tents. Tents for field hospitals can, alone, be allowed.

The best mode of effecting a passage of a hostile pass is the following:—

No. 1 detachment from the front occupies heights well in front of the column and on the flanks of the road. But it would be too exhausting for No. 1 detachment to continue to occupy the flanking heights; and as soon as the rear guard has passed No. 1, it descends and forms the rear guard. In the meantime No. 2 detachment has ascended the hills and performed the same operation, and so on. This successive occupation of ground on the flanks of the column can alone secure its safety. As each detachment, in ascending, was covered by skirmishers, so will it be as it proceeds along the ridge—skirmishers searching carefully, and making good, ground on the right and left of it. All mountaineers are prone to ambuscades.

The retreat of a column through a pass is conducted on the same principles.

As wheels are not transitable in mountain warfare, mounted batteries are employed, and are generally composed of the following ordnance, viz.:—

3-pounder horizontal guns.
12-pounder howitzers.
4¾- and 5½-inch mortars for vertical fire: but the accuracy of the latter is alone to be depended on.

Experience has shown that vertical fire is the only one that searches the cover of high ground and the interior of stockades.

The 5½-inch mortars being insufficient for forts and stockades, I organized an 8-inch mortar battery of six guns, on elephants, for mountain warfare in Bhotan, with slides, by means of which it could be brought into action in two minutes. This battery was used in Abyssinia.

s. *Camp organization in the Field.*—We have no instructions for camp organization. Its conditions are—

Proper protection in a hostile country or before an enemy.

It is formed in two lines, the cavalry and artillery so posted as to be able to turn out as quickly as possible, unembarrassed by tents of other troops. It is guarded by outlying picquets and patrols, infantry and cavalry, under one field officer, and inlying picquets, quarter guards, &c. under another. The site of the camp should be on favourable ground and safe from danger. On the alarm each regiment turns out, as quickly as possible, parades at the regimental, then at the brigade, rendezvous, &c. Outlying picquets and patrols are reinforced, inlying picquets bridle and mount. Each picquet, guard, and regiment should be furnished with lanterns, as the confusion arising from darkness is dangerous.

Gen. Lord Strathnairn.

12 June 1869.

Instruction of officers in the service.

Water.—The camp should be placed near running water, a lake, or pond. Drinking troughs supplied from them should be constructed for the horses.

All necessary precautions should be taken to prevent the camp being burnt in dry weather. No fires should be allowed to windward.

The reserves and supports of outlying picquets should be under cover, &c.

Instructions on this point are given in the book.

Sanitary Measures.—The tendency of camp life is to produce colds, fevers, and cholera. Every precaution should be taken against them. The most important are,—1st. The camp should be pitched on good healthy ground. 2nd. There should be good linen tents which do not admit wet—Lord de Ros's pattern is the best. 3rd. Straw for the men to lie upon, and a flooring of boards in a standing camp, should be provided. 4th. Trenches should be dug round the tents to carry off the rain.

Should cholera show itself in an endemic form, experience proves that nothing puts a stop to it so effectually as an immediate march, not in the direction of the choleraic current. The utmost attention should be paid to treating, early and promptly, premonitory symptoms; and all food likely to produce the disease should be interdicted.

A sufficient number of latrines, on the dry earth principle, should be constructed for each corps, and so placed that the prevailing wind of the locality should not carry any malaria to the camp.

IV.—*Field Fortification.*

There are so many excellent books published on this subject that I do not presume to enter on it, beyond recommending that a selected engineer officer should draw up a text-book—forming part of these volumes—specially compiled for the examination of officers, and entering fully into those matters with which they will probably have to do during their service, such as the defence of houses, bridges, villages, heights, cross roads, with engineering obstacles, &c., of course including entrenchments.

Field fortification.

As the entrenching question, or spade drill, has not been officially introduced, I have not considered it proper to enter into it as a subject of instruction. It is a revival of the old Turkish system of troops entrenching themselves after their daily march. Under exceptional circumstances, it may be advantageous for troops to entrench themselves; but to adopt the Turkish system, or to inculcate on the soldier that the spade is a necessary part of his equipment, or in any way to be valued like his rifle, would affect unfavourably his *morale*, as well as operations in the field. Entrenching a position would promote the tendency to *stay* in it, of which the result would be turning and enfilading movements against it. It might also have a bad effect in lessening the value of ground; and to add a cumbersome spade to the already overloaded kit would be out of the question.

V.—*Military Administration.*

No instructions have been issued to the army generally on this head, but as I hear the Commission have decided on having a text book published, I will leave it in their hands.

Military administration.

Gen. Lord Strathnairn.

12 June 1869.

Instruction of officers in the service.

Geographical strategy.

VI.—*Geographical Strategy.*

As, in field operations, strategy depends principally on ground, so, in operations of a more extended and higher scale, plans of war between states, and the wars themselves, must be ruled by geography.

Consequently, the following essential must be taken into consideration, viz. :—

The *best* point where the attack shall be made.

The term "best" is used in the present sense with regard to supplies, means of transport, friendly or neutral population, lines of rail and other communications, &c.

Foreign armies attach the greatest importance to geographical strategy. Staff officers are specially employed in extracting from maps, newspapers, periodicals, &c. all possible information as to lines of rail —projected, commenced, or completed—new roads, &c., &c. They are taught the geography, resources, warlike and agricultural, of all foreign powers, of whatever nature they may be. Maps are laid before them, and they are examined as to the mode in which different powers are to be attacked, taking into consideration all the points which I have mentioned, such as doubtful or friendly population, supplies, communications, ground, configuration of the country—whether mountainous, hilly, or plain, intersected by rivers, or enclosed, &c.—the warlike habits or otherwise of the inhabitants, which would be favourable, or the reverse, to an attacking army. After having discussed these points, they are directed to state the line or lines of operation, and the turning movements or feints to be executed, for no operations on a large scale are contemplated without the aid of one and the other.

A practical instance of this strategy is the feint the allies made against one part of the Crimea with their ships of war, and the descent on another with their armies. Prince Menschikoff could not divine where the real attack would be made; and, consequently, the allies landed at Old Fort without firing a shot.

There could not be a better proof of the advantage which is derived, in a military point of view, from the knowledge of the geography and resources of a country than the disadvantage which the allied forces experienced from their almost entire ignorance of those of the Crimea. In this respect the staff of both armies failed.

An illustration, and a favourable one, of geographical strategy was the echellon march towards Sevastopol; the ships of war of the allies being the advanced, and the left the refused echellon.

A further advantage of the maritime echellon of the right was that they covered the advance of General Bosquet on the coast, clearing the plateau over, and on the left bank of, the Alma, and enabling that general to ascend it with little or no loss.

VII.—*Military "Morale."*

I have already dwelt on the importance of taking into consideration the "morale" of the soldier. Attention to the "morale," or in other words, the feeling and well-being of the soldier, should be inculcated on young officers, from the soldier's meals and his drill to the most important operations in war. Drills should be short, active, and intelligent; if they possess these characteristics they will be learnt more rapidly and effectually, for the soldier's interest and goodwill, important guarantees for discipline, will be carried with them. Nothing can be more pleasing than to mark the interest with which officers and soldiers perform any movement accompanied by a gleam of object; such as a feint, defence of a flank, a turning movement. In this sense, I have experienced the good effect of giving such words as "The right threatened," followed by "Change front to the right," &c.

In the same way, in the interest of the soldiers' "morale," the ardour of a commander should never call on them to do more than they can in the field. A deviation from this principle caused a check at a great siege in India, and the death of one of the most gallant and efficient generals of the army.

When the soldier sees that his officers interest themselves in everything connected with his comfort and rights, and that he will not be unnecessarily exposed in the field, he will willingly bear any amount of hardship and face any danger, wherever such proofs of devotion to his duty may be required of him. Throughout my service I have seen the worst effects result from the disregard of these wholesome principles.

9477. Would your lordship prefer to rely upon the commanding officer of the regiment for securing the instruction of the officers in the subjects to which you have alluded?—No. Not solely on the opinion of the commanding officer, but also on the half-yearly inspection reports on officers under their command, which are sent in by commanding officers to general officers commanding divisions, to the general commanding in chief, if there is one, and to the Field Marshal commanding in chief. These general officers, and the Field Marshal commanding in chief, all judge the reports of the commanding officers on their officers. Therefore, the opinions of the commanding officers are amply and sufficiently tested by superior and responsible authorities.

9478. Would you be inclined to contrive that some one special officer in the regiment should be responsible for the communication of the instruction; because the natural question suggested by your remarks is, since it is so desirable that officers should receive this instruction, how comes it that there are so many of them who seem to be destitute of it?—No. This query is replied to by my previous answer in which I place all possible checks on the opinion of the commanding officer.

It must be borne in mind, that when the system of military education is improved, and I may say fundamentally changed for the better, the military qualifications of the commanding officer will be very materially improved, and render him competent for the discharge of the very important duties of his position; amongst which, that of judging the qualifications of his officers is one of the most important. But even under this improved system, I would still subject the opinion of the commanding officer regarding his officers, to those of the general officers in authority over him, whom I have mentioned. When to this improved system of education the further most important guarantee of efficiency, which I propose, be added—that military merit should be rewarded,—I consider that the several very responsible and competent military authorities who judge an officer's merits, will be sufficient.

The whole course of my evidence goes to prove, that owing to a mistaken system of education and training, and want of reward for merit, the absence of proper qualifications, of course with exceptions, exists in all grades, including that of commanding officers. In illustration of this, and of the mistake of drill without object—at an inspection during the Fenian period, and in a Fenian locality, I requested a commanding officer of 40 years' standing to defend his barrack yard against a rush of rioters from the town. There was but one road from the town to the barracks, and the sole fortification in the barracks consisted of defences flanking the gate, and a banquette. The officer placed his men against a high wall, which they could not defend, and posted none in the only place which they could defend—the banquette and gate defences.

9479. Would not the very incident to which you have referred imply that it would be advisable to take some better securities for the instruction of the officers?—Certainly.

9480. Through whose instrumentality would you do that; because evidently we cannot altogether rely upon the commanding officer of a regiment?—I have named the tribunal, which consists of general officers, the commander in chief, and the Field Marshal

commanding in chief. I agree that it would not be advisable to trust the decision of an officer's strategical capacity, even under an improved system, to a commanding officer. Nothing is more diversified than natural talent; and a disregard of this fact has exercised a very unfavourable influence on the tests of military qualification. We are not satisfied with one valuable qualification, or even more, for the army, which is possible; but we exact all, which is impossible. And very excellent officers are thus lost to the service. There are most gallant and valuable officers who, by their presence of mind in a crisis, have performed services of the highest importance. But strategy and its application are not their "forte."

In all foreign services, records are kept of the characteristics, the special qualifications of officers. This essential should form part of an improved system of military training.

So little value is attached to the means of knowing the merits of officers, that when I have remarked on their deficiencies in drilling their battalion, they have told me that during their service, often a long one, they have rarely, if ever, had an opportunity of commanding or moving the regiment. This is a grievous mistake which should be thoroughly remedied. Officers of all grades and ages should frequently be practised in drilling their regiments. They would thus acquire two indispensable qualifications, practical aptitude and confidence, neither of which they have now, as a rule, had the means of obtaining.

In the sense of my former observations, nothing, not even a perfectly devised system of education, will ensure the requisite military competency; unless proved and acknowledged military qualifications, acquired by zeal and application, or talent and zeal united, receive some proper acknowledgement or reward. The more an officer is gifted with an honourable desire to rise in his profession, and with recognized ability to do so, the more does he feel the want of any recognition. And it is this feeling, and to a certain extent the want of the fulfilment of an implied engagement, which has exercised a very unfavourable influence on military competency; extending, as it does, to all grades and responsibilities, which I may sum up in brief words—"the examiners, "the examined, the judges, and the candidates."

The system of commanding officers, general officers commanding divisions, generals, commanding-in-chief, and the Commander-in-Chief testing the capabilities of regimental officers at inspections, is conceived to imply, to hold out the expectation, that those who have qualified themselves for the service will be appointed, in due course of time, to the staff—which is a great incentive to officers—or be promoted. Whilst, on the other hand, testing examinations imply that the drones, those who will not, or cannot, qualify themselves for the army, will remain stationary in it; or if they persist in their inefficiency, eventually be removed from a service for which they, in spite of unceasing remonstrances and warnings, have disqualified themselves. But it would be as unfair to them as to the service to delay their removal, till age or want of opportunity had rendered it impossible for them to find other means of livelihood and occupation.

But neither of these conditions are, with a few exceptions, realized. Both categories, the competent and the incompetent, remain in the same groove. The door of the staff is closed to regimental officers —no matter how continued and indisputable the recognition of their merit and their promise, no matter if that promise holds out the belief that they will be great generals. I do not remember an instance of a regimental officer having been promoted in consequence of inspection reports, however favourable. General officers see that their favourable reports produce no results, and the candidates for a bright military career become still more impressed with this discouraging conviction. It is not surprising that these disappointed expectations should have produced a general relaxation amongst judges and candidates.

This was not the case formerly, as I know from my own experience. Entertaining the wish to get on in the service, I learnt the whole drill by heart; and accepted the kind offer of a first-rate adjutant, a gentleman risen from the ranks, to attend his drills. He frequently allowed me to drill the regiment. The result of this was that I acquired confidence, and a knowledge of the drill, which enabled me to receive the approval of the commanding officer and inspecting generals, which was followed by my promotion to an unattached majority after only 6½ years' service.

Gen. Lord Strathnairn.

12 June 1869.

Instruction of officers in the service.

I have always recorded the opinion that the half-yearly inspection reports of general officers, accompanied as they are by those of the commanding officers, who have daily experience of officers, are excellent guarantees for the discipline of a regiment, and the efficiency of officers, provided the rule that the best privates are to be promoted, be followed also as to the officers. I think that the term "confidential," as applied to the half-yearly inspection reports, is not a good one, nor called for. It creates a feeling, not an unnatural one, against them, and weakens their powers of good. Of course there are certain matters connected with officers, which, for their own sakes, they do not wish to appear in an ordinary official report. But there is nothing of this nature which applies to the mere opinions of an officer's capacity in drill and military efficiency. On the contrary, if, for instance, they cannot put the regiment through the "manual and platoon exercises," or "change a front," they are, as a matter of course, informed of their deficiencies and desired to correct them; and to consider this as a confidential matter is a mistake, and injurious to the service. I think that the disappearance of the word "confidential" would have a very good effect.

I should not be so decided in my recommendation of the adoption of the principle of reward of merit, if I had not experienced myself, as commander-in-chief in India, its great and certain advantages. I had to reorganize the native army of Bengal after the mutinies. I became convinced that no measures, or policy it may be called, would so effectually assist the realization of this desideratum as a great measure of justice to a body of officers, whose merit, tried and proved in Indian fields of honour, showed that they yielded in nothing to the spirit of unvarying devotion—of enterprise which hesitated before no obstacles—to the steadfast gallantry of their forefathers, which had won India for us. I therefore issued a general order, stating that I would give my patronage, which was very large, to military merit, adding that I did not require strictly official evidence of it. It was enough for me if the merit were proved. The general order was responded to as I thought it would be. Numerous and worthy candidates, whom I never failed to reward to the utmost of my ability, came forward. The result was all that I could wish. The native army was quickly and efficiently reorganized, as was proved in two hill campaigns, by the recognition of their merits by the Secretary of State for India and the Governor General of India. Of course, there were exceptions to which the best rules are subject. Tried gallantry in the field might not always be equal to administrative responsibility, or requirements which active service on the staff in the field had not tested. But, as an honourable military incentive, and a just recompense of tried qualifications, it was repaid by most satisfactory results, of which I have adduced the proofs. There was a native army superiorly commanded, well disciplined on safe principles, and a corps of officers who enjoyed the influence and the prestige, in and out of their profession, which always accompany good and gallant service.

9481. Do you think that if by an impetus being given to the officers of our army they acquired the practical knowledge of the subjects to which you have referred, it would be advisable to put them through an additional examination in those subjects?—This query has been replied to by the above answer.

9482. Would you render such examinations obli-

Gen. Lord Strathnairn.

12 June 1869.

Staff College.

gatory up to a certain point?—I have given an an opinion in favour of successive examinations.

9483. Do you approve generally of the constitution of the Staff College?—No, I cannot say that I do. I think that it is a failure.

9484. Is your opinion of it so unfavourable as to induce you to recommend its abolition?—I would say so, certainly on its present footing. It is too theoretical, not practical. The general complaint is, and I have experienced the same, that officers who have passed through the College have not acquired sufficient instruction to enable them to give the assistance which their position requires, in evolutions or strategical manœuvres. The reason is evident. They have not been instructed or practised in them. With the best intentions they are unable to take up alignments for direct or oblique changes of position of troops of all arms. They do not seem to understand, or practically judge, the angles which are necessary for safe changes of front; or to maintain the parallels required: the result of which is exposure of a flank to enfilade, or a misdirected fire. They fail, in short, in the practical adaptation of movements of large bodies to a strategical object. The short-coming points out the cause, and the remedy. As regards languages, I think that those who have been abroad speak and write them very well; but that, when officers are indebted, solely, to the knowledge of languages which they obtain at the Staff College, particularly colloquial practice, they, generally speaking, would fail to be useful for service abroad, especially in the "Intelligence Department." I object also to mis-spent time and labour in learning sciences which are useless for a career in the army: at least, speaking from my own experience, I never found once the want of them, and very numerous officers have told me the same. I have no prejudice against scientific education. On the contrary, my own military education at Berlin was scientific and varied. But it was also practical. I was indebted for it to a colonel of artillery at the head of the School of Cadets, and other officers and non-commissioned officers of the Prussian army. The time mis-spent in sciences would have been far better employed in the acquirement of the "sine quâ non" of war—strategical knowledge. It cannot be satisfactorily acquired, except in a camp of instruction; I have found all the officers coming from the Staff College, of whom I have had experience, deficient in this essential.

9485. Do you think that it would be possible to ensure the presence of those qualifications at the same time that you imparted scientific knowledge, for the communication of which the Staff College was originally instituted?—As I said before, I think that practical ability at the Staff College is sacrificed to theory and sciences useless to the army. I think that if the Staff College were improved—if staff officers, educated on the improved principles which I have suggested in answer to the preceding query, were then tested at camps of instruction—practical might be combined with scientific knowledge. During the Crimean war, an officer, who had distinguished himself highly at the senior department, was for this reason, appointed to the staff of a general officer, but was found to be so practically useless that he was transferred to the staff of another general. The transfer did not stop here.

9486. How is that difficulty to be got over?—By an improved and practical adaptation of evolutions in the Book of Field Exercise to object and strategy. Practical deficiencies are not confined to the book alone.

9487. It has been very fully brought before us that the certificate which is required to be given to an officer before he can enter the Staff College is scarcely ever a *bonâ fide* document?—It is a sort of form.

9488. What precautions could be taken to render it *bonâ fide*? The process now, as I understand it, is that when an officer wishes to enter the Staff College, before his application will be received, he has to apply to his commanding officer. In the first place he must have had a previous service of not less than five years, exclusive of leave of absence; and then he must apply to his commanding officer for a certificate, which says that he is acquainted with the various subjects connected with his duty as a regimental officer, and which are required for a staff officer. And the commanding officer in his certificate states:—"To the best of my belief and judgment I consider "him, from his general knowledge of the service, "character, habits, and disposition, to be qualified in "those respects for employment on the staff. He is "a (good, fair, or indifferent) rider, and is not short-"sighted." That certificate, it is evident to our minds, is altogether worthless for ensuring the presence of practical and physical qualifications; and what we want to know is, how we can accomplish what was originally intended to be accomplished by this certificate?—Yes. It is notorious that frequently when officers marry or do not wish to go to India, they have recourse to the Staff College, and that commanding officers, with a view of obliging them, assist their views. I think that the service would be essentially benefited, and justice done to good and zealous officers, were an officer, who has been frequently and favourably reported on by his commanding officer and his inspecting general officer at the half-yearly inspection, to be allowed as a reward to go to the Staff College. But I should not wish, for his own sake, or the good of the service, that he should be sent to the Staff College while it is under its present system of education. The officer might lose the qualifications which he had acquired in his regimental service, and gain no instruction at the College which would compensate him for the loss. I consider the term of the study at the College—two years—far too long. If the useless studies were eliminated, the time might be reduced to one year. An officer of average capacity requiries a two years' preparation to secure his entrance; and during that time he undergoes, more or less, a process of "cramming," from which results fleeting and not lasting knowledge. During these two years preparation, and two years at the College, altogether four years, the officer's thoughts and habits are diverted from the practical duties of his profession. Another material consideration is, that during two of these four years, his brother officers have to perform his duties for him, at the sacrifice of their regulated share of leave. But the greatest objection of all remains to be told. The staff officer does not imbibe, with his studies, the knowledge and the art of discipline, or the power and capacity to make a proper use of it. The misfortune of a college is that this "sine quâ non" of military efficiency, the knowledge of the soldier's wants, well-being, comfort, and feelings, are there lost sight of. Military law is learnt at the College, but not the difficult art of maintaining that discipline which is the best, when subordination is coupled with perfect justice to the service and the soldier. Nothing can be a greater proof of the disregard of practical qualifications in our military education, than that its system is established irrespective of this grand military essential—discipline; and yet in the histories which are given in the College, for instruction, no records are ampler, or more frequent, than those which tell of the fatal effects resulting from armies which have lost their discipline.

9489. Do you think that it would be possible so to correct the defects in the Staff College to which you have alluded, as to render it, when coupled with those precautions which you have suggested, a useful institution?—With respect to this question, I beg, in the sense of my former answer, to request that I may be acquainted with the improvements proposed for the College before I give any opinion on the subject.

9490. Supposing that the previous question were answered in the affirmative, would it be possible to introduce such an institution as the Staff College into

India?—I think that if a really efficient and improved College for military instruction were established in England, it would be for the good of the army to institute a similar one, if not more, in India.

9491. Is there anything else which you would wish to state?—In my evidence I have already gone fully into the subject of education. But there are one or two points which I would wish to add in reference to it.

An essential part of the instruction, one of great practical utility—I taught it in India, with the entire approval of the best cavalry officers of the Indian service and with the best results—is that our cavalry are taught to jump a low bar in the riding school, but not to go across country; thus the smallest obstacle off the road stops them. They should be taught the necessary acquirement of jumping obstacles and fences. The want of this essential was illustrated practically at a recent election. A cavalry escort was assailed with great and premeditated violence. If only a few of them had been able to jump the bank and wall on either side of the road, they would have cleared their flanks of the rioters, and the escort would not have failed in the duty which they were required to perform.

One great shortcoming among officers, of which I have had practical experience in my Indian and Irish commands, is the frequency of ill written reports and telegrams, not giving the necessary, although voluminous, information. I think that the capacity of writing a good letter or report, in a concise but instructive form, is a most useful one, particularly for the Adjutant-General's Department. And I think that part of the time now devoted to studies, of which I have described the inutility, would be very well employed in learning the art of correspondence. The incomprehensible telegrams which I have received on important matters, both in India and this country, to the detriment of the service, would not have occurred if officers had been taught to compose telegrams. I will give an instance of the effects of an ill composed report. An officer of rank and great distinction, whom I sent after the taking of Calpee in advance with a flying column in pursuit of the rebels, sent an express with a report dated the banks of the "Scinde." It was of the first importance that I should know whether he was on the same bank of the river as the enemy, and I wrote to him to this effect; but notwithstanding this he wrote two letters in answer, expressing his surprise that his position could not be understood. But still he did not tell me whether he was on the right or the left bank.

9492. Do you think that it would be advisable that regimental officers should be expected to have a certain amount of acquaintance with what is called army administration, that is to say, the disposal of the sick, and the provisioning of troops, &c.?—I think that it would be desirable.

9493. (*Lord Eustace Cecil.*) I did not quite understand how you would propose to give officers instruction in regiments, supposing that they wished for it; would you leave it entirely voluntary to an officer to pick up the instruction which it was in his power to pick up, or would you provide him any instruction at the expense of the state?—I would make the instruction systematic, not voluntary. I think that the Commission will see that this question is in a great measure answered, when I acquaint them with the system of instruction which I have adopted, and which I recommend, and which may render unnecessary the experiment of an unusual appointment or system, which would entail much expense. I anticipate great difficulties in connection with an appointment which I hear has been suggested, that of a captain instructor for every corps in the service. His position and duties must necessarily come into collision with those of his commanding officer and seniors; amongst the difficulties the least would not be that he would have to instruct his commanding officer and seniors in the most important of their duties—strategy. At once the delicate question would arise, whether the commanding officer and seniors really do require strategical instruction, and so forth. If they do, why do they occupy their present responsible positions? I fear that constantly recurring embarrassments would be the result of a position which is certainly anomalous. Then follows another serious consideration, the difficulty of finding a captain—and his grade and length of service do not guarantee the requisite experience—who will unite in himself the remarkable combination of superior talent and knowledge of field evolutions for small and large bodies of the three arms—of strategy in all its various grades—military drawing, reconnaissances, outpost duties, defence of buildings (respecting which special questions have been addressed), and field fortification—coupled with the personal qualities enabling him to impart this vast and varied knowledge to others. It is an axiom that such a variety of talent is seldom united in one individual, but two or three hundred individuals are to be found for the regiments.

Gen. Lord Strathnairn.

12 June 1869.

Instruction of officers in the service.

With regard to the system of instruction I have mentioned in the first part of my answer—which I have followed in India and Ireland—I have gone on the principle that, for practical purposes, the army ought to contain the means of instruction in itself. The general in chief command is responsible for, and must place himself at the head of it. I divide the instruction throughout the year.

The spring is devoted to the instruction in, and keeping up, elementary details and drill. The first part of the summer to instruction of all arms, in the correct performance of field evolutions, with strategical object, outpost duties, &c. The latter part of the summer to brigade movements, reconnaissances, field sketching, as applied to ground, and strategy. The autumn is devoted to movements of large bodies, of course of all arms, with a strategical object, with an enemy, and on a large scale, representing, as exactly as possible, operations in war, feints, surprises, &c., turning and outflanking movements by lateral roads, taking advantage of features of ground. Regimental officers, from other stations, should be attached to regiments at the camps of instruction, at Aldershot, and the Curragh, and thoroughly instructed in the movements of the three arms on a large scale, in reconnaissances, outpost duties, &c. As regards the winter—the leave season—it is also turned to account for useful military instruction; officers are catechised in interior economy, field evolutions, &c. The Commission is aware that, in the winter, when the weather renders the country impassable, the troops are exercised in "Route Marching" along the roads. I have endeavoured to develop and utilize this exercise, making it the means of instruction as regards military operations in the varied ground through which troops march. To give them an interest and to initiate them in this instruction, I tell them that *the features* of ground which they see, and through which they pass, the village, the pass, the brook, the bridge, the height, are the same as those which have been the scenes of the greatest battles. Officers in turn have to send in reconnaissance reports of the various features of ground, the means of attacking, defending them, &c. My instructions on this head have been submitted to the Commission. They are practised in that indispensable element of military operations—the non-observance of which has caused the failure of so many, in other respects, well devised movements—simultaneous concentration of bodies of troops on a particular point, cross-roads, bridges, &c. The *watchfulness*, which is another necessary condition of success in the field, is practically taught by outposts, sentries, videttes.

9494. But you would not under any circumstances separate an officer from his regiment so as to enable him to go to some station at a camp, or elsewhere, where he could obtain instruction during a short course?—Certainly, they should, in turn, be removed from a station where they cannot obtain the requisite instruction in the movements of large bodies, to one where

Gen. Lord Strathnairn.

12 June 1869.

Instruction of officers in the service.

they can. As regards field sketching and field fortification, there are few stations at or near which Engineer officers are not quartered. It might be arranged that they should give instruction to officers of the line. It would be an encouragement to these officers, and for the good of the service, if the commanding officer of the Royal Engineers gave a certificate to such officers as had acquired the requisite knowledge. The present system of staff officers serving two months with the two branches of the service to which they do not belong, has been a failure, as far as my experience goes, and that of every officer to whom I have spoken on the subject. The commanding officer takes little interest in these officers, and the time is far too short for the acquirement of any sound knowledge. Six months is the shortest time for real and substantial instruction. And there would be no good result unless the commanding officer of the regiment to which the student is attached were to send a certificate to the Horse Guards that he had, or had not, made himself sufficiently acquainted with the cavalry, infantry, or artillery duties, as the case might be.

The course of my evidence shows that I consider the whole of our present system of military education extremely defective, and not calculated to give officers the necessary instruction for operations in the field. When, therefore, I say that officers can qualify themselves for "Successive Examinations" while serving with their regiments, it is on the condition that practical strategy and practical instruction, in all its branches, shall be combined with our present system, which does not fit officers for service in the field.

9495. Then I understand that you would oblige every officer to go through a certain examination for promotion?—Certainly.

9496. And that he should be allowed to obtain the instruction he needed, either from the commanding officer or from the adjutant, or from any other qualified person at a military station?—Yes; and further I would give practical effect to the approval and recommendation of the general officer who inspects and tests officers twice a year, when it is coupled with that of his commanding officer. I allude to his efficiency in manœuvring a regiment and in all regimental qualifications. The practical effect I would give to the recommendation of those best qualified to give it would be, as a further reward, to open to them the staff, which, now most unfortunately, I think, for the interests of the service, is closed to first-rate regimental officers; unless they have distinguished themselves in the field, or passed the Staff College. In the category of first-rate regimental officers I place also good adjutants who have been highly recommended by inspecting generals and commanding officers. The position is the best nursery for not only the Adjutant-General's but also other departments. They acquire, in the first place, official habits of every description; they learn a rare accomplishment, to write properly and concisely; they become thoroughly acquainted with all the evolutions and exercises of their arm; they become thoroughly versed in the soldier's feelings and habits, and in the art of administering military discipline. I know adjutants who are fit to command brigades, if not divisions. By the present system the door of promotion is shut to these officers however meritorious they may be. I know of one to whom the success in the field of his regiment, in a military operation as important as it was difficult, may be mainly attributed. Having in vain endeavoured to obtain a military reward for this officer, I was equally unsuccessful in my attempt to procure for him a civil, although a very humble one.

Preparatory military education.

9497. Would you have any professional education given to candidates for the army?—Certainly; but I would on no account make the first examination too difficult. The effect of successive examinations is very good. It is now the universal custom to, as it is called, "cram" or "coach" an officer for his first examination. The word itself condemns the system. The intellect is hurriedly and unduly loaded for one occasion with certain subjects, but not with general, useful, and lasting information, of which practical utility is the distinguishing characteristic. The fleeting instruction has taken no root, and without successive examinations the student has no interest in retaining it.

9498. Of what subjects in your opinion, should the examination consist before entrance into the army?—In a previous answer I stated fully the system of education which I consider best. I left to the Commission the distribution of these subjects for examination. If a young candidate distinguished himself in any one of these subjects, I would not reject him because he failed in the others. Pre-eminence in one or two of the subjects must render an officer useful, even if he was not so successful in the others. Nothing is more profitable in an army than varied talent; for instance, good linguists for the intelligence department. When the Government of India asked my opinion as to the test for first commissions, I earnestly recommended that the prevailing practice of making it too rigid and too theoretical should not be adopted. I observed that the doing so might lose the service a Nelson or a Wellington, who were neither of them what may be called highly or scientifically educated men. The Government approved and acted on my suggestion. The system of competitive examinations has not had a good effect in India, or increased our prestige there; I believe it has been found necessary to relax it in Madras.

9502. Would you have a professional education given to everybody before entering the army?—The officers' first ideas and tendencies should be directed to professional subjects; and not to examine them in those subjects which qualify them for the profession which they are about to make their career, and thus to give them an interest in it, is an anomaly, which cannot be sufficiently condemned; and to which I must attribute many of the deficiencies in military instruction among officers, on which I have observed in this evidence. I know an instance of a young officer in the Guards who had a great turn for, and knowledge of field fortification. He asked permission to be examined in it and was refused. On the other hand, whilst military subjects are interdicted to the military candidate, the anomaly is completed by his being allowed to take up physics and natural science, which, most probably, will not be of any use to him during his service. They have never been so to myself or other officers of very long experience.

9503. I suppose that you contemplate a very material change, and that you would have a larger college for the army?—I do not think that an increase of Sandhurst would be desirable. I believe that at some public schools elementary military subjects and languages are taught to boys destined for the army. I think that this, as it were, national military education at public schools would have many advantages, and that it would be for the good of the service, were Government to communicate and come to an understanding with the head masters of schools, as to some definite and well-devised system of military education. I think, also, that the old system of sending boys abroad for the study of languages and the military art had good results.

9504. You are not in favour of a great military college?—Certainly not more than we have.

9505. You have spoken of the necessity of giving military rewards for military merit; that would be easy enough where there was a great deal of patronage, as in India, but would there not be a very great difficulty in carrying out your plan thoroughly in this country?—The representative system certainly places obstacles in the way of reward or promotion for merit; but if once this great principle were adopted as a system, it is so good and just that all applications for appointments grounded on any other claim but military merit would be *de facto* and *de jure* considered null. I cannot see any difficulty—the question was solved when the Government adopted the competitive

system, and gave commissions to successful *competitors*. They thus declared for selection by merit only; with this difference, that—while they adjudge the reward to military men for literary merit, a great part of which relates to non-military subjects, and does not, and cannot, qualify officers for service in the field, on the opinion of judges, many of whom are non-military men,——I would, in the first place, give promotion and staff appointments to officers who had given the best military test of qualification for success before the enemy, as recorded in despatches, &c., written by officers conducting the operations, and, secondly, to those who had given proofs of superior qualifications for the army according to an improved and practical system, which represents as faithfully as possible the events of war and its requirements from the humblest to the highest sphere. It will be seen that those qualifications will partly be grounded on military instruction and study, and partly on the practical execution of all conditions which give the best guarantee for success in war. The judges of this competency are those who are selected for command, with whom there can be none others equally qualified to judge, and who have had the best, because the daily and constant, opportunity of watching and judging of the progress and the abilities of the officers.

9506. Then would you make promotion depend upon the half-yearly report of the inspecting officer, or upon the examination which the officer passed?—I would—some, not all. Of course the commander-in-chief, before making an appointment, would refer as an aid to his selection to the half yearly report before mentioned. Besides giving promotion to regimental officers whom continued reports of their commanding officers and the inspection reports of the general officers commanding divisions, and of the general commanding in chief, had proved to the commander-in-chief to be deserving of promotion, I would award also promotion to officers who had passed the test required by the improved system of education, at the Staff College, as well as that required at one of the camps of instruction. As regards scarcity of vacancies for the promotion of deserving regimental officers, I beg to observe that in common justice they should profit by a source of promotion which is now denied to the senior lieutenants of regiments, that is the augmentation vacancies on a regiment going on foreign service to India. These vacancies are given generally by purchase and the money applied to a fund. Another source is the vacancies made by officers who have proved themselves to be unfit for the service.

9507. You do not think that any heart-burning would occur in the army if a selection of officers for promotion were by the Horse Guards?—I think not. I never experienced any disagreeable result. I told the officers that they did not come up to the standard required at the present day for "selected" officers of the native army. (By order of the Government of India regimental officers are to be "selected.") I told them that there was nothing wrong whatever against their character; but that the promotions had been confided to me, and that I was obliged to do this trust the fullest justice. I have always spoken and expressed myself with the utmost delicacy, but at the same time with the greatest frankness. It must be borne in mind that many of these officers had only become inefficient by long, hard, and often very gallant service; and I still think, and I wrote thus to the Government of India, that the case of these officers was specially entitled to compensation. It must be considered, that in rewarding only real merit and efficiency, I carried with me the public opinion of all that was sound in and out of the army.

9508. You would see no objection to a system of selection applied to regimental promotion throughout the army?—None whatever; I do it now, in fact, to the extent that when a service is at all special, I select an officer for it. The good of the service requires this. But this is to be said:—That the more officers are improved by a proper education, the less will be the necessity for selection. It is historical that we nearly lost India through military inefficiency; I do not speak of political causes.

Gen. Lord Strathnairn.
12 June 1869.

Regimental instruction.

9511. (*Sir C. Russell.*) Do you think it expedient that the rank and file of the army should be instructed in the construction of earthworks and throwing up works rapidly?—This has been already answered, but I ought not to be silent as to an excellent proposition of an officer of Royal Engineers, to convert the present regimental pioneers into regimental "sappers." The Commander-in-Chief sent me the plan for my opinion. I know of nothing which would solve more satisfactorily the important question of "camp works," or assist that of "entrenchments" in the modified form which I consider desirable. The regimental "sappers" would instruct intelligent soldiers in "works."

9512. If the rank and file of the army are to be so instructed, I presume that it must be done regimentally?—This question is answered by the previous reply.

9513. Do you propose to attach to regiments some officer, who is to initiate the method of instruction, and then to leave it in the hands of the commanding officer and the adjutant to conduct it regimentally?—No. I have already expressed myself on the subject of this question.

Staff appointments.

9515. (*Lieut.-Col. Chesney.*) Regarding staff officers, has your lordship had an opportunity of observing artillery and engineer officers employed upon the staff?—Yes.

9516. Have you found their scientific knowledge interfere with their performance of staff duties?—No. Not unless they have been employed so long on the Public Works Department as to impair their military training. This season, at the Curragh, the Royal Engineer officers gave a creditable proof of their desire to become acquainted with the movements of large bodies of troops, and offered to act on the staff of other generals, and my own, which I accepted with thanks.

9517. (*Lord de Ros.*) With respect to the practical testing of the fitness of an officer to compete for the Staff College, supposing that it was part of the qualification that he should be named in two successive reports as fit for the Staff College, would there not be a greater security, inasmuch as the inspecting officer would call him out, and examine him in handling a troop or company, and thus obtain a more thorough knowledge of him than by the mere certificate of the commanding officer?—Certainly.

9518. I believe that it has been your own custom at inspections to require something more than mere acquaintance with drill, and to give the officer an opportunity of showing his judgment and intelligence on such points?—Yes.

9519. You think that that, as well as his mere knowledge of drill, being included in the confidential report would be an advantage?—Yes; if with an object.

9520. You observed that in our regulations there was a great deficiency. I wish to call your attention to a passage introduced by Sir Hussey Vivian, which I think accords with your view. At page 144 of the Cavalry Regulations it is stated:—"The changes of "front and position by oblique echellon are the safest "that can be employed in the presence of and near "to an enemy. They are almost equal in security "to the march of the regiment in front or to a "uniform wheel of the line. They can be used in "the most critical situations, where the movements "of the open column could not be risked; and "they are more particularly to be used when the "enemy's flank is to be gained by throwing a flank "forward, or when one's own is to be secured by "throwing it back." I understand you to mean that this sort of commentary should be annexed to all the movements?—Yes.

9521. There is an observation also to a similar effect

Gen. Lord Strathnairn.

12 June 1869.

by the late Sir Hussey Vivian, at page 188 of the Cavalry Regulations:—"The general objects of a "quarter distance column are to form line to the front "in the quickest manner, to conceal numbers from "the knowledge of the enemy, and to extend in "whatever direction the circumstances of the moment "may require. It is a situation for the assembly "rather than for the movement of cavalry, and is "more applicable to reserves than to the general "purposes of field movement. The formation from "quarter-distance column into line should, if pos- "sible, be made at such a distance as not to fear "interruption from the enemy;" that is, I believe, what you meant to convey?—Yes; my wish is, as I have so frequently stated, to see the practical application of evolutions to object.

9522. With regard to inspections, as I understand you, you would note down such officers as were proved by the inspecting general's examination to have an aptitude for the staff?—Yes.

9523. You would also keep strongly in mind the excellence of the officer as a regimental officer, with a view to his fitness for the staff?—Certainly.

9524. As I understand you, you think that confining the appointment of staff officers to any Staff College is a very injurious thing, as deterring the regimental officers from properly preparing themselves for those purposes?—These are completely my sentiments.

9525. As regards the question of the Staff College, do you think that it would be advisable to return in any way to the old arrangement of a senior department attached to the Military College at Sandhurst, governed by an officer of high rank, who would be the only competent judge of what practical staff instruction ought to consist of?—No.

His Lordship withdrew.

H.R.H. The Duke of Cambridge, K.G.

FIELD MARSHAL HIS ROYAL HIGHNESS THE DUKE OF CAMBRIDGE, K.G., further examined.

Royal Military Academy.

9526. (*Chairman.*) Since we had the pleasure of seeing your Royal Highness we have been to Woolwich, and having examined that establishment, we should be glad to know whether you have any observations with which you would like to favour us with regard to Woolwich?—I think that Woolwich is now going on as satisfactorily as it can well do, and I am satisfied that if it is allowed to go on without interruption you will find that both in discipline and in every respect it will go on as satisfactorily as the public can require or as the interests of the public service demand. Having seen the evidence which has been given, I should be very sorry to see any change which should make a division in it between the artillery and the engineers; I am quite sure that that would be the worst thing which could be done for Woolwich, and I hope that no such feeling will influence the minds of the Commissioners.

9527. I believe that the evidence which we have taken has been sent to your Royal Highness, and as this is our closing day for receiving evidence, we should be very glad to hear from your Royal Highness any observations or suggestions which may have occurred to you in connection with the various points which have been brought to our notice by the witnesses who have been examined since we last had the pleasure of examining your Royal Highness?—I see that it is constantly stated that the governors of the two colleges have not sufficient authority. The governors of the colleges have entire authority, but with this reservation, that when cadets have become to a certain extent members of the public service, of course no man should be deprived of the power of continuing in the service, even though only a cadet, without the full sanction of the Commander-in-Chief; and it is only as regards serious offences that references are made to him both by the lieutenant-governor of the Royal Military Academy and by the governor of the Cadet College; and I most sincerely hope that there will be no change in that respect, because otherwise the military character of those institutions will be entirely destroyed. Then there is another point which has been entirely overlooked; it has been said that there is a roundabout mode of dealing with the Council of Military Education. The Commander-in-Chief is *ex officio* President of the Council of Military Education, and therefore the communications which come to him come to him not only as Commander-in-Chief but as President of that Council, and the military secretary has merely to go into details, but the Commander-in-Chief is President of that Council *ex officio*, and therefore he is appealed to in his individual capacity as such. There is nothing roundabout in the arrangement; instead of the letters being addressed to himself, as he could not himself manage to get through all those letters, they are sent to the military secretary, as is usual upon occasions of that description. I am extremely anxious that any erroneous view in this respect should be corrected, because that circumstance seems to have been quite lost sight of by those persons who have given evidence in this sense. I contend that both in the official capacity of the Commander-in-Chief as such, and in his capacity as the head of the Council of Military Education, it must be his business to be a party to any serious changes which take place, either as regards details or as regards principle and system.

Powers of the Governors of Woolwich and Sandhurst.

Council of Military Education.

Instruction of officers in service.

9528. We have had a good deal of evidence since your Royal Highness was before us with regard to the machinery for affording facilities to officers after they have entered the army for acquiring information. Perhaps some suggestions may have struck your Royal Highness with regard to that branch of the subject?—I think that it is a question which requires a great deal of elucidation as to whether it would answer or not. I am satisfied that we could not introduce it on a very extended scale at first, and therefore I hope that it would only be tried in the district form, or garrison form, in preference to the regimental form. If you find that the district or garrison form justifies you in extending it, you can afterwards do so; but I am satisfied that it would be a very imprudent step to attempt it regimentally at first, and that you should commence with it in such garrison towns as Dublin, Portsmouth, Plymouth, and Aldershot, and other large stations, and if you find it answer you can do it regimentally if you think fit. At the same time I still think that the district or garrison system will be a better one than the regimental system, and I very much doubt whether the regimental system will on the whole succeed. I do not think that you can carry it out on a large scale, and I think that you must do it by degrees, and therefore you give the system a more thorough chance by beginning it in district or garrison towns rather than by beginning it regimentally.

Staff Col

9529. Your Royal Highness will have observed several suggestions which have been made by various witnesses with regard to the elimination, from the candidates for entrance into the Staff College, of officers who do not possess certain physical qualifications which are essential for Staff Officers. Have any further suggestions occurred to your Royal Highness in that respect?—I have the very best feeling towards those gentlemen who have been at the Staff College, and I have always considered that they have done remarkably well; but I prefer for the staff to have regimental officers. I am quite satisfied that the best staff officer is your regimental officer, and that the whole system of the staff is entirely based upon the regimental principle, and on matters of detail connected with the regiments, and that any amount of study will never make up for a thorough proficiency and knowledge of his business which a regimental officer has. A regimental officer is known and appreciated in his corps, and if he is known to be a good

regimental officer the chances are always greatly in favour of his turning out a very good staff officer. Of course every now and then it may turn out differently, but that is not the rule. If you can educate a sufficiency of young men at Sandhurst at the Cadet College, to go through surveying and field fortification to a limited extent, and matters of that sort, which are most essential for a staff officer, and can give them the advantage of a thoroughly good regimental system, you may depend upon it that that is far better for a staff officer than any education which you may give at the Staff College. At the same time I wish it to be clearly understood that I do not give any opinion adverse to those gentlemen who have passed the Staff College, and who I believe have worked extremely hard, and have done their very best to do what is right by themselves and by the public; but still I think that the class of officers who go to the Staff College are not always those whom we should wish to see on the staff.

9530. Is there any other suggestion or observation which your Royal Highness would wish to volunteer?—As regards the Military College at Sandhurst, if any alteration is made I trust that it will not be made in the direction of diminishing its numbers. I think that it would be a fatal thing to the college if you were to eliminate from it youths from the public schools, and to have none but the sons of officers with limited means, or others who go there merely for the purpose of getting a commission without purchase. Now of all the misfortunes which could possibly happen to the Military College at Sandhurst the greatest would be to have nothing but that class of young men, and I am sure that it is that class which has given us the most trouble, because that class has not the same spirit of rivalry which the public school class has, the latter class having higher views and higher feelings. I think that a great deal might be done to reward those young men who go to Sandhurst, and to make it well worth their while to go. In the first place, we have commissions without purchase; those commissions fluctuate, and must be variable, but we have always a good number of them, and of late years we have not had less than eighty in a year. Then the next step is what I have suggested, namely, that according to the merits of the young men you should diminish the price of the commissions on what we call the B. list, which is not the non-purchase list, but the purchase list; so as to keep up the interest in study and also in conduct. Then beyond that is the system which existed at Addiscombe, but which I am sorry to say does not exist at Sandhurst, which is, that those young men who from their conduct and attention, and their physical powers, pass well through the college, should be allowed to count their time as officers of the army from the date of their entrance into the college, which in many cases would give them a year and a half army rank, and therefore give them the advantages which army rank carries with it, of course keeping it entirely in the hands of the authorities to curtail it, or perhaps altogether to strike it out, if the conduct of the young men did not entitle them to it. If you do that you have an immense hold upon everybody, and it would apply not merely to a man of sufficient intellect to obtain his marks, but it would also apply to a man of good conduct, and who, as far as intellect was concerned, was scarcely able at Sandhurst to hold his own. I believe that if you combined those three advantages you would have as good a college and as perfect an institution as you could desire. But if you could not arrange the financial part of the matter with respect to a graduated scale of purchase, I should be well satisfied with the other two advantages which I have suggested, namely non-purchase commissions, and also the great advantage of allowing an officer's rank to count from the period of entering the college. I would, however, let it be understood that that privilege was not to be given until the day when the officer left the college, so that the young men should not be anything but cadets while they were at the college, but that if they had been good cadets they might be considered as having been officers during the whole period that they had been at the college.

Staff College.

9531. (*Lt.-Col. Chesney.*) There has been a suggestion just sent in to us by a staff officer relating to the Staff College, namely, that a much larger number of officers should be put through it, and that merely going through it should constitute no claim for an appointment, but that staff officers should be selected from these larger numbers. Does your Royal Highness see any objection to that suggestion?—I object to it very strongly; I object to it on two grounds; first, because it would take a great many more officers from their regiments, which is very undesirable, and, in the next place, because when they have gone creditably through the Staff College, as far as their mental powers are concerned, they assume that they will get a staff appointment, and if not they will become grumblers, and we shall have more grumblers than we have now, and I am sorry to say that we have quite enough already.

9532. (*Major-General Eardley Wilmot.*) Does your Royal Highness see no difficulty in ante-dating the commissions of Sandhurst cadets?—No.

9533. A young man would then be senior to a man who had been serving a year and a half?—Only in the army, but not in the regiment; it would be army rank, and not regimental rank; but it would always give the officer an advantage during the whole of his career in the army if he was worthy of it.

Instruction of officers.

9534. With regard to the instruction of officers in the army, it has been suggested that the Book of Regulations should contain all the necessary things as part of the drill, that is to say, that there should be an addendum to the Book of Regulations containing a certain amount of field fortification, and all that sort of thing, which should be a part of the drill of the regiment to be taught by the adjutant; what is your Royal Highness's opinion of that?—There is no doubt that that could be done, and if it was done it would do away with the difficulty of regimental instructors; and while you would have classes at the large garrison towns, where there would be thorough instruction, (and I believe that that thorough instruction, combined with the instruction which the cadets get in surveying and other things, would be sufficient,) it would obviate the necessity of any Staff College at all. I believe that a good regimental officer, being able to study in such a class, and with the advantages to be derived from such instruction, would make the best Staff Officer that you could desire.

9535. Would it not be possible to give such an instruction as to do away with the cadet college altogether?—No. I have a very great objection to a youth going into the army who has not some military instinct. I think that it is very desirable that he should come from a military school; but I think that exactly the same relative advantage which a youth who goes into the church or into the law derives from a university, a young man should derive from a military college, either from the Cadet College or from the Royal Military Academy, before he enters his profession as a soldier, because he then, on becoming an officer, has only to learn the very simple applications of military science which he has already acquired before joining his regiment.

9536. Then you think that the object of the existence of a military college should be to a certain extent to make a man a soldier?—Exactly so.

Royal Military College.

9537. (*Sir Duncan Cameron.*) Admitting that there should be some reward to a well-conducted person who has not the ability to pass such an examination as will gain for him a commission without purchase, I do not quite see what would be the advantage of his having a brevet army rank on entering the service?—He would have the advantage of a year and a half or two years longer service in after life for pension, and everything else connected with the service, which is very considerable. Then there is the mere honour of the thing; if a man gets that privilege it is a credit to him, and if he fails in

H.R.H. The Duke of Cambridge, K.G.

12 June 1869.

Royal Military College.

obtaining it he gets no credit. But I think that there are a great many advantages which a man would derive in after service by having a year and a half or two years counted as actual commissioned rank as the result of passing through the college; for instance, a man may retire after 30 years service on full pay, and in that case he would get the advantage of the whole of those two years, so that actually after 28 years he would be able to retire having the benefit of those two years; and, as you know, many men retire on full pay, and they also have other advantages. A man may retire on half pay after 25 years' service, and he would then get it in 23 or 23½ years, instead of 25 years.

9538. Would you not think it better to give commissions without purchase to well-conducted cadets, the under-officers especially?—I should like to see it extended. We have had the very best men who perhaps have not had the quickness and intelligence and aptness for study which the less good cadets have had, and who have been positively debarred from coming into the army because they could not purchase a commission, and we could not give them a commission without purchase. If you could hold out a certain number of commissions of that description to the responsible under-officers it would be desirable. It must be done with caution, so as not to prevent their studying, but if it could be done it would be an immense advantage.

Staff College.

9539. (*Major General Haythorne.*) At present are not subaltern officers who pass through the Staff College rather shut out from staff appointments? Does your Royal Highness see any objection to a subaltern officer of standing being appointed a brigade major?—I think that it would be a great disadvantage, because he has to deal with commanding officers of regiments. After all, a brigade major is an officer of status and weight, and when you bring a subaltern officer into such a position with relation to captains and field officers it is a very serious matter.

9540. Then it shuts out officers who cannot purchase their company?—If the Staff College continues, I think that no subaltern officer should be allowed to go to the Staff Collge at all. I have always thought so; I would never allow anybody below a captain to go there.

9541. (*Lord Northbrook.*) Does not your Royal Highness think that it would be hard upon a man who could not purchase his company if such a rule was carried out?—I admit that there is that disadvantage; but, as far as regards the question put to me by General Haythorne, I think that for a subaltern officer to be a brigade major would be a very serious inconvenience to the service. I should not like to say to a man, "You have passed, but your rank does not enable you to gain the position for which you have passed;" and therefore I would rather that a subaltern should not pass in that way. But I admit that there is a difficulty as regards subaltern officers, many of whom are very old officers, and very good ones.

9542. (*Major General Haythorne.*) Would it be difficult to give them brevet rank or local rank, because many of them are of greater standing in the service than the captains?—There might be an arrangement of that sort. But, on the other hand, supposing that a man had this rank, and that he returned to his regiment, he must go back to be a subaltern officer, having for a long time had all the advantage of the rank of a captain.

9543. (*Lord de Ros.*) As regards what your Royal Highness has mentioned to us with respect to the employment of subalterns as brigade majors, your Royal Highness is aware that many brigade majors have been lieutenant colonels, and have been employed almost as assistant-adjutant generals?—Yes.

9544. And your Royal Highness thinks that there would be a very serious inconvenience in placing subalterns in that position?—Yes, because a brigade major is an officer who carries out many difficult duties, which a brigadier has to perform with reference to the troops under his command. He may have to give some strong expression of opinion to a field officer, and that is a very awkward thing when it comes from a subaltern, and I think that the rank of captain is quite low rank enough for that purpose.

9545. From your Royal Highness's experience in the cavalry your Royal Highness considers that there are most valuable officers, who have had experience in marching their troops many miles, among the regimental officers?—Yes.

Royal Colleg

9546. As regards a cadet college, you consider it a great advantage in time of war when there is a deficiency of supply of young officers for immediate service?—Yes; and I attach much more value to military studies which have been pursued at the cadet college in the case of a man who knows how to appreciate them than in the case of a man who acquires in after life a knowledge of those subjects or of any other subjects, when he is not able to take them up as a man who is much younger can take them up, for instance, surveying and field fortification and all those things. I believe that that is of much more advantage to a youth who goes to the cadet college than to an older man who tries to study the subject but never takes it in effectually.

9547. As regards the value of the army rank which your Royal Highness proposes to give to well-conducted cadets, your Royal Highness is well aware that the two years Waterloo rank told most signally for those officers who had obtained it?—Most signally.

9548. As regards the public school character of Sandhurst, it would be entirely lost unless there was an amalgamation at Sandhurst of that class of cadet with the class of sons of poor officers?—Yes, and that is very important.

9549. Your Royal Highness also probably considers that it would be a very great advantage to the class of the poor officers' sons to be associated with those persons?—I think that it would be everything to them To many it would be the only chance of their becoming really valuable and useful members of society. Take the case of officers who have very small means, and who travel about the world with their regiments; they have no chance of putting their children into good schools, and they have hardly any chance of letting them associate with their own equals. If you put all those boys into a college of this sort without a very large public school element to mould and leaven that class, so as to make them useful, you do them more harm than good.

Staff men

9550. Lord Strathnairn in his evidence has suggested that the best test of fitness for the staff would be gained by a really good inspection by the general officers at their half-yearly inspections, and that that would be a much better test than any certificate from the commanding officer alone. What is your Royal Highness's opinion in that respect?—Of course it would be a very good test if general officers were equal to making the inspection in a manner which would be really valuable, but I cannot help thinking that the inspections are often made in such a way that the test is of very little value.

9551. Suppose that at an inspection it was shown that an officer could not take up ground well. Would it not be rather difficult for an inspecting officer to say that such an officer could do it, when all the other officers saw that he had failed in it?—Possibly; but on the other hand, one or two officers do not go through the required drill, and they do not answer satisfactorily, the questions put to them. An inspecting officer does not like on such an occasion to condemn a man, or to blight his prospects for ever. He says, "I have never seen this man before, and I may never see him again;" and probably the commanding officer says that the officer has been on leave, or has been very much flurried, and that he is not accustomed to this sort of thing, but that he is a very good officer. There are a thousand excuses, and I doubt very much whether you would get a real answer in that way; but I think that you might have a very good test by having a combination of staff officers and selected

officers of regiments on a board to test the qualifications of these officers.

9552. By that remark your Royal Highness rather suggests the system of station instruction which has been proposed?—Yes; and I think that the station instruction might be applied to the staff if you had not a Staff College.

9553. From your Royal Highness's long experience in the army, have you ever known any case of a good regimental officer breaking down as a staff officer?—Never.

9554. (*Rev. W. C. Lake.*) I think that your Royal Highness attaches great importance to the education at Sandhurst before going into the army?—I do.

9555. Your Royal Highness has read the evidence which has been given before this Commission, and you find from that evidence that many of the best officers are obtained from the public schools?—Yes, that appears to be so; but I am quite certain that as regards surveying and so forth the cadets would acquire that knowledge better at a military college than elsewhere, and I cannot help thinking that the loss of a college like Sandhurst would be a great evil.

9556. You would not be indifferent to what some witnesses have called the idle element at Sandhurst?—No; but my aim has been to obviate that idleness which has been complained of, and which I feel exists to a certain extent, and which I think would be very much mitigated, if not altogether got rid of, if you held out advantages in the various forms which I have suggested; the more advantages held out the better I should be pleased; I do not wish the thing to be stereotyped in one direction, but I would rather have three or four different modes.

9557. You perhaps think that it would be desirable if, without diminishing the numbers in the college, we could get rid of the idle element by being able to offer a commission without purchase to every person who passed through Sandhurst?—Yes; so long as it is not made what I may call a refuge for the destitute. I think that there is a great deal in Sandhurst which would be an advantage to a poor man; but I do not wish it to be considered merely a refuge for a poor man, but it must have a larger element of public school youths to mix with the poorer element, and to make it really valuable to the public service.

9558. Always supposing Sandhurst to be open to young men from the public schools and from all quarters, you think that it would be desirable to give to every one passing through Sandhurst a commission without purchase, if possible?—I do. The difficulty is that we must arrange our numbers of commissions without purchase according to the number which we have at our disposal, and that of course depends very much upon the estimates from year to year, and upon various causes which we cannot settle long before hand, but it must be decided upon at the moment, and must be dealt with from year to year. Consequently we cannot always make the admissions to correspond to the exact number of commissions without purchase which we can give, and it was with that view that I made the suggestion that it might be desirable to give something less valuable than commissions without purchase, but still sufficiently valuable, in my opinion to make all those young men who were disposed to work look forward to the advantages which they would gain by industry and good conduct.

H.R.H. The Duke of Cambridge, K.G.
12 June 1869.
Royal Military College.

9559. (*Chairman.*) We have had it in evidence from a very distinguished officer that he thought that it would prove a great inducement to regimental officers to acquire instruction in military subjects if their industry was more likely to meet with reward than it does at present, and he hinted at the selection of regimental officers for promotion according to their acquirements and character. In your Royal Highness's opinion would the introduction of such a system create a difficulty?—It would be impossible to carry it out. First of all, you could not carry it out, because it would interfere with the purchase system; but putting that on one side, if you selected officers in that way no Secretary of State for War and no Commander-in-Chief could hold his place for six months, if he was bound to select the officers otherwise than by pure seniority; because every man has his friends and backers, both in Parliament and out of Parliament, and in the press, and elsewhere, and supposing that you selected one man over another, you would have no peace until the man passed over was restored to his position, or until the authorities who made that selection were placed in a position in which they could make no further selection. Therefore I hold it to be totally impossible to make such a selection, and that you must as a rule proceed by pure seniority.

His Royal Highness withdrew.

Adjourned.

Tuesday, 13th July 1869.

PRESENT:

THE RIGHT HON. LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
GENERAL LORD DE ROS.
LORD NORTHBROOK.
LIEUT.-COL. SIR CHARLES RUSSELL, BART., V.C.
LIEUT.-GENERAL SIR D. A. CAMERON, K.C.B.
MAJOR-GENERAL EARDLEY WILMOT.
MAJOR-GENERAL HAYTHORNE.
C. S. PARKER, ESQ., M.P.
REV. DR. BUTLER.
LIEUT.-COL. CHESNEY.

THEODORE WALROND, ESQ., examined.

Theodore Walrond, Esq.
13 July 1869
Civil Service examinations

9560. (*Chairman.*) You are the Secretary to the Civil Service Commissioners?—Yes.

9561. A suggestion has been made to us, that the Civil Service Commissioners should be charged with the duty of conducting the examinations through which cadets who enter Sandhurst and Woolwich have to be passed. The examinations are not in special military subjects, and it was upon that account that this suggestion was made. What is your opinion in regard to it?—I think that there would be no difficulty in the examinations being conducted under the superintendence of the Civil Service Commissioners.

9562. The great difficulty in conducting examinations seems to consist in the natural tendency of examinations conducted by different persons, to be inconsistent with each other; at one period a higher test is applied than at another, and at one time the examination is severer than at another. We should be glad to learn what your experience has taught you to be the best means of securing that uniformity which is so desirable?—That is, I suppose, with reference to qualifying examinations; as regards competitive examinations, they regulate themselves. As far as qualifying examinations

Theodore Walrond, Esq.

13 July 1869.

Civil Service examinations.

go, I ought to say that our experience is not of a kind which I think would throw very much light upon these examinations, for at present the great bulk of the qualifying examinations are for the lower offices in the Civil Service, with a few exceptions; and they would throw, I think, very little light on the military examinations. But the way in which we try to keep up something like an even standard from year to year, is that the Commissioners themselves look carefully into the reports of the examiners. I may also state that as regards the ordinary examinations which I speak of, we have two permanent examiners, one of whom has conducted the examinations from the beginning, for 14 years, and the other for five or six years, and I think that they manage to preserve a very fairly even standard. Even in subjects in which they do not themselves examine, but call in the aid of occasional examiners, as we term them, the two permanent examiners charge themselves with the duty of communicating with the occasional examiners, telling them the standard which has been found to be a convenient standard, and seeing that they act according to it.

9563. What is your staff of examiners?—We have only two permanent examiners.

9564. What are their salaries?—One has 700*l.*, and the other has 600*l.* a year.

9565. Are they university men?—Yes, one was a high wrangler at Cambridge, and the other is a Fellow of Oriel.

9566. How many assistant examiners do you call in every year?—We call in occasional examiners as occasion arises; it would be very difficult for me to say how many, but we have, perhaps, on our list four or five who help us in what we call general subjects, that is to say, who would be ready to take up anything which occurred, and then there are a good many others whom we call in solely for special subjects. For instance, we have a French examiner who examines the attachés.

9567. Is he a Frenchman?—Yes.

9568. On the average every year how many occasional examiners do you find it necessary to employ?—I suppose that the best way of stating that would be to mention the aggregate sum which we spend in that way. We pay those occasional examiners at the rate of 3*l.* 3*s.* a day; and the amount expended under this head in the year ending 31st March last was 450*l.* In the previous year it was 560*l.*

9569. Is the number something like two dozen?—It is less than that, I think—between one and two dozen.

9570. As regards your two permanent examiners, you make use of them for the purpose of regulating the standard, and of maintaining the uniformity of the system from year to year?—Yes.

9571. In all these examinations, of course the object of the examiner ought to be to frustrate the pernicious influence of the crammer?—Yes.

9572. Do you think that you have succeeded in doing that?—Not entirely.

9573. Do you think that you ever will succeed in doing it?—No; partly because my Commissioners have always thought, and I suppose rightly, that it is necessary to have all their proceedings as public as possible; and consequently they have published the papers which they have set at different times, and of course the crammers get hold of them, and I am afraid that it is very common for them to teach the young men subjects, by making them answer the questions which we have published.

9574. Perhaps in a very few words you will explain to the Commission the machinery by which the papers are prepared and distributed?—I shall be very glad to do so, but at the same time I may say that a very elaborate and distinct statement upon that subject is given in the report of the Committee of the House of Commons in 1860 on civil service appointments, which would correct or supply anything which I might say or omit. The examination papers are prepared chiefly by our two permanent examiners in all subjects with which they are competent to deal, and then the answers of the candidates are looked over either by them or by the occasional examiners who are called in to their assistance; they are reported on by the permanent examiners; the marks given by the occasional examiners are sent in to the permanent examiners; they send in a report to the Commissioners embodying those marks; and the Commissioners in every case themselves adjudicate on the papers before granting a certificate.

9575. How many Commissioners are there?—There are now two; originally there were three; but when Sir Edmund Head died last year, his vacancy was not filled up. Only one Commissioner is paid.

9576. Has the unpaid Commissioner equal authority?—He has equal authority so far as we know, but he does not do so much work. I suppose that the understanding is that he is a sort of assessor, to be called in when the paid Commissioner wants a second opinion.

9577. Do you think that the paid Commissioner has too much work?—No, not as things are now. At the starting of the system there was a great deal of work, but things now run smoothly.

9578. How many persons are examined every year?—My memory is rather bad for those facts, but I can send that information to the Commissioners; there are thousands.

9579. (*Lord de Ros.*) Not less than 2,000?—Not less than 2,000. In 1867 the number was upwards of 7,000; but some of these undergo but a very slight examination.

9580. (*Lt.-Col. Chesney.*) Will you explain how the daily payment to the occasional examiners is checked?—The permanent examiners know now pretty well from their own experience how much an examiner can do in a day, and in sending the papers to be looked over they say, "This will be two days' work," or "three days' work," according as they think that it will be, and they report to the Commissioners accordingly.

9581. And the fees are paid on their report?—Yes.

9582. (*Chairman.*) The whole work of the public civil service examinations is conducted virtually by one paid Commissioner, with the assistance of a secretary and two permanent examiners, and a staff of some dozen occasional examiners?—Yes, as regards the Home Civil Service. The Indian examinations are separate altogether. The permanent examiners take no share in them.

9583. I suppose that you attach great importance to that permanent element in the examining body?—Yes. When the Commission was first instituted, the Commissioners intended that there should be no permanent element in the Commission, except themselves; but they found it necessary to have permanent examiners.

9584. The papers are printed confidentially, and are distributed in such a way that no possibility of collusion or of cheating can exist?—Yes, we take all the precaution which can be taken. We have not a printing establishment of our own as the Foreign Office has, but the papers are printed for us by the Queen's Printer, and we take every precaution which can be taken to secure their privacy.

9585. As far as you have been able to ascertain (and I suppose that if anything had gone wrong you would have been aware of it) that system has answered?—Certainly. There have been two or three cases in which accusations have been laid against the examinations for unfairness, in that sort of way; but we always found that those accusations fell to the ground, and could not be substantiated.

9586. Does this business occupy the whole of the time, from year's end to year's end, of the Commissioner and the two permanent examiners?—Yes. At present, owing to the number of reductions, there is comparatively little for the examiners to do, but it is the only time since I remember the office when there

has been less than a reasonable amount of work for them.

9587. Have you any *vivâ voce* examinations?—Only in modern languages, where a colloquial knowledge has to be tested.

9588. A colloquial knowledge of a modern language is a requisite?—Yes, in some examinations. The scheme of examination for the different offices is not fixed by the Commissioners, but by the departments. For the Foreign Office, of course, a colloquial knowledge of modern languages is required.

9589. Is that found to be a satisfactory test?—Yes, I think that there is no test so satisfactory.

9590. Do you find that many lads who have never been abroad are able to show a satisfactory competence in speaking a modern language colloquially?—I remember a very marked instance in which there was a competition for a clerkship in the Foreign Office, which practically lay between two young men. One had been 13 years in Paris, and the other had never been out of England; but in the judgment of the French examiner, the one who had never been out of England talked French a great deal better than the other. He spoke it much more correctly, and he could talk on a greater variety of subjects. The other young man could talk about the wind and the weather and so on with a perfect accent, but he had not studied the language.

9591. There are some offices in which a knowledge of some modern language is an absolute necessity?—As far as I remember the Foreign Office is the only one where a colloquial knowledge of French is absolutely required.

9592. Of course a considerable number of candidates always present themselves?—For the Foreign Office the practice is that the Foreign Secretary nominates three candidates to compete for each vacancy.

9593. But the fact of that requisite being insisted upon is not found to deter a considerable number of candidates from applying?—We do not know how many apply for nominations; but if the point of the question is as to the number of young men who may be expected to be competent, an examination which we have had to conduct lately may throw some light upon the matter, namely, for the forest service in India. They now go upon the plan of sending the men selected by open competition either to Germany or to France to perfect themselves in forestry, and therefore it is a *sine quâ non* that the candidate should have a certain colloquial acquaintance with one or other of those languages. At a recent examination we found very few who came up to that requirement.

9594. It was a new institution?—It was.

9595. And perhaps sufficient notice had not been given of it?—Perhaps so; there will be another examination at the end of this year, at which we shall perhaps be better able to judge.

9596. It strikes one that if a permanent examiner remains for a considerable time at his post, his powers of invention will at last become exhausted, and that the public will have acquired knowledge of his method, and will prepare themselves accordingly: is that at all the case?—I think that there is a tendency to it.

9597. So that the thing to arrive at is a certain degree of permanence combined with a certain amount of change?—Quite so, and for that very reason our permanent examiners are constantly in the habit of getting the occasional examiners to set papers for them.

9598. What is your system in dealing with the minimum of marks?—The question I fancy points to the competition for the Civil Service of India, which is quite of a different character from the other examinations which the Commissioners conduct; and in all that I have hitherto said, I have not been at all thinking of it. Our plan with regard to that is founded upon what was stated in the Report of Lord Macaulay's Committee of 1854—which was the origin of these open competitions for the Civil Service of India—in which it was said that a low degree of knowledge of a subject ought not to count at all. At first the plan adopted to carry out that principle was simply to strike out all marks which fell below a certain proportion; at one time one-tenth was taken, and at another one-fifth, and so on. But as soon as the matter came to be carefully considered, it was obvious that this was very unjust to the candidates who were only one mark below the fixed proportion, as compared with the candidates who were one mark above it; that whereas the examiners gave only a difference of two marks between them, it really made a difference of perhaps 100. Therefore, the plan was adopted of deducting from the marks of all equally the sum which was fixed upon as representing (roughly of course) the line of tolerable competency.

9599. And that has answered?—It has answered admirably the purpose for which it was intended. I think that no candidate now comes up expecting to get marks for superficial knowledge, and the consequence is that on the average they take up much fewer subjects than they used to do.

9600. How many subjects do you think can be crowded into an examination of a high class? There are 20 subjects of human knowledge in respect of which proficiency may be required, but it is, I believe, the practice to limit the number of subjects which a candidate may take up?—We adopt the plan which I have mentioned for the very purpose of avoiding laying down a limit; we have no limit. There are a considerable number of subjects (I forget exactly how many)—more than any one candidate would take up—and a candidate is allowed to take up as many of them as he likes, but this plan of requiring him to show an amount of knowledge represented by 125 marks before he can count at all debars him practically from taking up more than a limited number of subjects. We find that the number of subjects generally taken up is five, taking English (composition, history, and literature) as one subject, Latin as another, and so on.

9601. Do you find as regards the examinations in English literature, English composition, and English history, that those are easy subjects in which to examine?—Not as regards literature and history.

9602. I suppose that the crammer has you rather at a disadvantage in those subjects?—The cramming element partly comes in, but more the element of luck. I do not think that any examination is good as a test of the powers of men, in which there is not a regular organized system of teaching; and until there is that in English history and literature at the great schools, I do not think that those will be satisfactory subjects of examination.

9603. (*Lord Eustace Cecil.*) I suppose that all your examiners in foreign languages are natives?—Yes.

9604. You mentioned the case of a boy who had been brought up in Paris, and you compared him with a boy who had been brought up in this country, and you said that the latter had a better acquaintance with the French language than the former. Do you know anything of the previous history of that boy, whether he was brought up by French or English masters?—No, I did not go into that matter, but I remember that his accent was not remarkably good, and I suppose that it is very difficult to acquire a correct accent in this country.

9605. (*Lieut.-Col. Chesney.*) Is it the case that you do not deduct the minimum in mathematics?—We do not.

9606. Will you state the reasons for that?—The reason which led the Commissioners to make the exception was that they thought that even a small amount of mathematical knowledge could not be acquired without real study; whereas in many other subjects at least a certain amount can be acquired, as you may say, without any study at all.

9607. Then may I put it thus, that mathematics are a subject which you consider cannot be crammed, but that the other subjects may to some extent be crammed?—I am afraid that that can hardly be said;

Theodore Walrond, Esq.

18 July 1869.

Civil Service examinations.

it is possible to cram the book work of mathematics without thoroughly understanding the principles.

9608. But still you do not apply your penalty to mathematics?—No.

9609. From your experience, should you say that there are any particular subjects which you think are more likely to be crammed hastily than others?—All subjects, where the examination turns principally upon matters of fact, are much more capable of being crammed than others; the least capable, I think, are languages. Cramming least applies to an examination in languages. I think that if a man can translate a bit of Greek, or Latin, or French, or whatever it is, which he has never seen, he must really know the language.

9610. Regarding the teaching of the so-called natural sciences, geology and mineralogy, what is your experience of what is brought up by the candidates in those subjects?—I am sorry to say that I have no knowledge of those subjects myself, but I am told by the examiners, who examine candidates for the Indian service, that there is some slight improvement, but that the knowledge of those subjects is still very limited.

9611. History and geography have been mentioned to us as being subjects which can be crammed?—Yes, I think that they are, for the very reason that they are matters of fact.

9612. It is said that the number of persons taking up mathematics for the competitive examination for India is diminishing in proportion to those taking up such subjects as English, and so on; do you think that that is the case?—I think that remark must have reference to some years ago. Some years ago the number of candidates who took up mathematics was very small; but since the exception which has been referred to was made in favour of mathematics, namely that no deduction was made from the amount of marks, the number of candidates taking up mathematics has greatly increased.

9613. Would it not be fair rather to define your two permanent examiners as assistant Commissioners, from the description which you have given of their duties, since "they regulate the standard of the ex- "aminations," and the amount of fees paid to the other examiners?—That is a matter upon which I can hardly be expected to have any view.

9614. (*Maj.-Gen. Eardley Wilmot.*) You have stated that there is some risk of danger, in consequence of the system of examination, that questions of a similar character might be asked?—Yes.

9615. Taking any standard of examination papers, supposing that a young man answered them well, would it not imply that he must have a considerable knowledge of what he was examined in?—Yes, if it could be taken as a true sample of his knowledge; but if he only knew those facts, and no others, it would not be satisfactory, and the fear is that the crammer may teach the answers to certain questions, and that a young man may know nothing beyond them.

9616. Is it not possible for the examiners to avoid that?—They do so as much as they can.

9617. According to your statement the examination does not test the real knowledge, but only the knowledge at the moment?—I think that there is a great danger lest they should degenerate into this.

9618. Taking history and geography, you say that they can be crammed because they are matters of fact?—Yes.

9619. What examination in history and geography could depart from fact?—That is why I think that there is an objection to them as subjects of examination.

9620. All the knowledge in those things is matter of fact in the mind, unless a man can reason in after years upon them?—Yes; and in the more advanced examinations we eliminate "cram" pretty satisfactorily.

9621. Do you find a very great difference between the candidates who are rejected and those who are passed?—We now very seldom have men who are very ill qualified, for the standard is pretty well known, and candidates are not sent up unless there is a reasonable chance of their passing.

9622. Take the case of three candidates for the Foreign Office; is the one who is received very superior to the other two?—Certainly, sometimes.

9623. (*Mr. Parker.*) Your reasons for deducting the minimum in other subjects apply exactly to mathematics also, do they not?—In the view of the Commissioners they do not.

9624. But it happens equally that it would be very unfair that a boy making one mark less than the minimum should be placed, say, 200 marks, behind a boy making one mark more?—That objection does not arise as we are not in the habit of striking out any marks in mathematics.

9625. That acts as a premium on mathematics as a subject?—It does.

9626. Should you say that, where the candidates may take as many subjects as they please, five is about the number which they usually select?—Yes; the number used to be greater, but after the introduction of the plan of deducting a fixed number of marks it has come down to five.

9627. Does that include qualifying subjects?—There are no qualifying subjects in the Indian examination; nothing is obligatory.

9628. (*Lord de Ros.*) Considering that cramming is the great evil to be avoided in all these examinations, are you not of opinion that *vivâ voce* examination is the only true way of defeating cramming, inasmuch as *vivâ voce* examination cannot be recorded and the questions conveyed to the cramming artists so well as papers?—I think it the best way of checking cramming if it can be adopted.

9629. Do you consider that *vivâ voce* examination would take up too much time; might it not be so compressed as not to take up too much time?—In the most important examinations which we have, namely, those for the Civil Service of India, great importance is attached to *vivâ voce* examination, which takes place in every subject, even including mathematics.

9630. Supposing that the chief examiners see a tendency in the occasional examiners to put questions, tending rather to show their own acquirement than to elicit what the candidate knows, do they check or do they stop such questions?—I have no doubt that they would do so; that tendency may be supposed to exist, but I have never seen it in the examiners whom we have employed.

9631. With regard to the question of marks, in respect to the chance of one candidate getting within one of the requisite number and failing, and another candidate getting one more and succeeding, how would it answer instead of these marks to adopt the terms *good*, *indifferent*, and *bad*, and to take a more general view of the capacity of the candidate in that way?—That is what we do in our qualifying examinations. The reports sent to the Commissioners are not in figures but in epithets.

9632. In the same way as you would describe conduct?—Yes.

9633. Is not a boy very often sent to a crammer in order merely to ascertain whether he is likely to pass, he having been educated elsewhere?—Yes.

9634. And you see no objection to such a test being applied?—Just so.

9635. (*Rev. Dr. Butler.*) I understand you to say that one reason for introducing the plan of deducting the minimum marks was to obviate the necessity of limiting a candidate's choice of subjects?—Yes.

9636. Why was it thought advisable not to put an actual limit on the number of subjects?—There was a great outcry, and pressure was put upon the commissioners to limit the number of subjects, because a good many of the best educators in the country said that they could not get their pupils to give real attention to any subjects, as they thought that they must learn so many in order to get marks in this examination. The Commissioners were very reluctant to draw a hard and fast line for one reason, namely, that the

ubjects are not all of equal weight and difficulty, nd extent. If you said that there should be six ubjects, six heavy subjects are too many; and if you aid that there should be four, four slight subjects re too few. The Commissioners thought that the st plan was to leave it to the natural operation of ne law laid down by Lord Macaulay, that no knowdge was to be of any weight in the examination nless it was solid.

9637. Is it then your opinion that that plan of educting the minimum solves the problem satisfacorily ?—I think so, quite.

9638. Have you reason to think that cases of breaking down of health are at all frequent in the Indian xaminations ?—No. I remember three cases, I think, within the last six years, of candidates who after being successful in the open competition, were either obliged by ill-health to withdraw, or else could not pass the medical examiner, but I remember only three cases in the last five or six years. The candidates are kept for two years in this country to undergo a special training in subjects connected with India. During those two years considerable pressure is put upon them; and then it might be expected that a good many would break down. There have been in the same time, perhaps, five or six who have broken down.

9639. Do you think that Greek and Latin confer a sufficient advantage upon those who take them up, allowing for the large amount of time expended upon learning them ?—That is a very difficult question, but I think that on the whole I may say that they do.

The witness withdrew.

Adjourned.

APPENDIX.

EPLIES RECEIVED TO QUESTIONS ISSUED BY THE COMMISSION, AND OTHER DOCUMENTS RELATING TO THE SEVERAL MILITARY EDUCATIONAL INSTITUTIONS.

APPENDIX I.—COUNCIL OF MILITARY EDUCATION.

A.—HISTORICAL NOTICE.

(By the Secretary.)

In the debates which took place in Parliament during e Crimean war, in the year 1855, attention was frequently awn to the necessity of improving the professional edu- tion of officers, and more particularly of providing eans of instruction for, and requiring special quali- ations from, those who were candidates for the staff. the course of the same year a great alteration was made the principles which had hitherto regulated prepara- ry instruction for the army, by abandoning, so far the scientific corps were concerned, the system of venile military education, and throwing admission to e artillery and engineers open to public competition ong candidates whose age would afford the presumption at their general education was already completed. At e beginning of 1856 three Commissioners, Lieut.- olonel Yolland, R.E., Lieut.-Colonel Smythe, R.A., and e Rev. W. C. Lake, were appointed by Lord Panmure, en Secretary of State for War, "to consider the best mode of re-organizing the system for training officers for the scientific corps;" and for this purpose were directed visit the military schools of France, Prussia, Austria, d Sardinia. The instructions issued to the Commis- oners informed them that it was already decided that mission to the scientific corps should be obtained by en competition, and that the age of candidates admitted the competitive examination should be from 17 to 20. ie Commissioners were directed to take these facts as their arting point.

While the Commissioners were still engaged in their quiries, the question of military education was frequently ought before the notice of Parliament in the course of e session of 1856, more particularly by Mr. Sidney erbert, who, in an elaborate speech on the 5th of June, plained to the House of Commons the details of a general heme of education for officers of all branches of the ser- ce, the outline of which he had previously sketched out nile Secretary at War in 1854, in a letter to the Com- ander-in-Chief.*

The subject of military education was one which at this ne engaged the serious attention both of the Government id the public. Towards the close of the year Major- eneral Lefroy (then Colonel Lefroy, and employed at the ar Office as artillery adviser to the Secretary of State) as directed by Lord Panmure to draw up a general heme for the education of officers; and numerous plans ith a similar object were about the same period proposed r the consideration of the Secretary of State.

The military educational establishments which existed in 856 were as follows:—

The Royal Military College at Sandhurst, comprising a senior and junior department.	Under the control of the Commander-in-Chief.
The Royal Military Academy at Woolwich.	Under the control of the Clerk of the Ordnance.
The Ordnance School at Carshalton, a preparatory establishment to the Academy.	
The Department of Artillery Studies at Woolwich.	
The Royal Engineer Establishment at Chatham.	
The East Indian Military College at Addiscombe.	Under the Court of Directors of the East India Company.
The School of Musketry at Hythe.	Under the control of the Commander-in-Chief.
The Royal Military Asylum at Chelsea, comprising a training school for army schoolmasters and a model school for children.	Under the control of the Deputy Secretary at War.
The Royal Hibernian School at Dublin.	
Garrison and regimental schools for soldiers and children.	Under the control of the Chaplain-General.

Up to this period no systematic organization for the direction of military education had prevailed in this country; the various educational establishments were under the control of separate departments, and no single authority exercised any general supervision over them. The appointment of a Director-General of Military Education had been already advocated in Parliament by Mr. Sidney Herbert, and the institution of a special department to superintend the whole system of education for the army was one of the main features both of Colonel Lefroy's and of all the other schemes brought under the consideration of Lord Panmure at this period.

The Commissioners appointed in 1856, after having visited the military schools of the continent, presented their Report in January 1857. In this Report, although their instructions had more particularly directed their attention to the training of officers for the scientific corps, they touched upon several points connected with the education of officers of the army generally. One of the changes most strongly recommended by them was the formation of a special Board of Military Education. "We consider it of "the first importance," their Report says, "that military "education in this country should be regarded as a whole, "and that perfect unity of system and harmony in its "working should be made to prevail. This, we conceive, "can only be done by bringing military education generally "under the control of one head, the Secretary of State for "War; and to effect this, a Board or Section of Military "Education should be formed, as part of the establishment "of the War Office." The Report adds, "the creation of "such a Section appears to us far more important than any "other single object we can recommend." The Commissioners also stated that after careful consideration they recommended the combined action of a Board in preference to the undivided authority of a single individual, on the ground of the variety of knowledge and experience required for the proper treatment of educational questions.*

The appointment of the Council of Military Education was the first result of the recommendations of the Commissioners. Its institution was proposed in a letter from the Commander-in-Chief to the Secretary of State for War on the 6th of April 1857,† and as originally constituted it consisted of the Commander-in-Chief as *ex officio* president, a Major-General as vice-president, and two field officers as members. The appointment of the Council, although the members commenced their duties at once, was not officially gazetted until the 1st of June.

The functions of the Council, however, did not in the first instance extend to a general superintendence over the whole system of military education. Almost simultaneously with their institution an Inspector-General of Army Schools was appointed under the Secretary of State for War, to whom the management of all institutions connected with the education of soldiers and children, which had previously been in the hands of the Chaplain-General, was entrusted. Nor was the supervision of the Council even over the education of officers at first general, as the Royal Military Academy at Woolwich remained under the

Appendix I. (A.)

Council of Military Education.

management of the War Office (under which department it had been placed on the abolition of the office of Master-General of the Ordnance), and the examinations for admission to it were conducted by a separate Board of Examiners under the superintendence of Canon Moseley.

The instructions issued to the Council on their first appointment directed their attention more especially to the organization of a Staff College, the revision of the system of examinations for direct appointments to the army, the amalgamation of Woolwich and Sandhurst, and the professional instruction and examination of officers after entering the service.* On all these questions they submitted reports in the course of the year, and at the beginning of 1858 they commenced to conduct the examinations in connexion with the Staff College and the Cadet College at Sandhurst, although these establishments were not formally put under their authority until, by a Royal Warrant of the 1st of October 1858, the Council were appointed Visitors of the Royal Military College.† The examinations of officers for direct appointments to the staff, which had been instituted in 1857, were also placed under the superintendence of the Council in 1858; but at a later period, the portion of these examinations which has more especial reference to matters of drill and regimental duty was, on the recommendation of the Council themselves, removed from their control, with the view of its being conducted by a Board of officers appointed by the Adjutant-General.

At the beginning of the year 1858 the office of Secretary to the Council of Military Education was created, and in June of the same year an augmentation of their number took place by the addition of two new members,—one a field officer, the other a civilian, the Rev. Canon Moseley. The constitution of the Council as then fixed continues to the present day, and consists of the Commander-in-Chief as *ex officio* president, a vice-president, and four members, one of the latter being a civilian.

The appointment of a civilian as a member of the central Board of Military Education had been recommended by the Commissioners of 1856 on the ground of the close connexion between military and civil educational questions. The decision to carry out this recommendation, simultaneously with an augmentation in the strength of the Council, appears to have been connected with the determination arrived at, to place the superintendence of the Academy at Woolwich—the competitive examinations for admission to which had hitherto been conducted by Canon Moseley—in the hands of the Council. They were formally appointed Visitors of the Academy in August 1858,* their control over the education of the officers of the army being now made almost entirely general. The powers of the Council, however, in regard to Woolwich appear, probably from the fact of their not being defined by Royal Warrant, to be theoretically somewhat less extensive than those possessed by them over Sandhurst, as the recommendation of the appointment of professors, which in the case of the latter college is formally vested in the Council, is at the Academy left more to the discretion of the Lieutenant-Governor.†

In October 1859 the Indian Military College at Addiscombe was placed under the supervision of the Council,‡ and the examinations for admission to it were conducted by them until the close of the establishment in 1861, consequent upon the abolition of the local Indian army.

In 1860 the superintendence of army schools, garrison libraries, recreation rooms, the Royal Military Asylum at Chelsea, and the Royal Hibernian School at Dublin, were transferred from the Secretary of State for War to the Council, the appointment of Inspector-General of Army Schools at the War Office being at the same time abolished.§

In 1864 the Advanced Class of Artillery Officers, on its institution, was placed under the control of the Council. Since this date the whole system of army education has been superintended by that body, with the exception of the examinations of officers for promotion, the School of Musketry at Hythe, and the more peculiarly regimental institutions which exist in the Department of Artillery Studies, the School of Gunnery at Shoeburyness, and the School of Military Engineering at Chatham, for the special instruction of officers of the scientific corps. The Survey Class at Aldershot, though not formally under the direction of the Council, is indirectly subject to their supervision.

Considerable information regarding the appointment and original constitution of the Council of Military Education is contained in the evidence given by His Royal Highness the Duke of Cambridge, Lord Panmure, Major-General the Right Hon. J. Peel, and Sir Benjamin Hawes, before the Select Committee of the House of Commons on Military Organization (1860).

The duties of the Council at the present time are fully described in the evidence of Major-General Napier, the vice-president (evidence 8 to 140), and of Colonel Hamley, one of the members (evidence 8691 to 8734).

Appendix I. (B.)

B.—CORRESPONDENCE, &c. CONNECTED WITH THE ORIGINAL FORMATION, AND WITH THE GRADUAL EXTENSION OF THE POWERS OF THE COUNCIL OF MILITARY EDUCATION.

(I.) Appointment and Constitution of the Council.

My Lord, Horse Guards, 6th April 1857.

With reference to the several discussions which I have had with your Lordship on the subject of the education of the officers of the army, I now transmit to your Lordship the draft of a general order, establishing certain qualifications, which I propose shall be required after the 1st January 1858 from all officers who are candidates for staff appointments in the adjutant and quartermaster-general's departments, or on the personal staff of a general officer, and which it would be my intention, should the regulations therein laid down meet with the approval of Her Majesty, to promulgate immediately to the army.

I consider this as the foundation of a system which may hereafter be extended, as experience may show to be desirable; but as it is necessary to make a beginning at as early a period as possible, I do not think that higher attainments could be exacted, at all events, in the first instance.

Those which are described in the general order are, in my opinion, sufficient to ensure that officers appointed to the staff have that degree of knowledge which will enable them to discharge the duties properly belonging to their situation, and the certainty that no officer can hope to obtain such appointment unless he is possessed of these qualifications, will, I should hope, have the effect of at once inducing a great number of officers to apply themselves to professional study.

It is not intended that candidates for the staff shall have necessarily passed through the Royal Military College. It will be sufficient that their qualifications should have been tested by an examination; but your Lordship will, I trust, agree with me, that it will be only proper to extend the present means of affording instruction to officers in the higher departments of professional knowledge, as many will, otherwise, not be enabled to obtain it; and with this view I am desirous of suggesting that the number of students to be admitted to the senior department of the Royal Military College, which is at present only 15, shall be at once increased to 30, and that this institution shall be considered as a staff school. I would propose that the candidates for admission shall be subjected to an examination, and rejected unless they come up to the required standard, to be fixed by a council of education, constituted as will be hereafter mentioned. The sanction of the Commander-in-Chief will of course be required for the examination of any candidate.

In order to carry out the system, it will be necessary that an officer should be placed at the head of the senior department, to be designated the Commandant, who will have the general superintendence of the studies and the management of the department, under the supervision of the Governor of the Royal Military College. It will also be necessary that two additional professors should be appointed, and specially attached to this department, viz., one for surveying and sketching, and one for mathematics or fortification; Mr. Narrien, a gentlemen far advanced in years, being at present the only professor for both mathematics and fortification, besides some professors of foreign languages.

To superintend the whole system of the education of officers, and the examinations, I propose that a council should be appointed, consisting of,—

One Major-general, with the title of Vice-President; and
Two members, the General Commanding-in-Chief being himself *ex officio* the head of the Council as President.

The measure above proposed will in no respect interfere with the present constitution of the Royal Military College, which will continue under the superintendence of the

† Evidence of Colonel Hamley, 8696, 8697.
§ *See* War Office Letters, pages v, vi.

Governor and Lieutenant-governor, as has hitherto been the case.

These explanations will, I believe, be sufficient to put your Lordship in possession of my views as to the course which it will be expedient to adopt, in order to introduce a system of education for staff officers; and I shall be glad to be informed whether your Lordship concurs with me in the plan I propose for the purpose.

(Signed) GEORGE.

The Right Hon.
The Lord Panmure,
G.C.B. and K.T.

GENERAL ORDER.

Horse Guards, S.W., 9th April 1857.

His Royal Highness the General Commanding-in-Chief having had under his serious consideration the question of army education, especially as relating to qualifications for staff appointments, is pleased to promulgate, for general information, that from and after the 1st January 1858, the undermentioned acquirements will be considered indispensable before appointment to the situations annexed.

Every officer, before appointment, will be required to undergo an examination on the subjects mentioned in such manner as shall be hereafter announced.

This regulation is not intended to affect officers now on the staff.

QUALIFICATIONS OF STAFF OFFICERS.

Aides-de-camp. To write a distinct and legible hand, and compose English correctly.

To have a good colloquial knowledge of one foreign language.

To have a good eye for a country, and to be able to produce an intelligible sketch of it.

To know the use of the sketching compass or pocket sextant, in order to lay down and protract the leading features of a country to be described.

To have a thorough knowledge of regimental duty, and tactics and field movements on an extended scale.

Also a knowledge of field fortification, both as regards construction and correct description on reconnaissance.

Brigade Major. To have all the qualifications of a good adjutant, the same acquirements as are exacted from an aide-de-camp, and a thorough knowledge of military law, and the Army and War Office Regulations.

Deputy Assistants Adjutant General, and Quartermaster General. The following further acquirements will be required to qualify for Deputy Assistants Adjutant General and Deputy Assistants Quartermaster General, viz., practical sketching, both on horseback, called "flying sketching," as well as correct and finished plotting, practical trigonometry and geometry, with knowledge of logarithms:—

To write, read, and speak at least one foreign language.

To judge of ground and its proper occupation by all arms.

To have a perfect knowledge of castrametation, and the principles of permanent fortification; and

To be thoroughly acquainted with geography and military history, especially as relates to the campaigns of ancient and modern commanders.

Assistants Adjutant and Assistants Quartermaster General. To the whole of the foregoing will be added, for Assistants Adjutant and Assistants Quartermaster General:—

The elements of mechanics, hydrostatics, and geology.

The construction of military bridges, dams, &c.

An acquaintance with the principles of strategy.

And statistics of the army.

All staff officers should be able to ride well.

(Signed) G. A. WETHERALL.

SIR, War Office, 13th April 1857.

I HAVE the honour to acknowledge the receipt of your Royal Highness's letter of the 6th instant, on the subject of the education of the officers of the army, together with the draft of a general order, establishing certain qualifications to be required after 1st January 1858, from candidates for staff appointments in the Adjutant General's and Quartermaster General's departments, or on the personal staff of a general officer; and I beg to signify my concurrence in the measures proposed in your Royal Highness's communication, as well as in the regulations laid down in the general order.

I have, &c.
(Signed) PANMURE.

His Royal Highness
The General Commanding-in-Chief.

SIR, Horse Guards, 22nd April 1857.

Appendix I. (B.) Council of Military Education.

WITH reference to the correspondence respecting the establishment of a Council for superintending the system of education for the officers of the army, I am directed by the General Commanding-in-Chief, to request that you will be good enough to submit to Lord Panmure the names of the following officers whom, should his Lordship concur in the selection, His Royal Highness would propose to submit to Her Majesty to form the Council:—

President.—The General Commanding-in-Chief, *ex officio*.

Vice President.—Colonel Duncan A. Cameron, H.P., having the temporary rank of Major-General.

Members.—Colonel Portlock, Royal Engineers; Brevet-Lieutenant-Colonel Addison, H.P.

And I am to request that you will be good enough to communicate to me, for His Royal Highness's information, whether his Lordship concurs in these appointments.

I have, &c.
(Signed) C. YORKE.

The Under Secretary of State for War.

SIR, Horse Guards, 22nd April 1857.

WITH reference to my letter of this date, stating, by the desire of His Royal Highness the General Commanding-in-Chief, the names of the officers whom he proposes to submit to the Queen, with Lord Panmure's concurrence, to form the Council of Education, I am directed by His Royal Highness to request you will bring under his Lordship's consideration the necessity of immediately fixing upon the salaries to be assigned to the Vice President and members, for as they will, of course, be required to vacate immediately the appointments which they now hold, some anxiety is felt by them on the subject.

Lord Panmure will probably think it desirable to ascertain the exact amount of the salary and advantages incident to the position which Colonel Portlock holds at Dover as Commanding Royal Engineer, as his Lordship would doubtless deem it proper that regard should be had thereto in fixing the salaries.

I have, &c.
(Signed) C. YORKE.

The Under Secretary of State for War,
&c. &c. &c.

War Office, Pall Mall, S.W.,

SIR, 24th April 1857.

WITH reference to your letter of the 22nd instant, stating, that with the concurrence of Lord Panmure, His Royal Highness the General Commanding-in-Chief proposes to submit to Her Majesty the names of the following officers who have been selected to form the Council for superintending the system of education of the officers of the army; viz.,—

President.—The General Commanding-in-Chief, *ex officio*.

Vice President. — Colonel Duncan A. Cameron, H.P., having the temporary rank of Major-General.

Members.—Colonel Portlock, Royal Engineers; Brevet-Lieutenant-Colonel Addison, H.P.

I have the honour to acquaint you, for the information of the General Commanding-in-Chief, that Lord Panmure concurs in these appointments.

His Lordship cannot, however, yet define the salaries of the Vice President and members, but desires me to state that, as soon as this point is settled with the Lords of the Treasury, a further communication will be made to His Royal Highness.

In the meanwhile, Lord Panmure would suggest that General Cameron, Colonel Portlock and Colonel Addison should be instructed to draw up rules on the following points, viz.:—

1st. For the admission of officers into the army.

2nd. The promotion of officers.

3rd. The establishment of a staff school and mode of admission to it, and time of attendance.

I have, &c.
(Signed) B. HAWES.

Major-General Sir C. Yorke, K.C.B.

SIR, War Office, Pall Mall, 30th April 1857.

I AM directed to acquaint you, for the information of the Lords Commissioners of Her Majesty's Treasury, that Lord Panmure, with the concurrence of His Royal Highness the General Commanding-in-Chief, proposes to recommend to the Queen the establishment of a Council for superintending the system of education for the officers of the army, consisting of:—

A President, the General Commanding-in-Chief, *ex officio*,

A Vice President, of the (temporary) rank of Major-General, with 1,000*l.* per annum.

And two members, with each 600*l.* per annum.

The above rates are to cover all allowances and expenses, except travelling, of which an account is to be rendered.

And I am to request you will move the Lords of the Treasury to sanction this additional expenditure accordingly.

I have, &c.
(Signed) B. Hawes.

Sir C. E. Trevelyan.

My Lord, Horse Guards, 4th May 1857.

With reference to the correspondence which has taken place respecting the salaries to be assigned to the Vice President and members of the Council of Education, I have to acquaint your Lordship that Colonel Portlock, of the Royal Engineers, is exceedingly anxious that there should be a decision on the question, as he considers that he could not, in justice to his family, accept a situation of inferior value to the command which he now holds.

I would, therefore, recommend to your Lordship's consideration, that he should be allowed to receive his ordinary military full pay with the 600*l.* a year, which I have understood your Lordship had proposed as the salary for the members of the Council, in addition to the half-pay of their military ranks. The case is different as regards Lieutenant-Colonel Addison, as he is now only in receipt of his half-pay, and would not, therefore, be a loser by the arrangement proposed by your Lordship. I would add, that I consider Colonel Portlock's services will be very valuable at the Council, and that there might be difficulty in replacing him by an officer equally qualified for so important an office.

I have reason to know, from a communication which I have received from Major-General Cameron, that Colonel Portlock would be quite satisfied with the amount of salary which he would receive under the arrangement.

I am, &c.
(Signed) George.

The Right Hon. Lord Panmure, G.C.B.
&c. &c. &c.

Sir, War Office, Pall Mall, 8th May 1857.

In reply to the communication addressed to Lord Panmure by His Royal Highness the General Commanding-in-Chief on the 4th instant, I am directed by his Lordship to acquaint you, for the information of His Royal Highness, that his Lordship approves of Colonel Portlock receiving his regimental full pay as a Colonel of Engineers, in addition to the salary proposed for him as a Member of the Council of Military Education.

I have, &c.
(Signed) B. Hawes.

The Military Secretary, Horse Guards.

Sir, Treasury Chambers, 1st June 1857.

I am commanded by the Lords Commissioners of Her Majesty's Treasury to acquaint you, for the information of Lord Panmure, that my Lords are pleased to sanction the arrangements recommended in your letter of the 30th ultimo, respecting the establishment of a new Council of Military Education, with the modification proposed in your further letter, dated 8th instant.

I am, &c.
(Signed) C. E. Trevelyan.

Sir B. Hawes, K.C.B.

Sir, War Office, Pall Mall, 9th June 1857.

With reference to my letters of 24th April and 8th May, relative to the emoluments of the Council of Military Education lately established, I am directed by Lord Panmure to acquaint you, for the information of His Royal Highness the General Commanding-in-Chief, that the Lords Commissioners of Her Majesty's Treasury have, on the recommendation of his Lordship, sanctioned the following scale of salaries for the officers composing the Council, viz.:—

Vice President. — Major-General Duncan A. Cameron, 1,000*l.* per annum, and half-pay.

Members.—Colonel Portlock, Royal Engineers, 600*l.* per annum and full pay; Lieutenant-Colonel Addison, 600*l.* per annum and half-pay.

I have, &c.
(Signed) B. Hawes.

The Military Secretary, Horse Guards.

Sir, War Office, Pall Mall, 21st May 1858.

Adverting to your letter of the 1st June 1857, conveying the sanction of the Lords Commissioners of Her Majesty's Treasury to the establishment of a Council of Military Education, consisting of a President (the General Commanding-in-Chief *ex officio*), a Vice President, and two other members, I am directed by Secretary Major-General Peel to acquaint you that he recommends for their Lordships' sanction the appointment of two additional members to the Council, one of whom should be an officer of the Royal Artillery, and the other a civilian. It is proposed that the salary of the officer of Royal Artillery should be the same salary as that paid to the other members of the council, viz., 600*l.* per annum, the difference between full pay and half-pay being deducted, if an officer on full pay is appointed, and that the salary of the civilian member should be the same as that of the military members without their military pay.

From the knowledge General Peel has gained since the formation of the Council of the duties required to be performed by them, he is convinced that this arrangement will be of great advantage to the public service.

I have, &c.
(Signed) B. Hawes.

Sir C. E. Trevelyan.

Sir, Treasury Chambers, 22nd May 1858.

In reply to your letter of the 21st instant, recommending the appointment of two additional members to the Council of Military Education, I am commanded by the Lords Commissioners of Her Majesty's Treasury to acquaint you, for the information of Secretary Major-General Peel, that my Lords are pleased to sanction the addition as proposed, and they do not object to the amount of remuneration proposed for them; but, adverting to the opinion expressed in the letter of this Board of the 12th ultimo, and confirmed in that of this day's date, in reference to the manner in which the remuneration of military officers holding salaried situations should be fixed, and exhibited to Parliament, they request that the subject of emoluments of the Council of Military Education may be again brought under the consideration of the Secretary of State, with especial reference to this question.

I am, &c.
(Signed) C. E. Trevelyan.

Sir B. Hawes, K.C.B.

(II.) First Instructions issued to the Council of Military Education.

Horse Guards, 22nd April 1857.

1. The members of the Council of Military Education should, in the first instance, direct their attention to the proper organization of the present Senior Department at Sandhurst, the numbers of which should be doubled, and the name of which should be changed to that of *Staff College*, to be presided over by a Commandant, who should be directly responsible to the Council of Education, and with a proper staff of professors, to be appointed with as little delay as possible.

2. They should at the same time revise the whole system of examination for direct appointments to the army, which is at present very defective, and establish a proper standard which must be attained by every candidate before he can be admitted into the service.

3. After having accomplished these two objects they should direct their attention to the Junior Department at Sandhurst, make the necessary proposals for converting the school, as at present established, into a college, the age of admission to range between 16 and 18; and should further suggest the mode in which the Royal Military Academy at Woolwich is to be amalgamated with the new college at Sandhurst, the manner in which youths are to be admitted to Sandhurst, and how they are to be passed out of it, by examination, to the practical classes at Chatham and Woolwich, the former for the Engineers, the latter for the Artillery.

4. They must then consider the question as to the *professional* examination of officers for promotion up to the rank of captain, that of the establishment of instructors at the larger stations, and the manner of conducting the examinations for the General Staff of the army, not confining their observations to the subjects named in this *memorandum*, but extending their remarks to all and every question connected with the education of the army generally.

(III.) Royal Warrant, appointing the Council Visitors of the Cadet College and Staff College at Sandhurst.

7611/285.

VICTORIA R.

Whereas it has been represented to Us, by Our Secretary of State for War, that it is expedient to appoint Our Council of Military Education to be Visitors of the Royal Military College; and also to amend so much of the Royal Warrant of the 27th May 1808, for regulating the affairs of the said College, as relates to the appointment of professors and masters:

Our Will and Pleasure is, that Our Council of Military Education for the time being shall be appointed Visitors of the said Royal Military College, and that they shall frequently inspect the same, and report to the General Commanding-in-Chief of Our Forces upon the instruction therein given.

They shall, moreover, be competent to recommend to the General Commanding-in-Chief the removal of any professor or master whom they may consider to be, for any reason, unfit for the performance of his duties; but such professor or master shall not be removed except by the express orders of the General Commanding-in-Chief, with the concurrence of the Secretary of State for War.

It is Our further Will and Pleasure, that when any vacancy shall occur among the professors or masters on the establishment of the said College, the Council of Military Education shall carefully investigate the merits of all candidates who may be brought under their consideration, and shall recommend to the General Commanding-in-Chief for the time being the person whom they shall deem most eligible to succeed to the vacant appointment.

Given at Our Court at St. James's, this first day of October one thousand eight hundred and fifty-eight, in the twenty-second year of Our Reign.

By Her Majesty's Command,
J. Peel.

(IV.) Letter from the Military Secretary, stating that Her Majesty had been pleased to approve of the Council being appointed Visitors of the Royal Military Academy, Woolwich.

7605/152.

Sir, Horse Guards, 3rd August 1858.

Adverting to your letter of the 26th ultimo, on the subject of the whole military education of the army being now placed under the superintendence of the Council of Military Education, I am directed by the General Commanding-in-Chief to acquaint you, for the information of the Secretary of State for War, with reference also to the correspondence that took place in November last regarding the Royal Military College at Sandhurst, that His Royal Highness has submitted to the Queen, and Her Majesty has been pleased to approve, that in order to carry out this arrangement, the Council of Military Education be appointed Visitors of the Royal Military Academy at Woolwich, with the power of inspecting it from time to time, and reporting upon its condition and progress.

I have, &c.
(Signed) C. Yorke.

The Under Secretary of State for War.

(V.) War Office Letter, placing the Royal Military College at Addiscombe under the Authority of the Council.

7605/338.

Sir, War Office, 2nd November 1859.

I have the honour to acknowledge the receipt of Your Royal Highness' letter of the 26th October, and in reply I beg to state that I entirely concur with your Royal Highness in the proposal that the Royal Military College at Addiscombe should be placed under the supervision of the Council of Military Education, as requested by Sir Charles Wood, and that an officer of the Indian army should be appointed as a member of the Council, as suggested by Your Royal Highness.

I have, &c.
(Signed) S. Herbert.

His Royal Highness The Duke of Cambridge.

(VI.) Extracts from Royal Warrant of the 20th April 1861, giving to the Council Powers in regard to the Schools of the Royal Military Asylum, Chelsea.

18. The Masters, instead of reporting, as heretofore, to the School Committee and to the Secretary at War, will report periodically on all matters relating to the details and course of study to the Council of Military Education, through the Commandant.

19. Finally, the Members of the Council of Military Education are to have free access at all times to the Schools, for the purpose of inspecting and reporting upon the same.

(VII.) Transfer of Army Schools, &c. to the Council.

War Office Letter, containing the First Proposal to transfer the Army Schools and Libraries to the Council.

Sir, War Office, 24th May 1859.

I am directed by Secretary Major-General Peel to request that you will state to His Royal Highness the General Commanding-in-Chief that he proposes to transfer to the charge of the Council of Military Education, under the direction of His Royal Highness, all duties connected with the training of army schoolmasters, and also with military schools and libraries, which have hitherto been entrusted to the Inspector-General of Army Schools, which office will therefore from henceforth become unnecessary. I am accordingly to request that you will move His Royal Highness to state, for Major-General Peel's information, when the Council of Military Education will be able to undertake these duties, with a view to make the necessary preliminary arrangements.

I am, &c.
(Signed) B. Hawes.

The Military Secretary, Horse Guards.

War Office Letter, enclosing Memorandum defining the Duties of the Council in connexion with the Army Schools, &c.

50/Genl. No./221.

Sir, War Office, 8th February 1860.

Adverting to previous correspondence relative to the transfer of the superintendence of army schools and libraries from this department to the Council of Military Education, under the direction of His Royal Highness the General Commanding-in-Chief, I am directed by Mr. Secretary Herbert to state that, as it is understood that the Council of Military Education will shortly be in a position to undertake this duty, it appears desirable to define the precise nature of the duties which will thus devolve upon the Council, and to fix the date of the transfer, with a view to take the necessary steps for notifying the change to the army and to those concerned.

I am accordingly to transmit to you the enclosed memorandum which has been prepared, showing the several duties which it is proposed the Council shall henceforward undertake; and I am to state that it is desirable that the transfer should take effect from as early a date as may be found convenient.

I am to request, therefore, that you will move His Royal Highness to cause Mr. Herbert to be favoured with the views of the Council in regard to the proposed transfer.

I am further to state, in reference to your letter of the 19th February last, that Mr. Herbert will be prepared to consider the several points therein alluded to and any others which the Council, after experience in the working of the schools under their superintendence, may recommend for adoption.

I am, &c.
(Signed) B. Hawes.

The Military Secretary.

Memorandum on the Transfer of the Superintendence of Army Schools, Garrison Libraries, Royal Military Asylum, Chelsea, and Royal Hibernian School, Dublin, from the Secretary of State for War to the General Commanding-in-Chief.

The Council of Military Education will from assume the functions which have hitherto pertained to the Inspector-General of Army Schools, which office has been abolished.

APPENDIX I. (B.)

Council of Military Education.

The Assistant Inspectors of Schools in the United Kingdom, and the local Inspectors of Schools at Gibraltar, Malta, and Corfu will be placed under the immediate superintendence of the Council of Military Education, and will receive their instructions from and report directly to the Council.

The general duties which will thus devolve upon the Council will be as follows, viz.:—

1. To receive and consider all applications for training schoolmasters or schoolmistresses; the usual course of procedure in these cases is annexed.
2. The appointment of trained schoolmasters and schoolmistresses, according to the regulations.
3. The appointment of acting schoolmasters and schoolmistresses, according to the regulations, when trained masters and mistresses cannot be provided.
4. The appointment of civilian schoolmasters in embodied regiments of militia under special regulations as annexed.
5. The transfers of schoolmasters and schoolmistresses from one regiment or garrison school to another, as circumstances may require.
6. Promotion of schoolmasters and schoolmistresses from one class to another according to the regulations.
7. To receive and consider all communications from commanding officers on matters relating to the appointment of schoolmasters and schoolmistresses, their discipline, application for leave to marry, furlough, &c.
8. To receive the monthly report of schools, prescribed by Article 16 of the Schools Regulations, and to consider the same, and take such proceedings thereon as may appear necessary.
9. The periodical inspection of all military schools, and of the Royal Military Asylum, Chelsea, and the Royal Hibernian School, Dublin.
10. To provide for and superintend the half yearly examination at the Royal Military Asylum, Chelsea.
11. The supply of suitable apparatus for the illustration of lectures for the instruction and entertainment of soldiers, according to the rules laid down by the Secretary of State.

Regimental and Garrison Libraries and Reading Rooms.

12. The general supervision of regimental and garrison libraries and reading rooms. *See* W. O. Circular 217.
13. To consider applications for, and appoint librarians at rates of pay previously authorized by the Secretary of State.
14. To supply games, and other authorized articles for reading rooms, according to the rules annexed.
15. To receive the quarterly reports of the state of barrack libraries in duplicate, and to consider any recommendation which may be made therein; one copy to be forwarded to the Secretary of State for War, with the recommendations of the Council recorded thereon, should any be necessary.
16. To make out requisitions upon the War Office for additions to libraries, when necessary, within the annual amount granted by Parliament for such purpose.
17. To receive and consider the half yearly reports of artillery and engineer libraries in duplicate, in aid of which a grant of money will be made annually to each brigade of artillery and company of engineers by the Secretary of State, on the recommendation of the Council of Military Education; one copy to be forwarded to the Secretary of State, with any remarks thereon which may appear called for, the other to be retained by the Council.
18. Hospital libraries and the schools and libraries of disembodied regiments of militia will remain under the Secretary of State for War.
19. Upon all matters connected with either schools or libraries, not specified above, and which may involve expense, reference should be made to the Secretary of State for War, previously to any decision being arrived at in regard to them.

WAR OFFICE LETTER, enclosing DRAFT of a CIRCULAR, notifying the TRANSFER of ARMY SCHOOLS, &c. to the COUNCIL.

50/Genl. No./249.

SIR, War Office, 28th February 1860.

IN reply to your letter of the 21st instant, in which you state that the Council of Military Education will be prepared to undertake the charge of military schools and libraries from the 15th of March next, I am directed by Mr. Secretary Herbert to transmit to you the enclosed draft of a circular which it is proposed to issue to the army, notifying the change and pointing out the particular subjects which will in future be considered by the Council of Military Education.

In laying the proposed circular before His Royal Highness the General Commanding-in-Chief, I am to request that you will move His Royal Highness to cause Mr. Herbert to be informed to whom he would desire communications intended for the consideration of the Council of Military Education to be addressed, and whether he concurs in the general tenor of the circular.

I am to add that in accordance with the memorandum forwarded in my letter of the 8th instant, the April inspection of schools in the United Kingdom, and the local inspectors at Gibraltar, Malta, and Corfu will be placed under the immediate superintendence of the Council of Military Education, and instructed to report directly to the Council from the 15th March next.

I am, &c.

The Military Secretary. (Signed) B. HAWES.

DRAFT OF CIRCULAR.

50/Genl. No./249.

War Office.

THE Secretary of State for War having, with the concurrence of His Royal Highness the General Commanding-in-Chief, decided upon transferring the general management of army schools and military libraries from the Secretary of State for War to the General Commanding-in-Chief, and placing them under the immediate superintendence of the Council of Military Education:—

It is hereby notified that the above change will take effect from the 15th instant.

In consequence of this change, all communications relating to the following subjects should on and after the 15th instant be addressed to the Military Secretary, Adjutant-General, or the Council of Military Education; all periodical returns being in like manner transmitted to the Military Secretary at the periods now prescribed by regulation, viz.:—

1. Applications for the training of schoolmasters and schoolmistresses.
2. The appointment of trained schoolmasters and schoolmistresses.
3. The appointment of acting schoolmasters and schoolmistresses.
4. The appointment of civilian schoolmasters in embodied regiments of militia.
5. Transfers of schoolmasters and schoolmistresses.
6. Promotion of schoolmasters and schoolmistresses.
7. Discipline, furlough, leave to marry, &c.
8. The monthly school report, required by Article 16 of the Army Regulations, a duplicate of which will as heretofore continue to be forwarded to the Assistant Inspector of Army Schools in the district.
9. The supply of apparatus for the illustration of lectures for the entertainment and instruction of the troops.
10. Regimental and garrison libraries and reading rooms.
11. Applications for new books and games for reading rooms.
12. The quarterly report of the state of the libraries.
13. Half yearly reports of Royal Artillery and Royal Engineer libraries, which are to be made in duplicate.

Communications upon all matters not specified above, and of a purely financial character, will continue to be addressed to the Under Secretary of State for War.

APPENDIX II.—ROYAL MILITARY COLLEGE, SANDHURST.

A.—QUESTIONS AND REPLIES RELATING TO THE ROYAL MILITARY COLLEGE.

QUESTIONS issued by the COMMISSION.

(I.) From the results of your experience as a professor, would you say that either the course or the method of instruction at Sandhurst are susceptible of improvement?

If so, what are the alterations which you would suggest?

(II.) What, in your opinion, is the amount of mathematical knowledge actually necessary to enable a cadet to follow the course of instruction in the strictly military subjects taught, such as fortification, surveying, &c.?

(III.) What do you consider the most desirable limits of age for admission to Sandhurst, and the length of course necessary for affording a strictly military and practical training to candidates for commissions?

(IV.) Do you find that the powers in regard to discipline which are exercised by you as a professor, are sufficient for the proper maintenance of your authority over the cadets?

(V.) Do you consider it advantageous that, as at present, there should be a separation between the staff employed for purposes of discipline and of instruction; or would it, in your opinion, be possible to combine these duties?

(VI.) Do you think that the incentives to industry and the punishments attached to idleness are sufficient under the existing system at Sandhurst? Or, if not, can you suggest any mode by which they might be increased?

(VII.) Will you favour the Commission with any other suggestions which you may think it desirable to make in regard to the Royal Military College?

The above questions were addressed to Colonel W. H. Adams, Professor of Fortification, and Captain L. Griffiths, Instructor in Fortification, at the Royal Military College.

(i.) ANSWERS received from COLONEL ADAMS, Professor of Fortification.

(I.) As to the alterations in the course:—

Arithmetic and mathematics to comprise only to the extent of a short and simple course of mensuration, suitable to *approximative* calculations of field parapets and ditches and time of construction.

Algebra, including quadratic equations.

Six books of Euclid, and trigonometry applied to the calculation of heights and distances.

Fortification, field and permanent, and the attack as at present, including the present practical constructions and work out of doors, but omitting such as are only carried out on service when engineers are present and their men (sappers), and confining calculations to approximative results, but practically correct, for the rough work superintended by line officers; the details to be decided on by a line officer professor, with the Superintendent of studies.

Military surveying and delineation of ground by the eye; no contouring or theodolite surveying. Military drawing to be more attended to. My recommendation is founded on the opinion of the late Quartermaster-General of the Duke of Wellington, General Sir George Murray, and on that of other of the Duke's staff officers employed on the continent during the war.

Instead of instructing cadets in "strategy," now taught under the misnomer of military history, and in the criticism of the operations of veterans in war, I recommend the study of, purely, military history, biography and geography, *reserving that of strategy for the staff school.*

Not one cadet in 500 can ever attain a position requiring him to advise or order the movements of an army; and he cannot acquire a useful knowledge of that vaguest of sciences without an intimate and practical experience of the capabilities, conduct, and endurance of men marching in bodies, &c. &c. &c. Who would think of teaching pupils to criticise even the games of chess of great masters before the pupils knew the moves and powers of the pieces, had played many games, and had *experienced* the difficulty of making good plans, whilst, at the same time, endeavouring to divine those of antagonists?

An intimate knowledge of the French language.

Landscape drawing, especially the drawing of military works, bridges, &c., and the implements and appliances in constructions.

Second part of 1st question; Whether the method of instruction is susceptible of improvement?

To answer this question intelligibly and usefully it is necessary to begin with the improvements which appear to me essentially requisite in the controlling powers or authorities of the studies. The power of the Council of Military Education to interfere in any manner with the details of instruction after the course has been decided on, should be withdrawn. No one should have the power to interfere with the professor (of each subject) in his method or manner of carrying out his teaching or instruction but the resident Governor, advised by the Superintendent of studies, *acting as head master without a class.* He ought to be an officer who has filled for at least five years the position, and *carried out the duties*, of a captain or field officer in *a line regiment.* He should be intimately acquainted with, and capable of teaching and examining in every subject of instruction at the College, and should be exempted from attending at military parades or instruction, excepting, perhaps, on Sundays or grand parades. If the Vice-President and Members of the Council of Military Education (a variable body) had been all and always masters or instructors, or officers who had been distinguished at school or college for their scientific, technical, and classical attainments and quickness of perception, even then it would be quite impossible that their interference (sometimes individually, sometimes collectively) with a professor of mathematics or fortification, &c. could be attended with other consequences than loss of time, offence to the professor (probably and presumably a person of high general as well as scientific attainments and a practised and distinguished teacher), and confusion of methods between the professor and his several assistant instructors, over whom he ought to be supreme. At present, the Council have not merely authority to overrule a professor in the *minutest details*, even if specially supported by the Superintendent of studies and by the resident general officer and Governor, but have frequently exercised it, causing great loss of time and loss of a considerable sum of money, and injury to the standard of results. The sort of professorial control to be exercised and the qualifications and powers necessary for a Superintendent of studies, suggested above, are not merely theoretical recommendations, but were really those exercised and possessed by the two successive Superintendents of studies (Colonels Proctor and Prosser), *for many years* before and up to 1857* about. They had each, in succession, held the position of Professor of Fortification (in which they had acquired a knowledge of the art of imparting instruction), and from which each was promoted. Both had a familiar acquaintance with mathematics of the highest order; fortification; surveying; military drawing in pen and brushwork (not done here now); French, German, and Latin; general history, ancient and modern; and they examined the classes in *each of these subjects, orally, rapidly*, and correctly before the Commissioners and a large assemblage of the (critical) public at the terminal examinations.

It was during their periods of control (for they were virtually the private secretaries of the Governors, Sir Edward Paget and Sir George Scovell, experienced general and staff officers), it was under their control that this college was held up by the public press as a pattern to the other military colleges or schools, for the good conduct and discipline of the cadets; and it was by the non-interference of authorities, by intrusting the Professor of Fortification with full powers to carry on his duties after his own fashion, that he was enabled by a new method of instruction and an original (as to compilation) Course book, to raise the standard of fortification "100 per cent. "in three years beyond what was ever known before;"—these words were expressed publicly and at repeated examinations by the desire of General Sir Howard Douglas, R.A., General Sir Charles Pasley, R.E., General Sir George Scovell, Staff of the Duke of Wellington, General Sir George Brown, educated at both departments of this college, and of His Royal Highness the late Duke of Cambridge, and other distinguished and scientific officers (Commissioners) who habitually attended public examinations here, at Woolwich, and at Addiscombe.

It must be recollected that, at that time, the cadets entered very young (between 13 and 15) with little previous instruction. There was only one instructor besides the professor for 180 cadets; the amount of plan drawing in fortification was at least six times as much as at present (besides the extempore drawing on the large slates); the cadets did not begin fortification until they had gone through a certain number of books of Euclid, or about the second year; and the greater number passed out in

* In 1855 Colonel Prosser became Lieut.-Governor, but saw the duties of Superintendent of studies carried out, as formerly.

Appendix II. (A.)

Royal Military College, Sandhurst.

three years, if at all. I do not think I am exaggerating when I state my belief that the last or lowest of *any* of the fortification classes between the year 1846 and the beginning of the Crimean war (when the cadets rapidly received commissions without the usually rigid examination) would have stood *first or highest* in any fortification class that has passed out (although stimulated by competition) since 1857, inclusive. I do not attribute this degradation of standard entirely to the altered system of control since exercised, viz., to the interference (at one period incessant) with the professor by those who neither understood instruction or science, and who made no distinction between an old professor, with the highest marks of distinction in science, and a new unpractised instructor; but this injudicious interference is the *principal* cause of it. The professor should have the supreme direction, as to method of instruction, over the instructors in the same branch, responsible only to one superior, the Superintendent of studies, acting for the Governor. I have endeavoured to anticipate as much as possible the most likely objections to my suggestions, but of course could do so, much more shortly in a personal examination, and more satisfactorily to myself.

(II.) Answered in the first part of the answer to the 1st question.

(III.) Between 14 and 16. After 16 I have found the majority of pupils to enter with a stunted development of mind; minds deficient in plasticity, slow in taking in new ideas, and that they work in a slow dreamy sort of way as compared with the younger lads of the former period before the competition system. The course should not be of less length than two years.

(IV.) Since the arrival of Sir Duncan Cameron I have found the power sufficient for the proper maintenance of authority; indeed the extraordinary irregularity and ill conduct of the last few years was attributable to the discouragement of reports of ill conduct; to the neglect of awarding punishment, or adequate punishment for even gross offences when reported; and to the mortification and loss of time to which any functionary (or civilian) was subject who might make a report of ill conduct.

(V.) As an old infantry officer educated at this college, and proud of the advantages of the good military training and excellent education which I received here as a boy between 14 and 16 (when I won a special commission with the highest honours ever awarded here), I deprecate a combination of the two distinct functions of instructor and military commander. Under the old system of "separate "functions, separate functionaries," nothing could be (relatively) better than the discipline and general conduct of this college from the year 1820 to the year 1857. Before 1857 none of the functionaries examined before the Commission were connected with this college; they are also, perhaps, unaware of (what I have stated in a previous answer) this continued good conduct, and that the "Times" and other papers held up the government and discipline here, as a pattern to other military schools. Any well-educated line officer of 20 years' standing and experience will be aware that two different temperaments and orders of mind are required for giving a youth a smart, active, soldierlike bearing, with a habit of ready obedience to authority; and for giving scientific instruction to youth. Such a combination of functions may be very suitable for a public or other (civil) school, where the boys enter very young, remain a long time, and are not required to have that special carriage and smartness which custom expects in soldiers; but to suit short and sharp training, carried on simultaneously with scientific instruction, for youths ranging from 14 to 18 (or older) two sets of officers are necessary. I also beg to add that very few of the half civil officers of the army can be well qualified to give a trustworthy opinion on a question, in one-half of which they can have had little or no experience, viz. in arriving at a knowledge of *what is considered smart bearing and training in our best regiments of the line.* Lastly, there is a limit to the endurance of monotony and labour; and when a *clever officer* of high attainments has been inculcating scientific knowledge for three or four hours to mere lads (the majority of them dull or idle), he requires relief from such society; or otherwise he would become listless and careless, or trivial and familiar, and the pupils would suffer in both cases.

(VI.) It is my opinion that the incentives to industry are sufficient, but that the incentives to idleness and distaste for reading are too abundant. In an institution of this character, where the object of the pupils is to win a commission and not to gain education; where the majority of their parents are far from wealthy; where the college career is limited to 18 months; where the majority must necessarily (by competion) *fail in their object*, a gratuitous commission; where the poorer (and more needy of patronage) are more likely to fail, for want of means and opportunities to obtain extra instruction before coming here and during vacations; and more especially, when it is known how difficult it is for young officers to live on their pay, and avoid the numerous temptations to luxurious living and other sorts of extravagance—no other amusements should, on any account be *permitted* (far less encouraged) than those usual at public schools, and which contribute to health and strength; billiard tables, pack of hounds, getting up plays during the term,—all these, and smoking, should be abolished. Every moment that can be spared from the ordinary athletic sports should be devoted to reading. Surely every thoughtful person must know that 18 months nominal (nearer 12 months only of actual) study is a short time (even devoting every moment to study that can be spared from meals and sleep) to prepare for competition in several subjects; and cadets who are found to be indisposed to hard study for so short a period should have notice to retire and make room for others; but for gross misconduct they should be publicly expelled. This is about the system pursued at the Berlin Military College, where there are scarcely any punishments (or any sick), and where smoking is also actually (not nominally) prohibited, not by punishment, but by notice to retire, for disobedience of orders, on the second offence. Stimulating food and drink being detrimental to hard study (disposing rather to muscular exertion), and the habit of indulging in them, or in smoking, being difficult to abandon, a young officer with small or no means besides his pay is liable to pass his leisure hours, when he joins his regiment, in enjoying these expensive luxuries, instead of amusing himself with reading, which costs nothing. Animal food ought to be restricted to twice a day. Now, a cadet whose employments are chiefly sedentary is allowed in weight of food at least twice the ration of an officer or soldier engaged in marching or hard work, daily, for a whole campaign. Honours and rewards should here (with slight modifications) depend solely on progress in study of the military subjects, as it used to be before 1857, when the discipline, conduct, and standard of acquirements began to deteriorate owing to the abandonment of the excellent system so long established by a succession of experienced governors and lieutenant-governors, and highly educated superintendents of studies trained to the art of instruction.

(VII.) I beg to bring to the notice of the Royal Commission that none of the military functionaries hitherto examined have been instructors at any school or college before their appointment to this institution in that capacity; neither were they educated here or at the Staff College (excepting one), nor had they any connexion with the Cadet College until after 1857, when the good system which had previously produced so many good staff officers, highly qualified instructors, &c., was broken up. Now, "good conduct," "strict discipline," "excellent method of instruction," "high standard of knowledge," &c., are merely relative terms; therefore, as the officers above alluded to, as well as the whole of the present military functionaries, never worked here under that good system, and only joined the college when there was no system other than a number of disconnected operations not tending to one great object, they cannot, of course, speak correctly as to the merits or demerits of the good system, but probably imagine that the state of this college after they joined it, was the normal state.

The method of instruction in force until about 1857 was introduced here by a very experienced instructor and an extremely clever, scientifically as well as classically educated man—widely known as such—Colonel Proctor. It was intended to be an improvement on the Woolwich method, and proved to be such (for the education of cadets for officers of the line) to the satisfaction of a long succession of experienced (in war) and scientific generals and field officers educated at all sorts of public and private schools, and accustomed to attend the terminal examinations here and elsewhere. The training, also, as to regular and economical habits was so good, that previously to the Crimean war numerous noble and wealthy families sent their sons here, not to gain a commission, (for to them that was of no consequence, no examination being necessary,) but for the military instruction, the discipline, the economical and regular training. Many noblemen, however, without special effort did obtain a gratuitous commission; amongst many others, Prince Edward of Saxe Weimar. The method of instruction in fortification was further improved, so as to produce (as declared by competent judges) doubled results as compared with previous "Lecture and Notes Method."

W. H. Adams, Colonel.
The Professor of Fortification.

(ii.)—Answers received from Captain Griffiths, Instructor in Fortification.

(I.) With regard to the whole course and method of instruction, I think that too many subjects are attempted, and that the method induces a system of cramming for examinations rather than a useful education; the subjects called "voluntary" are not so practically to those cadets who compete for commissions, and who are forced to study them in order to obtain a majority of marks; and slow cadets are obliged to leave each portion of a subject unmastered, in order to keep pace with the rate at which the portions are successively taught.

The labour of the instructors is not properly utilised; in some studies only two or three cadets are present with the instructor, and the halls of study are too small. Most of the instruction given could be by lectures to a larger number of cadets, who could thus be as well taught by a reduced number of instructors. In one subject, lectures are given in the theatre, by one instructor, to five classes; but yet the other four instructors are obliged to be present, unemployed, at these lectures. If the halls of study were altered by removing partition walls, doing away with useless passages, and making more entrances in the outside of the building, study could be better carried on and properly supervised, which it is not now, nor can it be.

The mode of examination is not a fair or a sufficiently exhaustive means of testing knowledge acquired, and it induces cramming; in that respect, the old system of the college, by which a cadet was not allowed to pass on to the more advanced portions until he had perfected his knowledge of the lower portions of a subject, was better; and if that system, as used 20 years ago, were used fairly, in a modified form now, sounder knowledge would be obtained and a better principle be established than the present, where marks rather than knowledge become the aim of the cadet. If the present term of residence remain unaltered, I think that cadets should pass a more stringent examination in arithmetic and English composition, and should study, during the three terms, only fortification, surveying, mathematics (so far as practically needed in the instruction of the last two subjects), and military history; if it be wished to retain geology, drawing, and chemistry as subjects of instruction, they and the higher voluntary portions of the other subjects might be taught during a fourth term to those cadets who had passed sufficiently good examinations in the subjects of the first three terms.

In my branch, fortification, the course is too long, and not sufficiently practical; part of it is not required by an officer of the cavalry or infantry. The knowledge of practical geometry possessed by the cadets is not sufficient to enable them to thoroughly understand many of the drawings on which their time is wasted; and they would obtain far more knowledge if, instead of mechanical plate drawing, they made good fair notes illustrated by hand sketches. Our course of instruction has been tending this way for years, but it requires a more radical and settled reform. To show, pointedly, the folly of the course, I may mention that a few years ago we were attempting to teach cadets (without previous knowledge of scales or practical geometry) the same course, in one year, as taught to Woolwich cadets (previously instructed in scales, practical geometry, and mechanical drawing), in a period of two years; although this evil is now modified, it still exists, both in the study of fortification and also of surveying.

I would limit the study of fortification to that required in the field,—omit permanent fortification altogether,—and apply theory to practice; not less than three terms' instruction would be needed to thoroughly teach field fortification, and those details of siege works which come under the same head.

More care is required in the selection of instructors, and their modes of teaching need supervision; great impropriеties have occurred in the halls of study of civilian instructors, showing that they were not qualified to command the respect of their classes; the present arrangements are such that the studies are not sufficiently under the eye of the superintendent, whose presence would check evil-disposed cadets, cheer the studious, strengthen the power of the instructor, and prevent the possibility of improprieties. I suggest that no instructor should, as a rule, be appointed unless he has been a cadet at Sandhurst or Woolwich; that, during his first term, he be appointed assistant to another instructor, and that his appointment be not confirmed until he has taught for a second term and proved his efficiency.

It would be better for the college if good instructors were considered as deserving promotion, and were retained for more than six years; for such do not attain their full efficiency without some years experience and thoughtful labour.

(II.) I consider that a thorough knowledge of arithmetic and the first book of Euclid is all that is absolutely needed as mathematical knowledge, for a cadet to understand all that need be taught in the study of fortification; very few cadets are well grounded in arithmetic, or able to apply the rule of simple proportion; no more Euclid and no algebra is needed, if the subject of fortification be taught with a view to its practical utility only.

(III.) With the present course, reduced as I propose in Answer (I), a residence of three or four terms would be sufficient, and then the age might be from 16 years upwards; but, if the present number of subjects be retained, I would recommend cadets to be admitted at 15, not taught fortification or surveying during their first year, but prepared for these studies by being taught mathematics, mechanical drawing, scales, and copying survey sketches.

(IV.) I do not find it necessary to use any but moral authority with cadets, nor should I need to punish cadets if I had the power; a good instructor needs no such power with well-disciplined cadets; during the eight years I have been an instructor, I have only had to report cadets thrice—for intoxication, refusal to study, and improper conduct at pontoon drill; the second offence would not be likely to occur now; but, five years ago, there was a tacit understanding that cadets were not to be forced to work in study; now, this has been altered.

(V.) It would, undoubtedly, be possible so to combine the duties of company officers and instructors as to cause some of them to take both positions, but I do not think such an arrangement would be advisable. An instructor who has been working hard in study is, at the end of it, dirty with chalk, wearied in mind and body, and unfit to go at once on parade, an example (as he should be) of smartness and activity. A smaller staff than the present could, with wiser arrangements, better carry on the duties separately; the maximum quantity of labour is now required from the instructors, and, if they had to take other duties, their number must be increased, and no reduction would be made in the general staff; it is also not often possible to obtain officers perfect as instructors and as company officers; the styles required for these duties are different.

(VI.) With the larger proportion of cadets, the present inducements to industry are quite sufficient; and I think that a college which offers, yearly, prizes to the value of 25,000*l.* ought to be able to do without other punishment than the loss of a prize; but instructors who teach the worst cadets find in them an apathy which requires correction; the monthly reports of conduct would, if properly noticed, easily be made sufficient; at present they are of little use; but if, as was always done at Woolwich, the cadets were assembled monthly, in the presence of the governor, and the returns then publicly read with the understanding that an unfavourable report carried with it punishment according to its nature, I am confident that study offences would be reduced to a minimum.

(VII.) In answer to this I should like to state many details which would, perhaps, be tedious and useless to the Commission; but I respectfully suggest the remedy of a few evils as they appear to me.

There are facilities and inducements to cadets to incur unnecessary expense, and to run into debt; London tailors constantly send letters, and agents offering loans to cadets. A tradesman employed by the college lends them money; and they are allowed to purchase, on credit, unnecessary luxuries from the private refreshment rooms in the college. The tailors lend money for the sake of obtaining the promise of supplying outfits, the expense of which is thus deceitfully increased. There is a simple remedy for this; and, if it were an understood thing that no tradesman lending money to cadets was to be employed by the college, that evil would cease. No greater harm can be done to a young man entering life than to teach him extravagant habits and saddle him with debt.

The establishment of refreshment rooms takes from the cadets any excuse for entering public houses; but it appears to me that the college can and ought to provide all necessary food, and that the expenses which it tacitly induces should not be beyond the means of the poorest cadet.

It is also very questionable wisdom to offer opportunities of smoking, beer drinking, and billiard playing to young men who need all their bodily and mental strength.

In all these arrangements, introduced during the last few years, the pleasure of the cadet appears to have been studied without sufficient regard to his future benefit or his parents' wishes. Whilst the cadets, as a class, have been always as good as those at Woolwich, or any public school, the tendency of the college has been generally so evil as to

Appendix II. (A.)

Royal Military College, Sandhurst.

allow the spirit of bad cadets to over-balance the power of the better class. The tone has been much improved during the last five years, but only during the past year has the discipline been so firm as to check great evils. At present there is a marked and continual improvement in the manners, dress, and discipline of the cadets.

The under-officers and corporals enjoy their positions, and are of great use to the establishment; their use would be materially increased by greater liberality towards them, and by rewards when they leave the college.

The cadets at Woolwich keep their arrests as officers and gentlemen; at Sandhurst, they used in these matters not to be treated as gentlemen, and hence they did not keep arrests as a point of honour. It will be long before the evils of the old system can be eradicated, and a good style in these matters perpetuated; but the modern tendency is towards it.

The college cannot, however, be put on a fair trial until a regular system be established. During the last few years, subjects and modes of study, hours, and details of discipline have been so continually altered that none have had a fair trial, and all connected with the college have felt in an unsettled state.

At Woolwich the system of 20 years ago is the system of to-day, only altered slightly to suit modern requirements. All officers and military instructors at Woolwich have been cadets; the *esprit de corps* is consequently strong there, whilst it scarcely exists at Sandhurst, owing to contrary causes.

Having been a cadet at Sandhurst and at Woolwich, a company officer at Woolwich, and an instructor at Sandhurst, I am naturally attached to both colleges; and I have often thought that the perfection of arrangement would be to combine the two thus,—That all persons desiring commissions should pass through Sandhurst, entering there at the age of 16; that, after a course of two years, the best qualified cadets should go to Woolwich and Chatham with temporary rank as subalterns in the Royal Artillery and Royal Engineers, and that the remainder should, with similar temporary rank, be taught practical details to make them useful officers of the cavalry and infantry.

I believe that some such arrangement would be possible, and that it would, if carried out by fit instruments, with strict discipline and due power, greatly add to the efficiency of the service.

L. Griffiths, Captain R.A.,
Instructor in Fortification.

Appendix II. (B.)

B.—PRESENT EDUCATIONAL SYSTEM OF THE COLLEGE.

(i.)—Memorandum by Colonel J. E. Addison, Major and Superintendent of Studies.

Col. Addison.

1. The educational distribution is by companies. Each company studies the same subject at the same time. There are three companies.

2. The enclosed paper shews the proposed arrangement of studies for next term. The companies are lettered A., B. and C. The hours of study are those of the first or summer-half of the term, those for the winter-half are different, but the same in amount.

3. The cadets passing in are distributed as equally as possible among the three companies, *e.g.*, the first on the list goes to A. company, the second to B., and the third to C. company, then the fourth to A. company, and so on.

4. The cadets of the same term in each company are classified according to the result of their examinations in each subject; those of the third term are put in the first or second class of the company in any particular subject according to their marks obtained in it during the preceding terms. Similarly the cadets of the second term are posted either to the third or fourth class in any subject according to their marks gained in it in their first term. The cadets of the first term are classified in the fifth and sixth classes as nearly as practicable according to their entrance examination. It will be seen that a cadet may be either in the higher or the lower class of his own term in any subject according to his attainments, but that the first and second classes of each company are limited to the third term, the third and fourth classes to the second term, and the fifth and sixth classes to the first term. This rule, however, does not hold rigidly in the non-military subjects. There is usually a little over-lapping of one term on another in French, and sometimes in mathematics, owing to inequalities of numbers. Still the above is the general rule.

5. Chemistry (or rather physics, for chemistry itself can scarcely be said to be taught at the college), geology, and landscape drawing are voluntary subjects. The cadets who do not take them up are dismissed after roll-call on parole not to quit the college grounds. About three-fifths of the cadets take them up.

Chemistry and geology are taught by lecture, the cadets taking notes. All the cadets of one company attend lecture at a time. There is but one lecturer to each of these subjects, and consequently there is no classification of cadets in them. The same lecturers have classes at the Staff College.

6. The "military exercises," which appear in the study table as done during study hours, are gymnastics for the first term, gun drill and one lesson a week in riding for the second term, and three lessons a week in riding for the third term. These are independent of the morning drill of half an hour, and the commandant's parade, with drill, lasting 50 minutes. There is also one class at riding at both these drills.

7. The discipline of the halls of study rests with the professors. The professor can either send a cadet out of the hall to his room in arrest, or report him to the Superintendent of studies without placing him in arrest. In either case the cadet is brought up before the Superintendent of studies at his next office hours, viz., immediately after morning parade.

As Superintendent of studies, I have power to award punishment up to seven days' arrest or drill. If the offence is of a nature to require a severer punishment, the case is referred to the commandant.

Monthly reports are sent to the Horse Guards of the application and conduct in study of every cadet. Where the report is bad, I make a point of drawing attention to it, and a reprimand or warning has always followed.

8. The marks assigned to the subjects of the final examination are shewn at p. 11 of the printed regulations. Half only of the maximum in each subject, however, is given to the actual final examination. The other half is distributed among the examinations held at the college during the cadet's residence. In each term there are two "minor examinations," and the examination at the end of the term, called the "half-yearly." The "minor" examinations occur at intervals of about six weeks; they are limited strictly to the work done during the preceding interval. The "half-yearly" are of a more general character, and being held at the same time as the final examination of the third term cadets, the same papers are used in the non-military subjects. In the military subjects this is not possible, as the cadets of the first and second terms are not sufficiently advanced to take the papers of the final examination. All the examination papers of the minor examinations and those in the military subjects of the half-yearly examinations, are set by professors named by the Superintendent of studies, and are looked into by him before they are issued. The marks awarded are published on a notice-board, which is always kept at the Grand Entrance. Each cadet has thus the opportunity of watching both his own progress as represented by marks, and that of others with whom he may be competing; for every mark given, from the cadet's first admission to his final examination, is to be seen on the notice-board.

Marks are also given for fortification plates, military drawings and sketches, and for questions set at the end of each lecture in chemistry or geology, and in the "note studies" in military history.

The total of the marks gained in each subject by each cadet is sent to the Council of Military Education in order to be added to those gained at the actual final examination conducted by the examiners under the Council.

9. The subjects of study are those stated, with the maxima and minima of marks attached to them, at pp. 11 and 12 of the printed regulations.

10. Fortification; one professor and five instructors. Field fortification is taught in the first two terms, and permanent in the last term. The plan drawing has of late years been very much reduced in order to give more time for practical work out of doors. A still further reduction has just been sanctioned in this direction, and it is hoped that the out-door and in-door instruction will now be enabled to proceed together, *pari passu*, and that every species of work taught in the hall will be illustrated, by the aid of the sappers, on the fortification ground.

The cadets trace and execute portions of field works, making and planting in revetment gabions and fascines, and doing all but the heavy work, which is left to the sappers. They are also instructed in bridge-making and pontooning. They witness the process of sapping executed

by the engineers, and it is hoped there will in future be time for them to execute this work themselves, with exception of the heavier part of the work, the completing the trenches, &c.

The out-door instruction is by far the most important, and yet it stands at this great disadvantage, that no marks are given for it, and it is regarded consequently by the most eager competitors as rather taking up their time from the in-door or mark-making instruction. No plan has yet been hit upon for remedying this. The consequence has frequently been that I have felt it necessary, in justice to the cadets who are working for their commissions, actually to curtail the out-door work, in order to give more time for the in-door book-learning, which alone avails for the examinations. I am not without hope of arriving at some mode of awarding marks for practical work, but hitherto my efforts have been unsuccessful.

11. Military drawing and surveying; one professor and five instructors. The cadets commence by drawing from copies, then from models, being in the meantime also taught the use of instruments, and then, at about 2½ months from their first joining, they are taken out to triangulate with the prismatic compass and pacing, and traverse roads. In the second term they execute two sketches on a large scale, and in the third term two sketches with compass, and two sketches without instruments. Hitherto the cadets have also had some instruction in the use of the theodolite and sextant; but as this was necessarily of a very superficial character, I recently recommended that it should be abandoned, and that the whole instruction should be concentrated on what was of primary importance to an infantry officer, the art of field sketching; and this has been sanctioned.

12. Military history; one professor, two instructors. The instruction in this subject is by lecture. Hitherto there has been a note study three or four days after the lecture, in which the cadets, during the first hour, read up the lecture which had been printed and issued to them, and during the last half-hour answered on paper any questions which might be set on the subject of it. The answers were taken home by the professor or instructor and marks assigned to them. I considered, however, one note study insufficient, and have recently recommended a second, which has been sanctioned. The following is the procedure I hope now to be able to follow. The lecture will be given at the first study, and at a subsequent attendance on the same day there will be a note study. In this the cadets will work from their notes taken during the lecture, and during the last half-hour they will answer questions, to which marks will be assigned. The printed lecture will then be issued, and a few days after there will be the second note study. In this the cadets will draw plans of the theatre of war, and of battles, showing the positions of the opposing forces, and, if time permit, further examination questions may be put. By this means I hope to secure attention to the lecture by having the cadets examined in the first note study on their own notes, and also to give them subsequently the advantage of having the lecture in print, which may correct any wrong impressions, and enable them to prepare for their minor and half-yearly examinations.

There has been much difficulty in arriving at a suitable course of instruction in this subject. The course as now sanctioned is the following: In the first half-year preliminary instruction in the organization and mode of action of the three arms, and explanation of the operation of the commissariat and transport departments of an army, followed by a short and simple campaign. In the second half-year, two campaigns selected with a view to illustrate the generally received principles of tactics and strategy. And in the third half-year, one campaign thoroughly worked out in detail.

13. Mathematics; one professor, four masters. The sections of this subject are shown at p. 12 of the printed regulations. Not more than about 20 per cent. can attempt the third section, or mechanics. The first section, which includes the solution of triangles, is obligatory. The cadets read in the hall of study such parts of the subjects as they may wish, provided the master approve; but a regular course is, to a certain degree, enforced by the minor examinations, the subjects of which are as follows:—

- 1st Term: (1.) 1st half of obligatory section. (2.) 2nd " "
- 2nd Term: (1.) Obligatory section, 1st half of 2nd section. (2.) Obligatory section, 2nd half of 2nd section.
- 3rd Term: (1.) Obligatory section, 2nd section, 1st half of 3rd section. (2.) Obligatory section, 2nd section, 2nd half of 3rd section.

The object of this scheme is to enforce a thorough knowledge of the elementary mathematics, and to advance gradually to the higher. I believe the professor and instructors are unanimous in approval of its working.

14. Languages, French and German; one professor and three masters in French, and one master in German. The cadets *study* either one language or the other, but they can be examined in both. They can change at the commencement of a term from the one language to the other, provided they have obtained at least two-thirds of the marks in their former language in the preceding term. About nine or ten per cent. only learn German, but many more take it up at the examinations. The reason of this is that a cadet joining the college with a good knowledge of German will find it to be his interest to study French, trusting to being able to keep up his German by private study for the examinations.

A regular course of grammar is marked out by means of the minor examinations. The instruction follows the usual mode, grammar, exercises, dictation, translation, composition.

15. Chemistry (one lecturer) and geology (one lecturer) have already been noticed (section 5); under the former head, which should rather be "physics," are comprised lectures on sound, heat, magnetism, electricity; under the latter, geology, mineralogy, and physical geography.

16. Landscape, or freehand drawing; one professor, and one master. The drawing is from copies and from models. In the 3rd term there are occasionally classes for sketching from nature. Hitherto there has been only one lesson a week. I have lately recommended a second lesson for the 1st term cadets, which has been sanctioned.

17. The instruction is given in halls of study, each of which will contain about 15 cadets, leaving free room to each, and this number may be increased if necessary to 17 or 18; but this is the maximum without crowding and its various injurious consequences to discipline. There are 18 such halls. There is also the lecture hall, which would contain 90 or 100 without crowding.

18. The standard of attainment required by the regulations is shown at p. 12 of the printed regulations as represented by marks.

For qualification, a cadet must obtain an aggregate of 1,200 marks out of 5,400 on the three military subjects, and a total aggregate of 1,950 on these, together with the 1st section of mathematics and one modern language.

Similar proportions of marks are required to be obtained each term in order that the cadet may be permitted to return in the following term.

One-fourth of the marks in any particular subject are required to be obtained, in order that they may count towards the aggregate.

J. E. ADDISON, Colonel,
Major and Superintendent of Studies,
July 1868. Royal Military College.

Proposed STUDY TABLE for August, 1868.

C.—MEMORANDUM BY COLONEL ADDISON.

THE ROYAL MILITARY COLLEGE AS A PLACE OF LATER MILITARY EDUCATION.

In my examination before the Royal Commission I dwelt upon two great defects in the system of education at this college, namely, the extremely low standard of attainment required for qualification for a commission without purchase, and the great number of subjects allowed to be studied at a time. The former applied principally to cadets low in education, the latter to the higher classes. In reply to a question I also stated that the period of residence was too short, and that in my opinion there ought to be another, that is, a fourth term. I now desire to add that means are also wanting of keeping back cadets whose work is unsatisfactory. This is scarcely possible at present, as we are bound to carry the cadet through a certain course in a certain time. At Woolwich it is managed by allowing in such cases an extra term. It appears to me that if these four defects were well considered and remedied, the result would be a thoroughly good educational system.

The question however remains whether after all, the age of youth is precisely the age for military education. This question did not indeed arise in the course of my evidence; but having subsequently mentioned it, and having been invited to submit to the Commission a memorandum upon the subject, I offer the following suggestions, which I should not otherwise have ventured to obtrude upon their notice.

It appears to me that to withdraw a promising youth of 16 or 17 from his classical studies, and to replace these with studies more or less technical, is to do his education an injury. Of two such youths, supposed equal in ability and in classical attainment, the one continuing his school-work and the other changing it for military science, I cannot doubt that, *cæteris paribus*, the former would, after a year or two, be the superior as to mental developement. To any one who will consider the intellectual exercise that a good lesson in a first-class Greek or Latin author involves, and who will then compare this with the formal, though in their way valuable, studies which constitute military science, the conclusion would seem to be obvious that to drop so high a study as that of the classics just at the time when the mind is beginning to open to their full appreciation is, educationally, a misfortune.

The above observations, however, refer only to the higher boys at classical schools. There are doubtless many others who have no aptitude for classical literature, but who have more or less mathematical power; and it may be thought that, for this class of mind, military science, which is neither entirely exact nor entirely experimental, but presents continually a balance of advantages and disadvantages to be weighed by the judgment, is well adapted. I think that it is so; but, at the same time, that it would be better to be pursued later; and that pure and applied mathematics and physical science would be, to the kind of intellect now being considered, the best training while in its youthful stage.

But, for military science itself, what is the best preparation? It appears to me difficult to find a better preliminary school than the army itself. A young officer who is fairly intelligent, who understands well his regimental duty and drill, whose mind is tolerably matured and who is willing to learn, is in the best possible position for profiting by a course of instruction in the military sciences.

There seems indeed no reason why a certain amount of practical military instruction should not be given to all young officers as soon as they have mastered the more elementary parts of their drill. There are certain operations of very great importance to an army which can be taught orally and put in practice as easily as ordinary drill, which could, in fact, be taught to every officer, non-commissioned officer, and private in the service. Of such are the following:—

1. The distribution of workmen in throwing up field works.
2. Throwing up breast works and the simpler kinds of field works; siege trenches, rifle pits; putting hedges, walls, houses, in a state of defence.
3. Making gabions and fascines, and planting them, as well as sandbags and sods, in revetments.
4. Making and planting obstacles, palisades, abattis, &c.
5. Knot-tying, lashing together spars, making small bridges on trestles, spars, ladders, casks.

Now all this could be made as much a part of the general instruction of the army—of officers and men alike—as is their drill. All that would be required would be, at each principal station, an Instructor, a supply of intrenching tools and of material, and a small piece of ground to work upon. A short explanatory manual would be necessary. An army thus trained would certainly be enabled to give itself all the chances of successful defence, where defence was its object, in a very short time.

The young officer could also be further taught sketching without instruments, so far as to enable him to give an intelligible sketch of an outpost, with the position of its piquet, sentries, &c., or of a line of road. A few might also be taught the use of the prismatic compass, and more extended sketching.

More than this could not, I think, be done without a regular scientific course. But very much more is wanted in a fair proportion at least of officers in every army; and I believe that if this additional course could be given at a more advanced period of the officer's career—say after two or three years' service—and at this college, properly adapted for the purpose, it would then be given with the greatest effect.

It would include the following matters:—Field fortification, with projects of defence of positions; military bridges; description of permanent fortification as exemplified in existing fortresses; siege works; encampments; field ovens; field sketching and reconnaissance; road reports; outposts; military art as deduced from military history; principles of the field exercise of infantry, cavalry, and artillery; rules and practice of courts-martial. There would also be a course of riding. In everything would be represented, as far as possible, the circumstances of infantry in the field; *e.g.*, the working parties would be detachments of infantry (not sappers) from Aldershot, and the officer students would be taught to instruct them. I estimate that if all that is not thoroughly practical were excluded from the details of this course, it would take about a year for its accomplishment.

Suppose that 100 officers were passed through this college in a year. This would take about one officer from every two battalions of infantry or regiments of cavalry. In course of time there would result a satisfactory amount of military education; and, further, another and most difficult problem might possibly be solved by it, viz., the selection of officers for the Staff College.

Of the 100 officers who had completed such a course of instruction, there might be selected 15 who should go through a further course of one year at the Staff College.

The best sketchers, the most able and ready in resource for field works, bridges, &c. would probably be the fittest for the Quartermaster-General's department; and these should be among those selected.

The best in the subjects of courts-martial and the field exercise of the different arms would probably be the fittest for the Adjutant-General's staff, and these also would be selected.

That general intelligence which is shown in the successful study of military art and history would contribute in each case to the election of the candidate.

In every case good riding, an active temperament, and physical energy would be requisites.

These qualifications could be tested to a certain extent by marks; but the result thus obtained should be required to be corroborated by the joint testimony of the officers under whom the student shall have been instructed, and by the commandant of the college, before the candidate should be elected for the Staff College. At the latter establishment the student would pursue such further and deeper study as might be thought proper, as, for instance, for those studying trigonometrical surveying on a large scale, the necessary amount of mathematics and practical astronomy, also one or more modern languages, and other subjects, such as military administration and law, a higher course of military history, &c., as now studied at the Staff College.

Thus, as it appears to me, would be practically solved the question of the best form of military education of officers generally, and of selection for the staff. The best, if practicable; but this is now the question, for there is one difficulty which, cannot be ignored, namely, the want of sufficient inducement to officers, in any considerable numbers, to undertake a course of military education. There are not, I believe, more than about 40 candidates annually for the Staff College. How then to find 100 for the college above supposed? Promotion or extra pay are, presumably, alike out of the question. But there are two classes of appointments, which, if reserved for those who had passed through the one year's course described above, or through that and the Staff College also, would, it would seem, effectually afford the inducement required. I refer to the appointments of Aide-de-camp and Regimental Adjutant. Such a reservation would, I submit, be per-

APPENDIX II. (C.)

Royal Military College, Sandhurst.

fectly justifiable. Supposing that all young officers, as well as the non-commissioned officers and men, received the practical military instruction before mentioned, nothing would appear more proper than that the Adjutant, who has so much to do with the regimental instruction, should be required to be himself a thoroughly instructed officer. It would seem to be equally proper to require that no Officer who is attendant upon General Officers should be ignorant of things upon which the safety of an army may depend. General Officers and Commanding Officers of Regiments would therefore according to this plan be required to nominate respectively their Aides-de-camp and Adjutants from the Officers who had passed through at least the one year's course at the College. As 100 Officers would pass through the College every year, the field of selection would soon be ample. There can be little doubt that if these two classes of appointments were thus reserved, the difficulty of providing sufficient inducement to Officers to come forward would disappear.

I need scarcely point out how great an impulse would be given by this scheme to young Officers to improve themselves in military knowledge, nor the indirect good effects which would result thence both to themselves professionally and to the army.

J. E. ADDISON,
Colonel.

Royal Military College,
23d March 1869.

APPENDIX II. (D.)

D.—PAPER HANDED IN BY CAPTAIN WALKER, R.E., LATE SENIOR INSTRUCTOR IN MILITARY HISTORY.

Capt. Walker.

The following points appear to me desirable to bring to the notice of the Commission.

1. With respect to professors and instructors, I would recommend that henceforth none but officers of the army should be appointed, as I feel sure that they exercise much more influence over the cadets than civilians. I would extend this rule to French and German as well as to mathematics, drawing, &c.; and I am certain that many officers will be found fully qualified to undertake the duties. For mathematics, almost all officers of engineers, many of artillery, and one or two in almost every regiment in the service would be competent. And for languages, many would be found able to teach the grammar, and their greater influence, as Englishmen and officers, over the cadets, would fully compensate for that accuracy of pronunciation which probably none but a foreigner would possess.

2. I would recommend the abolition of the study of permanent fortification for Sandhurst cadets. A few lectures on the subject might be given so as to enable an officer of the line to find his way about a fortress, but the actual study of fortification I would confine to field works.

3. Comparatively few men have a taste for mathematics, and I would therefore divide that branch into two portions, making it optional to a cadet who has no liking for mathematics to avoid the higher parts altogether, but compulsory upon him to take up, in lieu, either classics or general history, to which an amount of marks might be awarded equal to that for the advanced mathematics.

4. But as the subjects which a cadet has to study seem to me already sufficiently numerous, I would suggest the abolition of all marks for chemistry and geology; retaining, however, the lectures and giving good prizes for real proficiency, in order to induce the commencement of studies which may be interesting to young officers in after life.

5. It would be a great encouragement to the instructors if the Council of Military Education, or some members of it, were occasionally to attend the lectures. I can only speak with regard to my own, but can say that during four years in which I have been at the college no member of the Council has ever attended one of my lectures.

6. A question has been raised as to the method of employing cadets in what used to be called "independent studies." As I would propose that French, German, and drawing should all be obligatory, and that *either* classics or general history should be compulsory, and under an instructor, when taken up in lieu of high mathematics, there would only remain chemistry and geology, attendance upon the lectures on which subjects I would make purely voluntary, and on those evenings which are at present not assigned for other studies.

7. The halls of study are unfitted for lectures, which should always be given in the lecture room, and there would be economy of time and energy in increasing the number of a *lecture* class to its old proportion, or even more. I find that I can lecture more easily to 100 cadets in the lecture room than to 30 in the halls of study.

EDMOND WALKER,
Capt., R.E.

July 31, 1868.

APPENDIX II. (E.)

E.—HISTORICAL NOTICE OF THE ROYAL MILITARY COLLEGE.

(BY THE SECRETARY.)

Information regarding the early history of the Royal Military College is given in the Tenth Report of the Commissioners of Military Inquiry (1810), and in the evidence taken before the Select Committee of the House of Commons which was appointed in 1855 to inquire into the state of Sandhurst. The Report of the Select Committee gives the following account of the origin and early constitution of the establishment:—

"The institution owes its foundation to the exertions of "General Le Marchant. It commenced, as a place of in- "struction for officers, in 1799. In 1801 the Junior De- "partment was organized; the united departments took "the name of the Royal Military College, and His Majesty "George the Third was pleased by Royal Warrant to ap- "point a supreme Board of Commissioners for the purpose "of managing all the affairs of the College.

"An establishment and a course of study were recom- "mended by this Board, and adopted in a Royal Warrant "passed in the same year, 1801. From this date warrants "were issued from time to time until the warrant of 1808, "which cancels all former warrants and still regulates the "College.

"By this warrant a Board of Commissioners was appointed, "consisting of the Commander-in-Chief, the Secretary at "War, the Master General of the Ordnance, the Quarter- "master-General, the Adjutant-General, the Governor and "Deputy Governor of the College—all for the time being. "Certain other officers were added to these *ex officio* mem- "bers. In the Board so constituted were vested the control, "direction, and management of all the affairs of the Col- "lege. The College was to be under the immediate com- "mand of the Governor and Deputy Governor, to be "divided into a senior and junior department, each to have "its own course of study under the direction of its own staff.

"A collegiate board was created to take cognizance of all "matters relating to the interior economy of both depart- "ments. This board consisted of the Governor, the Deputy "Governor, and three other resident military authorities of "the College."

The Royal Warrant of the 27th May 1808, for regulating all matters relative to the Royal Military College, states the objects of the two departments of the College as follows:*—

"The Senior Department of the Royal Military College is "established for the purpose of instructing officers in the "scientific parts of their profession, with a view of enabling "them the better to discharge their duty when acting in "command of regiments (the situation in which they can "best recommend themselves to Us, and be entitled to hope "for advancement in the higher stations of Our service), "and at the same time of qualifying them for being em- "ployed in the Quartermaster-General's and Adjutant- "General's Departments.

"The Junior Department of the Royal Military College is "appropriated to the instruction of those who from early "life are intended for the military profession, and who by "this means may be grounded in science previously to their "obtaining commissions in Our army.

"This department of the college is also intended to afford "a provision for the sons of meritorious officers who have "fallen or been disabled in the service of their country, and "the means of education to the sons of those officers who "belong to Our regular service."

The first of the departments organized was thus the Senior Department, which was established at High Wycombe in 1799, although it would seem that classes for the military instruction of officers had been in existence previous to that year. The origin of the Senior Department is thus

* The warrant is printed *in extenso* in the Tenth Report of the Commissioners of Military Inquiry (1810).

described in the evidence given by Sir Howard Douglas before the Select Committee on Sandhurst:*—

"The establishment of the Senior Department of the Military College in 1799 was recommended by the late General Le Marchant, an eminent and distinguished officer, who came to a most glorious death on the plains of Salamanca in 1812. General Jarry, who was the first Commandant of the Senior Department, was a Frenchman, highly educated in France, who entered the service of Prussia a short time before the commencement of the Seven Years war, and was on the personal staff of Frederic the Second through the whole of that war. He returned to France and became afterwards one of the generals of the French army; and in the year 1795 defected from the French army, and came to London, where he soon became very generally known as a man of eminent talent, perfectly master of the science and the practice of his profession; and from his having served so long about the person and on the staff of Frederic the Second, full of the most interesting anecdotes and instructive details connected with that war. General Le Marchant having formed an acquaintance with General Jarry in London, it occurred to him that if General Jarry could be engaged to give lectures to a certain number of young officers who might be disposed to go and reside where the general might attend, it would be very advantageous to the service. General Jarry was so engaged. A house was taken at High Wycombe, a considerable number of the rising young officers of the day became his students, Sir George Murray, Sir Henry Bunbury, Sir Richard Bourke, General Richardson, and a great many others. General Jarry soon found that the rudiments of military science in the British army were not sufficiently known to enable all the students to profit by his instruction, and recommended that mathematical, and fortification, and other classes should be established; and accordingly Mr. Dalby, a mathematical professor, M. St. Denis, professor of fortification, and M. Polchet, of the Polytechnic School, were engaged; and in this way the Senior Department was established."

General Jarry became commandant of the establishment on its institution, and in 1804 Sir Howard Douglas himself was appointed to assist General Jarry as superintendent of the department.

The formation of the Junior Department had probably been determined upon from the time when the Senior Department was established. It was actually organized in 1801, when it was established at Great Marlow, and in the year 1803 consisted of 200 cadets; the Senior Department being at the same time composed of 30 students. Each department had at this time its own commandant, superintendent, and special staff of instructors (7 for the Senior and 19 for the Junior Department); while there was in addition a general staff, consisting of a governor, lieutenant-governor, and other officials, for the two departments, which, although in separate localities, together constituted the Royal Military College.†

The Royal Warrant of 27th May 1808 fixed the establishment on a still larger scale, as follows:—

1 Governor.
1 Lieutenant Governor.
1 Inspector-General of Instruction.

Senior Department.

1 Commandant.
1 Adjutant.
30 Students.

Junior Department.

1 Commandant.
1 Major.
4 Captains of Companies.
412 Gentlemen cadets.

Staff.

1 Chaplain and Librarian and superintendent of religious and classical instruction.
1 Agent.
1 Secretary to the Board of Commissioners.
1 Paymaster.
1 Quartermaster.
1 Surgeon.
1 Assistant Surgeon.

The number of professors is not fixed by the warrant, but in 1810 five were employed at the Senior and 32 at the Junior Department. In 1815 the number of professors was six at the former and 36 at the latter.‡

The establishment with slight modifications continued as above throughout the period of war which terminated in 1815, but shortly after the conclusion of peace reductions began, in consequence of the recommendations made in the report of the Finance Committee of 1817, and at the same time the course of instruction in the Junior Department was made of a much less strictly military character than it had originally been.*

The Senior Department was, as has been stated, originally established at High Wycombe, and the Junior Department, as there was not sufficient accommodation for it at the same place, was on its institution placed at Great Marlow. It is probable, however, that it was intended from the first that the Military College should be at Sandhurst, and it appears that as early as 1801 the greater part of the estate at Sandhurst had been purchased. Owing, however, to doubts having subsequently arisen as to the eligibility of Sandhurst as a site for the College, the works there do not appear to have been commenced until 1809;† and it was eventually determined that the Junior Department alone should be placed there, the Senior Department being accommodated at Farnham. In 1812 the Senior Department went to the quarters prepared for them at the latter place, and about the same time the Junior Department was removed to Sandhurst. In 1820, in consequence of the space left vacant by the reductions which had then been made in the Junior Department, the Senior Department was transferred to Sandhurst; its separate military staff was at the same time abolished, the number of students at it was reduced to 15, and the number of instructors to two. It continued in this state down to the time of its conversion into the Staff College, which took place in January 1858. The Junior Department was also by successive reductions brought, in 1832, to the state in which it stood in 1855, at the time of the appointment of the Select Committee of the House of Commons—the number of cadets having been reduced to 180, divided into two companies.‡ In the year 1832 also the Parliamentary votes in aid of the College, which in 1815 had amounted for the Junior Department alone to 34,000*l.*, entirely ceased, and from this time up to 1855 the College was not only self-supporting, but in some years actually paid money into the Exchequer.§

In the year 1855, in consequence of attention having frequently been drawn in Parliament to the state of Sandhurst, a Select Committee of the House of Commons was appointed to inquire into the condition of the Royal Military College. The establishment of the College was, at that time, as follows:—

1 Governor.
1 Lieutenant Governor.

Senior Department.

2 Instructors.
15 Students.

Junior Department.

1 Major and Superintendent of Studies.
2 Captains of Companies.
180 Gentlemen Cadets.
1 Chaplain.
1 Secretary to the Board of Commissioners.
1 Paymaster and Quartermaster.
1 Surgeon.
1 Assistant Surgeon.
1 Riding-master.
16 Instructors.

This continued without material alteration to be the establishment until 1858.

The instructors undertook the following branches:—

(*a.*) *Senior Department.*

1. Mathematics and Fortification.
1. Military Surveying.

(*b.*) *Junior Department.*

3. Mathematics.
2. Fortification.
3. Military Drawing and Surveying.
1. Landscape Drawing.
2. History, Geography, and Latin.
3. French, } The seniors in these branches also gave
2. German. } instruction to the Senior Department.

The Chaplain also gave instruction in History.

The title of Major and Superintendent of Studies dates from the year 1842. For some years previously the offices of Adjutant, Paymaster, and Superintendent of Studies, had been combined in the person of one officer, Major Proctor. On his retirement in 1842, Lieut.-Colonel Prosser was appointed Major and Superintendent of Studies

Appendix II. (E.)

Royal Military College, Sandhurst.

—an office which has been retained to the present day—and the appointment of Adjutant was abolished.

At the time of the enquiry by the Select Committee of the House of Commons (1855), the Junior Department of the college was a school for boys. The limits of age for admission were from 13 to 15; candidates were admitted by application to the Governor, on passing a qualifying examination, before the professors of the college, in elementary subjects of ordinary education. The maximum term of residence was four years, the average period being three years. The course of study was intended to complete the general education of the youth in addition to giving him military instruction, and included history, geography, and Latin, as well as more professional subjects.

The system of instruction which prevailed at the college at that time is described as follows by Mr. Twisden, now professor of mathematics at the Staff College:—"The "instruction and examinations in the Junior Department "were in the year 1855 conducted on the following sys- "tem:—There was a division of the department into "upper and lower school, but practically the division was "of little importance. The most important division was "made by the line which in each separate branch of in- "struction divided the cadets in the Board class from "those not in the Board class.

"A cadet was in a Board class who was actually pre- "paring for the public examination which took place "before the '*Board* of Commissioners for regulating the "'affairs of the Institution.' The Board was, however, "in most cases represented by not more than one or two "of its members. In any given subject a cadet had to "pass through certain grades of elementary instruction "before he could be placed in a Board class. Moreover, "he was only moved from one grade of elementary in- "struction to another on passing examinations, which were "held monthly by the senior instructors in the several "subjects. The junior instructors reported those of their "cadets whom they regarded as ready for promotion, and "the senior ascertained that the proper degree of proficiency "was obtained. Thus in mathematics, a cadet had to "pass examinations in Fractions and Decimals, mixed num- "bers, Rule of Three, Interest, and Square Root, Algebra "up to the end of Quadratic Equations, and logarithms— "four successive examinations in all; he had then to "spend a half year in the study of Euclid's Geometry "before admission to the Board class. It will be under- "stood that all the cadets were not examined monthly, "but only such as were reported as fit for examina- "tion; so that any one cadet might pass a long time "without examination, or he might be examined for "several successive grades in one subject, and not undergo "any examination in another. There was in fact scarcely "any mutual dependence of one branch of instruction "upon another. I believe the only exceptions to this "were that a cadet was required to have passed his exa- "mination in algebra before getting into the lowest forti- "fication class, and to have gained a certain proficiency in "military drawing before getting into the surveying class.

"The Board class in each branch was taught by the "senior instructor in that branch, except that the Board "class of history was taught by the chaplain. When a "cadet had passed an examination in any subject before "the Board he was said to have taken up a step. The "steps which it was possible for him to take up were as "follows, and I have arranged them in three groups for "conveniences of reference:—

"A. (1.) Euclid's Geometry.
"(2.) Fortification.
"(3.) Surveying.
"B. (4.) Trigonometry and Mensuration.
"(5.) Attack and Defence of Fortification.
"(6.) History and Geography.
"(7.) Latin.
"(8.) French.
"(9.) German.
"C. (10.) Elements of Mechanics.
"(11.) Elements of Co-ordinate Geometry and Differential Calculus.

"To gain a commission without purchase it was neces- "sary to take up the three steps in the group (A.), and "any three in the group (B.); six in all. But if a cadet "took up more than six steps the fact was mentioned in "the certificate given him on leaving the college. For "gaining this honorary distinction the steps marked in "group (C.) were allowed to count, but I believe not "otherwise. I may mention that in many cases more "than six steps were taken up.

"The process of examination before the Board was "this:—About seven weeks before the end of the half "year the senior instructor in each branch reported the "cadets in his branch whom he thought capable of taking "a step. Thus the senior instructor or professor of ma- "thematics reported those cadets in the Euclid Board "class whom he judged capable of taking up the step. "Shortly after, these cadets were examined before the "Lieutenant-Governor; about a week before the end of "the half year they were examined again, on this occasion "before the Governor; lastly, they were examined publicly "before the *Board*. Failure was possible in either of these "examinations, and not unfrequently occurred at the pre- "liminary examinations, and sometimes, though rarely, at "the Board examination. The effect of failure was that "the cadet could not pass his step without going through "his examinations at the end of the next half year.

"The examinations were conducted entirely *vivâ voce*. "The Governor's and Lieutenant-governor's examinations "were searching, they sometimes lasted from six to seven "hours; but of course the cadets severally were under "examination only during a part of that time. The Board "examination, though less searching, was a real examina- "tion. A cadet under examination had not the least "notion of what question he was going to be asked, except "that it was fairly within the subject of the step.

"The system thus briefly described was invented by "Major Proctor, who was at first *adjutant* and afterwards "Superintendent of studies; it was in operation, at all "events, as early as the year 1818. It was open to several "objections, but it possessed this capital advantage, that "it was calculated to bring, and in point of fact brought, "a large majority of the cadets up to a certain moderately "high standard of proficiency. The instructors were "under no temptation to take great pains with a few clever "boys and to neglect the rest; they were nearly sure to "assist every cadet showing the least inclination to work, "and to assist those most who were most in need of "assistance.

"On the other hand, the system failed to supply a cadet "of superior ability with a motive to attain a high degree "of proficiency in any given subject. The utmost attained "was that cadets of more than ordinary ability were en- "couraged to attain the standard of proficiency in more "than the necessary six subjects. The system was also "open to the serious objection that under it the cleverest "cadets got through their course quickly. This was bad "for them, for it had the effect of bringing their school "education to an early end; and it was bad for the insti- "tution, because the eldest cadets were not the most "intelligent.

"I must be allowed to add that my experience of the "examinations by *vivâ voce* has given me a very lively "sense of the value of that kind of examination; and "though it is not adapted for all subjects, and where many "have to be examined takes too much time, yet it might "be used under many circumstances with very great ad- "vantage, and I regard its total disuse since the year 1858 "as a very serious error.

"I have mentioned above the fact of the Junior Depart- "ment being divided into an under and upper school. I "may add that there were six classes, three in each school, "and two removes in each class. I believe that this was "the remains of an earlier organization, which, without "being formally abrogated, was by degrees nearly oblite- "rated by the introduction of the step system. The "only thing that kept up the distinction between upper "and lower school was that a cadet to be in a Board class "had to pass into upper school. The three classes in the "upper school did not have even a nominal existence in the "year 1851.

"With respect to the Senior Department, a somewhat "different system was followed. The course was one "of two years, but in the case of officers who had been "cadets the course was one of a year and a half. There "was an examination held at the end of each half year on "the subject of the half year's course; the method of exa- "mination resembled that in use in the Junior Depart- "ment; the subjects comprised in the course are mentioned "in a paper printed on page 125 of the evidence taken "before the Select Committee of the House of Commons "on Sandhurst (1855).

"In certain respects officers might do more than the "prescribed course and obtain honorary mention; *e.g.*, "they might do extra plans, they might take up a certain "amount of analytical mathematics, with a portion of "Poisson's 'Traité de Mécanique' and of Laplace's 'Mé- "canique Céleste.' I have by me the synopsis of the "ordinary course of mathematics in use before the year "1858; but as the heads of it are given in the paper "above referred to, it is unnecessary to give any details "about it."

The Report of the Select Committee of 1855 contained various suggestions for the improvement of both depart-

ents of the College, but did not propose to alter the ...ter of the Junior Department as a place of juvenile ...ucation. The only practical results of the Report were ...e establishment of Queen's cadetships, and the revision of ...e rates of payment required from all classes of cadets. The ...stitution of Queen's cadetships was determined upon by ...e Government in 1856, but the other alteration was not ...mediately carried out, and no modification of importance ... the constitution of the College ensued from the recommen...tions of the Committee. It was not until the general ...-organization of the system of military education which ... place in 1857, that any important change was made in ...gard to the Military College.

It appears to have been decided at the end of 1856 by Lord ...nmure, then Secretary of State for War, that an amalgama...n of the Junior Department of Sandhurst with the lower ...asses of Woolwich should be effected. The Council of ...ilitary Education on their appointment in April 1857 ...ere directed to suggest the mode in which this amalgama...n could be carried out, taking as their starting-point the ...inciple that Sandhurst was to be converted from a school ...r boys into a college for young men, with the age of ad...ission ranging from 16 to 18.

The scheme suggested by the Council, which contem...ated the enlargement of the Junior Department to an ...tablishment of 500 cadets, is fully explained under the ...count of the proposals which have been made for the ...malgamation of Woolwich and Sandhurst.*

The proposed plan having been approved, an announce...ent was made in December 1857 that the education ... candidates for all arms of the service who did not ...tain commissions by direct appointments would be ...ven at Sandhurst; that entrance would be obtained by ...mpetitive examination open to candidates between the ...es of 16 and 18; that the period of study would be two ...ars, and would be terminated by a competitive examina...on, the most successful candidates in which would be per...itted to select the Engineers or Artillery according to the ...mber of vacancies in those corps, or would receive com...issions without purchase in the Cavalry, Guards, or Line. ...hose who selected the Ordnance corps were to be removed ... the school of application at Woolwich.

Almost simultaneously with this notification appeared a ...eneral Order announcing the conversion of the Senior De...rtment into the Staff College, which was then placed under ... separate commandant and staff of instructors—the Junior ...epartment being henceforward called the Cadet College.†

An examination for admission to Sandhurst under the re...lations described above took place in January 1858, when ...4 candidates were admitted to the College. On the 26th ... April, however, a resolution was passed by the House of ...ommons on the motion of Mr. Monsell, in consequence of ...hich the plan for the amalgamation of Woolwich and ...andhurst was necessarily abandoned; and in May 1858 ...vised regulations were issued which again placed Sand...rst on the footing of an entirely distinct establishment ...om Woolwich. In these regulations, however, a new pro...sion was introduced by which a cadet at the Military ...ollege was, if otherwise eligible, permitted to compete at ...e examination for admission to Woolwich, without his ...osition at Sandhurst being affected by failure in this ...xamination. This regulation has been retained to the ...resent time.

The large increase in the numbers of the College which ...as contemplated by the amalgamation scheme was not ...arried out—the establishment still remaining at 180 cadets, ...ivided into two companies. At the same time, the other ...lterations recommended by the Council in the constitution ...nd course of study of the College were brought into effect. ...ince this period the system of juvenile military instruction, ...hich had been already abandoned at Woolwich, has been ...iscontinued at Sandhurst. The establishment was con...rted from a school for boys into a college for young men, ...e minimum age for admission being placed at 16; while the ...urse of instruction, the length of which was fixed at two ...ars, was made almost entirely professional. The prin...ple of competition was adopted as the condition of admis...on, although not to so full an extent as at Woolwich, the ...andidate for Sandhurst being required to apply to the ...ommander-in-Chief in order to have his name entered on ...e list of competitors. The entrance examinations for ...dmission to the College and the final examinations for ...ommissions were placed under the control of the Council ...f Military Education; and the whole method of instruc...ion was revised, the old system of "steps" being aban...oned.

For many years up to this time the College had been almost entirely self-supporting. The orphan class of cadets, established by the Royal Warrant of 1808, who had received a gratuitous education, had, after successive reductions, been finally abolished in 1822; and though the sons of officers were still educated at reduced rates, the system had been gradually introduced of affording them this advantage without expense to the public, by increasing the rates paid by the sons of private gentlemen. This system, which had been animadverted on by the Select Committee of the House of Commons in 1855, was altered on the re-organization of the College in 1858; the rates of payment from all classes were reduced, and the principle was, at least partially, adopted, of defraying by a parliamentary vote the difference between the actual cost of the education of a cadet and the lower rates charged for the sons of officers. The first public announcement of the institution of Queen's cadetships, the holders of which were to receive a gratuitous education, was also made in 1858.* Since this period a large part of the expense of the College has been borne by the public.

Some addition to the instructional staff was made in the year 1858 in consequence of the general changes introduced at that time in the system and subjects of instruction; and in the same year the office of adjutant, which had been abolished in 1842, was revived in consequence of the strong representations of the Governor, Lieut.-General Sir H. D. Jones.†

The next important change in the organization of the College was in 1862. After the abandonment of the scheme for the amalgamation of Woolwich and Sandhurst, the Council of Military Education turned their attention to the subject of enlarging the latter establishment, with the view of making it a general military college through which all candidates for commissions in any branch of the service, except the Artillery and Engineers, should be required to pass. The general outline of a scheme having this object in view was submitted by the Council, as early as July 1858, to General Peel, then Secretary of State for War. It was still under consideration when General Peel left office in the summer of 1859, and was again brought under the notice of his successor, Lord Herbert, in August of that year.

After some consideration the general principle of the scheme was sanctioned by Lord Herbert in December 1859, but no immediate steps were taken for carrying the plan into operation. At the end of 1860, however, the Council were directed to draw up a detailed scheme of organization for the College, on the assumption that all candidates for commissions in the cavalry, guards, and infantry would be required to pass through a year's course of instruction there; a vote was also included in the estimates of 1861 for commencing the enlargement of the buildings, with the ultimate object of providing accommodation for 600 cadets. The details of the scheme were, after some correspondence, fully matured, and were on the point of being submitted to Her Majesty for approval, with the view of the new system coming into effect on the 1st of January 1862.‡ The plan, however, met with very great opposition both in the House of Commons,§ and from the authorities of the universities, who regarded it as necessarily leading to the exclusion of university men from the army.‖ In consequence of this opposition the Under-Secretary of State for War, towards the end of the session of 1861, announced in the House of Commons that the new system should not come into operation until Parliament had had a further opportunity of expressing their opinion upon it. The original plan was also so far modified that the extension of the College was limited to providing accommodation first for 500, and then for 400 cadets, in the first instance; but the abolition of appointments to direct commissions, and the system of passing all candidates for commissions in the Line through the College were still contemplated, though the commencement of the system was deferred until the 1st July 1862.

---

* *See* Appendix II. G., page xxi.

† Further information regarding the Staff College is given in the historical notice of the College, Appendix XI. C. The remainder of the present account is confined to the Cadet College.

* Although these cadetships had been instituted in 1856, no Queen's cadet was actually admitted to the College until March 1860.

† Extract from a letter from the Governor of the Royal Military College (Lieut.-General Sir H. D. Jones) to the Secretary to the Board of Commissioners, dated Nov. 21, 1857:—

"I beg leave to take advantage of the opportunity which now present "itself of pressing upon the attention of the Commissioners the neces"sity which exists for an increase of one officer to do the duty of adju"tant. Such an appointment formerly existed, but was cancelled upon "the appointment of Colonel Prosser as Major and Superintendent of "Studies in 1842. The want of such an officer is daily experienced, "and the present Lieut.-Governor has repeatedly brought the subject "under my notice. I therefore request that the Commissioners will "recommend that an adjutant be re-appointed, and that the additional "expense may be charged in the estimate for 1858-9.

"I have submitted for approval the appointment of an adjutant, be"cause it appears to me essential to the well conducting of the military "duties of the Royal Military College, and which I hope will meet "with the approval of the Commissioners."

APPENDIX II. (E.)

Royal Military College, Sandhurst.

The question was in this state at the time of the death of Lord Herbert, in August 1861. Sir George Lewis, who succeeded him as Secretary of State for War, having during the recess re-considered the question, announced shortly after the commencement of the session of 1862, that it had been determined to abandon the idea of requiring all candidates for commissions in the Line to pass through the College, and that the system of appointments to direct commissions by purchase would be maintained.* At the same time, it was proposed that *non-purchase* commissions should in future only be obtained by passing through Sandhurst, and that an enlargement of the College to 336 cadets should take place to provide for the increased number of non-purchase commissions caused by the amalgamation of the Indian with the Imperial Army.

Even in this modified form the plan for the extension of the College appears to have been viewed with considerable jealousy by the House of Commons; a vote adverse to it was actually at first carried, but the question having, in consequence of the representations of Sir George Lewis, been re-considered, the plan proposed by the Government was at length agreed to.† Regulations for the College on the new footing were issued on the 1st May 1862. These regulations form the basis of the present system of the College.

One of the most important changes made at this time was the great increase in the number of free commissions placed at the disposal of the College. Under the old system which existed prior to 1858, while the institution was still a mere place of juvenile education, all cadets who passed in the six "steps," to which allusion has been made, received free commissions, but there was strictly speaking no competition for such commissions. After the alteration in the age of admission to the College, and the general revision of the course of instruction which took place in 1858, a limited number of free commissions were bestowed upon those cadets who stood highest in the final examination; a large number of these appointments, however, still remained in the gift of the Commander-in-Chief, and were granted to candidates who passed the ordinary examination for direct commissions. Since 1862 all non-purchase commissions have been reserved for cadets at the Royal Military College, with the exception of a small number (not exceeding on an average 12 annually) bestowed upon non-commissioned officers promoted from the ranks,‡ and on gentlemen who have held the appointment of page to Her Majesty. The commissions given to the latter are exclusively in the Foot Guards, and their number seldom exceeds one in each year. The free commissions allotted to the College are thrown open to competition among the cadets, with the exception of those reserved for Queen's and Indian cadets; both of these classes of cadets have, since the institution of Indian cadetships, which took place simultaneously with the change of the College system in August 1862, been entitled to receive free commissions on passing a qualifying examination at the end of their term of residence.

The course of study at the College was at the same time considerably modified, with the view of allowing its completion under ordinary circumstances in one year, instead of two years, as formerly—the maximum term of residence being fixed at a year and a half. An attempt was also made to render the course more strictly professional, and better adapted to qualify a young officer for the performance of ordinary regimental duties immediately on joining his corps, by the introduction of instruction in military law, interior economy, &c.

The age of admission was fixed at 16 to 20 for candidates for the Infantry, and 16 to 22 for those for the Cavalry, an extension of a year in these limits being for the first time introduced in favour of students at the Universities. A further privilege held out to the latter class of candidates was, that while others could only obtain admission by competitive examination, the fact of having passed certain university examinations was of itself made a qualification for admission. These concessions, which at first were made to the Universities of Oxford, Cambridge, and Dublin, have been since extended to the other Universities.

The number of cadets was never raised to the extent contemplated in the plan proposed by Sir George Lewis. It was originally intended that the College should accommodate 336 cadets, divided into four companies of 84 each; but the establishment was ultimately fixed at 250. This increase, however (the numbers having previously to 1862 been 180), led to the addition, in August 1862, of a third company to the two in which the cadets had been previously divided. An additional captain was appointed to command this company, and at the same time three subaltern officers (one to each company) were for the first time added to the strength of the establishment, to assist the captains in the charge of the companies.* Simultaneously with this an important alteration was made in the discipline of the College, by abolishing the system which had hitherto prevailed of employing the serjeants to assist in maintaining discipline by reporting the cadets for offences committed against the regulations.

The increase in the establishment also necessitated in this year an augmentation of the staff of instructors.

The establishment of the Royal Military College in 1863, after the change of system had come into effect, was as follows:—

General Staff.

1 Governor.
1 Chaplain.
1 Paymaster.
1 Quartermaster.
1 Surgeon.
1 Assistant Surgeon.
1 Riding Master.

Staff College.

1 Commandant.
1 Adjutant.
9 Professors.
30 Students.

Cadet College.

1 Lieutenant Governor.
1 Major and Superintendent of Studies.
3 Captains of Companies.
3 Subalterns.
250 Gentlemen cadets.
1 Adjutant.
40 Professors and Instructors, of whom two were employed also at the Staff College.

The organization of the College has undergone no material alteration since 1863, with the exception of the abolition of the office of Lieutenant-Governor and the substitution for it of that of Commandant of the Cadet College. The change, though decided upon in 1862, was not carried out during the tenure of office of the officer who at that time held the appointment of Lieutenant-Governor, and did not actually take effect until 1864. The Lieutenant-Governor, though nominally the deputy of the Governor, had exercised no control over the Commandant of the Staff College from the time of the institution of the latter establishment in 1858. His functions were limited to the Cadet College, of which he was virtually, though not nominally, the Commandant.

The establishment of cadets was raised in 1865 to 300, and some slight alterations have at various times been made in the number of professors and instructors; but in its general character the establishment at the present time remains as it was in 1863.

The modifications which have since been made in the age of admission, and in the course and subjects of instruction, are detailed in a memorandum by Colonel Addison.† They consist chiefly in the reduction of the higher limit of age for admission to 19 for all branches of the service (retaining, however, the former exception in favour of students from the Universities); the discontinuance of the study of military law, &c.; and the extension of the ordinary course of residence from one year to a year and a half. The regulations now in force for admission to the College will be found at page xliv. The present expense of the establishment is shown in the evidence of Colonel Hallewell (Question 3514); and the method of instruction and course of study are fully detailed in a memorandum by Colonel Addison on the educational system of the College.‡

In regard to discipline, the system of assigning marks for good conduct which was introduced by the Regulations of 1862 has been discontinued, owing to practical difficulties which were found to occur in carrying out the system with uniformity.§ At the beginning of 1868 an alteration was introduced in the powers of the professorial staff with regard to the maintenance of discipline. Previously to this period they had exercised no disciplinary powers; they have since been required to take notice of all offences which come within their cognizance either in or out of study and have been empowered to place a cadet in arrest pending an inquiry into the offence.‖ Even at the present time,

* Speech of Sir G. C. Lewis in moving the Army Estimates, March 3rd, 1862.

† Debates in the House of Commons of March 6th, 10th, and 13th, 1862.

‡ This of course is exclusive of the number of non-commissioned officers promoted to appointments on the regimental staff.

* It had originally been intended to add two new companies to the College, and in the estimates of 1863-4 the pay of four captains of companies and four subalterns was voted; but the addition of the fourth company was never actually carried out.

‖ Evidence of Lieut.-Colonel Porter, 2165.

however, the professors have no power of punishment, this power being confined to the military staff of the College.

According to the Royal Warrant of 1808, the four companies of cadets were placed upon the establishment of the army, and every one admitted to the College received a warrant of gentleman cadet, with the daily pay of 2*s.* 6*d.* Down to the year 1857 the regulations for admission to the College contained the provision that, "in conformity to "the Royal Warrant dated the 27th of May 1808, all "gentlemen cadets at the Royal Military College are sub-"ject to the Articles of War." This provision appears to have been omitted from all regulations published on the recommendation of the Council of Military Education since the re-organization of the College, which took place at the beginning of 1858. At the present time a cadet on admission is required to sign a declaration "to conform, in every "respect, to Her Majesty's Regulations and to the rules "and discipline of the service."

The Board of Commissioners, at the time of the Report of the Select Committee of the House of Commons in 1855, still continued to administer all the affairs of the Royal Military College, in virtue of the wide powers vested in them by the Royal Warrant of 1808. For some years previously to this, however, the War Office had exercised considerable control over the financial acts of the Board. On the appointment of the Council of Military Education in 1857, the latter body began to superintend the course of instruction at the College, their attention having been directed to this subject in the first instructions issued to them on their appointment. At the beginning of 1858, they commenced to conduct the examinations for admission, and by a Royal Warrant of the 1st October 1858 they were formally appointed Visitors of the College, and required to report to the Commander-in-Chief upon the instruction given at it. The power of recommending either the appointment or removal of the professors and instructors was by the same warrant placed in their hands.

Appendix II. (E.)

Royal Military College, Sandhurst,

The original warrant of 1808 has never been cancelled, and the powers vested by it in the Board of Commissioners still therefore nominally remain in force, except so far as they were transferred to the Council of Military Education by the warrant of 1858. Since this time, however, the connection of the Commissioners with the management of the College has been gradually diminished.* In 1863 the office of Secretary to the Board was abolished, his financial duties being transferred to the Paymaster of the College, and the performance of his other duties being provided for in the Commander-in-Chief's office. The discipline of the College still remains nominally under the superintendence of the Commissioners, but even in regard to this point their interference, except when questions of considerable importance have arisen, appears to have been little called for. Their duties of late years seem to have been principally confined to business connected with the management of the College property, in regard to which, although the estate is now formally vested in the Secretary of State for War,† the former powers of the Commissioners are reserved.

F.—CHIEF CHANGES IN THE EDUCATIONAL SYSTEM OF THE COLLEGE SINCE THE YEAR 1855.

Appendix II. (F.)

MEMORANDUM BY COLONEL ADDISON, MAJOR AND SUPERINTENDENT OF STUDIES.

I. At the date of the Report of the Select Committee of the House of Commons (1855), the following were the conditions of admission to the Royal Military College:—

Age, 13–15 years.

Subjects of Examination:—English (Dictation); Elementary Arithmetic and Algebra; Construing and parsing a passage either in Latin, or French, or German; Geography; and Printing in ordinary Roman character and in Italics.

Applications for admission were addressed to the Governor. The examination was not competitive. It was conducted by the College professors.

The extreme term of residence was four years; but special permission was required for gentlemen cadets who had completed their 18th year to be allowed to remain.

The course of study included four "steps" in Mathematics, two in Fortification, one in Surveying, in General History, ancient and modern, in Latin, in French, and in German. Of these "steps," one in Mathematics (Euclid), one in Fortification, and one in Surveying were obligatory; of the remainder the cadet could select any three. A certain qualification had, however, to be obtained in French and German, if not taken up as "steps"; and also in History and Geography.

The examination for commissions was held by the professors, under the direction of the College authorities and the Commissioners.

II. No change was made in the above after the Report of the Select Committee of the House of Commons, till December 1857, when the following alterations were introduced:—

Age of admission, 16–18 years.

Subjects of the Entrance Examination:—Latin, Greek, Mathematics, English, French, any other Modern Language, History and Geography, Natural and Experimental Sciences, and Drawing. A certain qualification, represented by marks, had to be obtained in Mathematics, English, French, and History, and also a certain aggregate of marks (2,400), whatever the subjects the candidate took up.

The admission was by competitive examination. The entrance examination was held in London, under the direction of the Council of Military Education.

The extreme term of residence was fixed at two years.

The course of study included Elementary Mathematics, Fortification, and Military Drawing and Sketching, in each of which a qualification, represented by marks, had to be obtained; and the following subjects, not obligatory, but the marks gained in which reckoned towards the obligatory aggregate, viz., Higher Mathematics and Fortification, French, German, History and Geography, Chemistry, and Landscape Drawing. All these subjects were studied, although qualification in all was not obligatory.

The final examination was conducted by independent examiners, under the direction of the Council of Military Education.

In March 1858 Geology, and in July 1858 Military History, were introduced as studies.

III. In January 1859 the age of admission was raised from the limits 16–18 to those of 16–19 years.

French and History were at the same period discontinued as obligatory subjects, in the entrance examination, but retained as voluntary subjects; and the minimum aggregate of marks required was lowered from 2,400 to 1,800.

IV. In April 1861 the minimum aggregate of marks required at the entrance examination was lowered from 1,800 to 1,000.

After June 1861 General History and Geography were discontinued.

V. In 1862 the course of study was modified so as to admit of gentlemen cadets passing through the College in one year, and the extreme limit of residence was made a year and a half.

The age of admission was made 16–20 years for candidates for the Infantry, and 16–22 years for candidates for the Cavalry.

The minimum aggregate of marks at the entrance examination was raised from 1,000 to 1,500.

The Queen's Regulations, Mutiny Act, and Articles of War, Regimental Interior Economy, and the Field Exercise Book were introduced into the course of study; and a qualification, represented by marks, was required to be obtained in them.

The regulation by which an obligatory minimum was required in Elementary Mathematics, in Fortification, in Military Drawing, and Surveying, was at this time altered to requiring an obligatory minimum *aggregate* on the above subjects, and on Military History, and one Foreign Language, taken together.

In 1863 Chemistry, Geology, and Landscape Drawing were made voluntary subjects.

The study of the Queen's Regulations, and the other regimental subjects before mentioned, was at the same time discontinued.

VI. In 1866 the age of admission was altered from 16–20 for Infantry, and 16–22 for Cavalry, to 16–19 for candidates for either of those arms.

The course of study was modified so as to require usually a residence of one year and a half, but with the proviso that a gentleman cadet could go out in one year if he could pass the requisite examinations.

VII. The establishment of the College was in the undermentioned years as follows:—

1855	-	-	-	180
1862	-	-	-	250
1865	-	-	-	300

Appendix II. (G.)

Royal Military College, Sandhurst.

G.—PLANS FOR THE AMALGAMATION OF WOOLWICH AND SANDHURST.

(i.)—Historical Notice.

(By the Secretary.)

In the early history of the Royal Military College, some traces are to be found of a connexion between it and the Academy at Woolwich. In the year 1803, shortly after the organization of the Junior Department, and while it was still located at Great Marlow, an arrangement was made for educating at that establishment the cadets who were waiting for vacancies at Woolwich, until they could be admitted into the Academy. In the year 1806, 60 cadets on the establishment of the Academy were at Marlow.* In 1810, however, when the pressure on the accommodation at Woolwich no longer existed, this arrangement was discontinued, and with its discontinuance all close relation between the two establishments ceased. It appears that in later years Sandhurst cadets occasionally obtained nominations to Woolwich, and left the former establishment to enter the Academy, but they did this exactly under the same conditions as any other candidate for admission to the Academy. There was no recognized connexion between Sandhurst and Woolwich; the former establishment was not in any way regarded as a feeder to the latter.

The first formal proposal for establishing any connexion between the two institutions appears to have been made by Mr. Sidney Herbert in his general scheme of military education, as explained by him in the House of Commons on the 5th June 1856. He proposed that Sandhurst should be converted into a general preparatory school for all branches of the service, the preliminary education at which should be followed by more special courses at Schools of Application for the various arms, Woolwich being converted into a School of Application for the Artillery, and Chatham for the Engineers.†

From the evidence given by Lord Panmure, when Secretary of State for War, before the Royal Commission on the Purchase System, it would appear that he also had, as early as July 1856, contemplated a similar change with regard to Sandhurst;‡ and the general scheme of military education drawn up by Colonel Lefroy, by direction of Lord Panmure, in November 1856, assumed that the conversion of Sandhurst into a preliminary school for all arms had been determined upon.§

The Commissioners appointed to consider the training of officers for the scientific corps, in their Report, presented in January 1857, drew attention to the authorities by whom the system of common education for all branches of the service in the earlier stages of military instruction had been recommended. They also noticed some of the objections which might be made to such a system, but stated that they did not feel themselves entitled to make any recommendation on the subject.‖

It seems, however, by this time to have been finally decided to amalgamate the Junior Department of Sandhurst with the lower classes of Woolwich, and to convert the Academy at the latter place into a School of Application for the Artillery and Engineers, admission to which should be obtained by competition among the cadets at Sandhurst on the completion of their preliminary education there. The Council of Military Education, in the instructions issued to them on their appointment, were directed to suggest a scheme by which the amalgamation could be effected; and the plan proposed by them having been approved, a memorandum was issued on the 23rd December 1857, announcing the regulations under which, in accordance with the Council's scheme, candidates would for the future be admitted to Sandhurst, as a preparatory school to Woolwich.¶ An examination for admission to Sandhurst under these regulations actually took place in January 1858.

The scheme proposed by the Council and approved by Lord Panmure for converting Sandhurst into a common preparatory college both for the line and the scientific corps, was adopted by General Peel on his succeeding to the Secretaryship of War in February 1858; but it was decided that instead of at once discontinuing the competitive examinations for admission to Woolwich, as originally intended, two more such examinations should be held, in order to prevent injustice to candidates who had been preparing themselves for them; after the second of these examinations it was intended that admission to the Academy should only be open to those who had previously passed through Sandhurst.

The scheme appears from the first to have been viewed with disfavour by the House of Commons, on the supposition that it was an interference with the principle already adopted of open competition for admission to Woolwich;* and on the 26th of April 1858 a resolution was passed on the motion of Mr. Monsell, "that a humble address be presented "to Her Majesty, praying Her Majesty that no alteration "may be made in the principle of the existing arrangements "which regulate the admission to cadetships in the Royal "Artillery and Royal Engineers." In consequence of this resolution the plan for the amalgamation of Woolwich and Sandhurst was abandoned, and does not seem since that time to have been officially revived.

The advantages which it was supposed would be likely to result from the amalgamation are explained in the scheme proposed by the Council of Military Education. The main objections urged against the proposal in the debate in the House of Commons above referred to were—that it involved an interference with the principle of open competition for admission to Woolwich, by giving a monopoly to Sandhurst over other places of education, and consequently restricting the number of candidates—that it would lower the standard of education of the scientific corps to that of the line—that by fixing the age of admission to Sandhurst at 16 it necessitated the commencement of special education at too early an age—and as a consequence of this would entail the exclusion from the scientific corps of men who had had the advantage of a public school or university education.

Considerable evidence on the subject has been taken before the present Commission, to which references will be found in the Report.

(ii.)—Plan for the Amalgamation of Woolwich and Sandhurst suggested by the Right Hon. Sidney Herbert in 1856.

Extract from a Speech on Military Education, in the House of Commons, June 5, 1856.

I will just explain shortly what the present system of military education is, and how I propose to amend it. The young men intended for the Artillery and Engineers are placed first at the preliminary establishment at Carshalton, and thence go to the Academy at Woolwich, and are there transferred to the practical class. Those intended for the line may go at the age of thirteen years to Sandhurst, where they remain till they are old enough for their commissions; or they may receive their commissions without passing through any military school. Now, in reference to the age at which these boys are taken into the military establishments, I do not believe that it is the business of the State to give education to children. I do not believe that the State can give it effectually or well. I do not believe that, either at Carshalton or Sandhurst, the boys acquire the same healthy tone of feeling or of morals by one-half as they do at the great English public schools. I therefore think it advisable that they should not be sent to Sandhurst until after the period when a boy's education is completed at a public school or at home. When he has been so educated, then take him and convert him into an officer. With respect to Carshalton, I propose, therefore, that it should be altogether abolished as a preliminary school to Woolwich; and with respect to Sandhurst, I propose that instead of taking boys of thirteen years of age, they should be taken at sixteen. At present, the students are subjected to a system of discipline properly applicable to persons of more advanced years, and I believe the system does not work well, but fails. It is admitted by all—and here I might again quote the evidence before the Sandhurst Committee—that it would be advantageous to introduce a greater number of officers into the army through Sandhurst, and you can do so by shortening the course of those who go there.

* * * * *

What I propose is, to reduce the course at Sandhurst to eighteen months or two years, taking the boys at the age of sixteen, and to make several alterations in the education, the tendency of which would be to render it more practical and less theoretical; and after the course at Sandhurst, I should propose that those boys who showed the greatest aptitude for chemistry, mathematics, and so on, should go to Woolwich to prepare for the Artillery, and that those who showed the greatest aptitude for architectural science

* Debate on the Army Estimates, 12th March 1858.

and the like, should go to Chatham to prepare for the Engineers. I would have, also, a third school for the cavalry, where those officers who are destined for that arm should learn veterinary surgery and farriery besides, and all such matters as are necessary for a cavalry officer to know. This school of course would be most naturally placed at Maidstone, which is our great cavalry depôt. I would propose that no one should be admitted into the army who had not passed the examination at Sandhurst, or, at all events, an examination equal to it. It has been argued that every man who goes into the army should pass through Sandhurst, but I do not think that would do. It would tie parents up too much; and I do not think it would be suited to our English habits to force all through a particular or exclusive educational establishment. I would require that from whatever schools the boys came, they should pass through as strict an examination as is required in the military schools. Besides, as an examination between boys keeps boys up to the mark, so an examination between schools keeps masters up to the mark, which is equally important. At the open examinations at Woolwich which the pressure of the war rendered necessary not very long ago—first, I think in the time of the Duke of Newcastle and then again of Lord Panmure—it was found to the astonishment of the examiners that some of the stranger boys were ahead of the boys at the Academy; and I believe that that has not been without its effect on the professors at Woolwich. In order to secure perfect impartiality, the examination should not be conducted by the Sandhurst professors; you must have a separate board of examiners, and this board would play a considerable part in my plan.

(iii.)—Account of a Scheme prepared by the Council of Military Education in 1857 for the Amalgamation of Woolwich and Sandhurst.

Extract from the first General Report of the Council of Military Education, published in* 1860.

The establishment of the Royal Military College was fixed at 180 cadets, and at the time when the Council entered upon this inquiry 154 cadets were actually on its books. The age of admission was from 13 to 15 years; the average period of residence was about three years. The cadet, to obtain his commission, was required to pass in six sections of study, called steps, three of which, namely, Euclid, fortification, and military surveying, were compulsory, and for the other three steps the cadet was allowed the option of selecting from the higher mathematics, the French and German languages, history, geography, and Latin. After passing in any one step or subject of study at any period of the course, the cadet was allowed to drop it entirely and give his whole attention to the remaining subjects, one or more at a time, in which he had yet to pass.

The memorandum of His Royal Highness the General Commanding-in-Chief,† already quoted, contemplated the conversion of the above establishment into one possessing more of the character of a college, to which youths 16 to 18 years of age should be admitted; the candidates for admission being no longer mere boys. And it was further determined that the theoretical class of the Royal Military Academy should be amalgamated with the Royal Military College, which should henceforth therefore prepare candidates, not only for commissions in the cavalry and line, but also for admission to the practical class (or School of Application) at Woolwich, with a view to their appointment to the corps of Royal Artillery and Royal Engineers, the selection of all the candidates being by competive examination.

The Council accordingly prepared a scheme‡ which it submitted to the General Commanding-in-Chief, and which, having been submitted by His Royal Highness and by the then Secretary of State for War to the Queen, was sanctioned by Her Majesty.

The outline of this scheme may be briefly stated. Candidates for admission were required to be between the ages of 16 and 18 years, and having been placed with the sanction of the Commander-in-Chief on the list of competitors were allowed to compete, and if not at first successful, were permitted to come forward a second time, if still within the limits of age; the first candidates in the order of merit, as represented by the general total of marks, succeeding to the vacancies at the College. The establishment was to be gradually raised to 500 cadets. The period of study, which was not to exceed two years, was to be terminated by a competitive examination, the most successful candidates in which were to be permitted to select the corps of Royal Artillery or Royal Engineers, or to receive, if they preferred it, commissions without purchase in the cavalry and line; those who selected the Artillery or Engineers were to be transferred to the School of Application at Woolwich, for special instruction in the sciences appertaining to those branches of the service. Subsequently, to avoid any misconception on the part of the public, the proviso by which the sanction of the Commander-in-Chief was required before a candidate could be entered on the list of competitors was withdrawn, and the competition was left entirely free.

The advantages which the Coucil expected would be secured by this plan were the following:—

1. The competitive examination for admission to the College would be based on the ordinary subjects of a liberal education, and, as such, would not interfere with, but, on the contrary, would greatly assist, the general schools of the country.

2. The competition among the cadets themselves for the corps of Royal Artillery and Royal Engineers would be based in a great measure on the subjects of military, as distinguished from general, education; whilst this competition between so many cadets who had all proved their ability at their entrance examination, would have raised the intellectual standard of the officers of all arms of the service.

3. The gradual increase of the establishment to 500 cadets, preparing for all arms of the service, held together by a strict military discipline, and trained to the exercises of the three arms, would, it was conceived, infuse a military spirit into the cadets far beyond that which can be expected to be called forth in two separate and comparatively small colleges; and as 250 cadets would annually enter the army from Sandhurst, of which number 200 would join the line, the enlarged competition for first admission, as well as for that of admission to the School of Application at Woolwich, would have on all the candidates an influence which could not be otherwise than highly beneficial to the army at large.

The scheme submitted by the Council having been approved, the first examination under its provision was held in January 1858, when 33 candidates presented themselves, out of whom 24 possessed the required qualifications, and were admitted. The very brief interval of time which elapsed between the public notice and the actual holding of the examination was doubtless the reason why so few candidates came forward; however, as will be hereafter shown, several of the candidates were possessed of as much intelligence as had been exhibited in the preceding Woolwich examinations. In the session of 1858 the House of Commons passed a vote adverse to the plan of amalgamating the Colleges of Woolwich and Sandhurst,* and in consequence that part of the scheme was abandoned.

Scheme referred to in the above Extract.

October 27, 1857.

1. The Council proposes that the education of gentlemen for all arms of the service, who do not obtain commissions by direct appointment, shall be given at the Royal Military College at Sandhurst.

2. The establishment of this college, it is recommended should be raised to 500 cadets; the age of admission to be from 16 to 18 years.

Candidates for admission to the college must apply through their parents or guardians to the Commander-in-Chief for permission to have their names entered on the list of competitors. On this being granted, it will be open to the candidates to compete at any one of the half-yearly entrance examinations which may occur while they are within the prescribed limits of age. If unsuccessful they will be allowed a second trial; but if again unsuccessful, they will be debarred from further competition for entrance into the college.

A minimum standard of attainment will be fixed, which, together with the competition, will ensure that none but well-educated youths, and who will do justice to the college instruction, will be admitted.

Those who are unsuccessful at their second competitive examination for entrance, will still be eligible to enter the army by passing the examination for direct commissions.

3. It is recommended that the period of study shall not exceed two years. It will be terminated by a competitive examination, the most successful candidates in which will be permitted to select the corps of Engineers or Artillery, according to the number of vacancies in those corps, or will

Royal Military College, Sandhurst.

receive commissions, without purchase, in the cavalry, guards, or line. Those who select the Ordnance Corps will be removed to the School of Application at Woolwich.

Memorandum on the Mode of Effecting the proposed Amalgamation of Woolwich and Sandhurst Colleges.

August 1, 1857.

1. It appears by a return that has been forwarded to the Council from Sandhurst, that the Royal Military College will consist, after the next entrance examination in August, of 157 cadets varying from 13 to 19 years of age.

It is probable that between 20 and 30 cadets will quit the college next Christmas, leaving about 130 cadets with ages varying from 14 to 18 years.

2. It is proposed that at and after the commencement of 1858 the College of Sandhurst should be opened to all youths between the ages of 16 and 18 years whose names shall be recorded on the Military Secretary's list as candidates for admission.

Such candidates will be allowed to present themselves for competition at any half-yearly examination, and those who are first in order of merit will be taken to fill up the vacancies.

If unsuccessful, the candidate may compete at any subsequent half-yearly examination, so long as he is within the prescribed limits of age.

A minimum standard of attainments will be fixed, which, together with the competition, will ensure that none but well-educated youths, and who will do justice to the college instruction, will be admitted.

Those who are finally unsuccessful in the competition for entrance will still be eligible to enter the army by passing the examination for direct commissions.

It is proposed that, whilst candidates generally will enter the college by successful competitive examination, those cadets from Carshalton who shall have attained the age of 16 at the period of the half-yearly examinations, shall be received into Sandhurst on passing a *qualifying* examination, which will be of the same character as that whereby they would under other circumstances have entered Woolwich, and that this shall continue until the establishment at Carshalton be at length emptied of its pupils.

The cadets who shall have come from Carshalton will also be eligible, on leaving Sandhurst, for the practical class of the Artillery, on passing a final *qualifying* examination, similar to that which they would have otherwise passed at Woolwich, without being subjected to the competition which will in other cases be the principle followed at Sandhurst for admission to the Ordnance Corps.

The above arrangement is rendered necessary on account of the promise these cadets have received of ultimate appointment to those corps, only conditional on their possessing the prescribed qualifications.

The number of cadets now at Carshalton is 53, with ages varying from 13½ to 15½ years.

By the arrangement above suggested they will all have been drafted into Sandhurst, and the establishment at Carshalton will be broken up by Christmas 1859.

The number of candidates to be admitted into Sandhurst, at the commencement of 1858, will depend upon the progress of the arrangements for increasing the accommodation of the college; and the numbers subsequently admitted each successive half-year will be arranged so as to raise the establishment *gradually* to 500 cadets. This number the establishment will have attained when the last batch of cadets from Woolwich shall have been drafted into the practical class, and that academy be cleared of its students in the mode to be now described.

5. From returns which have been furnished to the Council, it appears that, allowing for the number about to be admitted into the practical class at Woolwich, and, on the other hand, for the number of successful candidates at the recent public examinations, there will be 139 cadets at the Royal Military Academy at the commencement of the ensuing term. The Council proposes that these shall complete their terms at the Academy, and be removed to the practical class in the ordinary way. This it is presumed will empty the Academy in two and a half years from the present time, provided (which also the Council recommends) no new cadets be introduced.

6. It is proposed that, in proportion as the Academy at Woolwich diminishes, while that at Sandhurst increases in its establishment, such professors as may be selected from the former shall be transferred to the latter college.

7. By the process above described it is computed that by the month of August 1860 the military schools of Woolwich and Carshalton will be emptied, and a general college for all arms, comprising 500 cadets, will be established at Sandhurst.

8. Whilst, however, this operation is in progress, it is recommended that those cadets from Sandhurst who shall qualify themselves for passing an examination, equivalent to that required for passing out of the Royal Military Academy, shall be allowed, if such be their wish, to join the practical class for the Ordnance Corps.

9. It is recommended that the Academy at Woolwich, when emptied of the ordinary cadets, should be transferred to the uses of the practical class, the name, however, being changed to that of "School of Application for the Artillery and Engineers," and the cadets on joining receiving provisional commissions; the latter arrangement being necessary in order to place all candidates for commissions, whether in the line or in the ordnance corps, on the same footing, as otherwise the temptation of at once obtaining a commission would operate injuriously to the ordnance corps.

The arrangements proposed in the preceding recommendations are submitted by the Council for consideration, as requiring decision before the Council can safely lay down any proper course of study for the combined college, or determine on the staff of professors which will be required for it.

Appendix II. (H.)

H.—PROPOSALS FOR MAKING THE ROYAL MILITARY COLLEGE THE SOLE MEANS OF ADMISSION TO THE CAVALRY AND INFANTRY.

(i.)—Preliminary Notice.

(By the Secretary.)

The idea of requiring every candidate for a commission in the cavalry or infantry to pass through a preliminary course of instruction at a military college does not appear to have been seriously considered until brought forward by the Council of Military Education in 1858. The evidence given before the Sandhurst Committee in 1855 was very generally unfavourable to any such scheme. Sir Howard Douglas "was not prepared to say that all officers should "pass through Sandhurst;"* Sir John Burgoyne "did not "think it necessary that the whole army should be educated "at military colleges, and believed that to attempt to force "such a system would lead to great inconvenience and difficulty;"† and Sir George Wetherall expressed his decided objection to making it a *sine quâ non* for admission to the army that a man should be educated at a military college.‡ The principle of making a passage through Sandhurst compulsory on all officers did not enter into the general scheme of military education proposed by Mr. Sidney Herbert in 1854 and 1856, and was in fact combated by him on the ground that "it would tie up parents too much, "and that it would not be suited to our English habits to "force all through a particular or exclusive educational "establishment."* All the schemes for the re-organization of military education brought under the consideration of Lord Panmure in 1856 appear to have contemplated maintaining the system of admission to the Line (and in some cases even to the Scientific Corps) by direct appointments, side by side with that of affording special instruction at military colleges to a certain proportion of candidates for commissions. The Report of the Commissioners of 1856 on the training of officers for the scientific corps stated, that "the practice of military nations was "opposed to the opinion that *all* officers ought to pass "through a military college, but that with the principle of "a general examination for *all* should be combined that of "a military college for any young men who may show an "early talent for military study."† The system of making a preliminary course of special education a necessary condition of obtaining a commission was indeed advocated by some witnesses‡ before the Royal Commission on the Purchase System in 1856 and 1857; but the Commissioners in their Report, though touching upon the subject of military education, gave no favour to such a proposal. The plan suggested by the Council of Military Education in 1857 for the

* Evidence before Sandhurst Committee (1855), 2241.

† Report, page xxvii.
‡ Evidence of Lord Clyde, Lord West, Sir J. Scarlett, Sir C. Trevelyan. Lord Clyde, however, was unfavourable to the idea of passing all officers through Sandhurst.

amalgamation of Woolwich and Sandhurst, and for the conversion of the latter establishment into a general preparatory school for all branches of the service, did not include the proposal that this school should be the sole means of admission to the army; notwithstanding which, much of the opposition with which the scheme met in the House of Commons, was based upon the argument that it would give Sandhurst an unfair monopoly in regard to admission to the scientific corps, and would remove the stimulus of competition between it and other schools.*

The first official proposal for the conversion of Sandhurst into an establishment through which all candidates for commissions in the cavalry and infantry should be required to pass was made by the Council of Military Education in 1858, after the final abandonment of the scheme for the amalgamation of the College with the Royal Military Academy. The original proposal, in consequence of objections taken to it, underwent various modifications, which are detailed in a memorandum by the Council of Military Education dated 30th July 1859,† printed among the correspondence connected with this subject. Major-General Peel, who was Secretary of State for War when the Council's scheme was first submitted, expressed his opinion "that it would be inexpedient to make the Royal Military "College the sole school from which young men should be "allowed to enter the army, but that they should be "admitted *directly* from all places of education in the "United Kingdom."‡ Mr. Sidney Herbert, who succeeded Major-General Peel as Secretary of State in the summer of 1859, was also at first unfavourably disposed to the measure, on the ground of the unpopularity it would excite, the great outlay it would entail, and the injurious effects which would be produced on the education of Sandhurst itself by the creation of a monopoly in favour of the College, and the withdrawal of the stimulus of competition between it and other educational establishments.§ Subsequently, however, in consequence of the representations of the Council of Military Education, Mr. Herbert modified his views, and in December 1859, gave his sanction to the general principle involved in the measure, directing the Council at the same time to draw up a detailed scheme for carrying their proposal into effect.

During the following year the plan, while still under consideration, was advocated by His Royal Highness the Duke of Cambridge and Mr. Sidney Herbert before the Select Committee of the House of Commons on Military Organization (1860), and was frequently referred to in their evidence, as well as in that of Major-General Peel, before the Committee.‖ The Committee in their Report alluded to the subject in the following terms:—

"For the purpose of obviating objections as to the large "amount of patronage at the Horse Guards, and the num"ber of first commissions given away, the Commander-in"Chief opened a plan, whereby henceforth there should be "only one entrance into the army, and that through the "medium of a military college. His Royal Highness is of "opinion, 'that this would be the most desirable thing "'which could be introduced into the service.' He gave "the outline of a plan in great detail, which will be best "explained by reference to the evidence, and to the ques"tions and answers specified in the margin. Mr. Herbert, "who heard that evidence, and who took part in the ex"amination of His Royal Highness, declared that in his "opinion the advice given by the Duke of Cambridge "was sound; that, if it were adopted, the whole dispute "as to first commissions would be entirely at an end, and "that one entrance into the army, through the door of a "military college, would terminate the controversy re"specting patronage.

"He stated further, that he had himself made the same "proposal some years ago in the House of Commons; "that he had a plan now before him, submitted by the "Council of Education; that, with the Commander-in"Chief, he was now considering it; and that, in the event "of the fusion of the European Indian army with the "Queen's army, many difficulties with respect to the "enlargement of the patronage at the Horse Guards would "be removed by the establishment of this military college.

"The plan being thus avowedly incomplete, and the "details not yet being matured, Your Committee do not "think it expedient to pronounce a decided opinion on the "subject; but the measure proposed is well worthy of "the most careful consideration."

‡ *See* memorandum by the Council of Military Education, dated 30th July 1859, page xxiv.
§ *See* observations by Mr. Sidney Herbert on the Council's memorandum, page xxv.
‖ *See* subjects "Military College" and "Sandhurst" in the Index to the Report of the Committee.

The various detailed schemes submitted by the Council of Education, in the course of 1860 and 1861, for the organization of the College as a general place of education for all candidates for commissions in the cavalry and infantry, and the modifications which the several schemes underwent, will be best understood by reference to the correspondence on the subject, which will be found at page xxiv. A plan of organization and instruction having been at length approved,* it was finally decided that admissions to the army by direct appointment should cease entirely on the 1st January 1863, and that the new system of admission to Sandhurst should be partially commenced on the 1st of January 1862.† The steps which led, first to the postponement of the commencement of the proposed system, and subsequently to the final abandonment of the plan in 1862, owing to the strong opposition shown to it in the House of Commons, have been already explained in the historical account of the Royal Military College.‡ Serious objections to the contemplated measure were also raised by the authorities of the Universities, as will be seen by reference to the correspondence on the subject between the Secretary of State for War and the Vice-Chancellors of the Universities of Oxford, Cambridge, and Dublin.§

The following extract from the Second General Report of the Council of Military Education (published in 1865) gives a general summary of the measure which it was proposed to introduce in 1861, with the object of making a course of instruction at Sandhurst the sole means of admission to the cavalry and infantry, and explains the modified plan which, on the adandonment of that measure, was adopted for the organization of the College:—

"In the former report of the Council the advantages were "stated which would result from the Royal Military College "being so extended as to include all candidates for com"missions in the cavalry and line. It was represented, that "though the test in the subjects of general education im"posed upon candidates in their examination for direct com"missions afforded a guarantee that those who passed had "received the ordinary education of a gentleman, it afforded "none whatever of their having acquired any knowledge of "theoretical military science.

"No means existed of imparting such knowledge to "officers who were doing duty with their regiments. In "consequence a large number, probably the majority, "passed their entire military service without ever acquiring "that moderate amount of scientific military knowledge "which might be most valuable both to themselves and to "the army. It was added that while the general education "of officers had better continue to be intrusted to the "public schools and other establishments, there was only "one way in which a professional education for all could "effectually provided, namely, by means of a military "college, which should include candidates for all branches "of the service except the two scientific corps, for which "provision was already made in the establishment at "Woolwich.

"These arguments were fully considered by His Royal "Highness the Field Marshal Commanding-in-Chief and "the Secretary of State for War, and in 1861 the necessary "application was made to Parliament for the sum required "for the enlargement of the buildings of the Royal Military "College, with a view to its affording accommodation for "600 cadets. The scheme, however, met with much oppo"sition, and the Government engaged that the proposed "system should not come into operation till the midsummer "of the following year,‖ in order that Parliament might "have further opportunity of expressing an opinion upon "it.

"The question having been reconsidered in the interval, "it was decided to limit the extension of the college to an "establishment of 336 cadets (the former establishment "having consisted of 180 cadets), and that the original "scheme proposed by the Council should, with this limita"tion, be carried out. It was therefore determined—

"1st. That candidates should continue to enter the army "either by receiving their commissions direct, after a quali"fying examination in the subjects of general education, or "after passing through the Royal Military College.

"2nd. That with a view to encourage candidates for the "army to go through a course of military science, all non"purchase appointments to first commissions, with excep"tion of those which are bestowed on deserving non-com"missioned officers, and in West India regiments, should

* *See* especially letter from Lord Herbert to the Commander-in-Chief, of 28th February 1861, page xxix.
† *See* Military Secretary's letter of 11th June 1861, and War Office Reply of 19th June.

" be thrown open to competition amongst the cadets of the " Royal Military College.

" 3rd. That the course of instruction should be arranged " for a residence of one year, at the end of which period " the cadet should be examined for his commission, with or " without purchase; but that if unsuccessful at that time " he might return for another term, and have a second trial.

" 4th. That while admission to the college should be " determined in general by a competitive examination, " candidates who had passed certain examinations at the " Universities should be exempted from the competition.

" 5th. That in addition to the 20 Queen's cadetships for " which provision was already made by Parliament, there " should be 20 cadetships to which candidates should be " nominated by the Secretary of State for India in Council. " The maintenance and education of the cadets thus nomi- " nated were to be free. The 20 Queen's to 20 Indian cadets " were to be included in the total establishment of 336 " cadets.

" The question of the enlargement of the Royal Military " College to the limited extent above stated having been " submitted to Parliament in 1862,* was agreed to after " considerable discussion; and the college, re-organized on " the plan just described, is now being gradually raised to " its full establishment. The number of cadets during the " term just concluded was 281."

(ii.)—Correspondence connected with the Schemes for requiring all Candidates for Commissions in the Line to pass through the Royal Military College.

Sir, Horse Guards, 12 August 1859.

I am directed by the General Commanding-in-Chief to request that you will bring before Mr. Secretary Herbert the enclosed copy of a memorandum by the Council of Military Education, giving a brief outline of the several schemes which have been proposed for carrying out the general professional instruction of officers, and suggesting that all candidates for the cavalry, guards, and line should after a certain date be required to pass through the Royal Military College at Sandhurst, which for that purpose must of course be considerably enlarged.

His Royal Highness has a very strong opinion as to the desirableness of making it necessary for all candidates before obtaining appointments in the army to go through a course of military instruction at Sandhurst, and the only point on which he differs from the Council is with regard to the admission to the college being in any cases by competition. His Royal Highness would rather propose that the examination for admission to the college should be qualifying, precisely on the same footing as that now existing for direct appointments to the army; that the age for admission and the period of instruction should be as proposed by the Council; and that the final examination for commissions at the college should be as at present—that is, as many commissions without purchase as might be disposable at the time, and allowing a margin for the number that might be expected within the next three months, should be competed for.

To entitle a competing candidate, however, to a commission without purchase, the qualifying minimum of marks in each obligatory subject must be obtained, as well as a general total of marks, representing a comparatively high standard of attainment.

The final examination of the non-competing cadets to be fixed at a standard not so high as that for the competing cadets, but still sufficiently high for the purpose in view. All these cadets would be required to purchase. The unsuccessful competing cadets to be still eligible for commissions by purchase, and would take their places among the purchasing cadets according to the order of merit of their examinations.

His Royal Highness would be glad to be favoured with the opinion of Mr. Sidney Herbert with respect to the two propositions which he has thus brought before him.

I have, &c.
(Signed) C. Yorke.

The Under Secretary of State,
War Office.

Memorandum by the Council of Military Education, enclosed in the above Letter.

30 July 1859.

The Council of Military Education have given their most careful attention to the letter of the 7th June from the late Secretary of State for War, 7605/303, suggesting a plan for carrying out the general professional instruction of officers after passing the examination for direct commissions, by the establishment of a college for provisional officers at Sandhurst.

The Council, from their first appointment, have repeatedly urged the necessity of taking some steps to remedy the serious deficiency of Military Education in the great body of the officers of the army, and it may be desirable here to give a brief outline of the several schemes they have proposed for this purpose.

I. In Part II. of their General Report on the instruction of officers and examinations for promotion, forwarded on the 8th July 1857, the Council proposed the formation of provisional officers' schools at certain depôt battalion stations, at which the provisional ensign should receive that amount of general professional instruction which is considered necessary, simultaneously with his instruction in his ordinary regimental duties; his commission not being confirmed until he had passed through both of these courses of instruction.

This project was favourably entertained at first by His Royal Highness the General Commanding-in-Chief and by the then Secretary of State for War, but it was subsequently objected to on the ground of the provisional officers, while under instruction, not being available to be sent to the head-quarters of their regiments during the period of one year which it would probably occupy.

II. The plan above referred to being thus abandoned, the Council on the 8th of September 1858 proposed a scheme for the re-organization of the Royal Military College at Sandhurst, with a view to its reception and instruction of all candidates for the cavalry, guards, and line.

It was proposed that the entrance should be determined by competitive examination, the conditions of admission remaining nearly the same as those at present established for the college. The contribution of cadets to be at one uniform rate of 85*l.* per annum, but with an annual grant in favour of the sons of deserving naval or military officers, or other professional persons, who might be proved to require assistance. The time of residence was expected not to exceed one year and a half. The age of admission from 16 to 21 years. The course of instruction to be, in general, directly military, not excluding, however, the teaching of such amount of elementary mathematics as might be considered necessary, and requiring at least one foreign language.

III. On the 1st March 1859, the Council having some reason to believe that difficulties existed in the way of the adoption of the above scheme, proposed as a modification of it that the examination for admission to the college, instead of being competitive, should be only qualifying, the examination being therefore precisely on the same footing as that now existing for direct commissions.

IV. The Council have not heard of any objection to either of the two last proposals, with the exception of that stated in the letter of the late Secretary of State for War of the 7th June, viz.:—" That it would be inexpedient to " make the Royal Military College the sole school from which " young men should be allowed to enter the army, but " that they should be admitted *directly* from all places " of education in the United Kingdom."

V. To obviate this objection Major-General Peel suggested, in the letter above quoted, that candidates, on passing their examination for entrance to the college, should at once receive their commissions provisionally; to be confirmed on passing their final examination at the college, and joining their regiments or depôts. It is stated to be an indispensable condition of this plan that " the course of instruction " should embrace, merely and purely, military studies and " drill, and be within the scope of what an ensign or cornet " might be fairly required to know."

The principal objection to which the scheme appears open is also noticed, viz.:—" That it would entail the " absence of some junior ensigns from their regiments, " thus throwing more duty on the other officers;" but this is considered to be counterbalanced by the advantage which regiments would derive from receiving their young officers already drilled and trained.

VI. The Council cannot doubt that this plan would meet much of the difficulty constantly experienced in drawing up schemes of this kind, by removing the burden of the expense from the cadet, while at the same time the army estimates would not be increased, the pay of the provisional officer being applied in whole or in part to the maintenance of the college; but as the provisional officer would, during at least the year in which he was under instruction, be unavailable for any duty, the public would in reality pay, though under another form, for the whole expenses of the establishment, amounting to from 40,000*l.* to 50,000*l.* a year. Should, however, this objection be removed, there

* *See* Speech of Sir G. C. Lewis, in moving the Army Estimates, March 3rd, 1862; also Debates in the House of Commons of March 6th, 10th, and 13th, 1862.

would remain the very serious one noticed in the War Office letter under consideration, namely, the absence of the junior officers from their corps. On the supposition of a year's residence at the college this would amount to three officers per battalion, on an average, being absent from their duties. It is evident that the objection is much stronger in this case than in that of the depôt battalion officers' schools before noticed, since at the latter the provisional officers would have been available for the greater part of their regimental duties, whereas, when students at the college, they would not be available for any. The Council cannot but consider that this difficulty would be found practically to be very great, and that the constant tendency would be to remove the provisional officer from the college in order to join his corps, long before he had obtained that amount of general professional instruction which would be really useful to him and the service.

It ought also to be observed that, as in this scheme it was laid down that the instruction given should be purely military, and there would consequently be no means of supplying any defects in the previous education of the student as exhibited in the admission examination, it could only be expected that, as a general rule, the knowledge acquired, even of purely professional subjects, would be shallow and imperfect.

VII. In view of these serious objections the Council do not feel justified in recommending the adoption of this plan.

VIII. The Council are, however, of opinion that, by a modification of the schemes before proposed for the reorganization of Sandhurst, the very desirable object in question may be yet attained. This consists in admitting both the competitive and the nominative principle as regards the entrance of cadets into Sandhurst, and obliging all to pass through the college. Those who enter by competitive examination to be entitled, like the cadets at the Royal Military Academy, Woolwich, to commissions without purchase, on having gone through the prescribed course, and obtained the qualifying minimum of marks in each obligatory subject, as well as a general total of marks which should represent a comparatively high standard of attainment. The commission without purchase would therefore be virtually secured by the successful competitive examination for entrance, and it is considered by the Council that this would be an additional stimulus to the general education of the country, and would as such receive every support from the public. For the success of this scheme it would of course be indispensable that all commissions without purchase, with exception of those given to Queen's cadets and deserving non-commissioned officers, should be thus opened to competition. Those cadets who entered the college by nomination would be required to pass the present examination for direct commissions, and having gone through a course of professional instruction at the college, to pass a final examination, the standard of which should not be so high as that for the competitive cadets who obtain their commissions without purchase, but still sufficiently high for the general purpose in view. The cadet would then in this case receive his commission *by* purchase.

The period of instruction would of course vary according to the capacity and aptitude of the cadet, but should not in any case exceed two years. The age of admission should be for competitors from 16 to 19 years; and for nomination cadets from 16 years to such higher limit as the necessities of the service should require.

It is unnecessary to enter upon the details of this plan, which indeed would be much the same as those proposed for the establishment of a general college in the Council's memorandum of the 8th September 1857, further than that the cadet would be required to pay from 80*l.* to 90*l.* a year during his residence, with the exception of the Queen's cadets, who would be on their present footing. The Council are of opinion that it involves an important principle, which would be highly appreciated by all persons interested in education and by the public generally, namely, that of granting commissions without purchase to successful competitors, and thereby, it is hoped, inducing well-educated youths to enter the army, who would afterwards present a wide field of selection for the Staff College and the Staff.

Observations by Mr. Sidney Herbert on the foregoing Memorandum of the Council of Military Education.

Appendix II. (II.)

Royal Military College, Sandhurst.

This memorandum from the Council is an able paper, and I have read it with great interest.

Sandhurst is now below its numbers, and seems likely to decline still further.

The result is that it becomes more expensive to the country, as the establishment charges remain the same, but the number of contributors at the higher priced rates becomes fewer.

The declension of Sandhurst is probably owing to the disbelief, whether well or ill founded, of the public in the efficiency of the school; or else to their belief that they can obtain the amount of instruction necessary to pass for the army, either better or cheaper, or both, elsewhere.

The proposal to compel every one who enters the army to pass through Sandhurst would be looked upon as an attempt to force on parents, as a monopoly, that which they will not choose when left open to the competition of other schools.

I believe that the attempt to carry on schools for boys, as contra-distinguished from colleges for young men, on the military principle, which assumes that every boy is alike and must be governed alike, will always fail to educate or form character.

But it has not the same evil effects on more advanced lads, who have already had their education at public or other schools, and the bent of whose characters is already formed.

I should, therefore, be disposed to concur in a plan to convert Sandhurst from a school for boys, where they are to spend from two to four years, into a military college for young men of 17 or 18, where they should remain for a year or eighteen months.

If, however, all candidates were compelled to go through it, we should lose all benefit from rivalry and competition. The professors having a safe monopoly would lose one great spur to exertion. It is the competition between Oxford and Cambridge, and between Eton, Harrow, and other public schools, which raises the character and standard of each.

The plan, too, would be unpopular; and when we are endeavouring to raise the education for officers against a good deal of prejudice and opposition, it is wise to consider in what way you will obtain the support of the greatest mass of public opinion.

Lastly, the plan would require so great an extension, and consequently so great an immediate outlay, that, coupled with the hostile feeling it would create, I doubt whether, even if sound, it would be easily carried.

Would it be possible, however, to attract to Sandhurst as many young men as it is said to be capable of accommodating, namely 270, by giving to every young man going there the certainty of a commission with purchase, and the chance of one without it, provided he passes after his year's course a certain standard examination? The fear of an impending examination at the end is necessary to prevent idleness while there.

An examination also to be passed by candidates for direct commissions, but an increased number of marks being required in some branches, to compensate for the entire absence of acquaintance with fortification, pontooning, drill, and military exercises, for which marks would be given to the Sandhurst candidates.

It appears to me that Sandhurst might be made much more useful to the army in this way, much less costly to the public, and at the same time much more attractive to parents.

Woolwich and Chatham would be left as now, and you would have to destroy nothing in order to establish this system.

If Sandhurst should prove too small for the numbers who would come, additional accommodation might be obtained by moving the Staff College to Farnham, or Aldershot, or its immediate neighbourhood.

I should like the Council too take these rough notes into their consideration, because it seems to me that they might form the basis of a new system, embodying many of the advantages which they seek to attain, and taking a considerable step in the direction in which they wish to move, while they obviate some of the objections which may be taken to their plan.

1 September 1859. S.H.

Sir, Horse Guards, 15 November 1859.

I enclose herewith a memorandum of the Council of Military Education referring to the Notes of Observations which you had transmitted to the Council, on the subject of the scheme submitted in their memorandum of the 30th July last, for so extending and modifying the

Appendix II. (H.)

Royal Military College, Sandhurst.

present Royal Military College at Sandhurst, as to convert it into a general training college for all officers of the army.

Without altogether concurring in all the opinions expressed by the Council, I wish to state that I consider the second plan proposed by them to be the best and most practicable, and I am therefore disposed to recommend its adoption; but it might be advisable, if it should suit your convenience to attend a meeting of the Council, that a day should be fixed for the purpose, when the whole scheme might be discussed and explained, with the advantage of your assistance.

I shall be glad, therefore, to be informed whether you would be able to attend such a meeting, and in that case the time that would be most convenient to you, that the members should be summoned.

I am, &c.
(Signed) George.

The Right Hon.
Sidney Herbert, M.P.

Extract from a Memorandum by the Council of Military Education, dated 4 November 1859, enclosed in the above Letter.

Second Plan.

All candidates for commissions to go to Sandhurst and to be admitted by examination as at present, but from 16 to 20 years of age.

Examinations for *commissions* to be held when the Sandhurst course has been completed, and to comprise as hitherto military subjects, and such scientific subjects only as are necessary for the efficient study and right understanding of military subjects.

It could not be imputed to this scheme that it would interfere with the freedom of public instruction, for at the ages of 16 to 20 public instruction is understood to be completed; nor could it be objected that Government was creating a monopoly of military education, so long as it is felt to be impossible to provide that kind of education in an efficient manner elsewhere than at a Government Military School; indeed, by requiring all candidates for commissions to pass through such a school, nothing more is imposed upon them than is required by other liberal professions, for admission to all of which it is a condition that the candidate should have availed themselves of some recognised means of professional instruction.

In the following respects this scheme may perhaps be viewed as unfavourable to the interests of the candidates themselves, when compared with the present plan of admission to the army by the examination for direct commissions:—

1. Instead of one examination as at present, two would have to be passed to obtain a commission, one on going to Sandhurst, and the other on leaving it.

2. The additional expense would have to be incurred of a residence at Sandhurst of a period of from one to two years.

3. In the event of a candidate failing to qualify for a commission when his period of residence at Sandhurst has been completed, the time spent on his military instruction there would have been in some measure thrown away; and it might therefore, though with little reason, be supposed that these discouragements would tend to diminish the number of persons seeking a military career.

On the other hand, the following may be considered special, and more than counterbalancing recommendations of this plan:—

1st. Its economy to the Government—the contributions expected from the candidates being understood to be sufficient to cover the whole expenses of Sandhurst.

2d. The stimulus which might be supplied to the exertions of the candidates by the offer of commissions without purchase as prizes at the end of the Sandhurst career would not only tend to bring forward many intelligent and highly qualified officers, but would also materially diminish the supposed ill effects of the discouragement before noticed.

It will be observed that in the first of the above schemes, the education of candidates for the army has partaken of a military character from its commencement, and that in the event of failure a large portion of time which might have been more profitably directed to other studies would have been as it were lost, and this was in fact one of the objections sometimes urged against the system of military colleges, when the cadets were admitted at very early ages.

In the second plan it may be said that the same objection applies, as there is still a chance of failure, but that chance is so very small (the entrance examination of candidates of ages varying from 16 to 20 being sufficient to ensure that every one may by reasonable diligence obtain a commission) that it ceases to deserve notice; whilst even supposing such a case to occur, the unsuccessful candidate would not be in the same position as in the other plan, as he would already have obtained a good general education before his admission.

Sir, War Office, 9 December 1859.

With reference to your Royal Highness' letter of the 15th ultimo, and previous correspondence on the subject of the re-organization of the Royal Military College at Sandhurst, I have the honour to return herewith the memorandum of the Council of Military Education, dated 4th November, and to inform your Royal Highness that I approve generally of the second plan proposed in this paper, as discussed at the meeting between the Council, Lord de Grey and myself, on the 4th inst.

I have therefore to request that your Royal Highness will give directions for the preparation of a detailed plan and estimate of the cost (not including buildings) which will be incurred by carrying this scheme into execution, and also a statement showing the number of persons to be employed, and their salaries, with the proposed establishment of cadets.

The present establishment of the college should in my opinion be revised, and no functionaries should be included in the above establishment, excepting those actually employed in the discipline or tuition of the establishment.

I have, &c.
S. Herbert.

H.R.H. The Duke of Cambridge, K.G.
&c. &c. &c.

Sir, Horse Guards, 10 January 1860.

I am directed by the General Commanding-in-Chief to request that you will submit to the Secretary of State for War the accompanying copy of a memorandum by the Council of Military Education, proposing a scheme, with an estimate of the expense, for re-organizing the Royal Military College at Sandhurst as a general college for the professional education of all candidates for the cavalry and infantry of the army, in conformity with the second of the plans submitted in the memorandum of the Council of the 4th of November last.

His Royal Highness highly approves of the several suggestions of the Council of Military Education on this subject, and recommends them for the favourable consideration of Mr. Sidney Herbert. His Royal Highness would only wish to recommend that the salary of the Governor should be fixed, including either his half or full pay, as the case may be, at 1,000*l.* a year, which he does not consider would be too large a sum with reference to the establishment of which he is the head, and the expenses to which he would be subject, and he trusts therefore that Mr. Herbert will concur with him in opinion with respect to this point.

I have, &c.
(Signed) C. Yorke.

The Under Secretary of State,
War Office.

Extracts from the Memorandum by the Council of Military Education, enclosed in the above Letter.

1, Whitehall Yard, S.W.,
7 January 1860.

In reply to the letter from the Secretary of State for War of the 9th ultimo, 7605/361, and the letter from the Military Secretary of the 13th of the same month, which accompanied it, the Council of Military Education have now the honour to submit a revised estimate of the cost of maintaining the Royal Military College at Sandhurst, when re-organized as a general college for the professional education of all candidates for the cavalry and infantry, in conformity with the second of the plans submitted in their memorandum of the 4th November, and approved by Mr. Secretary Herbert.

In framing this estimate the Council have had in view, and have endeavoured strictly to conform to the principle laid down by Mr. Sidney Herbert, that the personal establishment should include only those officers or others whose services are deemed actually necessary for the preservation of discipline and order, both in and out of study, or for conducting and superintending the professional studies and military training of 600 cadets. The organization proposed to be adopted resembles as closely as possible that of a regiment, so that the cadets will have an opportunity of becoming acquainted not only with parade and field movements, but also with every particular connected with the interior economy of a regiment.

The military staff therefore will be as follows:—

1. Governor.—A colonel in the army, superintending and directing every branch of the establishment.

2. Two majors, one assisting the governor in all matters f discipline, parades, drills, and military training generally, ne other in superintending the studies and enforcing iscipline and order in the study rooms.

3. Six captains and six subalterns, viz., one to each com- any. They will be responsible for the conduct of the adets in their barrack rooms, for their presence at proper ours, and for all the details of ordinary company disci- line, and in general for the military training of the cadets; istruction in military tactics, the principles and forms of ilitary law, keeping of soldiers' accounts, &c., will also be art of their duty.

In addition to the above, which applies to a company iewed in itself alone, a captain and a subaltern of the day ill be regularly detailed for the general orderly duty, and lso for assisting the major superintendent of studies in reserving order and discipline in the study rooms.

4. Adjutant - } The duties of these officers will be
5. Paymaster - } analogous to those of similar offi-
6. Quartermaster } cers in a regiment.

No explanation is necessary as regards the serjeants and her non-commissioned officers. * * * *

* * * * * *

In respect to the educational branch of the establishment ne Council have been guided by the following principles:—

1st. That nothing more can be reasonably required from ne great body of young gentlemen who (after having assed a preliminary examination in the subjects of ordinary ducation) desire to enter the army, than that they should quire such knowledge of professional subjects, of drills d military movements, of military law, of soldiers' ccounts, &c. as will qualify them when they join their egiments to perform any duty which may be required of em, thus saving all that time which is now required for rilling an officer and otherwise preparing him for entering pon the duties of his regiment.

2nd. That opportunity may be afforded to those pos- essed of a higher ambition to advance further on their ourse of professional studies, and thereby to preserve the dvantage of supplying the army with a fair proportion of nore highly instructed officers, an object which the present oyal Military College has hitherto in a high degree ttained.

On these two principles it may be assumed that a very rge majority of the cadets will leave the college within he year, and that none will require to remain there more nan a year and a half.

As a qualification for a commission by purchase, the final xamination will be restricted to the following professional ubjects (in addition to the required proficiency in drills, ding, musketry theory and practice, field and heavy ord- ance exercises, pontooning, &c.), viz., military drawing d field sketching, practical geometry as applied to forti- ication and military surveying, field fortification in theory nd practice, and the elements of permanent fortification, ilitary history and geography, regimental and company ccounts, official correspondence, Queen's Regulations and ilitary law.

The higher course, or that which will be required from hose gentlemen who compete for commissions without urchase, will comprise all subjects that now enter into the inal examination at the Royal Military College, viz.:—

Mathematics.
Higher course of fortification.
French and German languages.
Landscape drawing.
Natural and experimental sciences.

In addition to the ordinary scientific and professional struction, it will be observed that provision is made for ltivating those tastes for the natural and experimental iences, which many amongst so large a body of cadets ..y be expected to exhibit, and which are in themselves aluable.

The educational staff has been so estimated as to be qual to the probable requirements under each of the eceding heads.

The estimate is made on the supposition that 24 hours a eek may be required from each professor and instructor, nd that there are six companies, each company having its istinct halls of study, and consisting of 100 cadets as a aximum establishment.

SIR, War Office, 1st November 1860.

THE time for the preparation of the estimates being ow at hand, it is important to come to definite conclusions on certain points connected with the proposed changes ontemplated in the system now in force at Sandhurst, with view to passing in ordinary times all candidates for the rmy through that college.

The points requiring immediate settlement are the length of residence to be required from each candidate, and the amount of annual payment to be made by the students.

As regards the first point the Council of Military Education in their able memorandum of the 7th of January last, transmitted in Sir C. Yorke's letter of the 10th January, speak of the period to be passed by each candidate as "from one to two years." It appears to me that a period of one year would be sufficient.

In the first place it must be recollected that it is not the object of a preparatory college for the Line, to bring up the students to a high standard of scientific attainments, that being the proper function of Woolwich and Chatham, which are the seminaries of the scientific arms—the Artillery and Engineers.

2ndly. It is admitted on all hands that a Military College for the line ought not to be a school for general education, more especially if all or nearly all the candidates for the army are to pass through it. It appears to me that the liberty of selecting the place and the kind and degree of education of their children should be left entirely in the hands of the parents. What the Military College should teach is what cannot be taught, or cannot be taught so well, elsewhere; all it should profess to do is to teach the specialities of a military education. The general education should be left as now to the public schools or to private tuition. I should greatly regret to see any system of entrance into the army established, which would interfere in any way with the education more especially of the public schools, which have a traditional tone which no new founded establishments can possess, and which are nurseries of public spirit and manly feeling, such as exist perhaps in no other country in the world. Nor is there any profession to which the peculiar habits and tastes produced at public schools are so valuable as to the army.

But it must also be borne in mind that this course at Sandhurst is to be compulsory upon all candidates for commissions. It will be wise therefore to reduce both the length and the cost of the course as much as is compatible with the efficient attainment of the object in view.

The defects of the present system of direct commissions are pretty generally acknowledged. The boy is taken away from a public school to be specially crammed for an examination which is in no way special to the profession which he is about to enter. So far as he or his parents are concerned he might as well be at Sandhurst; so far as the public service is concerned he had much better be there. But Sandhurst is now a school with a three years' course. I wish to see it converted into a college with a one year's course.

It may be agreed that this is a great diminution of the time specially given to military education as compared with that now exacted at Sandhurst. That is true; but the number of cadets who enter the army from that institution are little, if at all, more than one-tenth of the whole number who receive commissions in the year. To the rest, *i.e.*, to the great body of young officers, it will be a clear gain of one year's special military education, in the place of none at all.

If one year be the period of residence in lieu of 18 months, 500 cadets only need be accommodated as against 600 proposed by the Council. This will be, 1st, a more manageable number for the purposes of education, discipline, and order; 2ndly, a less outlay will be required for the purpose of providing additional accommodation for them.

As regards the payments under the present system, there is a graduated scale by which it is attempted to give to the junior ranks of the army special facilities for the education of their children. Thus, a private gentleman or a general officer is made to pay not only for the education of his own son, but for half that of the son of a regimental captain. But the private gentleman who is amerced the highest of all may often be the poorest, such as clergymen and other professional men.

This principle, however, having been long established, I do not propose to interfere with it, but if by a revision of the estimates of the Council, owing to the reduced numbers and proportionate reduction of the staff, the charges could be reduced, I should propose the reduction of the highest sum now charged.

I certainly would not add to the number of Queen's cadets, except what is necessary to comply with the conditions of the Indian Government Act of 1858, by which a certain proportionate number of the commissions given by the East India Government in the then local army were to be given to sons of officers in reduced circumstances. These amounted to about 20 a year, and as a commission without purchase would be no boon to them if the cost of a year's previous education were exacted from them, 20 new Queen's cadetships should be given to meet their claims. This seems consistent with good faith, though I

APPENDIX II. (H.)

Royal Military College, Sandhurst.

Appendix II. (H.)

Royal Military College, Sandhurst.

doubt the advantage to the boy who having no means is thus allured into a profession which in this, as in all countries, is pecuniarily of a very unremunerative character, though conferring on its members great advantages in the social status of the country.

The Council of Military Education have calculated upon a surplus of upwards of 9,000*l.* a year to meet contingencies. I am of opinion that this sum might be in some degree trenched upon, and a smaller surplus left, so as to enable the Government to make the terms of admission slightly less than now as regards the upper charges.

I enclose a return showing the numbers now at Sandhurst paying the different rates.

I propose, therefore, a year's course, which should comprise elementary instruction in military science, combined with the proper cultivation of manly exercises—riding, swimming, fencing, &c.; and I would then add the suggestion that in the final examination proficiency in these indispensable accomplishments should be represented by marks, contributing to the aggregate required for a pass.

If your Royal Highness concurs with me in these general views, I would request you to call on the Council of Education to prepare a scheme for a course of one year, and an estimate of the cost and income of such an establishment.

Captain Galton is preparing plans for the increased accommodation required, but the extent of this will of course depend on the length of the course to be required.

I should also be glad to have the opinion of the Council how far Addiscombe could be made to take a share of this programme, and whether a double establishment or a single would be preferable as regards efficiency and expense. The rivalry of the two establishments might have a useful effect on both, and some cost in building might be spared, but that advantage may be counterbalanced by the greater expense of the maintenance of a double staff.

I have, &c.

H.R.H. The General Commanding-in-Chief. (Signed) S. Herbert.

Memorandum by the Council of Military Education in reply to the above Letter.

1, Whitehall Yard, S.W.,
20 November 1860.

In conformity with the desire expressed by Mr. Sidney Herbert in the War Office letter of the 1st instant, the Council of Military Education have again resumed the consideration of the important question of establishing one great training college, through which all candidates for ordinary military service should, without exception, be required to pass.

Mr. Sidney Herbert remarks that the points requiring immediate settlement are the length of residence to be required from each candidate, and the amount of the annual payment to be made by the students. Taking them into consideration in the order here stated, it may be observed that the Council are fully conscious, to use the words of their memorandum of January 1860, "that nothing more "can be reasonably required from the great body of young "gentlemen who desire to enter the army (after having "passed a preliminary examination in the subjects of "ordinary education), than that they should acquire such "knowledge of professional subjects, of drills and military "movements, of military law, of soldiers' accounts, &c., as "will qualify them when they join their regiments to perform any duty which may be required of them."

The nature of this obligatory course was then defined, and whilst it was made to include nothing but purely professional subjects, it was calculated that a very fair proficiency in those subjects might reasonably be expected to be gained by a candidate of average abilities, zeal, and industry in one year.

The Council have carefully reviewed the above course, and are of opinion that it could not be diminished without abandoning much of the object of the institution, and setting before the students an inferior and inefficient standard of military education.

Whilst, however, they consider that, as a whole, the course as detailed in their former memoranda ought to be retained unaltered, they feel bound to adopt any measure which may facilitate the passage through the college of even candidates of inferior abilities in the one year. Towards this end they propose that the time allotted to the two principal studies in the obligatory course should be increased in the proportion of 4 to 7—that half-holidays, as unsuitable to such an establishment, should be abolished, the time not occupied in indoor studies being allotted to the various military exercises—and finally that instead of exacting an obligatory minimum in each subject of study, the obligatory minimum should be estimated on the aggregate number of marks gained in all the obligatory subjects, including, as suggested by Mr. Sidney Herbert, those gained for skill in riding, fencing, swimming, and military exercises. By this arrangement the tastes and peculiar abilities of all candidates will be consulted, and whilst the more talented may be expected to excel in many, if not all of the subjects of the course, others may compensate for a deficiency in some, by excelling in others. Nothing can be more equitable than this principle, and it may be fairly said that in most cases those who fail to gain the qualifying minimum in the year, must do so from gross carelessness, inattention, and idleness. To provide, however, for the casual occurrence of a failure, not due to any neglect, the Council consider that it would be advisable to give the candidate, as is done in examinations for direct commissions, a second chance, limiting however, his possible residence to one year and a half.

The obligatory course having been thus limited to the mere general necessities of the military profession, the Council did not consider that it would be advisable to include the study of other subjects, calculated to be indirectly of the greatest value to a military officer, such as modern languages, landscape drawing, the natural and experimental sciences, and even a higher course of practical mathematics. They propose, however, to leave these subjects to the voluntary selection of the candidates, and not to include them amongst those on which the obligatory minimum is prescribed, the marks gained in them, therefore, only serving towards determining the position of successful candidates, but not of themselves qualifying a candidate for his commission. In the competition for commissions without purchase a higher qualifying minimum will be required in the obligatory subjects, and that minimum being gained, the marks obtained in voluntary subjects will equally aid in determining the position of the candidates. This competition, however, will be limited to candidates of one year's (or four consecutive quarterly terms) residence.

The next question, namely, the amount of payment to be required from candidates, ought to depend on the number of students, and the expenses of the establishment, as in the present case where attendance is obligatory, and commissions as a general rule have, as heretofore, to be purchased, no higher sum ought to be required from a candidate than what is found necessary to pay for his board and education.

By a statement received from the Military Secretary on the 10th instant, it is estimated that 639 commissions will be disposed of annually in the combined British and Indian army; but as it is further stated that the number may probably be higher, it is safer to estimate it at 700.

It has been calculated that the annual expense will be 46,891*l.* 4*s.* This sum shared amongst all the cadets will require the payment by each of 71*l.* 0*s.* 10*d.*, or to leave a safe margin, of 80*l.*

In this sum clothing is not included, as it does not form an item in ordinary school charges, and is always provided by the parents. To ensure the necessary uniformity, it is suggested that the clothing be supplied by a public contractor, the money for its payment being lodged with the Governor of the college.

And further, though coals, light, &c. were presumed to be supplied as a contingency in the estimate which accompanied the Council's memorandum of the 7th January 1860, and formed a principal item of the sum of 9,000*l.* for contingencies to which Mr. Sidney Herbert refers, they are not included in the present estimate, as it appears more reasonable to consider the supply of all such articles in the same light as a similar supply to barracks and all other military buildings, the cadets, just as recruits are, being considered a part of the army.

Allowing 80*l.* to be the maximum sum to be paid, and retaining, as suggested by Mr. Sidney Herbert, the principle of a lower rate of payment in the case of the sons of naval and military officers, the classes may be reduced to four, that of Admirals and Generals having regiments (at present there are none in this class) being omitted, as the rate formerly required from them is the same as the highest rate now proposed. Taking advantage of the list of cadets at the Royal Military College, and the rates paid by those of each class, furnished by Mr. Sidney Herbert, and adding to the numbers now paying at each rate the average number per annum of sons of officers in the same classes who obtain direct appointments, it is calculated that, excluding the expenditure on account of fuel and light (which the Council have not the means of estimating), of the working party of Engineers, and of forage for officers' horses, there will remain an excess of income over expenditure of 3,348*l.* 16*s.* In this estimate the maintenance of 40 Queen's cadets is not included, as it would require to be provided for by special Parliamentary grant, as recommended by the Committee of the House of Commons on Sandhurst in 1855.

It would appear from what has been stated by Mr. Sidney Herbert that there is no alternative but to add 20 to the number of Queen's cadets, in order to comply with the Indian Government Act of 1858; but the Council would observe that the Indian force being, as stated in War Office letter of the 7th November 1860, 7611/1135, not more than one-twelfth of the Imperial, and only 20 Queen's cadets being allowed to the latter force, the relative advantages accorded to the two armies seem to be out of all fair proportion.

Appended to this memorandum is a table showing the data on which the estimate has been framed, and it is trusted that the general statement will be sufficient to convince Mr. Secretary Herbert of the practicability of carrying into effect a scheme which is calculated so materially to benefit the public service, and that without entailing on the public any cost at all commensurate with the advantages to be gained from it. Should the scheme as thus explained be approved, it is suggested that a notice should be issued as early as possible, as there can be little doubt that the Royal Military College would be then quickly filled by those whose age would not permit them to come forward for examination before the stated time. An early notice is in fact important, not only to enable parents to make the requisite arrangements for their sons' education, but also by filling Sandhurst to the utmost extent of which it is capable (which is believed to be nearly 400 cadets), to provide a sufficient reserve of candidates, who will be ready by the time the additional buildings are completed, and the scheme is brought into thorough operation, to receive their commissions from the college; by which means the serious inconvenience will be avoided of having a large number of first commissions vacant while their future holders are undergoing their college training. It is evident from the latter consideration alone that the scheme should be carried into operation, so far as the present means will admit, at the earliest possible date.

The Council therefore recommends,—

1. That the course of instruction shall be calculated for one year, allowing, however, to the few who could not complete it in that time another half-year.

2. That the highest amount of payment should be such as will fairly defray the expense of board and education, and may be fixed at 80*l.*, and that whatever allowances are made in favour of sons of officers should be at the cost of the public.

3. That as soon as these measures receive the final approbation of the authorities, the Royal Military College should be immediately adapted to the new system, and early notice be given to the public of the general scheme.

T. Elwyn, Colonel.
J. E. Addison,
Lieut.-Colonel.

Sir, War Office, 28 February 1861.

It being desirable that the scheme should now be drawn up in detail, I propose in this letter to state the results of the discussions which have passed between the Council of Military Education, your Royal Highness, and myself on the subject of the re-organization of Sandhurst.

1. It is proposed that Sandhurst should be converted into a general training college, through which all candidates for ordinary service should be required to pass, and where they may acquire such a knowledge of professional subjects as will qualify them when they join their regiments for the performance of any duties which may be required of them.

2. Under the proposed system direct appointments to the army will be discontinued, and commissions, whether with or without purchase, will be given to none but those who have gone through a course of education at the Royal Military College, which will form the sole channel of admission to the Cavalry, Guards, and Infantry, and will be placed in the same relation to these branches of the service as that which Woolwich at present occupies in relation to the Artillery and Engineers.

3. Admission to the college will be determined by examination in the subjects of general education. Candidates for admission will be nominated by the Commander-in-Chief on recommendations of eligibility as to character, &c., and certificates as to age and bodily health, similar to those now required from candidates for direct commissions.

4. These examinations will be held four times in the year, before the commencement of each college term.

5. It is proposed to make sufficient additions to the college buildings to afford accommodation for 600 cadets, 40 of whom will be Queen's cadets, to be admitted under the same regulations as at present.

Appendix II. (H.)

Royal Military College, Sandhurst.

6. Excluding therefore the Queen's cadets, it may be calculated that there will be accommodation at the college for 560 cadets, giving on an average about 140 vacancies to be filled at each quarterly examination; but the actual number of vacancies on each occasion will of course be regulated by the Commander-in-Chief according to the requirements of the service at the time.

7. The subjects of the examination for admission to the college will be the same as those at present required at the examination for admission to Sandhurst.

8. The limits of age for admission to the college will be determined from time to time by the Commander-in-Chief as the requirements of the service may demand. By existing regulations the age for admission to the army is fixed at from 18 to 23 for the infantry, and from 18 to 25 for the cavalry; and it is proposed that the age of admission to the military college should in the first instance be from 16 to 20 for the former and from 16 to 22 for the latter service.

9. The ordinary course of instruction at Sandhurst will be calculated to extend over one year of four terms, and will comprise the following subjects:—

Obligatory.

Military drawing and field sketching.
Practical geometry as applied to fortification and military surveying.
Field fortification in theory and practice.
Elements of permanent fortification.
Military history and geography.
Regimental and company accounts.
Official correspondence.
Queen's Regulations and military law.
Regimental drill and exercises.
Riding, fencing, &c.

Voluntary.

Mathematics.
French.
German.
Hindustani.
Natural and experimental sciences.

10. The obligatory course of instruction, comprising purely professional subjects necessary to the performance of ordinary military duty, will be the same for all. The voluntary subjects, a knowledge of which though not actually necessary is still of the highest value to an officer, will be left to the selection of the candidates themselves. At the commencement of each college term the cadet will be required to select the voluntary studies he may wish to undertake—those who do not wish to undertake any of the latter being required in place of them to devote additional time to fortification, military drawing, or military history.

11. At the end of the year's course of instruction, and prior to obtaining their commissions, cadets will be required to pass an examination in the subjects which form the college course of military instruction, and to obtain certificates of a fair proficiency in drills and military exercises.

12. A minimum aggregate of marks in the obligatory subjects of examination will be fixed, which it will be necessary for a cadet to obtain in order to qualify him for a commission by purchase; and it is intended that the marks gained for skill in riding, fencing, swimming, and military exercises should be allowed to count towards obtaining this minimum standard of qualification—thus affording every candidate an opportunity of deriving advantage from any special tastes and abilities likely to be of service to him in his profession.

13. It is further intended as an assistance to discipline that each candidate shall carry with him to his examination whatever number of marks for good conduct he may have obtained during his residence at the college.

14. In the event of a candidate failing to qualify himself for a commission at the end of the year's instruction, he will be allowed, on the recommendation of the governor, to present himself at either of the two subsequent examinations; but in no case will a longer residence at the college be permitted than one year and a half, and if a candidate fail to obtain the necessary qualification on a second examination he will no longer be considered eligible for a commission.

15. At each examination for commissions those cadets whose period of residence does not exceed four terms, or one year, will be allowed to compete for such number of commissions without purchase as may at the time be notified for competition. In the examination for this purpose they will be required to obtain a higher qualification in the obligatory military subjects than that exacted from candidates for commissions by purchase; and that minimum

Appendix II. (H.)

Royal Military College, Sandhurst.

being gained, the marks allotted in voluntary subjects will also be counted towards determining the position of the candidates. In every case, before a cadet is permitted to appear for his final examination at the college, satisfactory testimonials of conduct from the governor must be produced; his marks for good conduct, as before stated, being carried to his credit in summing up the marks by which his success will be tested.

16. In the event of sufficient vacancies not existing in the army to afford commissions for the full number of cadets who have obtained the required qualification, the commissions at the disposal of the Commander-in-Chief will be allotted to candidates in order of merit, as shown by the result of the examination; those who remain unprovided for will not be retained at the college, but will be commissioned as vacancies occur, and a corresponding reduction will be made in the number of those admitted to the college at the next examination.

17. To cover the expenses of board and education at the college, retaining the present principle of a reduced scale of charges for the sons of naval and military officers, the following rates of payment will be required from cadets:—

	£
Sons of private gentlemen, admirals, and general officers having regiments	80
Sons of general officers not having regiments	70
Sons of captains and commanders of the Royal Navy, and of field officers of the army, having substantive rank	50
Sons of all officers of the army and navy under the above rank	40
Sons of officers of the army and navy who have died in the service, and whose families are proved to be left in pecuniary distress	20

18. These payments do not include either the expense of clothing, or of fuel and light; for the former a fixed charge would be made against the parents of the cadets; the expense of the latter it is proposed to include in the ordinary estimate for the supply of these articles to barracks and other military buildings.

19. The maintenance of the 40 Queen's cadets, who will as at present receive gratuitous education, should, it is considered, be made a charge against the public, and be defrayed by a special Parliamentary grant at the rate of 80*l.* for each cadet, which will include the cost of clothing.

20. As regards discipline I am strongly of opinion that its maintenance should not be entrusted to non-commissioned officers, but that the supervision of commissioned officers, and a delegation of authority to the senior students should be substituted, as being more in accordance with the honourable feelings which it is so important to cultivate among the young men about to enter the army.

I would suggest that a detailed scheme of instruction and discipline with the number of professors and officers to be employed should now be drawn up by the Council of Military Education, and that an early announcement of the scheme should be made to the public, as the new buildings about to be erected will be ready for occupation early next year.

I have, &c.

H.R.H The General. Commanding-in-Chief. (Signed) Herbert.

Extract from a Memorandum of the Council of Military Education in reference to the above Letter.

1, Whitehall Yard, S.W.,
7 March 1861.

With reference to the letter from the Military Secretary of the 1st inst., transmitting a letter from Lord Herbert of the 28th ultimo, on the subject of the re-organization of the Royal Military College, the Council of Military Education have the honour to submit, for the consideration of His Royal Highness the General Commanding-in-Chief, the enclosed estimate with an explanatory statement and a proposed notice to be issued to the public.

The Council will also forward, with as little delay as possible, the detailed scheme of instruction and discipline which has been called for.

Proposed Notice.

After the 1st January 1863,* direct appointments to commissions in the army, with the exception of those granted to deserving non-commissioned officers, will cease, and all candidates will be required to undergo a course of military instruction and training at the Royal Military College.

The course of instruction will be calculated for a residence of four terms or one year, and in no case will a cadet be allowed to remain more than six terms, or one year and a half at the college.

Candidates will be required to pass a qualifying examination for entrance, similar to that now in force for direct commissions, and on leaving the college prior to obtaining their commissions, cadets will be required to pass an examination in the subjects which form the college course of military instruction, and to be certified to have attained a fair proficiency in drills and military exercises. Those cadets whose period of residence does not exceed four terms, or one year, will be allowed to compete for such commissions without purchase as may at the time be notified for competition.

This examination will include the obligatory subjects of military instruction, which will form the college course, as well as other subjects of general education which will be optional to the candidate.

Examinations for direct commissions will continue as heretofore, until 1st January 1863,* when they will cease. The minimum age for that examination being 18 years, it follows that candidates who will not attain that age before the date above stated, will be required to pass through the college before they can obtain their commissions. On the 1st August of the present year, candidates will be admitted to the college on the one year's course only, the number to be so admitted being hereafter notified. The age for admission will continue to be for the present from 16 to 19 years, but the qualifying examination for admission will be the same as that now required from candidates for direct commissions. The scale of payments will be as follows:—

	Annual rate of Payment. £
For sons of private gentlemen, admirals, and general officers having regiments	80
Sons of general officers not having regiments	70
Sons of captains and commanders of the Royal Navy, and of field officers of the army having substantive rank	50
Sons of all officers of the army and navy under the above ranks	40
Sons of officers of the army and navy who have died in the service, and whose families are proved to be left in pecuniary distress	20

All commissions without purchase will henceforth be reserved for the competition of the cadets of the Royal Military College, with exception of those for which candidates have already passed their examination, and also with exception of commissions granted to non-commissioned officers.

Proposed Estimate for an Establishment of 600 Gentlemen Cadets at the Royal Military College, Sandhurst.

The strength of the establishment proposed by the Council was as follows:—

I.—*Military Establishment.*

1 governor.	2 riding masters.
2 majors and superintendents of studies.	1 quartermaster.
6 captains.	1 chaplain.
6 lieutenants.	1 surgeon.
1 adjutant.	2 assistant surgeons.
1 paymaster.	2 rifle instructors.
	2 fencing masters.

Besides non-commissioned officers, band, clerks, servants, &c.

II.—*Educational Establishment.*

6	masters of mathematics.
6	„ French.
2	„ German.
2	„ landscape drawing.
1	„ natural sciences.
1	„ experimental sciences.
18	instructors in fortification.
6	„ military history.
18	„ military sketching.

The estimated annual expense of the establishment was:—

	£
Military establishment and general expenses	36,051
Educational establishment	8,532
Total	44,583

Exclusive of the cost of maintenance of 40 Queen's cadets.

---

* This date is assumed as the probable period of the completion of the additional buildings which will be required at Sandhurst, and the confirmation of the architect or contractor will be requisite before this notice is issued to the public.

The above memorandum by the Council, with the accompanying estimate, were transmitted to the Secretary of State in a letter from the Commander-in-Chief, dated 8th March 1861.

SIR, War Office, 21 March 1861.

I HAVE had under my consideration the memorandum of the Council of Military Education enclosed in your Royal Highness's letter of the 8th instant respecting the re-organization of the Royal Military College at Sandhurst.

The estimate of the probable cost of the establishment which has been prepared by the Council would appear, so far as can at present be judged, to have been rightly computed, except that the difference between the full and half pay of the military officers attached to the college has been under-estimated by about 200*l.*, even assuming, as the Council have done, that infantry officers will alone be employed.

With regard to the amount to be charged to the parents, I am of opinion that it is very desirable that the whole should be included in the one annual payment to be exacted from each class.

At present there is a charge spread over two years on account of clothing supplied by the establishment. I propose that to the regular uniform some sort of inexpensive dress should be added, and that the cost should be included in the annual fixed payment, instead of being made a separate account. The same remark applies to the contingent fund for breakages. Thus, if the sums charged under these heads amount to 12*l.* the annual payment, now fixed at 80*l.*, would have to be raised to 92*l.*, and that of the class at 20*l.* to 32*l.*

The charges on account of the uniforms of the non-commissioned officers, band, attendants, and hospital corps, ought, I think, to be recovered from the cadets and included in the present payment.

With regard to the wages of gate-keepers and police, rates and taxes, the salary of the Secretary to the Board of Commissioners, and also fuel and light and stationery, if it be decided that these charges should be borne by the public, a clear statement should be furnished annually by the Commissioners for insertion in the estimates, so as to place Parliament in possession of the true cost of the establishment.

But these charges will amount to between 5,000*l.* and 6,000*l.*, and the question arises whether they ought not to be recovered from the cadets.

I confess that I think that the principle on which the scale of payments is now fixed is objectionable, inasmuch as the parents of one boy are required to pay more than the true cost in order that the parent of another may be charged less.

Nothing but the existence of the practice, and a certain tradition in its favour, can justify the arrangement.

It may be said that now that passing through Sandhurst will be made compulsory, it is the more important not to raise the scale of charges of the lower ranks of the two services. But on the other hand, inasmuch as it is compulsory, it is the more necessary not to inflict any injustice on ranks in the first class, who are often poorer than officers in the 2nd or 3rd. Thus a curate with the stipend of an ensign is made to pay the same rate as a general officer with a regiment.

I should propose therefore to omit the 2nd class now put at 70*l.*, and to bring all general officers into the 1st class, with this proviso, that general officers who are in the receipt only of the half pay of their last regimental commissions should pay as regimental officers of that rank.

I would also omit class 4, thus bringing all officers not being general officers on to one scale.

And lastly, I would abolish class 5 altogether, now that the Queen's cadetships will amount to 40, inasmuch as the amalgamation of the Indian local army with the Queen's army will ultimately give a larger share of the cadetships now at the disposal of the East India Government to the sons of Queen's officers who have served in India, than has hitherto been the case.

The effect of these changes, calculated on the estimate of the Council, would amount to 680*l.* a year, but the main advantage would be that they would diminish the chances of fluctuation in the receipts without any corresponding fluctuations in the number of cadets to be maintained, by which the financial position of the establishment might be seriously compromised.

Apparently it would require an addition of 10*l.* to each of the two classes into which, according to this plan, the whole number of cadets (exclusive of the Queen's cadets) would be divided, to raise the 5,000*l.* or 6,000*l.* which would be required to cover the expenditure which the Council propose to charge to the public.

The two classes would therefore stand at 90*l.* and 60*l.* respectively, but to this must be added certainly 10*l.* for the items now charged separately, such as clothing, breakages, &c., thus bringing the whole annual payment to 100*l.* and 70*l.*

I would add that it appears to me advisable that the scale of charges at the establishment at Woolwich should be carefully inquired into, and if necessary revised, so as to bring them in principle, if not in degree, to an uniform standard.

I have, &c.

H.R.H. The General Commanding-in-Chief. (Signed) HERBERT.

MY LORD, Horse Guards, 26 March 1861.

I HAVE to acknowledge the receipt of your letter of the 21st inst., 7011/1297, relative to the re-organization of the Royal Military College at Sandhurst, upon which I would observe that, with regard to the scale of payment to be made by the parents for the cadets, I fully concur that it is objectionable as a general principle that the parent of one boy should be required to pay more than the actual cost in order that the parent of another should be charged less; but the practice of half a century has accustomed the public mind to the existing varied scale of payments.

The reduction of the rate paid by civilians from 120*l.* to 100*l.* per annum was a great boon to them, and now to raise the rate to be paid by sons of officers might be viewed as a positive hardship.

It is worthy of consideration, that after the new system, as proposed shall have been established, it will become compulsory for all candidates for the line to pass through the Royal Military College; and to increase the annual payment for the sons of the junior grades of the profession will, I fear, be virtually their total exclusion from the army.

I would therefore propose that all cadets should pay a certain annual amount, say of 80*l.*, exclusive of clothing and contingencies—that the separate classes should remain as at present, with the exception of the distinction between the sons of general officers who have regiments and those who have not—but that the difference between that sum (80*l.*) and the amount now paid by captains and by ranks junior to them for their sons, should be made up to that sum by the Government. It appears to me preferable to apply the grant of public money in this manner, than to exempt the cadets from other charges such as fuel and lighting at present borne by them.

I am, &c.

The Right Hon. Lord Herbert. (Signed) GEORGE.

SIR, War Office, 10 May 1861.

I HAVE the honour to inform your Royal Highness, in reply to the observations on the re-organization of the Military College at Sandhurst, contained in your Royal Highness's letter of the 26th March, that I have directed an estimate to be made of the total annual cost of the military college under the proposed system, based upon the principle of regarding it as a private establishment, in which the payments made by the pupils would be expected to cover the whole outlay, including the original purchase of land and buildings, and the cost of wear and tear and maintenance.

The estimate is as follows:—

	£
Cost of the military establishment and general expenses - - -	36,252
Educational establishment - -	8,532
Fuel and light not included in the above	5,590
Clothing of non-commissioned officers and privates - - - -	133
Interest on original value of buildings and land at 5 per cent. on 100,000*l.* -	5,000
Cost of repairs, and interest on the cost of the buildings now in course of erection - - - - -	5,000
Messing and washing of 40 Queen's cadets - - - -	1,287
Total - -	£61,794

This sum divided among 600 cadets would give an annual cost for each cadet of 103*l.*, to which must be added a sum of 12*l.* to cover the cost of uniform, and the amount paid to the contingent fund; thus making the total cost of the education and maintenance of each cadet 115*l.* per annum.

The reduction in the rates of payment in the case of

Appendix II. (H.)

Royal Military College, Sandhurst.

certain classes of cadets, would therefore entail an annual charge upon the public to the following extent:—

		£
For 18 cadets contributing	50*l.* instead of 115*l.*	1,170
25 „ „	40*l.* „ „	1,875
16 „ „	20*l.* „ „	1,520
40 „ „	Nil. - -	4,600
	Total - -	£9,165

This estimate gives the extreme calculation of the expenses which could be considered chargeable against the cadets, and if the principles on which it is founded were adopted, the establishment would be really self-supporting in every respect, with the exception of the contribution from the public funds in aid of orphans and officers' sons.

I am of opinion, however, that, although the cost of fuel and light must strictly be included in the annual expenses of the establishment, the interest on the 100,000*l.* originally invested in the estate and buildings may fairly be omitted from the calculation. This omission would diminish the estimate of the annual outlay by 5,000*l.*, and reduce the charge to each cadet by 8*l.* in round numbers, thus leaving it at 107*l.*

I am also of opinion that the cost of uniform, estimated at 9*l.* for each cadet, can scarcely be considered as a part of the general expenses of the college, but that it is a charge which should be borne by all the cadets themselves, whether admitted at reduced rates or without payment. On this principle the estimate of the cost of each cadet would be still further reduced by 9*l.* (the cost of the uniform), or from 107*l.* to 98*l.*

With regard to the sum included in the estimate as interest on the cost of the additional buildings now in course of erection, it may be questioned whether such an item is fairly chargeable to the cadets. But as there can be little doubt of the propriety of charging them with the cost of repairs, I consider that under any circumstances 95*l.* is the lowest sum which should be taken to represent the annual cost of each cadet.

The elimination of the items to which I have referred, and the payment by individuals of the cost of their uniform, would reduce the charge on the public in aid of the education of orphans and officers' sons by 20*l.* for each individual to whom such assistance is granted, or in all by 1,980*l.*, and the sum to be defrayed by the public, for which it would be necessary to provide in the army estimates, would amount, for the numbers I have stated, to 7,185*l.*; viz.:—

		£
For 18 cadets at	50*l.* instead of 95*l.* -	810
„ 25 „	40*l.* „ -	1,375
„ 16 „	20*l.* „ -	1,200
„ 40 „	Nil. „ -	3,800
	Total - -	£7,185

The actual sum, however, to be voted in the education vote to make up this deficiency would not be so large, as the cost of fuel, light, forage, and repairs, would be borne in the respective votes to which these heads belong.

If your Royal Highness concurs in the views which I have expressed, I would propose that the principle on which these calculations are based should be adopted in determining the rates to be paid by the different classes of cadets admitted to the college.

A notice should now be issued as to the time when the new regulations will come into operation, and the terms on which the candidates will in future be admitted to Sandhurst.

I have, &c.
(Signed) Herbert.

H.R.H. The General Commanding-in-Chief.

Sir, Horse Guards, 11 June 1861.

With reference to previous correspondence, I am directed by the General Commanding-in-Chief to transmit to you, to be laid before the Secretary of State for War, the accompanying memorandum by the Council of Military Education, forwarding a copy of the proposed regulations for the admission, education, and military training of the gentlemen cadets at the Royal Military College, together with a form of notice to be given to the public, of the new system which has been decided upon for the education of candidates for commissions in the army at that institution after the 1st January next.

His Royal Highness agrees generally in the views of the Council as to the alteration of the present regulations to suit the new system, and also in the suggestion on Article 3 relative to payments, &c.; and would therefore propose that the contribution of 80*l.* a year by the sons of general officers not having regiments be added as a second item in the list detailed on page 5; and further requests that Lord Herbert's attention may be drawn to those parts erased on pages 7 and 8 on the subject of pocket money hitherto paid to gentlemen cadets, His Royal Highness having some doubts as to the expediency of discontinuing the weekly allowances referred to.

I have, &c.
(Signed) W. F. Forster.

The Under Secretary of State, War Office.

P.S.—In order to save time the papers alluded to in the foregoing letter are sent in original, and I have therefore to request they may be returned with your reply, when steps will be immediately taken to obtain Her Majesty's approval of the whole scheme previously to its being made public.

W. F. F.

Sir, War Office, 19 June 1861.

The Secretary of State for War has had under consideration your letter of the 11th instant, enclosing a memorandum from the Council of Military Education, together with a copy of the proposed regulations for the admission, education, and military training of the gentlemen cadets at the Royal Military College, and a form of notice to be given to the public of the new system which has been decided upon for the education of candidates for commissions in the army at that institution.

In reply, I am to request that you will acquaint the General Commanding-in-Chief that Lord Herbert is disposed to agree with the Council that, as the scale of payments has been generally raised, it may be advisable to continue to admit the sons of general officers not having regiments at the same rate as heretofore, viz., 80*l.* a year, and his Lordship requests that the necessary alteration may be made in the scale.

His Lordship also agrees with the Council that the system of restricting the amount of pocket money, however applicable in a school for boys, could not be enforced in a college for young men, and should therefore be discontinued.

Lord Herbert observes that in the list of marks to be awarded the Council have omitted not only the marks for conduct, for which omission his Lordship conceives that they have assigned sufficient grounds, but also the marks for athletic exercises which, as being peculiarly suitable in a military college, his Lordship considers should be inserted.

It is proposed that the age for admission should be from 16 to 20. This would enable candidates generally to enter the army at from 17 to 21. Lord Herbert questions, however, whether 17 is not too young, and in the event of His Royal Highness concurring on this point, he would propose to fix 17 as the minimum age of admission to the college.

Subject to these observations Lord Herbert concurs in the proposed notice and regulations.

I am, &c.
(Signed) E. Lugard.

The Military Secretary.

Sir, War Office, 7 August 1861.

I am directed by the Secretary of State for War to acquaint you, for the information of His Royal Highness the General Commanding-in-Chief, that Mr. Baring having conveyed an assurance to the House of Commons that the new system of admission into Sandhurst should not come into operation till next Midsummer—thus allowing the House an opportunity of expressing an opinion upon it next session—it follows that no admissions under that system can take place until 1st July 1862.

I am, &c.
(Signed) E. Lugard.

The Military Secretary.

(iii.)—Correspondence between the Secretary of State for War and the Universities of Oxford, Cambridge, and Dublin, relating to the Plan for requiring all Candidates for Commissions in the Line to pass through the Royal Military College.*

Sir, Oxford, December 1861.

I am directed by the Council of the University to bring before your notice the subject of military education, especially with reference to the plan believed to be now

* Reprinted from a Return ordered by the House of Commons to be printed, 11th March 1862.

under the consideration of the Government, by which every candidate for a commission in the line will be required to reside at Sandhurst for at least one year, being at the time of admission not less than 18 years of age.

We understand that 500 officers are annually required for the line alone; and, if an average be added for rejected candidates, it will probably be necessary to have at Sandhurst an establishment calculated to hold between 600 and 700 youths above the age of 18. We submit that, regard being had to the difficulties long found in managing military colleges consisting of smaller numbers, and composed of young men possessing higher qualities than can be demanded from candidates for commissions in the line, the task of regulating an establishment such and so large will be exceedingly arduous.

We believe that high authorities may be cited to show that officers who have received academical education and training have been distinguished among their compeers for intelligence, good conduct, and aptness for military affairs.

We have no wish, in Oxford, to undertake the military instruction of a large mass of candidates for commissions. To do so we should have to alter our standard of education, or to admit a special class of young men who neither could nor would attempt to pass our ordinary examinations. But we think it would be hard upon the Universities, and disadvantageous to the army, that a measure should be adopted which will discourage those young men who can and will pass our examinations from seeking academical education. We are convinced that a liberal education, such as we can give, and the mental and social training implied in residence at the Universities, would, to such young men, and to the army generally, be of much greater value than any technical proficiency which they might gain by early instruction of a strictly professional kind.

We submit that, to give effect to these principles, it would be desirable that young men who have passed our first and second examinations (called responsions and moderations) should be accepted as candidates for commissions in the line, and not be re-examined in Latin, English, arithmetic, or any parts of mathematics in which they have satisfied our examiners.

This would be much; but, besides this, we could, if the military authorities think fit, propose to the University to add other special subjects to those generally required. Excellent teachers of foreign languages are paid from academical funds to give free instruction to members of the University; and a project for establishing a drawing school in one of our public buildings is now under consideration. In these subjects, as also in branches of history, geography, and mathematics, not made compulsory at our examinations, we could provide instruction, and might give special certificates to all candidates for commissions who should satisfy examiners in these subjects respectively.

I have, &c.
(Signed) FRANCIS JEUNE,
Vice-Chancellor.

The Right Hon. the Secretary of State
for the War Department.

REVEREND SIR, War Office, January 8, 1862.

I AM directed by Secretary Sir George Lewis to acknowledge the receipt of your letter of the ult. on the subject of military education, and in which you convey the recommendation of the Council that members of the University who have passed the first and second examination should be accepted as candidates for commissions in the army, without further examination in those subjects in which they have already satisfied the university examiners.

I have, &c.
(Signed) DE GREY AND RIPON.

The Rev. Francis Jeune, D.C.L.,
Vice-Chancellor.

P.S.—A further communication on this subject will be addressed to you.

Merrion Square, Dublin,
SIR, January 11, 1862.

IT being understood to be in the contemplation of Her Majesty's Government to establish a general scheme of military education, applicable to all candidates for commissions in the army, I am requested by the governing members of this University to express their hope that no provision may be introduced in such scheme tending to displace the Universities from the office which they have hitherto filled in relation to the army; such, for example, as that of requiring that all candidates for commissions should be educated exclusively in one school or college.

It is believed that any such measure as this would lower the intellectual culture of the army generally, by depriving it of the higher education which the Universities supply, while it would at the same time tend to engender that narrowness of mind which is the ordinary result of all exclusively professional training.

On the other hand, the Universities afford already the greater part of the instruction required by military men. The University of Dublin possesses able instructors in all the subjects taught in the military colleges, with the exception of those which are purely professional; and she has already educated no small number of those who hold commissions in the higher branches of the service.

It is true that the number of those who now resort to the Universities, previously to entering the army, is comparatively small, still a small ingredient in the mass may exercise a large influence; and it would be much to be regretted if this influence were to be excluded altogether.

I venture therefore to express the hope of the governing members of this University, that in any general scheme of military education which may be hereafter prescribed, the certificate of the proper officer of this University may be accepted, without further examination, as evidence that the candidate has attended the lectures and passed the examinations in the University, and has acquired a competent knowledge of the subjects certified.

I have, &c.
(Signed) FRANCIS BLACKBURNE,
Vice-Chancellor of the University of Dublin.

To the Right Hon.
Sir George Cornewall Lewis, Bart.,
Secretary of State for War.

SIR, War Office, January 27, 1862.

I HAVE the honour to acknowledge the receipt of your letter of the 11th instant, relative to the admission of candidates for military cadetships into the Royal Military College at Sandhurst, and in reply, I am directed by Secretary Sir George Lewis to inform you that, having had the subject fully under his consideration, and having conferred thereon with His Royal Highness the General Commanding-in-Chief, he is of opinion that such candidates as may have passed examinations other than those of matriculation in the University, in the subjects of a general character which are included in the syllabus required to establish a qualification for a military cadetship, may be exempted from any additional examination of a preliminary kind in such subjects, upon the production of certificates from the University examiners of their proficiency in the same; and I am to add, that should the candidates from the University exceed the limits of the maximum age as at present prescribed (viz., under 19 years), Sir George Lewis will be prepared in such cases to consider (if necessary) a relaxation of the rule in regard to age for University undergraduates.

I have, &c.
(Signed) E. LUGARD.

The Right Hon.
Francis Blackburne, LL.D.,
Vice-Chancellor, Dublin University.

SIR, War Office, January 27, 1862.

WITH reference to the letter from this department of 8th instant, I am directed by Secretary Sir George Lewis to inform you, that having had the subject therein adverted to under his further consideration, and having conferred thereon with His Royal Highness the General Commanding-in-Chief, he is of opinion that candidates who may have passed the first and second examinations (called responsions and moderations) at the University of Oxford, may, upon certificates being furnished by the examiners of their possessing the necessary qualifications in the subjects included in those examinations, be exempted from any additional examination of a preliminary character in the same for admission to Sandhurst as military cadets; and I am further to state, that should the candidates from the University exceed the limits of the maximum age as at present prescribed (viz., under 19 years), Sir George Lewis will be prepared, on cases arising, to consider (if necessary) a relaxation of the rule in regard to age for University undergraduates.

I have, &c.
(Signed) E. LUGARD.

The Vice-Chancellor,
University of Oxford.

REVEREND SIR, War Office, January 29, 1862.

ADVERTING to a private correspondence which passed between the late Lord Herbert and the former Vice-Chancellor of the University of Cambridge, in regard to

APPENDIX II. (H.)

Royal Military College, Sandhurst.

the admission into the army and to the Royal Military College, Sandhurst, of the students of that University, I am directed by Secretary Sir George C. Lewis to acquaint you, that, having had the subject under his consideration, and having conferred thereon with His Royal Highness the General Commanding-in-Chief, he has caused letters on the subject to be addressed to the Vice-Chancellors of Oxford and Dublin Universities, copies of which are enclosed; and I am to request, in the event of the University of Cambridge being also desirous of adopting the course approved in the cases of the two Universities above named, that you will be good enough to state, for Sir G. C. Lewis's information, what are the examinations at Cambridge which may be considered equivalent to the first and second examinations (called responsions and moderations) at the University of Oxford, in order that the Secretary of State may be able to determine the qualifications which may entitle the students of the University of Cambridge to exemption from any further examination of a preliminary character in those subjects on admission to Sandhurst as military cadets.*

(Signed) E. LUGARD.

The Vice-Chancellor of Cambridge.

Queen's College Lodge, Cambridge,

SIR, February 3, 1862.

I HAVE the honour to acknowledge the receipt of your communication of the 29th ultimo, and to say, that I have laid the same before the Council of the Senate. I have no doubt that the University of Cambridge will be desirous of adopting the course approved in the cases of the Universities of Oxford and Dublin.

The examination, which may be certainly considered equivalent to the responsions and moderations at Oxford, is the previous examination at the end of the fifth term, *i.e.*, towards the latter part of the second year of residence.

As the students will have so long a training in Cambridge, might not the period of residence at Sandhurst in their case be shortened?

I have, &c.

(Signed) GEO. PHILLIPS, V.C.

Edward Lugard, Esq.,
War Office.

REVEREND SIR, War Office, February 7, 1862.

I AM directed by Secretary Sir George Lewis to acknowledge the receipt of your letter of the 3rd instant; and I am to state, in reply, that when the new scheme of military education at Sandhurst is finally decided upon, Sir George Lewis will give due consideration to the suggestion contained in the latter paragraph of your letter.

I am, &c.

(Signed) EDWARD LUGARD.

The Vice-Chancellor of
Cambridge University.

SIR, February 10, 1862.

I HAVE the honour to acknowledge the receipt of your letter of the 27th ultimo, in which you propose to make certain regulations in favour of those University undergraduates who may hereafter be candidates for admission into the Royal Military College at Sandhurst; and I have not failed to communicate the same to the tutors, and other persons concerned in the University of Dublin.

At the same time, I must express my fear that the proposed regulations, limited as they are, to the examination for admission into Sandhurst, will not operate as an inducement to any to receive a portion of their education at the University, previously to entering the army.

If, as is supposed, it is the intention of Her Majesty's Government to require all candidates for commissions in the army to reside, and to be instructed at Sandhurst, I may perhaps be allowed to suggest, that the advantages of a University education might be more adequately recognized, by abridging the required time of residence. And I venture to ask that such concession be made to the undergraduates of this University who have been two years on its books, and have passed the "previous examinations" (preliminary to the degree examination), which takes place at the close of that time. Such an arrangement would seem to be both reasonable in itself, and simple in its operation, and it would fall in with the regulations which you have already professed your readiness to make, by which the limit of age for admission into the military college is extended in the case of University undergraduates.

I have, &c.

(Signed) FRANCIS BLACKBURNE,
Vice-Chancellor of the University of Dublin.

To the Right Hon.
Sir George Cornewall Lewis,
Secretary of State for War.

SIR, War Office, February 14, 1862.

I HAVE the honour, by direction of Secretary Sir George C. Lewis, to acknowledge the receipt of your letter of the 10th instant, and to acquaint you in reply that when the new scheme of military education at Sandhurst is finally decided upon, Sir George C. Lewis will give due consideration to the suggestion contained in your present communication.

I have, &c.

(Signed) EDWARD LUGARD.

The Right Hon.
Francis Blackburne, LL.D., Vice-Chancellor
of the University of Dublin.

REVEREND SIR, War Office, February 18, 1862.

WITH reference to my letter of 27th ultimo, relative to the examination of University students for cadetships at Sandhurst, I am directed by Secretary Sir G. C. Lewis to state, that, having referred the correspondence for the information of the Council of Military Education, it has been pointed out by that board that it would be desirable to fix some definite course of mathematics, as without such a qualification a student would enter the establishment unable to proceed with his fortification and other collateral studies. It seems therefore to Sir G. C. Lewis desirable that the University authorities should define the course of mathematics which would be required from the candidates in their examination; and as it is proposed to introduce in the future regulations for the college of Sandhurst a rule that candidates for commissions without purchase shall be allowed to count, at their final examination, a certain proportion of the marks which they had gained at the entrance examination, it is also desirable that some scheme should be adopted at the Universities to meet this requirement, or that the candidates for commissions without purchase, should attend the examinations of the Council in those subjects.

I am, &c.

(Signed) E. LUGARD.

The Vice-Chancellor of the
University of Oxford.

Similar letters were written to the Vice-Chancellors of the Universities of Cambridge and Dublin.

Pembroke College, Oxford,

SIR, February 22, 1862.

WITH reference to your letter of the 18th instant, may I be permitted to ask what is the extent of the mathematical knowledge which it would be proper that young men going from the University to Sandhurst should have attained?

I am, &c.

(Signed) FRANCIS JEUNE,
Major-Gen. Sir Edward Lugard. Vice-Chancellor.

SIR, Dublin, February 24, 1862.

I HAVE the honour to acknowledge your letter of the 18th instant, which I have communicated to the Provost and Senior Fellows of Trinity College for their consideration; and I am requested by them to state in reply for your information, and that of the Council of Military Education, that the University qualifications proposed by them is the passing (to the satisfaction of the examiners) of the "previous examination," which takes place at the close of the second academic year.

The course of mathematics embraced in this examination is, in the case of ordinary students—

Euclid—Books 1, 2, 3, and 6.
Arithmetic.
Algebra—to end of quadratic equations and plane trigonometry.

Candidates for honours are examined, in addition, in—

The higher algebra (including the general theory of equations).
Trigonometry, plane and spherical.
Analytic geometry (including the conic sections).
And the more elementary portions of the differential and integral calculus.

I am also requested by the Provost and Senior Fellows to state that an abridgment of the required time of residence at Sandhurst, in the case of University candidates, as

* Similar concessions were made at later periods to the Universities of London, Edinburgh, Glasgow, St. Andrew's, Aberdeen, and Queen's University, Ireland.

explained in my letter of the 10th instant, would, in their opinion, be in every way preferable to an exemption from any portion of the examinations prescribed by the military authorities.

This arrangement would probably compensate the disadvantages under which such candidates would otherwise labour, in devoting so large a portion of time to the general subjects of the University curriculum; and it would not be liable to the difficulty to which you have referred in your last letter relating to candidates for commissions without purchase.

I have, &c.
(Signed) Francis Blackburne,
Vice-Chancellor of the University of Dublin.

To the Right Hon.
Sir George Cornewall Lewis, Bart.
Secretary of State for War.

Rev. Sir, War Office, March 3, 1862.

In reply to your letter of the 22nd ultimo, I am directed by Secretary Sir George C. Lewis to annex, for your information, a statement showing the subjects in arithmetic and mathematics, and the extent of knowledge required therein in the examination for admission to the Royal Military College, Sandhurst.

I am also to state that the obligatory subjects at Sandhurst for passing for a commission are, in addition to drills and military exercises, elementary mathematics, fortification, plan drawing, and military surveying, and that the Council of Military Education have reported that "there is nothing "to prevent a cadet from going up for examination for his "commission as soon as he has completed his military "instruction."

"Practically a very large number have gone up in a year "and a half, and there are instances of cadets having "qualified themselves for their final examination in one "year."

I have, &c.
The Vice-Chancellor (Signed) E. Lugard.
of the University of Oxford.

Similar letters were written to the Vice-Chancellors of the Universities of Cambridge and Dublin.

(Extract.)

Examination for admission to the Royal Military College, Sandhurst.

Obligatory Mathematics:

Arithmetic.—Vulgar and decimal fractions, proportion, extraction of the square root, and interest.

Algebra.—Fractions, simple equations, and questions producing them.

Euclid.—The first two books.*

To these elementary branches 1,200 marks (out of the whole 3,600 for mathematics) are allotted, and it is necessary for qualification that at least 400 be obtained, of which 200 must be obtained in arithmetic.

I.—QUEEN'S AND INDIAN CADETSHIPS.

(i.)—Memorandum on the Regulations under which Queen's and Indian Cadetships are granted.

(By the Secretary.)

The creation of Queen's cadetships originated in the recommendations of the Select Committee of the House of Commons on Sandhurst.* At the time the Committee reported (in the year 1855) the age of admission to Sandhurst was from 13 to 15; in the following year, however, at the time the recommendations of the Committee were adopted by the Government, it was in contemplation to raise the minimum age for admission to the College to 16; and it was consequently decided that, in order to meet the case of those who under the former regulations would have been admitted as Queen's cadets at a younger age, a special allowance of 40*l.* a year might, at the discretion of the Secretary of State, be granted to a candidate qualified for a Queen's cadetship, at the age of 13, to assist him in his preparatory education, until he attained the age at which he would be eligible for admission to the College. This arrangement was sanctioned by the Treasury in 1856,† and at first the results of the recommendations of the Select Committee seem to have been confined to granting candidates the special allowance in aid of their preparatory education, as no Queen's cadet appears to have entered the College until March 1860.

The first public announcement of the institution of Queen's cadetships, and of the regulations under which they were to be granted, was made by a General Order dated Horse Guards, 5th January 1858. It had by this time been finally determined to fix the ordinary minimum age for admission to Sandhurst at 16; but an exception was made in favour of the Queen's cadets, who were to be admitted one year younger,—at the age of 15. The regulations which accompanied the General Order above alluded to contained the following provisions:—

"These cadetships, of which there are 20 in all, are confined to the sons of officers of the army, Royal navy, and Royal marines, who have fallen in action, or have died of wounds received in action, or of diseases contracted on active service, and who have left their families in reduced circumstances.

"Gentlemen cadets on this class are educated gratuitously.

"The nominations, with the concurrence of the Secretary of State for War, are made by the Commander-in-Chief for the army, in the proportion of 15 cadetships, and by first Lord of the Admiralty for the navy and marines, in that of five cadetships,—to whom applications are to be made.

"No candidate can be admitted under the age of 15 nor above that of 17.

"In a case where the services of the father and the circumstances of the family are deemed such as to constitute a claim, a candidate ineligible for immediate admission, on account of his not having attained the proper age, but being a promising youth, may, at the discretion of the Secretary of State for War, be allowed an addition to the compassionate allowance, with the especial view of promoting his education, until he is eligible for admission into the College."

The regulations under which Queen's cadets are at present nominated are similar to the above, with the exception that the wording of the phrase "diseases contracted on "*active service*" has been altered to "diseases contracted "on *service abroad*," and that Queen's cadets, like other candidates, are not now admitted until the age of 16. An addition to the "Compassionate Allowance," not exceeding 40*l.* a year, may at the same time be granted to a candidate after the age of 13, in order to assist him in his education until he becomes eligible for admission to the College. The number of 20, however, to which the Queen's cadetships are limited, includes both those who have entered the College and those to whom the educational allowance is granted, between the ages of 13 and 16, previously to their admission.

From the first institution of Queen's cadetships, the candidates nominated to them have been admitted to the College on passing a qualifying examination, and have received a gratuitous education; they were, however, originally required to compete for commissions without purchase with other candidates at the end of the College course. The privilege of obtaining a free commission on passing merely a qualifying examination was not extended to them until the institution of the Indian cadetships in 1862. As it was found necessary to exempt the Indian cadets from competition with other candidates for commissions without purchase, it was considered that a similar privilege could not be withheld from the Queen's cadets.† Both classes of cadets, in addition to their free education and maintenance, receive clothing and pocket-money at the public expense.

The institution of Indian cadetships at Sandhurst took place in consequence of the transfer of the government of India from the East India Company to the Crown, and the subsequent amalgamation of the Indian and Imperial forces.‡

The notice of the admission of Indian cadets to the establishment appears for the first time in the College regulations of 1st May 1862. Their number, like that of the Queen's cadets, is limited to 20. They are nominated, under the provisions of Acts 21 & 22 Vict. cap. 106. s. 35. and 23 & 24 Vict. cap. 100. by the Secretary of State for India in Council,

* *See* War Office letter of 27th May 1856, printed among the correspondence connected with the establishment of Queen's cadetships, page xxxvi.

† *See* Treasury letter of 17th September 1856, page xxxvii.

* It has been proposed by the Council of Military Education to add the third book in the event of the present examinations for direct commissions (in which three books are required) being abolished, and all candidates being commissioned from Sandhurst.

Appendix II. (I.)

Royal Military College, Sandhurst.

from the sons "of persons who have served in India in the "military or civil services of Her Majesty or the East India "Company." The restrictions, however, regarding the death of the father and the circumstances of the family, which apply to a candidate for a Queen's cadetship, do not limit the nomination of Indian cadets. The expense of the education and maintenance of the latter is borne by Indian revenues.

(ii.)—Correspondence connected with the Establishment of Queen's Cadetships at the Royal Military College.

Sir, War Department, 27th May 1856.

I am directed by Lord Panmure to request that you will state to the Lords Commissioners of Her Majesty's Treasury that it appears to his Lordship the time has now arrived for giving effect to that part of the report of the Select Committee of inquiry into the establishment and system of education at the Royal Military College, Sandhurst, which related to the claims of the orphans of army, navy, and marine officers.

At page vii. of the Committee's Report, dated 18th June 1855,* the creation of 20 Queen's cadetships was recommended—to be confined to the sons of officers in the army, navy, and marines who have fallen in action, or have died of wounds received in action, or of diseases contracted on active service, and who have left their families in reduced circumstances.

The public charge which these cadetships would involve is estimated in the report at page viii. at about 100*l.* each.

Lord Panmure is desirous of having an estimate forthwith submitted to Parliament to meet the charge of the college for the education of the Queen's cadets, which probably during the remainder of the current year would not exceed the sum of 1,500*l.*; and I am to request that you will move the Lords Commissioners of the Treasury to sanction the submission to Parliament of such an estimate accordingly.

I am, &c.
(Signed) F. Peel.

The Secretary to the Treasury.

Sir, Treasury Chambers, 2nd June 1856.

The Lords Commissioners of Her Majesty's Treasury having had before them your letter of the 27th ultimo. requesting their sanction to a charge in connection with the Military College at Sandhurst, for the education of the Queen's cadets during the remainder of the current year, I am directed to acquaint you, for the information of the Secretary of State for War, that their Lordships are pleased to authorize the insertion of the requisite sum not exceeding 1,500*l.* in the supplementary army estimate as proposed: and they have only to request that regulations may be framed for confining the cadetships, as recommended in the Report of the Committee, to the sons of officers "who have "fallen in action or have died of wounds received in action, "or of diseases contracted on active service, and who have "left their families in reduced circumstances."

I remain, &c.
(Signed) C. E. Trevelyan.

F. Peel, Esq., M.P.

Sir, War Office, 12th June 1856.

I am directed by Lord Panmure to request that you will state to the Field Marshal Commanding-in-Chief that, in pursuance of the recommendation of the Select Committee appointed to inquire into the establishment and system of education of the Royal Military College at Sandhurst, contained in their report of 18th June 1855, page vii., his Lordship has obtained the concurrence of the Lords Commissioners of Her Majesty's Treasury for submitting to Parliament an estimate for meeting the expense of the 20 Queen's cadetships which the Committee proposed should be created for the education of the sons of officers in the army, navy, and marines, who have fallen in action or who have died of wounds received in action, or of diseases contracted on active service, and who have left their families in reduced circumstances.

Lord Panmure is desirous that the first appointments should take effect from the beginning of next term, and proposes to allot their distribution in the first instance in the proportion of fifteen for the army and five for the navy. The selection of candidates from the military service will be vested in the Commander-in-Chief, subject to the confirmation of the Secretary of State for War, who will signify the Queen's approval.

I am therefore to request that you will move Viscount Hardinge to take the necessary steps for carrying out this measure, and that special attention be paid to the qualification above enumerated, as the conditions upon which these applications are to be made.

I have, &c.
(Signed) F. Peel.

Maj.-Gen. Sir Charles Yorke, K.C.B.

Sir, War Office, 12th June 1856.

I am directed by Lord Panmure to state to you, for the information of the Lords Commissioners of the Admiralty, that his Lordship has obtained the concurrence of the Lords Commissioners of Her Majesty's Treasury for submitting to Parliament an estimate for meeting the expense of the 20 Queen's cadetships which the Select Committee of inquiry into Sandhurst Royal Military College in their report of 18th June 1855, page vii., recommended should be created.

The appointments to these cadetships will, in the first instance, be distributed in the proportion of 15 to the sons of military officers and 5 to the sons of officers of the Royal navy and Royal marines, who have fallen in action, or who have died of wounds received in action or of diseases contracted on active service, and who have left their families in reduced circumstances.

The first appointments can be made from the beginning of next term; the selection of candidates, the sons of naval and Royal marine officers, will be vested in the First Lord of the Admiralty, subject to confirmation by the Secretary of State for War, by whom the names will be submitted for Her Majesty's approval.

I am further to beg that special regard may be paid to the qualifications above pointed out, as the conditions upon which candidates are to be appointed.

I am, &c.
(Signed) F. Peel.

The Secretary to the Admiralty.

Sir, Horse Guards, 14th June 1856.

Having laid before the Field Marshal Commanding-in-Chief your letter of the 12th instant, respecting the proposed establishment of 20 Queen's cadetships for the education of the sons of officers in the army, navy, and marines who have fallen in action, died of wounds received on action, or of diseases contracted on active service, and who have left their families in reduced circumstances, I am directed by his Lordship to state that before giving any public notice of the establishment of this class he considers it very desirable, in order to prevent disappointment, that it should be decided at what age cadets for this class will be eligible for admission.

The Field Marshal understands that the question as to the age at which the cadets in general shall be admissible to the Royal Military College is under consideration; and

* The passage in the Report to which reference is made is as follows:—

"Your Committee are unanimously of opinion that the claims of the orphans of our army, navy, and marine officers are entitled to more favourable consideration than they now receive, and that the institution should be put more in harmony with the humane and just views of the Royal Warrant of 1808; and they have no hesitation in recommending an appeal to the liberality of Parliament for such a purpose.

"Your Committee would suggest that 20 Queen's cadetships should be created, 10 to be filled up this year, and 10 the next. That these cadetships should be confined to the sons of officers in the army, navy, and marines, who have fallen in action, or have died of wounds received in action, or of diseases contracted on active service, and who have left their families in reduced circumstances. That these cadetships should not be given by priority of application, but by selection, having reference to the services of the father, and the circumstances of the family. That the selection should be made by the Commander-in-Chief for the army, and the First Lord of the Admiralty for the navy and marines. That the nomination should be made by them, accompanied by a declaration, written in their own hand and signed by them, that (having reference to the services of the father, and the circumstances of the family), the party named has, in their judgment, the best claims for the appointment of all who have applied.

"These cadets should be subject to the examination on entrance, and to all the other rules and regulations of the college, as other cadets; they should receive their education free of expense, and be relieved from the payment for books, &c.; and your Committee would recommend that if their conduct shall have been perfectly satisfactory, and they shall have passed their final examination well, they should receive the same outfit as is granted to an officer promoted from the ranks.

"The fair payment of a cadet for his board and education has been calculated at 80*l.* This is possibly somewhat underrated. To this, however, something must be added for payments for books, &c., from which the Queen's cadet should be free, which would bring the expense of each cadet to 100*l.*; and if it should please Her Majesty to sanction by warrant the appointment of such cadets, your Committee would suggest that the estimates for the Military College should contain a special item, based on this calculation, 'in aid of the funds of the college 'for the gratuitous education of 20 Queen's cadets, being the sons of 'officers who have died in the service of their country, and whose fami-'lies are in reduced circumstances.'

"Your Committee trust that by this vote, and by some arrangements which they have to propose in the senior department, the funds of the junior department will, to a small extent, be relieved; and that the educational staff of the college may receive such increase as would appear to be required."

his Lordship inclines to the opinion that there would be an advantage in the age being so fixed that they might receive the ordinary education of the sons of gentlemen at some public or other school before commencing the course of military instruction at Sandhurst, consequently that they should not enter the Royal Military College before the age of 15; but in the case of the Queen's cadets, as [illegible] appears to be, in consequence of the claims they derive from the services of their fathers and the reduced circumstances in which their families have been left, that the State should charge itself with their education, it would be desirable that they should enter at an earlier age, probably at 12, or not later than 13, and that the education should at first be different from that of the other cadets, being of the nature of that given at other schools, and preparatory to their taking their places amongst the other cadets in the ordinary course of military instruction.

The Field Marshal, therefore, requests that you will bring the subject under the early consideration of Lord Panmure with the view to directions being given thereon.

I have, &c.
(Signed) C. YORKE.

F. Peel, Esq., M.P.

SIR, War Office, 14th August 1856.

REFERRING to the intention announced by the Government during the last session of Parliament, of carrying into effect at once the recommendation of the Select Committee of the House of Commons on Sandhurst Royal Military College, 1855, by the establishment of 20 Queen's cadetships for the education of the sons of officers of the army, navy, and marines, who have fallen in action, died of wounds received in action, or of diseases contracted on active service, and who have left their families in reduced circumstances, I am directed by Lord Panmure to request that you will lay before the Lords Commissioners of the Treasury the accompanying copy of a letter from Viscount Hardinge on the subject of the age at which this advantage is to be made available to the class of orphans proposed, stating at the same time that as Lord Panmure sees considerable objection to the very early age of admission named by Lord Hardinge, while he is at the same time sensible of the force of his Lordship's reason for it, he is induced to request the concurrence of their Lordships in an arrangement by which the same result may be obtained in a different way.

Lord Hardinge would commence the military education of these young gentlemen at 12, or not later than 13 years of age, whereas the result of careful inquiry has been to convince Lord Panmure that it ought not to commence before 16, which is the age his Lordship proposes for admission to Sandhurst hereafter. As this would throw upon the surviving parent or relatives of orphans the expenses of their education for a longer period than heretofore, Lord Panmure proposes to meet the difficulty in their case by a special addition to the compassionate allowance of 40*l.* a year from the age of 13 until they are brought up for examination at 16. This will be a less expense to the public than if they were received as cadets at 13. It will permit them to partake of the advantages of a sound general education during the period at which it is most desirable not to confine the mind to the special objects of military education, and it will leave them under the care and moral training of their natural guardians while it may be most beneficial to them. The total number of Queen's cadets being limited to 20, of whom from six to ten would probably obtain commissions every year, the number of Queen's scholars will not exceed what may be necessary to keep up the supply. It cannot be greater than 10, of whom somewhat more than half would be the orphans of military officers, the remainder of officers of the navy and marines. The expense would be divided between the army and navy estimates in the same proportion.

I am to request that you will submit this proposal for the favourable consideration of the Lords Commissioners of the Treasury, and should their Lordships concur with him, Lord Panmure will take care to frame such regulations as shall effectually secure the objects in view and guard this public provision from abuse, in conformity with the recommendations of the Committee above referred to.

I have, &c.
Sir C. Trevelyan. (Signed) G. C. MUNDY.

SIR, Treasury Chambers, 23d August 1856.

THE Lords Commissioners of Her Majesty's Treasury have had before them your letter of the 14th instant proposing to establish 20 Queen's cadetships for the education of the sons of officers of the army, navy, and marines who have been killed in action, died of wounds received in action, or of disease contracted on active service, in accordance with the recommendation of the Select Committee of the House of Commons on Sandhurst Royal Military College, 1855, and stating that Lord Panmure, being of opinion that the age of admission to the cadetships should be fixed at 16 instead of at 12 or 13 as at present, is desirous of obtaining their Lordships' concurrence in the grant of an addition to the compassionate allowance of 40*l.* a year to the young gentlemen who may be nominated, from the age of 13 until they are brought up for examination at 16.

I am commanded to observe that it appears to my Lords that the proposal to grant this special allowance goes beyond the recommendation of the Select Committee, which was, that "they should be subject to the examination on entrance, and to all other rules of the College as other cadets," the only difference being that in the case of the Queen's cadets the education should be afforded gratuitously.

My Lords are also of opinion that provision is already made under the ordinary regulations relating to widows' pensions and compassionate allowances for such aid as ought to be given from public funds towards the education of the sons of deceased officers of the army, and that by the adoption of the proposed measure a new practice would be introduced, and obligations would be assumed which might lead to serious inconvenience.

I remain, &c.
Colonel Mundy. C. E. TREVELYAN.

SIR, War Office, 3d September 1856.

HAVING submitted to Lord Panmure your letter of the 23d instant, I am directed by his Lordship to request that you will point out to the Lords Commissioners of the Treasury, in reference to their Lordships' remark on Lord Panmure's proposal for the establishment of Queen's cadetships, that at the time of the report of the Committee of the House of Commons on Sandhurst College, the age of admission to that establishment was, as it has hitherto continued to be, 13 years, and that Committee contemplated the education of the military and naval orphans under consideration, from the age of 13 to 17 or 18. It would still be competent to the Secretary of State for War to maintain that rule as regards this or any other class of scholars. Having been led, however, to the general conclusion that it is better for the individual, and ultimately for the service, that his purely military training should commence later, Lord Panmure proposes to make it 16 in general, but his Lordship must hesitate to apply this new regulation to the orphan class, if it is to have the effect of throwing their education on their surviving parent for three years longer than before, and to require it to be of a much higher and more expensive character than her means can possibly admit of; for their Lordships will observe that poverty is one of the indispensable qualifications for this boon. Lord Panmure cannot suppose that the compassionate allowance, never exceeding 20*l.* a year, for the children of officers below the rank of Lieut.-Colonel, is a sum upon which any parent or guardian can maintain, clothe, and educate a boy from the age of 13 to 16, so as to qualify him for admission at that age to the Royal Military College; nor can his Lordship see any alternative, if the intended boon is to be really operative, between an addition to that sum as proposed in Mr. Peel's letter of the 14th instant, and the retention, as regards that class of cadets, of the existing rule. This latter course his Lordship is reluctant to adopt, and I am therefore to request that you will again bring the subject to their Lordships' consideration.

I have, &c.
(Signed) F. PEEL.

SIR, Treasury Chambers, 17th September 1856.

I AM commanded to acquaint you for the information of Lord Panmure, that under the circumstances represented in your letter of the 3d instant, the Lords Commissioners of Her Majesty's Treasury accede, though with reluctance, to the recommendation of his Lordship, that a special addition of 40*l.* a year should be made to the compassionate allowance of the youths who may be selected for the Queen's cadetships at Sandhurst, to be received by them from the age of 13 until they are brought up for examination at 16.

I remain, &c.
F. Peel, Esq. G. ARBUTHNOT.

(iii.)—CORRESPONDENCE CONNECTED WITH THE ESTABLISHMENT OF INDIAN CADETSHIPS AT THE ROYAL MILITARY COLLEGE.

SIR, Horse Guards, November 7, 1861.

I AM directed by His Royal Highness the General Commanding-in-Chief to request that you will bring under

Appendix II. (I.)

Royal Military College, Sandhurst.

the consideration of the Secretary of State for War, that, since the sons of Indian military and naval officers have been admissible to the Royal Military College on the same terms as those of officers of the Queen's services, several applications have been received on behalf of the orphans of deceased officers of the former service for admission to the College on the footing of Queen's cadets.

Though some of the cases would under other circumstances have been in every point of view clearly eligible, and are, from the ages of the youths, of an urgent nature, the Duke of Cambridge has felt himself precluded from entertaining any of these cases by reason of the prior claims of the orphans of the Queen's services, and of there having been no vacancies for some time past on the present very limited establishment of 15, including candidates who are in the receipt of the educational allowance between the ages of 13 and 16.

In order to meet the additional claims of the families of deceased Indian officers, I am directed to convey His Royal Highness's recommendation that the present limited number of Queen's cadets and scholarships should be increased to 20.

I have, &c.

The Under Secretary of State, War Office. (Signed) W. F. Forster.

Sir, War Office, November 26, 1861.

I am directed to acknowledge the receipt of your letter of the 7th instant, conveying a recommendation that the present number of Queen's cadets and scholarships should be increased on account of the claims of orphans of Indian officers, and to acquaint you in reply, that, before communicating with the Secretary of State for India on the subject, Sir G. C. Lewis is desirous of obtaining the opinion of the Council of Military Education on the increase proposed for this particular class of cadets.

I have, &c.

The Military Secretary. (Signed) B. Hawes.

Sir, Horse Guards, December 30, 1861.

I am directed by the General Commanding-in-Chief to request you to lay before the Right Honourable the Secretary of State for War a correspondence which has arisen with the Council of Military Education in reference to the subject of your letter of the 26th November last, and to propose, for Sir George Lewis's consideration, that the addition to the present number of 20 Queen's cadetships at the Royal Military College, for the benefit of the sons of officers of the civil and military services in India, as recommended in the late Lord Herbert's letter of the 1st November 1860,* should, with the approval of the Secretary of State for India in Council, be provided in the estimates now under preparation.

His Royal Highness is aware that even this liberal measure would not literally fulfil the obligations imposed by Clause XXXV. of the Act of 2nd August 1858, which provides for the assignment of "cadetships," that is, commissions without purchase granted on a test examination, whereas a commission without purchase does not fall as a matter of course to the holder of a Queen's cadetship, who cannot obtain it otherwise than by competition with others.

Still, as Lord Herbert's proposal affords to those who would benefit by it every opportunity of obtaining such a commission, and further extends to them the bounty of a free education, which was not guaranteed, either directly or by implication, in the Bill, His Royal Highness is of opinion that the allotment of 20 Queen's cadetships to the sons of officers of the Indian services, civil, naval, and military, would be generally considered ample to satisfy the promise made by Parliament, which it would appear almost impracticable to fulfil by any other means.

I have, &c.

The Under Secretary of State, War Office. (Signed) W. F. Forster.

Memorandum by the Council of Military Education.

1, Whitehall Yard, December 4, 1861.

With reference to the letter of the 28th ultimo from the Military Secretary, the Council of Military Education have the honour to submit, for the consideration of His Royal Highness the General Commanding-in-Chief, that it would appear form the letter of the late Secretary of State for War of the 1st November 1860, $\frac{7611}{1152}$, that in order to comply with the India Government Act of 1858 a certain proportionate number of the commissions formerly given by the India Government in the local army should be given to the sons of officers in reduced circumstances, and that these amounted to about 20 a year. It was then decided that as a commission without purchase would be no boon to such candidates, if the cost of their previous education at the college were exacted from them, it would be necessary to establish 20 new Queen's cadetships to meet their claims.

This decision was no doubt given in contemplation of the establishment of a military college, through which all candidates for commissions would be required to pass; but as it has been decided that candidates for commissions without purchase will in future be required to pass through the Royal Military College, and obtain them as the prize of successful competition, the above reasoning appears equally to hold good under the present regulations.

While, however, it is their duty to refer to the above decision, as bearing materially upon the question now before them, the Council must state their opinion, that, assuming the proportion of the Indian force in officers to be, as stated in the War Office letter of the 7th November 1860, $\frac{7611}{1135}$, not more than one-twelfth of the Imperial, the number of Queen's cadetships above proposed to be granted to the former appears to be out of all fair proportion to that which has been actually accorded to the latter army, and that the addition now proposed of five to the present number of Queen's cadetships would seem to be amply sufficient for the requirements of the Indian military service. The Council, however, would suggest that as, in addition to the 15 Queen's cadetships appropriated to the Royal army, five are also given to the orphans of officers in the Royal Navy, two Queen's cadetships additional to the above might fairly be allotted to the Naval service of the late East India Government.

(Signed) W. Knollys, Lt.-Gen., V.P.
J. E. Portlock, Maj.-Gen.
T. Elwyn, Colonel.
J. E. Addison, Colonel.

Sir, Horse Guards, December 10, 1861.

In reference to your memorandum of the 4th instant, reporting upon a proposal to add five to the number of Queen's cadets at Sandhurst, I am desired by the General Commanding-in-Chief to point out to you that the recommendation of the late Lord Herbert to add 20 to the number of Queen's cadets on account of the sons of officers in the Indian army is based, not on the proportion between the officers of the British and Indian armies, but on the specific guarantee of Clause XXXV. of the Act of 2nd August 1858, wherein it is enacted that "not less "than one-tenth of the whole number of persons to be "recommended in any year for military cadetships shall "be selected from among the sons of persons who have "served in India in the *military and civil services*." This guarantee is deliberately renewed in the Act of 20th August 1860.

It now appears to His Royal Highness that it would be more convenient to invite the fulfilment of Lord Herbert's recommendation in its entirety instead of by instalments, and I am to request you accordingly to favour His Royal Highness, for the information of the Secretary of State for War, with the opinion of the Council upon the original recommendation to increase the Queen's cadetships from 20 to 40.

I have, &c.

Lieut.-Gen. Knollys, &c. &c. &c. (Signed) W. F. Forster.
Council of Military Education.

Memorandum by the Council of Military Education.

1, Whitehall Yard, December 24, 1861.

With reference to the letter from the Military Secretary of the 10th instant, the Council of Military Education have the honour to report, for the information of His Royal Highness the General Commanding-in-Chief, their opinion that, under the circumstances therein stated, the establishment of Queen's cadetships at the Royal Military College should be increased from 20 to 40, in order to meet the requirements of the Indian military and civil service, in accordance with Clause XXXV. of the Act of 2nd August 1858.

(Signed) W. Knollys, Lt.-Gen., V.P.
T. Elwyn, Colonel.

---

* *See* correspondence connected with the schemes for requiring all candidates for commissions to pass through Sandhurst, Appendix II. H., page xxvii.

SIR, War Office, January 4, 1862.

IN transmitting the enclosed copies of correspondence relative to the establishment of a certain number of Queen's cadetships at the Royal Military College at Sandhurst, for the sons of officers of the Indian military, naval, and civil service, I am desired by Secretary Sir G. C. Lewis to state that it has been decided, subject to the concurrence of Parliament, to require a compulsory course of one year's professional study at the college for all candidates for commissions. Having in view, however, the Acts of Parliament as quoted in the correspondence relative to military cadetships, Lord Herbert proposed to create 20 Queen's cadetships exclusively for the Indian service. As, however, the expense thus occasioned by a gratuitous education would amount (calculated at the rate of 100*l.* per cadet) to about 2,000*l.*, and as such expense could not consistently fall upon Imperial revenues, Sir G. C. Lewis desires that the subject may be brought to the attention of Secretary Sir Charles Wood, and his views obtained in regard to the course suggested.

I am, &c.
(Signed) E. LUGARD.

The Under Secretary of State for India.

SIR, India Office, February 1, 1862.

I AM directed by the Secretary of State for India in Council to acknowledge the receipt of your letter, No. $\frac{7620}{270}$, dated 4th January, transmitting copies of correspondence relative to the establishment of a certain number of Queen's cadetships at the Royal Military College at Sandhurst, for the sons of persons who have served in India in the military or civil services of Her Majesty or of the East India Company, under the Acts 21 & 22 Vict. c. 106. s. 35., and 23 & 24 Vict. c. 100.

Sir Charles Wood learns from your letter that it has been decided, subject to the concurrence of Parliament, to require a compulsory course of one year's professional study at the Royal Military College for all candidates for commissions; that it is proposed in order to meet the provisions of the above quoted Acts of Parliament, that 20 Queen's cadets selected by the Secretary of State for India in Council should receive a gratuitous education at that college; but that they should only be appointed to commissions without purchase if they should be successful competitors for such commissions with all the other cadets in the college.

Sir Charles Wood is of opinion that the provisions of the Acts of Parliament will not be complied with by this arrangement. It was clearly intended that commissions without purchase should be allotted to the sons of the persons specified in those Acts, and Sir Charles Wood, therefore, does not consider that their commissions should depend upon success in a competitive examination to which other persons are admitted.

Sir Charles Wood fully acknowledges the justice and propriety of requiring that the candidates selected by the Secretary of State for India in Council, on account of the claim of their parents, should be subjected to a test as to their perfect fitness in every respect to hold commissions in Her Majesty's service; and he could not object to their being required, in common with all other candidates for commissions, to pass a certain time in a military college for purposes of professional education; but he considers that they should receive commissions without purchase, after passing such an examination as may be considered necessary, at the expiration of the period which may be fixed for their residence at the college.

Sir Charles Wood agrees with Sir G. C. Lewis, that if it be decided that the education of the candidates to be selected by the Secretary of State for India in Council should be gratuitous, its cost should properly be defrayed out of the revenues of India, but he abstains from expressing an opinion upon this point until he shall have learnt the views of Sir George C. Lewis with regard to the suggestions which are contained in this letter.

I have, &c.
T. T. PEARS,
Major-General,
Military Secretary.

The Under Secretary of State for War.

SIR, War Office, February 13, 1862.

WITH reference to your letter of 30th December last relative to the establishment of 20 Queen's cadetships at Sandhurst for the sons of officers of the Indian service, and of the mode therein proposed of giving effect to the several Acts of Parliament in which commissions without purchase are guaranteed to such officers' sons, I am directed by Secretary Sir G. C. Lewis to transmit, for the information of His Royal Highness the General Commanding-in-Chief, copies of letters, viz., one from this department of 4th ult., and the reply of the India Office of 1st inst. on the subject, and I am to request you will cause the same to be submitted to His Royal Highness, with a view to any further observations or suggestions he may have to make thereon being furnished to the Secretary of State.

I am to add that unless His Royal Highness sees reason to dissent, Sir G. C. Lewis would entertain no objection to the examination being made qualifying instead of competitive in regard to these cadets, and that the only point (should this be conceded) remaining to be determined in regard to the granting of commissions without purchase would be the limit in regard to numbers.

I have, &c.
(Signed) E. LUGARD.

The Military Secretary.

SIR, Horse Guards, March 4, 1862.

I HAVE laid before His Royal Highness the General Commanding-in-Chief your letter of the 13th ultimo, forwarding a correspondence in which Sir Charles Wood advocates that in lieu of Queen's cadetships, commissions without purchase should be given to the sons of Indian officers who may be selected by the Secretary of State for India, on their going through Sandhurst and passing a qualifying examination.

To which proposal you signify the assent of Sir George Lewis.

In reply His Royal Highness desires to express his entire concurrence in the object proposed, and would suggest for the favourable consideration of the Secretary of State that commissions without purchase be henceforth extended on the same terms to the Queen's cadets on the original foundation.

But at this point it becomes necessary to consider the numbers of commissions without purchase which will be disposable annually, and the various claims for their allotment.

His Royal Highness understands that the vacancies in line regiments caused by appointments to the staff corps, and in the twelve new non-purchase regiments, will probably amount to upwards of 80 annually.

The number of such vacancies in the British army at its present strength, exclusive of these regiments, may be taken at 150, giving a total of 234 per annum as the probable annual supply so long as the British army is maintained at its present strength. His Royal Highness, however, would prefer to base his calculations on a total of only 200.

Hereafter the distribution of these commissions might be arranged as follows:—

To sons of Indian officers - -	20
To Queen's cadets - - -	20
To non-commissioned officers - -	40
Leaving for competition at Sandhurst -	120

which His Royal Highness considers a very liberal proportion to the full establishment of 500 cadets proposed ultimately to be passed through the college every year.

And as the gentlemen who might enter Sandhurst at midsummer on nomination, either as Queen's or Indian cadets, cannot obtain their commissions in the current year, His Royal Highness sees no reason why the first nominations under the arrangements now proposed should not be made in June next.

For the present the arrangements must be exceptional. There are upwards of 50 names of gentlemen on His Royal Highness's list, who were noted and have passed under the old system of direct commissions without purchase, for whom provision must be made.

There are, moreover, about 300 lieutenants and 300 ensigns of the Indian service, supernumerary or unposted to regiments. Of these a large number desirous of entering the Staff corps and adopting an Indian career, will probably prefer adhering to the local service till they can obtain admission to the Staff corps; but it has been already arranged that those who desire it are to be absorbed, as far as practicable, by appointments caused by transfers to the Staff corps.

For the present year His Royal Highness would propose to distribute commissions without purchase as follows:—

The 150 commissions without purchase which may be available in the British army exclusive of the 12 new regiments,—

For Sandhurst - - - -	50
For non-commissioned officers - -	20
Queen's cadets at Sandhurst - -	4
His Royal Highness's list - -	60
	134

This is, perhaps, as many as can be depended on for this year, though the average of late years has been greater.

APPENDIX II. (I.)

Royal Military College, Sandhurst.

Any surplus may be given either to unposted Indian officers, or added to Sandhurst, as may be determined when other requirements are satisfied.

The vacancies which may be expected owing to transfers to the Staff corps, and to casualties, in the twelve new line regiments, His Royal Highness would assign entirely to the Indian service.

Should these views be concurred in by the Secretaries of State, His Royal Highness will instruct the Council of Military Education to report on the means by which they would propose to combine education at Sandhurst for competitive and qualifying examination under one system.

I have, &c.
(Signed) W. F. FORSTER.

The Under Secretary of State for War.

SIR, War Office, March 24, 1862.

IN reply to your letter of the 4th instant, I am directed to acquaint you that Secretary Sir G. C. Lewis is disposed to concur in the arrangements suggested by His Royal Highness the General Commanding-in-Chief in regard to the distribution and grant of commissions as therein detailed.

Prior, however, to making any further communication to the Secretary of State for India relative to the 20 Indian Queen's cadetships, Sir G. C. Lewis is desirous of being informed of the number of Indian Queen's cadets which can be admitted to the Royal Military College at Sandhurst on the next examination, in order that the Secretary of State for India may make arrangements for the candidates nominated by the Indian department.

I am to add that in the event of the 20 Indian Queen's cadetships being established and their commissions granted to them without purchase on passing a qualifying examination, Sir G. C. Lewis will have no objection to a similar course being pursued in regard to the Queen's cadets, *i.e.*, that they should obtain their commissions by passing a qualifying instead of a competitive examination.

I have, &c.
(Signed) E. LUGARD.

The Military Secretary.

SIR, Horse Guards, March 26, 1862.

IN reply to your letter of the 24th instant relative to the distribution and grant of non-purchase commissions to sons of Indian officers, I am directed by the General Commanding-in-Chief to acquaint you that His Royal Highness, having referred to the Council of Military Education, has the satisfaction of informing the Secretary of State for War that in the event of its being decided to allot 20 Queen's cadetships to the sons of officers of the Indian service, there appears to the Council to be no reason why 10 such cadets should not be admitted to the Royal Military College at the next examination, and 10 more at the following examination in December, all subsequent admissions being regulated by the vacancies which may occur at the college.

I have, &c.
(Signed) W. H. GREATHED,
Lt.-Colonel, for
Military Secretary.

The Under Secretary of State for War.

SIR, War Office, April 3, 1862.

IN reply to Major-General Pears' letter of the 1st February, $\frac{473}{104}$ W., in which it is stated that Sir Charles Wood fully acknowledges the justice and propriety of candidates for commissions without purchase being required to pass through a military college, but "considers that they should "receive commissions without purchase after passing such "an examination as may be considered necessary at the "expiration of the period which may be fixed for their "residence at the college," I am directed by Secretary Sir G. C. Lewis to state that, having conferred with His Royal Highness the General Commanding-in-Chief, and it being agreed that the examination to establish a claim to a commission on the part of such candidates as may be recommended by the Secretary of State for India under the provisions of the Act 21 & 22 Vict. c. 106. shall be of a qualifying nature only, Secretary Sir G. C. Lewis will be prepared, having reference to the accommodation at Sandhurst, to give the necessary directions for the reception of 10 candidates who may pass a qualifying entrance examination at Sandhurst at the next examination in June, and 10 more at the subsequent examination in December, all subsequent admissions being regulated by the vacancies which may occur at the college, but a reserve of 20 being as far as practicable maintained for the cadets to be nominated by the Secretary of State for India.

I am to add in regard to the last paragraph of Major-General Pears' letter, under acknowledgment, that Sir G. C. Lewis would be glad to be informed whether the whole or any portion of the number of these cadets should be admitted on the terms of Queen's cadets, *i.e.*, to be educated and maintained at the expense of the State, in this case of course, at the cost of Indian revenues.

I am, &c.
(Signed) E. LUGARD.

The Under Secretary of State for India.

SIR, India Office, S.W., April 12, 1862.

I AM directed by the Secretary of State for India in Council to acknowledge the receipt of Sir E. Lugard's letter of the 3rd April, No. $\frac{7641}{135}$, stating, with reference to the subject of my letter No. $\frac{473}{104}$ W., dated 1st February 1862, that Sir G. Lewis, having conferred with His Royal Highness the General Commanding-in-Chief, and it being agreed that the examination to establish a claim to a commission on the part of such candidates as may be recommended by the Secretary of State for India, under the provisions of the Act 21 & 22 Vict. c. 106., shall be of a qualifying nature only, will be prepared, having reference to the accommodation at Sandhurst, to give the necessary directions for the reception of 10 candidates at the next examination in June and 10 more in December and inquiring whether the whole or any portion of the number of these cadets should be admitted on the terms of Queen's cadets, *i.e.*, to be educated and maintained at the expense of the State.

Sir C. Wood is gratified to learn that Sir G. Lewis concurs in the views expressed in my letter of the 1st February, with respect to the conditions upon which the sons of officers who have served in India should receive commissions in the army under the Acts referred to in that letter.

With a view to carry into effect the arrangement which has now been determined upon, I am desired to request information on the following points:—The period of residence at the Military College proposed for these cadets; the nature of the examination to which they will be subjected on entrance and on passing out; the actual date of the proposed examination, as well as the date by which the qualifying age is to be determined; and the terms and conditions generally under which they will be received at the college.

It is desirable that these particulars should be communicated with as little delay as possible to those whose names have been from time to time recorded in this office as applicants for commissions for their relatives and friends, such applications having in most cases been made with a view to appointments given under different circumstances from those under which these Queen's cadetships will be conferred.

I am further instructed to state that it has been determined by the Secretary of State for India in Council that the whole of the cadets nominated by this office should be admitted on the terms of the Queen's cadets, and the expense of their maintenance and education be defrayed out of the Indian revenues.

I have, &c.
(Signed) T. T. PEARS,
Major-General,
Military Secretary.

The Under Secretary of State for War.

SIR, War Office, July 31, 1862.

ADVERTING to the last paragraph of your letter of the 12th April last, stating that it has been determined that the expense of the maintenance and education of the whole of the cadets nominated to the Royal Military College by the Secretary of State for India shall be defrayed out of Indian revenues, I am directed by Secretary Sir G. C. Lewis to transmit the copy of a letter and its enclosure from the Lieutenant-Governor of Sandhurst, by which it will be seen that the present expense of a gentleman cadet at Sandhurst is estimated at 153*l.* 15*s.* a year, and I am to state that under all the circumstances Sir George Lewis would propose that a sum not exceeding 75*l.* per term, or 150*l.* per annum, should be paid for each cadet nominated by the Secretary of State for India to the Royal Military College, this sum to include all expenses for education, maintenance, and clothing.

As, however, the general expenses of the cadets will fluctuate year by year according to the total number of cadets educated there, it appears to Sir G. C. Lewis that it will be desirable that the rate to be paid by the Indian Government should be fixed once in each year.

I am to add that should Sir C. Wood concur in this proposal, it will be desirable that the first payment should be made by the Indian Government so soon as the cadets

shall have joined, and that subsequent payments should be made at the commencement of each term.

I have, &c.
(Signed) E. LUGARD.

The Under Secretary of State,
India Office.

SIR, India Office, S.W., September 5, 1862.

I AM directed by the Secretary of State for India in Council to acknowledge the receipt of your letter dated 31st ultimo, on the subject of the payment of the expenses of the Queen's cadets at the Royal Military College, Sandhurst, nominated by the Secretary of State for India, and to inform you in reply, that Sir Charles Wood will authorize payment of the sum of 75*l.* on account of each of such cadets as have now joined the college at Sandhurst, and will be prepared to authorize payment of a like amount on account of the cadets who may join the college in February next.

Sir Charles Wood agrees with the Secretary of State for War that it is desirable that the rate to be paid by the Indian Government on account of these cadets should be fixed annually.

I have, &c.
(Signed) T. T. PEARS,
Major-General,
Military Secretary.

The Under Secretary of State for War.

APPENDIX (I.)

Royal Military College, Sandhurst.

K.—CORRESPONDENCE ON THE QUESTION OF REDUCING THE INSTRUCTIONAL STAFF OF THE COLLEGE.

APPENDIX II. (K.)

6609/2052.

SIR, Horse Guards, 2nd September 1867.

WITH reference to your letter of the 29th June last, calling for a report of the time devoted by the professors and masters at the Royal Military College to their tutorial duties and inquiring whether some modification of the present system of instruction would not secure greater economy without impairing efficiency, also calling for a report of the expense of the Staff College, showing whether such is really commensurate with the result, viz., the number of officers qualified therein for staff employment, I am directed by the Field-Marshal Commanding-in-Chief to transmit to you for submission to the Secretary of State for War the enclosed reports (Council, 16th August 1867, College, 2nd August 1867), and I am to request that you will acquaint Sir John Pakington that His Royal Highness concurs most fully in the views adopted by the Council of Military Education, and is strongly of opinion that no change ought to be made in the present system of education at Sandhurst. The Duke of Cambridge is further of opinion, looking to the small remuneration received by the professors and masters, that they should be allowed to take private pupils, provided no such tuition be given to the cadets, which he considers would be most improper.

As regards the report on the efficiency of the Staff College, I am to observe that this institution appears to have perfectly answered its purpose of supplying to the Staff of the Army a sufficient number of officers of ability and of requisite professional attainments.

I have, &c.
W. F. FORSTER.

The Under Secretary of State for War.

CORRESPONDENCE ENCLOSED IN THE ABOVE LETTER.

Royal Military College, Farnboro' Station,
SIR, Hants, August 2, 1867.

IN compliance with the instructions conveyed in your letter of the 2nd July last, I transmit a report of the time employed by the professors of the Royal Military College in their tutorial duties.

If it be His Royal Highness's command that professors should not be permitted to receive private pupils, as suggested by the Secretary of State for War, orders will be given accordingly. They are permitted so to do by the present regulations of the college, and it is feared that if deprived of that privilege, professors would be men of inferior talents. I beg to draw His Royal Highness's attention to paragraphs 4 and 5 in Colonel Hallewell's letter on this subject, herewith enclosed, with which I entirely agree.

I beg leave to state, for the information of His Royal Highness, that no material modification can be made in the present system of instruction; but the course of instruction may, in my opinion, be modified without impairing efficiency, and be productive of economy. This subject (the course of study) has received mature consideration, and is fully discussed in the accompanying report of Colonel Addison, the Superintendent of Studies. The subjects of study may be reduced, and a reduction of professors in consequence. The different schemes of the Superintendent of Studies require serious investigation.

In each he retains two subjects, viz., chemistry and geology, which, in my opinion, may be entirely dispensed with. The instruction is limited to lectures only, occupying, as shown by the return, a short period of the week. I submit that all studies at the Royal Military College should be purely military, and of practical use in military life. I cannot reconcile to myself that chemistry and geology are so; they may be interesting studies to men in mature life. Cadets can only acquire a smattering of these sciences, and even to staff officers they are, so far as my experience goes, of no practical utility, except as regards the management of the electric telegraph, which is not taught either at the Staff or Cadet College.

The only other change, with a view to economy, is a new distribution of the duties of the professors of languages. To this end I propose that the professors of German and French be made available for both the Staff and Cadet Colleges. There are at present two of the former and five of the latter. The reduction of one French and one German master would not, in my opinion, impair efficiency.

As regards the third paragraph of the Secretary of State's letter, viz., a report of the expense of the Staff College, showing whether it is really commensurate with the result, viz., the number of officers qualified therein for staff employment, the expense of the Staff College, as shown by the army estimates, amounts nearly to 8,600*l.* per annum, about one half of which is for the educational branch, the remainder for the maintenance of the establishment. The number of officers qualified for staff appointment since its foundation in 1858 (exclusive of deaths and retirements) is 106 Whether this result is commensurate with the expense is a matter for the consideration of His Royal Highness the Field-Marshal Commanding-in-Chief, and upon which I cannot offer an opinion. Certain it is, however, that much valuable talent has been developed by means of the Staff College, which, but for it, would probably have continued in obscurity, and from which the service cannot fail to derive great advantages.

I have, &c.
G. A. WETHERALL,
Governor Royal Military College.

The Military Secretary,
&c. &c.
Horse Guards, London.

Royal Military College, Farnboro' Station,
SIR, Hants, August 1, 1867.

ADVERTING to the letter from the Military Secretary of the 2nd ultimo, I have the honour to submit to you a letter from the Superintendent of Studies, Colonel Addison, on the subject of possible reductions in the number of professors and instructors in the Gentlemen Cadet branch of the Royal Military College. After careful consideration with Colonel Addison, it appears to me doubtful whether the result, as to economy, of anything short of a very material change in the course of study here could be considered equal to the loss which would occur on the present course.

2. Should the third scheme be entertained (in which, however, I think landscape drawing should be added, for there is no doubt it assists field surveying, and *vice versâ*) one important fact should not be lost sight of, viz., that the gentlemen cadets' time would be fully occupied in subjects that may be regarded as strictly military, and consequently a much higher standard would be attained in the very subjects which hereafter must prove most useful to a young officer. Moreover,

3. Viewing the age at which the gentlemen cadets now enter the college, is it too much to require that their civil education should be sufficiently advanced, on their becoming candidates for the college, to enable them to pass such an entrance examination as shall show a sufficient preparation for the college studies?

4. With regard to the professors not being permitted to take private pupils, I do not know whether it is proposed that such a prohibition should extend to the gentlemen cadets.

5. There are always a certain number of young men who like devoting some portion of their spare time to study, and I would submit that it would be impolitic to interfere with such a proceeding. Indeed, if it were to be prohibited,

Appendix II. (K.)

Royal Military College, Sandhurst.

it might become worth while for strangers to come into the neighbouring villages towards the end of the term to give private tuition, which I should regard as more objectionable than cadets receiving private tuition from our own professors.

I have, &c.
E. G. Hallewell, Colonel,
and Commandant Royal Military College.

General Sir G. A. Wetherall, G.C.B.
&c. &c. &c.
Governor Royal Military College.

Royal Military College,
Sir, 26th July 1867.

With reference to the inquiry whether the instruction at this college could not be conducted with greater economy without impairing its efficiency, I have the honour to state that, after a long examination of this question, and after repeated trials by construction of supposed study time-tables, I can see no way of reducing the educational staff, while continuing the present scheme of studies, without exceeding the limit of 24 hours' attendance per week which forms one of the conditions of the agreement with the masters.

By altering, however, the scheme of studies a reduction might undoubtedly be effected. The excess of masters arises chiefly from the great number of subjects of study. Diminish the number of subjects, or the number of studies in some of the subjects, and a corresponding reduction of masters may be made without lessening the number of hours per diem in which the cadet is employed.

I.—Assume that the number of studies in mathematics and languages is reduced, by striking off these subjects from the work of the third term, and replacing them by a more extended course in the military subjects. The number of studies per week, as compared with the present numbers, will then stand for the respective terms as follows:—

Subject.	Present System.	Suggested System.		
	Number of Lessons per Week during entire Residence.	Number of Lessons per Week.		
		1st Term.	2d Term.	3d Term.
Mathematics	4*	4*	4*	—
Languages	3*	3*	3*	—
Fortification	4	4	4	6
Surveying	4	4	4	6
Military history	2	2	2	4
Landscape drawing	1	1	1	2
Chemistry	1	1	1	1
Geology	1	1	1	1
Total	20	20	20	20

* These numbers are interchanged in the middle of the term.

It will be observed that in this scheme the discontinuance of mathematics and languages in the third term is met by two additional studies in fortification, surveying, and military history, and one additional study in landscape drawing.

The following would be the number of masters, and of hours per week in which they would be employed, under this arrangement:—

Subject.	Number of Masters.	Number of Hours' Employment per Week.
Mathematics	3	21
Languages	3 (French) 1 (German)	21
Fortification	6	21
Surveying	6	21
Military history	3	13½
Landscape drawing	2	15
Chemistry	1	4½*
Geology	1	4½*
Total	26	—

* In addition to work at the Staff College.

The present establishment consisting of 29 masters, there would be a reduction of three, viz.:—

Two masters in mathematics.
One master in French.

It will be observed that the masters would be still underworked, with respect even to the limitation of 24 hours per week; nor do I see how this can be avoided so long as the number of subjects remains so great.

II.—It must be confessed, however, that the reduction above suggested, from 29 to 26 masters, will scarcely meet the arguments of those who estimate the proper amount of educational staff simply by dividing the number of pupils by the number of masters. This, indeed, would be a true mode of estimating where, as in the public schools, one subject of study is entirely predominant. It is impracticable, however, where there are a great number of subjects of nearly equal weight. The only way in this case of reducing considerably the educational staff is by reducing the number of subjects. If the non-military subjects were altogether expunged, the staff might be reduced by nearly one half. Without going so far as this, if it be assumed that mathematics and languages be struck out from the course of study, landscape drawing, as a most useful auxiliary to surveying, and chemistry and geology as voluntary studies, being retained, the following would be the number of masters and the number of hours in which they would be employed:—

Subject.	Number of Masters.	Hours of Employment per Week.
Fortification	6	27
Surveying	6	27
Military history	3	15
Landscape drawing	2	18
Chemistry	1	4½
Geology	1	4½
Total	19	—

The reduction is therefore from 29 to 19 masters. The latter would have in some cases rather more than the amount of work at present stipulated for the civilian masters; but, being military professors, the rule does not, strictly speaking, apply to them.

The following might in this case be the number of studies in each subject for each cadet during his residence:—

Subject.	Number of Lessons per Week.
Fortification	6
Surveying	6
Military history	4
Landscape drawing	2
Chemistry	1
Geology	1
Total	20

Thus, on the present establishment of military professors and instructors, and of those in landscape drawing and the sciences, the cadets would be kept as fully occupied as they are at present, even though 10 masters in mathematics and languages were reduced; a fact that proves what has been above stated, that the excess of masters is mainly due to the great number of subjects of study. There are also, indeed, other causes which, by rendering the construction of the study time-table very complicated and difficult, and making it impossible to give the masters their full work, lead to the same result; but these are in their nature irremediable, as arising from the peculiar nature of some of the studies, and perhaps need not be entered into here.

If it were desired to reduce still further the establishment, the remainder of the non-military studies might be struck off, and the establishment would then consist of—

6 Instructors in Fortification,
6 „ Surveying,
3 „ Military History,

15 Total,

which appears to be the extreme limit to which reduction could be carried for 300 cadets.

Such a reduction of the subjects of study at the college would have to be accompanied by a higher standard on admission, especially in the subjects so struck out from the course. Probably also, in order to give sufficient encouragement to civil education, it would be desirable to carry forward a portion of the marks obtained at the admission examination to the final one for commissions.

It will be understood that in the above tabular statements the figures by no means represent the whole number of hours during which the instructors would be employed. There would be, as at present, examinations during and at the end of the term. Those during the term are conducted

entirely by the masters, and, in the case of the cadets of the first two terms, constituting two-thirds of the college; those at the end of the term also. In military history at least as many hours must be spent in the preparation of the lectures as in the study attendances.

The general conclusion, therefore, so far as I have been able to arrive at it, is,—

1. That no reduction is practicable under the present scheme of studies and the present agreements with the masters.

2. That a partial reduction is possible by expunging mathematics and languages from the work of the third term.

3. That a very considerable reduction is possible by abolishing the last-named studies altogether, and still more if the remainder of the civil studies were also abolished.

Lastly. That in all these cases the time of the cadets could be as fully occupied as it is at present.

I have, &c.
J. E. ADDISON, Colonel,
Major and Superintendent of Studies.

The Commandant,
Royal Military College.

MEMORANDUM by the COUNCIL of MILITARY EDUCATION on the above CORRESPONDENCE.

13, Great George Street, S.W.
August 16, 1867.

The Council of Military Education have the honour to submit for the consideration of His Royal Highness the Field-Marshal Commanding-in-Chief, and the Secretary of State for War, the following observations on the accompanying correspondence relative to the Royal Military College.

1. They consider that, provided the professors and instructors give the stipulated time to their official duties which is required of them by the rules of the college and by their agreements, there is no objection to their increasing their very moderate stipends by giving private tuition, but the Council are of opinion that they should not be allowed to give private instruction to the gentlemen cadets, as such a practice appears to them to be open to grave objections, as already stated in their memorandum of the 23rd July 1867.

2. With respect to a reduction in the number of the masters at the Royal Military College, the Superintendent of Studies proposes three plans. In the first a very trifling reduction (three masters) is contemplated at a considerable sacrifice of instruction in the subjects of mathematics and languages, and the Council consider it inexpedient to disturb the present arrrngements for the sake of so inconsiderable a result. In the second plan he proposes to reduce 10 masters, by altogether excluding mathematics and languages from the college course; while by his third plan he would abolish four more instructors by limiting the instruction entirely to three military subjects, namely, fortification, military drawing, and military history.

Appendix II. (K.)

Royal Military College, Sandhurst.

Either of these latter propositions, if adopted, would entirely change the constitution of the college, and would convert it from a place of general, as well as special education, into one of purely military training.

This would necessarily entail the raising of the standard of qualifications for the entrance into the college, and from this would follow the necessity of raising the age of admission from 16 to 17 in order to enable youths to complete in some degree their general education, and to acquire a sufficient knowledge of mathematics for pursuing with advantage their military studies.

The present system of education at the Royal Military College has been established after long experience and on conviction of its expediency, and the Council consider it would be injudicious to introduce without a better reason than that of a mere saving in the expense of instruction a sweeping change, which would perplex parents, and render the public distrustful of an establishment where the conditions of education were so often varied.

For these reasons the Council submit that it is inexpedient to introduce at present any of the proposed changes in the system of the Royal Military College.

3. With respect to the question whether the result of the Staff College is commensurate with its expense, the Council find the number of qualified officers to be rather in excess of that stated by the governor (115 instead of 106), and they further submit that the value of a well educated staff is not to be estimated by a mere reference to the cost of their instruction.

The Staff College appears to have perfectly answered its purpose of supplying to the staff of the army a sufficient number of officers of ability and of requisite professional attainments.

Lastly, with regard to the governor's suggestion, that the professor of German and French should be made available for both colleges, the Council beg to observe that the post already exists in the branches of chemistry, geology, and riding, and that having been found extremely inconvenient, as it hampers the arrangements of both colleges, it is very inadvisable to extend it further; on the contrary, it is most desirable that the two colleges should be kept as distinct and independent as possible.

Wm. Napier,
Major-General, V.P.
E. B. Hamley,
Colonel.
F. Abbott,
Major-General.

Canon Moseley concurs. Colonel Pocklington is absent on leave.

Wm. Napier.

Minute of the Secretary of State for War on the above Papers.

These reports have been very well prepared, and they meet my inquiries in a complete and satisfactory manner.

Of the three plans suggested by the Superintendent of Studies, with a view to economy and improvement, I think the two first are open to grave objections.

The third appears to me in its principle, though not exactly in its details, worthy of serious consideration.

But it involves so extensive a change that I cannot at once express an opinion upon it, and in any case it could not be adopted without full and further investigation.

I therefore concur with His Royal Highness the Commander-in-Chief and the Council in abstaining for the present from any change.

23/10/67. J.S.P.

Appendix II. (L.)

L.—PRESENT REGULATIONS OF THE ROYAL MILITARY COLLEGE.

Horse Guards, 5th Sept. 1867.

Her Majesty having been pleased to direct that the Regulations of the Royal Military College at Sandhurst, relative to the admission, education, and military training of gentlemen cadets, should be revised and corrected, the following are to be substituted for those now in force.

Admission.

1. Candidates for vacancies at the Royal Military College, Sandhurst, will be required to undergo an examination under the superintendence of the Council of Military Education. Examinations for this purpose will be held in June and December of each year at the Royal Hospital, Chelsea.

2. Twenty Queen's cadets will be borne on the establishments, being the sons of officers who have fallen in action, or have died of wounds received in action, or of diseases contracted on service abroad; and who have left their families in reduced circumstances. Fifteen will be sons of officers of the army, and five will be sons of officers of the Royal Navy and Royal Marines.*

There will be, in addition, twenty Indian cadetships, for nomination to which the sons of persons will be selected who have served in India in the military or civil services of Her Majesty, or of the East India Company.

3. Candidates, whether for the infantry or the cavalry, must be between 16 and 19 years of age at the commencement of the term immediately succeeding their admission examination.

Terms commence on the 1st February and 1st August.

Students from the Universities will be admissible at the ages stated in Art. 11. of these regulations.

4. Every candidate for admission must apply (if under age through his parent or guardian) to the Commander-in-Chief, to have his name entered on the list of candidates.

5. He must transmit, with his application, the following documents, viz.:—(*a.*) An extract from the register of his baptism,† or, in default of that, a declaration before a magistrate, taken by one of his parents, giving his exact age. (*b.*) A certificate from the minister of the church or denomination to which he belongs, of his having been duly instructed in the principles of the Christian religion.

6. His name having been placed upon the list of candidates, it will be open to him to offer himself at any of the half-yearly examinations which may occur while he is within the prescribed limits of age. If unsuccessful in obtaining one of the vacancies at the college, he will be allowed to present himself at any subsequent examination until he has exceeded the maximum age. After he has exceeded the maximum age, he can only be admitted into the army on obtaining a direct commission by purchase, in the usual manner, after passing a qualifying examination.

7. He will be examined by a medical officer who will ascertain whether he is free from all bodily and organic defects, and whether, as far as regards physical constitution, he is in every point of view fit for military service.

8. The following will be the subjects of examination, but no candidate will be allowed to be examined in more than *five* of these subjects.

	Marks.
Classics { Latin, 2,000 / Greek, 1,600 }	3,600
Mathematics	3,600
English language	1,200
Modern languages, each	1,200
History with geography	1,200
Natural sciences (*i.e.* mineralogy and geology)	1,200
Experimental sciences (chemistry, heat, and electricity, including magnetism)	1,200
Geometrical drawing	600
Freehand drawing	600

Of the above subjects, the elementary portions of mathematics and the English language are obligatory on each candidate.

The following elementary branches will be included in the obligatory section of mathematics, viz.:—

In arithmetic: vulgar and decimal fractions, proportion, extraction of the square root, and interest.

In algebra: fractions, simple equations, and questions producing them.

In Euclid: the first three books.

To these elementary branches 1,200 marks (out of the whole 3,600 for mathematics) will be allotted, and it will be necessary for qualification that at least 400 be obtained, of which 200 must be obtained in arithmetic.

In the English language 400 marks will be allotted to correct and legible writing from dictation, and to composition; and of these it will be necessary for qualification that 200 be obtained.

Out of the remaining subjects the candidate may select any three.

No candidate will be allowed to count the marks gained in any of the three voluntary subjects, unless amounting to one sixth of the whole number of marks allotted to that subject; and for qualification he will be required to obtain on his five subjects a total of 1,500 marks.

* These limited numbers include the cadets who have entered the college, and those candidates who have been granted the educational allowance referred to in article 47.

† Note.—When the register of baptism does not contain the date of birth, it should be accompanied by a memorandum, signed by one of his parents or guardians, stating the day on which the candidate was born.

No marks will be allowed to count in any subject left optional to the candidate, unless he gain at least one-sixth of the whole number allotted to that subject.

9. Every candidate will be required to forward to the Military Secretary, Horse Guards, one month before the examination, a statement of the subjects he desires to take up, as well as a certificate from the master or tutor under whom he has been educated, of his general moral conduct for at least the two preceding years. If a candidate has failed in a previous examination he will only be required to forward a list of the subjects he selects, and a certificate of conduct between the two examinations. These documents are under no circumstances to be transmitted before the date above specified.

10. After the examination the candidates will be reported to the Commander-in-Chief in the order of their merit, and will be appointed accordingly as far as vacancies will allow.

11. Candidates who have passed the examinations called "responsions" and "moderations" at the University of Oxford, or those called "previous examinations" at the Universities of Cambridge and Dublin, or the matriculation examination of the University of London; or any one of the three examinations required for the degree of M.A. at the Universities of St. Andrew's and Glasgow; or the "class examination of the second year" (Curriculum of Arts) at the University of Aberdeen; or the "preliminary examination" at the University of Edinburgh; or the "first University examination" of Queen's University, Ireland, will be considered as qualified for admission to the Royal Military College without further examination.

Candidates from the Universities must not be more than 21 years of age for the infantry, nor more than 23 years for the cavalry. They will be required to send to the Military Secretary, Horse Guards, two months before the commencement of the term at which they desire to enter, certificates from the responsible authorities of their college, of general moral conduct during residence at the University, and of having passed the above-mentioned examinations, together with the certificate of age, as required by clause 5.

Should the number of general candidates be considerably in excess of the number of vacancies at the college, a suitable portion of those vacancies will be offered to the University and to the competing candidates respectively.

12. Candidates for admission as Queen's cadets must apply for a nomination to the Commander-in-Chief, if the sons of officers in the army; or to the First Lord of the Admiralty, if the sons of officers in the royal navy, or royal marines. The above nominations will be made by the Commander-in-Chief or First Lord of the Admiralty, with the concurrence of the Secretary of State for War. The Secretary of State for India in Council will nominate to cadetships for the Indian services.

Provision of Necessaries, Books, &c.

13. Every gentleman cadet will receive from the Military Secretary a list of the articles of clothing, books, and instruments with which he must provide himself before joining the college, and which he will be required to keep complete during his residence.

Any other books, instruments, or drawing implements that he may subsequently require for the prosecution of his studies, will be provided at the college, and charged to his account.

Payments, Contributions, &c.

14. The amount of contribution for education, board, washing, and medical attendance, on account of each cadet, is as follows:—

	per Annum.
a. For sons of private gentlemen - -	£100
b. For sons of admirals, and general officers having regiments or receiving Indian colonels' allowances - -	80
c. For sons of general officers - -	70
d. For sons of captains and commanders of the royal navy, and field officers of the army having substantive rank -	50
e. For sons of all officers of the royal navy and army under the above rank -	40
f. For sons of officers of the royal navy and army who have died in the service, and whose families are proved to be left in pecuniary distress -	20
g. Queen's cadets and cadets nominated by the Secretary of State for India in Council - - - -	Free.

15. General officers on the non-effective list will pay according to their last substantive rank.

Officers who have sold their commissions are, in this classification, reckoned as private gentlemen.

The cases of officers who have retired voluntarily upon half-pay previous to having served twenty-five years on full pay will be specially considered.

Officers who retire on half-pay after twenty-five years service on full pay will be entitled to be classified for payment with the rank in which they last served.

16. The orphans of officers whose claims do not come under classes *f.* and *g.* must contribute according to the substantive rank last held by their fathers.

17. For sons of officers who have retired on *full* pay the payments will be according to the substantive rank last held by their fathers.

18. The sons of officers of civil departments having relative rank with officers of the army and navy, of the permanent militia staff, and of adjutants of the volunteer force, are admissible to the college on the same terms as those prescribed for the sons of officers of the army and navy of corresponding rank.

19. The sons of Indian naval and military officers not specially nominated by the Secretary of State for India will be admitted on the same terms as the sons of officers of the Queen's service.

20. Contributions for the sons of professors at the Staff and Cadet Colleges, at the Royal Military Academy, and at the late Indian College, Addiscombe, will be - - - - - £50

For the sons of masters at the above institutions - - - - - - 40

21. Any change which may take place by promotion or retirement in the rank of the father of a cadet must be immediately notified to the Military Secretary, in order that the contribution paid to the college on account of such cadet may be regulated accordingly.

22. *Previously* to the admission of a cadet (not a Queen's cadet) he; or if a minor his parent or guardian, will be required to make the following payments, viz.:—

1. His contribution for half a year.
2. The sum of 15*l.* for the provision of his first equipment of uniform clothing.
3. The sum of 10*s.* for the support of the company reading rooms of the gentlemen cadets.
4. A deposit of 15*l.* on account, for contingent expenses.

23. The above sums are to be paid to the paymaster of the Royal Military College at Sandhurst.

24. For each succeeding half-year the regulated contribution is in like manner to be paid in advance, to the paymaster of the college, to whom must also be remitted the sum of 5*l.* for the further provision of uniform clothing, and such sum as may be required to make up the contingent deposit to 15*l.* The amount of this balance will be shown by an account rendered at the end of every half-year, of the sums paid out of the deposit, during the past term.

25. No cadet on whose behalf these regulations in regard to payments have not been complied with, will be received at the college.

26. No refund of contribution will be made for any portion of the half-year in which the cadet may be removed from the establishment, without the special sanction of the Secretary of State for War.

27. No payments will be required from Queen's or Indian cadets.

28. If a cadet be rusticated during a term, his contribution for the half-year will be forfeited.

29. If absent a whole term in consequence of rustication or sickness, a contribution of 10*l.* will be required for the privilege of his name being kept on the rolls of the establishment, and for a vacancy being guaranteed at the commencement of the next term.

30. If absent from sickness during any portion of a term, a refund of that portion applicable to subsistence will be permitted.

31. In the cases of cadets of the orphan class, whose annual contribution is only 20*l.*, the amount to be paid when the absence extends over a whole term will be submitted to and determined by the Secretary of State.

32. Every gentleman cadet will be supplied with a weekly allowance of pocket money, at the discretion of the commandant of the college; but this allowance will not exceed 4*s.* 6*d.* a week for a gentleman cadet who is a responsible under officer, 4*s.* a week for a gentleman cadet who is an under officer, 3*s.* 6*d.* a week for a gentleman cadet who is a corporal, and 2*s.* 6*d.* a week for all other gentlemen cadets. The expense of this allowance will be defrayed out of the amount deposited for the purpose of meeting contingent expenses, and in the case of Queen's or Indian cadets it will be borne by the public.

Discipline.

33. All gentlemen cadets are subject to such rules and regulations as are, or may be from time to time, established for the maintenance of good order and discipline.

APPENDIX II. (L.)

Royal Military College, Sandhurst.

34. Every gentleman cadet will be liable to be removed from the college at any time should his conduct be such as to render it obvious that his remaining longer would be either hurtful to the institution or unprofitable to himself.

35. To every cadet will be assigned, at the commencement of each term, 100 marks for conduct.*

From this number deductions will be made in certain authorized proportions for every offence which shall have been met by a punishment of more than two days' drill.

Should the cadet forfeit more than three-fourths, or 75 of the above 100 marks, he will not be gazetted to his commission until all other gentleman cadets of the same batch shall have been provided for; and should he lose all his marks for conduct he will be rusticated for one term.

36. Gentlemen cadets are strictly prohibited from contracting debts with any publican or tradesmen in the vicinity of the college.

37. No perquisites or presents of any kind are to be received by any person belonging to the college from either the gentlemen cadets or their friends.

38. Gentlemen cadets will not be allowed to remain at the college during the vacations without the special sanction of the Secretary of State for War, on satisfactory proof being shown that they have no friends in the United Kingdom to whom they could go. Payment of 1*l.* 1*s.* a week will be required in such cases from those who are not Queen's cadets.

Termination of the Course, and removal from the College.

39. The course of study is calculated for a residence of three terms, or 18 months, reckoned from the commencement of the term in which a gentleman cadet may join. It is open, however, for any cadet, who at the end of his first term shall have proved himself qualified for promotion at once to the third term classes, to compete for a commission without purchase, or to be examined for a commission by purchase, at the end of his second term; but no fourth term will be allowed on any plea but that of long continued sickness, in which case special application must be made to the Commander-in-Chief, accompanied by an opinion from the surgeon of the college.

Gentlemen cadets allowed a fourth term will not be permitted to compete for commissions without purchase.

40. Examinations for commissions will be held periodically. The number of commissions to be given without purchase will be announced previously to the examination. These will be competed for and awarded to the candidates who are first in order of merit.

41. Candidates who have not succeeded in obtaining a place amongst those to whom commissions without purchase can be awarded, but who have obtained the minimum number of marks required for qualification, will be considered to have prior claims to all other candidates for commissions by purchase.

42. Queen's and Indian cadets will receive commissions without purchase on passing the qualifying examination. The names of those who distinguish themselves equally with competitors for commissions without purchase will be published in the same lists with the latter.

43. In every case a certificate of conduct and proficiency in military and athletic exercises will be required from the governor of the college before a cadet can be examined for his commission.

44. Any gentleman cadet desirous of entering the Royal Artillery or Royal Engineers will be permitted, if otherwise eligible, to offer himself as a candidate at any of the competitive examinations for admission into the Royal Military Academy at Woolwich; and his position at the Royal Military College will not be affected by his failure at such examination.

45. No gentleman cadet will be allowed to present himself at a direct commission examination during his residence at the Royal Military College.

46. No gentleman cadet is to be removed from the college without the permission of the Commander-in-Chief, obtained through the governor of the college. And when a parent or guardian intends to withdraw a cadet, or, if of age, the gentleman cadet intends to leave the college at the end of a term, at least six weeks' notice of his intention is to be given to the governor. In default of such notice a quarter's subscription must be paid.

Miscellaneous.

47. The establishment for Queen's cadets having been sanctioned by Parliament when the age of admission to the Royal Military College was from 13 to 15 years, it has been decided that in any case when the services of the father and the circumstances of his family are such as to constitute a claim, an addition of not more than 40*l.* a year to the "compassionate allowance" may, at the discretion of the Secretary of State for War, be allowed to a candidate who is over 13, to enable him to complete his preparatory education, as he is ineligible for immediate admission into the college in consequence of the minimum age of admission having been raised to 16.*

48. It is desirable that every candidate who is under 21 years of age should, at his admission, be accompanied by his parent, guardian, or some other responsible person, to satisfy the requirements of the college on his behalf.

49. The responsible parent or guardian of every successful candidate, and the candidate himself, before he can be admitted as a cadet, will be required to sign respectively the following declarations:—

Declaration by Cadet.

"I_____, do hereby declare that I have attentively considered the regulations for admission to the Royal Military College, and I consent to abide by the same in every particular, as well as to observe and follow all such orders and directions as I shall from time to time receive from the governor, the commandant, or other officers or authorities of the Royal Military College. And I further hold myself bound to conform, in every respect, to Her Majesty's regulations, and to the rules and discipline of the service."

(Signature)_____

Declaration by the Parent or Guardian.

"I hereby declare that I consent to the admission of my (son or ward) to the Royal Military College, on the foregoing conditions."

(Signature)_____

German	1,200	300	
Chemistry	1,200	300	
Geology	1,200	300	
Freehand drawing	600	150	

In order to qualify for a commission, every gentleman cadet will be required to obtain 1,950 marks in the obligatory section of fortification, military drawing and surveying, military history, the first section of mathematics, and one foreign language; of which number of marks 1,200 must be gained in the three *military* subjects, as shown on the preceding page.

W. F. FORSTER,
Military Secretary.

* The system of conduct marks has been abolished since the publication of these regulations (*vide* Evidence 3354–3357).

* In order to establish a claim to the allowance, a certificate must accompany the application from the candidate's tutor that will enable the authorities to come to a reasonable conclusion that his education will be sufficiently advanced on his attaining the proper age to pass the examination for admission to the college.

APPENDIX III.—ROYAL MILITARY ACADEMY, WOOLWICH.

A.—QUESTIONS AND REPLIES RELATING TO THE ACADEMY.

FIRST SERIES.

QUESTIONS ADDRESSED TO OFFICERS AND PROFESSORS CONNECTED WITH THE ROYAL MILITARY ACADEMY.

(I.) Will you state your opinion regarding the present regulations for admission to Woolwich, the entrance examinations, and the results of the adoption of the system of admission by open competition?

(II.) What do you consider the most desirable limits of age for admission, and the length of course necessary for the instruction of candidates for the scientific corps?

(III.) Are you of opinion that either the course or the method of instruction at Woolwich is susceptible of improvement?

If so, what are the alterations which you would suggest?

(IV.) Do you consider it desirable that the course of instruction should be the same for the candidates for the Artillery and the Engineers; or would you suggest any alteration in this respect?

(V.) Will you express your opinion regarding the present organization of the establishment, the powers of the company officers and professors, and the state of discipline among the cadets?

(VI.) Do you consider that it would be possible, and, if possible, that it would be desirable, to effect either a complete amalgamation or a partial union between the Royal Military College at Sandhurst and the Royal Military Academy?

(VII.) Will you favour the Commission with any other suggestions which you may think it desirable to make in regard to the Royal Military Academy?

The above questions were addressed to—

J. J. Sylvester, Esq., M.A., F.R.S., Professor of Mathematics at the Academy.

Lieut.-Colonel J. J. Wilson, Royal Engineers, Professor of Fortification.

Lieut.-Colonel C. H. Owen, Royal Artillery, Professor of Artillery.

Lieut.-Colonel G. A. Milman, Royal Artillery, Captain of a company of Cadets.

Major W. J. Stuart, Royal Engineers, Instructor in Fortification.

Captain C. B. Brackenbury, Royal Artillery, Assistant Director of Artillery Studies, Woolwich.

Captain H. Brackenbury, Royal Artillery, Professor of Military History.

(i.)—ANSWERS received from J. J. SYLVESTER, Esq., Professor of Mathematics.

(I.) (*a.*) On the whole, except in the particulars hereinunder mentioned, the regulations for admission appear to me to be judicious; only I would limit to two, or at most to three, the number of trials allowed for admission to the Academy.

(*b.*) The obligatory number of marks for passing in mathematics ought I think to be raised.

The number of marks assigned to subjects not subsequently taught in the Academy is too great.

3,000 marks can be gained by classics alone, only 2,500 by pure mathematics.

(*c.*) The adoption of the competitive system has resulted in an increase in the average general intelligence as well as special knowledge of the cadets. Their application to study is greater than under the old system, in a degree which it would be difficult to over-estimate; the tone of feeling and conduct (subject to certain limited exceptions) is higher, and I think there is more general regard to veracity. Bullying and other worse practices which formerly prevailed are practically extinct, and cadets disposed to work hard at their studies are not interfered with and persecuted by their comrades as was formerly the case.

(II.) The present limits of age are in my opinion the best that could be adopted.

The conditions for entrance being supposed to continue as they are, I see no reason for altering the length of the course.

(III.) In answering this question it is expedient that I should confine myself to my own department of study. The course of instruction in mathematics would be susceptible of considerable improvement were more importance assigned to it as a condition for admission, and a higher scale of attainments, especially in pure mathematics, insisted upon at entrance. In such case the time now bestowed in the earlier part of the course upon elementary mathematics might be greatly abridged, and an opportunity given for the introduction or more detailed study of subjects now either omitted altogether or only studied by a few as extra subjects, and the want of a knowledge of which is felt as a practical inconvenience in other departments of study at the Academy. I think also that the business of the Professor of mathematics should be to deliver, supervise, and examine; the tutorial part of the instruction being carried on under him by the mathematical masters. Except so far as the present Inspector of studies has made it a rule to bring under his notice all reports connected with the mathematical studies in the junior classes, the Professor of mathematics has no cognizance of the mode in which the mathematical instruction is carried on in any other class than his own.

The marks gained in the junior classes in extra subjects of mathematics ought to be *carried on* to the credit of those who obtain them, in giving them places on obtaining their commissions.

The mathematical parts of the instruction in practical geometry, artillery, fortification, and surveying, ought to be brought within the cognizance of the Professor of mathematics or of mechanics (as the case may be), who at present have no means of ascertaining with what degree of efficiency, completeness, or reference to correct principles such mathematical or mechanical applications are taught in the Academy.

(IV.) I consider it desirable that the course of mathematical instruction should be the same for candidates for the Artillery and for the Engineers.

(V.) (*a.*) I am of opinion that the Royal Military Academy is greatly over-officered, there being now eight officers engaged to perform for 200, recently raised to about 220, cadets, up on the Common, the same duty as formerly was discharged nominally by three, but virtually by two officers for 160 cadets. The organization is quite unnecessarily elaborate. The Academy groans under the weight of a triple government, one (itself heavily loaded) at Woolwich, a second at the Council of Military Education, and a third at the Horse Guards.

I think advantage ought to be taken of the existing interregnum to do away with the now superfluous and costly office of Lieut.-Governor.

(*b.*) Sufficient power is not entrusted to the professors or masters. They ought to have authority to order out of their class rooms any recalcitrant cadets impeding others in their studies, reporting the same to the Inspector of studies, who would at once consign them to their own rooms.

(*c.*) There ought to be a mixed council of professors and the military authorities to look after cases of discipline arising in study, to arrange or suggest the distribution of the hours of study, to provide for the changes that might from time to time become necessary in the books and modes of teaching, and to guard the purity of examination. With such a council, so great a scandal as allowing a cadet detected in fudging to get his promotion at the tail of his batch would become impossible. Under existing arrangements an order to such effect might come down from the Horse Guards, and no one on the spot would have the power of protesting against its being carried out.

(VI.) (*a.*) I think that a complete amalgamation of the Royal Military Academy with the Royal Military College at Sandhurst, as at present constituted, would be like linking the living with the dead.

Appendix III. (A.)

Royal Military Academy, Woolwich.

(*b.*) The terms of the partial union must be specified before I can presume to offer any opinion on the desirability of such taking place. I should see, however, no objection to an arrangement which would admit of a limited number of commissions without purchase in the Line being given to cadets of good conduct from the Royal Military Academy, who, through no want of application to the studies of the place, have not quite attained the minimum of marks requisite for promotion to the scientific corps, or for passing out from one class to another when there is no probability that they will be able eventually to pass the final examination.

(VII.) (*a.*) The scale of remuneration to the mathematical masters on joining the Academy compares very unfavourably, and I think unfairly, with that of the junior military instructors on first joining. After five years' devotion to his work, Mr. Crofton, a gentleman who has obtained the highest honours of his university, and otherwise signally distinguished himself as a mathematician, receives 100*l.* per annum less than any junior lieutenant from the first day of his taking up his duty as a military instructor. In the present state of the Academy only men of university distinction or possessing some other equivalent evidence of qualification could be presumed competent to give the necessary mathematical instruction to the more forward cadets. The mathematical masters must serve 15 years before their pay, exclusive of lodging money, reaches 350*l.* per annum. From the first day of joining each military instructor under the new arrangement draws 400*l.* per annum, with the advantage of his time counting all the while towards seniority and promotion in his profession.

(*b.*) Until recent times the evenings were either at the disposal of the cadets or devoted to the lighter studies of modern languages, geography, and history, lectures, and experiments. A great change has, within the last few years, been made for the worse in causing half the mathematical instruction to take place late in the evening. This most objectionable practice ought to be abolished, and the old system reverted to of mathematical studies taking place in the mornings or early afternoons, when the mind is fresh and the energies of the body unimpared.

(*c.*) The cadets should in my opinion have more time for private study. The system which commenced when they were mere boys is still continued now that they enter the Academy as young men. They are, I think, on an average occupied 6½ hours daily in the class rooms, during which time they are tied to forms and desks like school-boys. If treated like boys they will be apt to act as boys, if as men they will also act accordingly; and I think great good would arise from assimilating the system of management at the Royal Military Academy more closely to a university type, and by giving freer scope to the spontaneous energies of its alumni.

(*d.*) The urgency of the occasion (leaving only one clear day for considering the subject) has not allowed me sufficient time to do justice to all the questions submitted, or to answer them with the fulness and detail their importance deserves, or to think of possibly various other points which would suggest themselves to my mind, were time allowed for more mature and deliberate reflection.

J. Sylvester,
Professor of Mathematics,
Royal Military Academy.

(ii.)—Answers received from Lieut.-Colonel J. J. Wilson, Royal Engineers, Professor of Fortification.

Lt.-Col. Wilson.

(I.) I think that the present arrangement of permitting lads to come up for examination as often as the limits of age permit is a bad one. It is thoroughly understood that experience in the nature of the examination is gained thereby, and subsequent success unduly facilitated. The system permits the presence at the examination of a number of lads, who, as proved by the reports afterwards published, have no pretensions for presenting themselves, so that the public are led to believe that a severe competition is going on, whereas perhaps one-third of the so-called competitors have no chance even of qualifying. No lad ought to be allowed more than two chances.

I think a much higher qualification in geometrical drawing and practical geometry ought to be insisted upon. I would propose a rigorous examination, with ·5 as a minimum qualification. At present we suffer at the Royal Military Academy from want of early practice in the subject. I have several times made careful comparisons, and I feel sure that, in the old time of younger cadets, more rapid execution of mechanical drawing was the rule. It would be necessary also to appropriate more marks to this subject, and to allow those obtained to count towards the general aggregate.

I think the mathematical minimum of 700 out of 2,000 in Section I. (see syllabus of examination) too low. It ought to be at least 1,000, *i.e.*, ·5. The examination papers in elementary mathematics should be more copious and searching. Sound knowledge of arithmetic, algebra, trigonometry, co-ordinate geometry, and use of logarithms, is far more valuable than a moderate acquaintance with more advanced subjects, probably only crammed up for the occasion. When engaged in instructing the junior classes, I was much struck by the inability to apply simple algebra to plane geometry evinced by many of the cadets at the top of the list on entrance to the Academy. I wish more attention were given to the subject of the application of algebra to geometry.

I fear that the marks given for classics are somewhat too high, and perhaps too easily obtained. For quick progress in the technical subjects taught at the Royal Military Academy, mathematical training is most desirable. Nothing but very good abilities can make up for the want of it, and the classical marks ought to be within the reach only of lads above the average in talent.

The adoption of the system of admission to Woolwich by open competition I regard as successful. Its results necessarily depend largely on the treatment the material supplied by its means receives at the Royal Military Academy, and I believe those results may be confidently appealed to in proof of its success. The average mental calibre of each batch commissioned, after making due allowance for difference of age, is, in my judgment, higher than before the system was adopted. Those at the bottom of each batch are decidedly abler than was formerly the case. With respect to those at the top, I do not think there is much difference. But of course, owing to greater age, their stock of information is greater, and their mental culture more advanced.

(II.) I am of opinion that the best limits of age for admission to the Royal Military Academy are 16 to 18 or 18½ years. I have had considerable experience in the matter, as since I had the honour to become connected with the instructional staff at the Academy cadets have been admitted at various limits, from 14½ years to 21. I believe that under any limits as to age good officers may be obtained for the ordnance corps, provided that a suitable system of instruction and of examinational tests be applied. But to bring about this result not only does the strain thrown upon all responsible for the conduct of the institution become greater as the age of admission is diminished, but in order to produce a certain number of officers per annum a more numerous establishment will have to be kept up. Youths of 15 or 16 are not, as a rule, easily convinced of the necessity for close application; they have not so clear an appreciation of the object in view as lads of 18 or 19, and therefore not so great a determination to attain that object; nor will the spirit of competition work so vigorously among them. Failures to pass the several examinations will be more frequent, and a longer term of residence than five terms will be required for the greater part. Hence there must always be a greater number of cadets maintained in the institution under such a system than is the case at present. These evils were felt formerly, and would be felt again, and I think it would be more difficult to enforce the necessary elimination of the inefficient ones now than it was 12 or 14 years ago. With older lads and a good system of entrance examination this weeding process is effected before admission, and since the age for admission has been raised very few failures to pass through have occurred from incompetence, certainly not 3 per cent.

The objections urged against high limits are mainly laxity of discipline, great age when commissioned, and consequent want of flexibility. They possibly had some force when the superior limit was 21 years, but very little since it was lowered to 19. In fact, laxity of discipline does not exist now at the Royal Military Academy, the tone being undeniably good, and I think the alterations I have suggested in the entrance examination, coupled with the educational revival of our public schools, will indirectly lead to further improvement by diminishing the necessity for each candidate's passing six months at what is called a cramming establishment previous to the examination. With respect to the other two objections, I do not attach much importance to them. It is far better for a young man to be 19 or 20 years of age when commissioned than to be thrown into the midst of temptation and independence two years younger. They are flexible enough when they leave the Royal Military Academy, and I humbly think, with few exceptions depending on native character more than age, will remain so in proper hands.

The present superior limit is 19 years. This I have proposed to lower to 18 or at least 18½ years, and I think a further reduction of age when commissioned may be obtained by enabling lads to pass through the Royal Military Academy in two in place of 2½ years. At 17, which will be the age of the greater number admitted, lads who pass the entrance examination, *subject to the alterations which I have proposed in drawing and mathematics*, not otherwise, would be able to commence the technical subjects sooner, and might be expected to make more rapid progress in them than is at present the case. Bearing in mind also the fact that the course of instruction is intended for lads who may serve in either the Royal Artillery or Royal Engineers, who are not supposed to be turned out of the Academy complete officers in either case, but who will have afterwards to extend their acquaintance with the subjects commenced here, I am of opinion that the necessary studies might be compressed into a two years' course, with an additional half year in case of failure.

(III.) I do not think any radical alteration is required in the course of instruction at Woolwich.

The list of subjects taught is much the same as when I was myself a cadet in 1843–45, the age of admission then being 15 to 17, but their range is somewhat more extensive.

In 1843–45.	At present.
Mathematics.	Mathematics.
Fortification.	Fortification.
Artillery.	Artillery.
Surveying.—Topography.	Surveying.—Topography.
Practical Geometry.	Practical Geometry.
Landscape drawing.	Landscape drawing.
French.	French.
German.	German or Hindustani.
History and geography.	Military history.
Mechanics (Lectures.)	Mechanics.
Chemistry (Lectures.)	Chemistry.
Natural philosophy (Lectures.)	Natural philosophy.

The three subjects last named have been raised in importance; more time has been appropriated for them, and marks are given. I doubt whether this has been altogether an improvement. In fact, considering the nature of the last two of these subjects, and the general inability of youthful intellects to grasp and master them, especially when fairly occupied with other matters, I think too much has been attempted, and that the time given to them might be reduced with advantage. Two years ago geology was also on the list of subjects. Its omission and replacement by military history was a wise step, not only because of the value of the latter subject to military students, but also because little good came of the former.

I do not think that any change could be made with advantage in the method of instruction pursued. It may be defined in general (*i.e.*, except for some special subjects) as the individual system; and I am convinced it is not only the best, but the only one by which young people can be thoroughly taught; and I firmly believe that, mainly owing to this method being pursued at the Royal Military Academy, more useful knowledge is acquired at that institution than at any other in the country.

I believe it has been proposed in some quarters to make the study of the whole or part of some subjects voluntary. This I fear would be a disastrous alteration, difficult to apply, and one likely to produce great unevenness (so to speak) as to educational results. Holding that the present course, subject to the amendments I have suggested above, is only what is wanted, I object to any plan for reducing or lowering the standard it ensures; and this the voluntary system must come to. In fact it seems to me a slipshod way of reducing the number and range of the subjects taught. Some persons may think our present rigid system operates hardly on some of the cadets. If so it is but on very few; and it seems to me advisable to arrange as far as possible for the good of the whole, rather than shape a scheme by its bearings on individual cases.

(IV.) I believe the present system of carrying on the instruction of the cadets together, up to the time of their being commissioned, irrespective of the service they may enter, to be fraught with many valuable results which would be endangered, if not lost, by making any alteration in it.

If separated into distinct batches before that time much valuable incentive to exertion, in the shape of competition for the favourite corps, would be lost. Moreover the two services are so connected together and dependent on each other, especially in actual warfare, that it is not only desirable that cordiality and harmony should exist between them, but that each should have an intelligent and educated knowledge of the duties of the other, as is certainly the case at present. Instances may occur where artillery or engineer officers may be forced by circumstances to undertake the duties of the sister corps, and the officers so called upon would be stranded if they had not studied those duties at the Royal Military Academy.

The theoretical subjects required as a basis for each may be called identical, and the same may be said of the three technical subjects of fortification, artillery, and surveying, so far as they should be carried at the Academy. The knowledge of fortification acquired there by the future artillery officer is no more than is necessary for him. The extra subjects in this branch of study (military mining for instance) are rarely reached except by the cadets near the top of each batch, who almost always choose the Engineers. Similarly the knowledge of artillery acquired at the Royal Military Academy is indispensable to the engineer, and I know of no other opportunity for his seeing and studying the application of machinery so good as when he is a cadet going through the arsenal course. And so again with regard to surveying and topography. Supposed to be indispensable to the engineer, they are of the greatest value to all military aspirants. No other study does so much to train the mind to habits of quick and accurate observation; and it would be bad policy indeed to refrain from teaching them on the plea that it is not certain that each of the students will have to make a survey.

The notion of separating the instruction seems to me to arise from a false view of education. It surely is not desirable to confine it to the acquiring only such information as is likely to be put in practice in after life. This would only cramp the intellect; and believing, as I do, that artillery and engineer officers already suffer somewhat from the special nature of their studies and duties, I should deplore any attempt to separate them at the Academy, as it would only increase the evil by diminishing the comprehensiveness of their education.

(V.) The state of discipline is very good. The cadets are respectful in demeanour, both in and out of study, so far as they come under my notice. In class they always behave well and work hard, and I may say that I have never had to report one for a breach of discipline or misconduct of any sort.

With such results I need scarcely say that I have no fault to find with the present organization, from which those results are derived, nor with the powers of the company officers and professors.

I think it unnecessary and unwise to give the latter charge of the cadets, when out of class, as has been proposed in some quarters. It would increase their labours, already sufficient, and entail an addition to the instructional staff. The number of hours passed by a professor in class with the cadets is a very imperfect basis for an estimate of the labours of his office.

(VI.) I do not think it would be possible to effect either an amalgamation or partial union with the Royal Military College of Sandhurst, without injuring the Royal Military Academy, and that can scarcely be called a desirable object.

The present system of having two colleges is advantageous, as, besides avoiding complication as to arrangement of studies, there is no doubt that a wholesome influence is produced by comparison and emulation between them. The amalgamation or union involving the suppression of one would put an end to this; and the increased number of students it would be necessary to maintain in a single institution would be more difficult to control and manage. I think also it would entail a lowering of the standard of education at Woolwich, or the making an unnecessary attempt to force the line pupils up to the same mark. If treated separately as to studies, and only united in barracks and on parade, the presence of the line students, pursuing a lighter course of instruction, and probably earning their commissions in a shorter time of residence, could only have an unsettling influence upon the others.

(VII.) The preceding questions having been very comprehensive, I will only add that I think a revival of the system of having a probationary examination at the end of the first or second term would act well, as an opportunity would be afforded thereby for weeding out the few inefficient ones, who manage to struggle in, at a period sufficiently early to enable them to turn profitably to some other pursuit, and the institution could only gain by being relieved of their presence.

JOHN J. WILSON, Lieut.-Col., R.E.,
Professor of Fortification,
Royal Military Academy.

APPENDIX III. (A.)

Royal Military Academy, Woolwich.

Lt.-Col. Owen.

(iii.)—ANSWERS received from LIEUT.-COL. C. H. OWEN, Royal Artillery, Professor of Artillery.

(I.) The regulations for admission are, I think, well adapted to answer their intended purpose, except that too many trials for entrance are allowed; one or two of the subjects for examination might be struck out of the list, and the qualifying marks might probably be slightly modified with advantage.

One result of the open competition system, *combined with increased age at entrance*, has been, that cadets have more general knowledge than formerly, and that the tone of the Royal Military Academy has considerably improved. This latter statement may be questioned, but its truth can, I think, be easily demonstrated.

One objectionable result has been, that many cadets before joining have contracted an independent and insubordinate spirit, which has tended to make them wish to resist the proper restraints of discipline. This spirit has doubtless been fostered by those who have prepared such cadets, and who can have taken no trouble to train them in habits of order and obedience. It would, however, be wrong to suppose that this spirit is general, and that there are no good preparatory schools, the pupils from which have proved satisfactory in all respects.

It is to be regretted that our chief public schools have not followed the example of Cheltenham, Marlborough, and some others, and organized special departments—the ordinary public school course being totally unsuited to the entrance examination requisite for the Royal Military Academy.

(II.) From 16 to 18, for reasons given in my pamphlet, p. 17.

If the course be chiefly confined to special subjects (which in my opinion it should be) two years would be sufficient.

If general subjects be included in the compulsory course, more time must be allowed, and the age at entrance might have to be reduced.

(III.) Time is, I consider, wasted during the first year in compelling *all* the cadets to give so many attendances to subjects (mathematics and languages) which they should have studied sufficiently for ordinary purposes before entrance.

A certain number may pursue such subjects with advantage, viz., those who have more than average talent for any of them.

The marks at entrance should be carried forward and count at the commission examination.

Qualification* in *pure* mathematics (without calculus), and perhaps in French or German, should be indispensable.

The higher branches of pure mathematics, languages, and landscape drawing should be *optional* subjects at the Royal Military Academy, but they should carry marks to count for place in examinations. Their study might be encouraged by giving a few scholarships at entrance, to be held during residence.†

The compulsory or course subjects at the Royal Military Academy should, I think, include—

- Mixed mathematics
- Natural Philosophy
- Machinery

} Combined in the same branch.

- Chemistry.
- Practical geometry.
- Surveying and topographical drawing.
- Fortification.
- Artillery.
- Military history.

The marks and time devoted to each subject should be regulated by its relative importance as regards its future utility. The following figures will show how this principle has been neglected.

	Total Marks.	Total Attendances.
Fortification - - -	6,300	221
Artillery - - -	6,200	170
Surveying and topographical drawing - - -	4,000	221

* By qualification, I mean ·5 of total marks. No qualification in any particular subject is now necessary. *See* Pamphlet on "Education at R. M. Academy," p. 10.

† Pamphlet, p. 13.

Artillery having manifestly too few, and surveying too many, attendances in proportion to their respective importance.

During late years the artillery attendances have been systematically reduced. Some 10 years ago each cadet had eight artillery attendances per week for a year. They were reduced to four per week, but in consequence of a strong remonstrance from myself, they were after a time raised to six per week in one class, and five in the other. About a year ago they were again reduced to five per week in the year. On my representation they have been again raised to six in one class and five in the other. This, however, falls far short of the eight per week during the year formerly given, although the subject has of late years been considerably developed, and has grown in importance.

The fortification and artillery courses should be carried on simultaneously. Now the fortification instructors are obliged to give some fragmentary instruction in artillery to enable cadets to comprehend enough to go on with their fortification course.

A few subjects only should be studied at a time (or during a term), as I have indicated in my pamphlet, p. 14.

I have taken considerable pains to render the method of instruction thoroughly efficient in my own branch, artillery,* but this method might not suit other subjects. As a general rule I think the instruction should be as much as possible *class instruction*, and, in the case of lectures, they should be followed by carefully written essays or reading up, with frequent verbal examination; without one or other of these the lectures will be worthless.

(IV.) In my opinion the candidates for Artillery and Engineers should go through the same course at the Royal Military Academy.

(V.) It is questionable whether the old company organization was not preferable to the present one.

The discipline and instructional branches should, I think, be kept distinct, but there should at the same time be an intimate connexion between the two. This might be supplied by the appointment of a board or council composed of officers of different branches, as I have suggested, p. 23 of my pamphlet.

No officer or civilian engaged in instruction has any power. Practically in my own branch, and I believe in the surveying department, it has always been the custom for the instructor to give a cadet 24 hours' arrest should he think necessary to do so. This is certainly required now and then. It is very desirable that the punishments for serious offences should not be administered but by one or two officers who have access to the records of the general conduct of the cadets, but for minor offences the instantaneous exertion of a little power by an instructor may at once check any bad behaviour, and thus prevent serious offences. In all the out-door work, in the special studies, discipline is just as requisite as on parade.

The tendency of late years, since the practical class was merged into the upper academy, has been to treat the military instructors as civilians, but to hold them responsible for proper discipline; this cannot be fair to them.

Defective discipline has of late years been shown chiefly in unsteadiness on parade, and in what is popularly termed slackness. The cadets do not usually perform promptly what they are told to do, but show an inclination to question rather than obey orders. This is doubtless due in some measure to defects in training previous to joining, and to the more advanced age of the cadets, but must also be attributed to the tendency latterly to defer to the ideas of the cadets without reference to the interests of the service or the opinions of the working staff. More assistance might also, I think, be derived from the corporals. As far, however, as my experience goes, a class of cadets behaves very well when an officer is present, but if left to themselves under their own corporals confusion or disturbance may not unfrequently arise.

(VI.) I think an amalgamation of Woolwich and Sandhurst would be very prejudicial as far as officers of Artillery and Engineers are concerned. A cadet for either of these services requires such a very much more extended special course than officers for the Line that no common plan could be arranged which would have a chance of working satisfactorily, unless cadets for the Line were taxed beyond what is at all necessary. With regard to cadets first going to Sandhurst and afterwards passing on to Woolwich, I can see no practical advantage, but on the contrary much probable waste of time with a prospect of indifferent results. If a cadet had a chance of getting a commission in the Line to fall back upon, he would, in many cases, not take the

* Pamphlet, p. 28.

trouble to try for the Artillery and Engineers. We might thus lose many good men besides lowering the standard by reducing the competition. Under the present system at Woolwich a cadet is compelled to work hard under peril of failing to obtain a commission.

The Polytechnic in France, the old Indian College at Addiscombe, and West Point in America are not parallel cases.

The advantages we possess at Woolwich for an Artillery course could be obtained in no other place. Another point which must not be lost sight of is the immense number of cadets which would be required in time of war to supply the whole army from one college.

(VII.) Considering the greater age at which officers of Artillery and Engineers are commissioned compared with line officers, would it not be desirable to let service count from entrance, or from some stage of progress at the Royal Military Academy?

CHARLES H. OWEN,
Captain, R.A., and Lieut-Col.

(iv.)—ANSWERS received from LIEUT.-COLONEL G. A. MILMAN, Royal Artillery, Captain of a Company of Gentlemen Cadets.

(I.) The regulations are to a certain extent satisfactory.

As classics count high at the entrance examination, it seems hard that *after entrance* a cadet should lose all profit from his knowledge of classics, and as it is a great object to get young men with a good general liberal education, I think some arrangement should be made by which cadets might carry on a portion of the marks gained at the entrance examination, and thus be on a more equal footing when in the Academy.

As to open competition, it is found that men of the same class, and drawn from the same sources, come in now as in the close or nomination time. There is no difference in this respect.

Cramming or forcing houses are a necessary evil, and are merely a case of supply and demand. It is possible that the introduction of special classes at the great public schools may help to mitigate this evil, but I doubt it. A clever man taking a few pupils for a special purpose will probably be more successful than any large establishment, as a general rule.

(II.) 16 to 18 years. And I should only allow two trials. At present a candidate by going up each half year may try five or six times, which is decidedly objectionable.

Length of course two to two and a half years.

(III.) I am not very well up in this subject, but as a matter of opinion, it seems to me that there are too many subjects, that matters of a professional and practical character should be more attended to.

The large class rooms with 40 cadets and three instructors in each room, appear to me highly objectionable.

It also seems worthy of consideration whether it would not be possible in certain cases to introduce the French system of lecturers, *répétiteurs*, and *interrogations particulières*.

(IV.) As practical instruction is necessary for the officers of both corps (after they have quitted the Academy), I see no drawbacks to the joint education, and many recommendations.

It is very important to an engineer officer to be well acquainted with artillery matters, and to an artillery man to have some knowledge of fortification and engineering matters.

It also tends to promote good feeling in after life, between the officers of the two corps, and to make them act cordially together when brought into professional contact, a point always of the highest importance, the neglect of which has produced and may produce great evils.

(V.) The conduct and discipline of the cadets is satisfactory.

I believe that it is a great advantage having a certain number of military officers in charge of the cadets, but no doubt certain modifications might be made with *advantage* also.

A board of improvement, as in foreign colleges, where some of the professors and military officers might be associated together, would be a useful institution, and would tend to break through the strong line of demarcation drawn between the "two elements," the instructional and the military.

(VI.) I do not know about the possibility, but I am of opinion that it would not be desirable. The general standard of admission would have to be lowered.

APPENDIX III. (A.)

Royal Military Academy, Woolwich.

I fully believe that Sandhurst is now improving rapidly; but I think that a little leaven leavens the whole lump, and this element would exist in a college where some cadets might be able to get commissions by purchase.

(VII.) It may be presumptuous in an executive officer to give his opinion upon such a matter, but I certainly think the Governor of Woolwich, if a general officer, ought to have full powers, and that the President of the Council of Military Education should be the medium of communication with the Commander-in-Chief in all matters of education connected with the Military Colleges. At present there is considerable circumlocution.

G. A. MILMAN,
Captain, R.A., and Lieut.-Col.

(v.)—ANSWERS received from MAJOR W. J. STUART, Royal Engineers, Instructor in Fortification.

Major Stuart.

(I.) (*a.*) They are, with certain exceptions specified, very good; but I should prefer "limited competition," no matter how extended the nominations might be.

(*b.*) The examinations should be conducted with the special object of defeating cramming, and of testing sound available knowledge and natural ability. I question if this is sufficiently carried out.

I would raise the obligatory qualifying minimum in mathematics so as to make the entrance examination a final and sufficient test for *pure mathematics*, which, I think, should not be studied after entrance, but only mixed and applied mathematics. This is on the assumption that the minimum age of entrance is raised rather than lowered.

I would demand, after due notice, a higher obligatory qualification in geometrical drawing, as progress in the Academy depends so much upon it, and as the recent change has proved so beneficial.

I would require a high obligatory qualification in French, and, if possible, in German, neither of which, I think, need be studied at the Royal Military Academy, although I should like to see a course of professional reading in foreign languages introduced.

(*c.*) I think that the marks for classics are quite too high. I admit the desirability of obtaining a proportion of public school men, but with the present tendency to create "modern sides" at the public schools, it seems likely that we should very soon get from them what we require, especially if it were shown that classics would not count as at present.

(*d.*) The results of open competition are, I think, better on the whole than could have been expected. A high standard of attainments has undoubtedly been obtained. But a few objectionable men, in a social sense, have been passed into the service, and it is to meet this that I would propose a liberal system of nomination.

Full advantage of the system has not, I think, been taken in respect of testing mental capacity.

(II.) (*a.*) I am entirely in favour of a high standard of age at entrance, in order to obtain a sound liberal and general education, combined with an advanced special training. Limiting the course to two years, I would fix the maximum age at 18½, and the minimum at 17. This is with the view of giving candidates only *two* trials, of running men of nearly the same age against each other, of preventing reiterated cramming, of testing talent more completely, and of making the Academy as nearly as possible a school of application. If this arrangement should give a higher average age on entrance into the Artillery and Engineers than in the rest of the army, a portion of the time at the Academy might be allowed to count as service.

(*b.*) Two years would suffice if pure mathematics and languages were omitted from the curriculum.

(III.) Yes.

(*a.*) When lectures are given (and they should be as much as possible), the lecturers should be supplemented by assistants to examine and explain.

(*b*) The present system of having two and even three instructors working in the same class-room is not only highly inconvenient, but it is detrimental to effective teaching. Every instructor should have a room to himself, by which means he could frequently address his class as a whole, and, by lessening the amount of instruction given individually, he could supervise more cadets than at present is possible.

(*c.*) There should be a large well-supplied model room.

Appendix III. (A.)

Royal Military Academy, Woolwich.

(*d.*) The instructors, with a few exceptions, should be military men, and in my opinion these appointments should be deemed to be of considerable importance, and be made worth something more than to suit a man's convenience.

(*e.*) The Academy should be considered as a preliminary school of application leading up to Chatham and Shoeburyness.

(*f.*) The professor or head of each branch of study should be the *lecturer*, and not merely head instructor.

(IV.) I have written a small pamphlet advocating a separation of artillery and engineer cadets at some period prior to the final term. I forward herewith some copies of this pamphlet, which also touches on other parts of the subject.

(V.) (*a.*) As I have been exclusively employed on the instructional department, I speak with great diffidence on this part of the subject. I think the head of the establishment should be Governor, not Lieutenant Governor; that he should be armed with extensive powers; that he should be alone held responsible for the discipline of the Academy; and that his decisions should be final and irrevocable save in extremely exceptional cases.

(*b.*) I see no necessity for dividing the cadets into three divisions, with three captains. I would prefer either that the cadets should be considered as one company undivided, with a captain and a second captain; or that there should be but two divisions, with two captains. The company officers should have considerable powers, and the subalterns, as being brought into constant contact with the cadets, should especially have their hands strengthened so as to carry undoubted weight with them.

(*c.*) The professors, masters, and instructors have ample powers if they know how to use them. If it were deemed desirable to combine military and tutorial functions in one and the same individual, I can see no difficulties in the way. If, however, the system were adopted the officers selected to exercise both functions should, I think, receive a liberal remuneration. The practice of late years of adding work and reducing pay, has, in my opinion, been a short-sighted policy, and one by no means conducive to cheerful contented service. It is a mistake to calculate the services of military instructors at so many hours a week. The duties are irksome, and the situations lead to nothing.

(*d.*) To all appearances things seem to go smoothly enough, but I venture to think too much concession has been made to the supposed necessity for modifying rules and regulations on the score of age. Twenty years ago there were occasionally men who, having remained nearly four years at the Academy, had attained a comparatively high age, and yet we never heard that the stringent rules of the day were unsuitable to them. As things now stand, however, I think the code should be revised by the light of recent experience, and the rules, reduced to a minimum, should be carried out to the letter, and with a strictness and certainty with which nothing should be allowed to interfere.

(VI.) I think it would be *possible* to effect either a complete amalgamation or a partial union between the Royal Military College and the Royal Military Academy. But, after a great deal of reflection, I think either would be highly undesirable. The attempt could only result in a lowering of the standard of qualification. Woolwich Academy has produced very good practical results, and with some changes it might be made perfect. This being the case I should be sorry to see an experiment of so doubtful a character tried. If Sandhurst is not in so satisfactory a condition, the causes are patent and the remedies can be easily applied. Moreover, the requirements of the Artillery and Engineers and the rest of the army are, I take it, essentially different, and therefore I can see no advantage in starting from a common basis. If the present entrance standard for Woolwich could be maintained for the combined college, one objection would no doubt vanish. But it must be remembered that a sufficient number of candidates to satisfy the wants of the combined college could not be expected, when not many more than are required for Woolwich qualify each examination. Even with the present obligatory entrance minimum, which I should like to see raised, only some 60 to 80 candidates qualify each examination; how then are the numerous candidates required for Sandhurst to be obtained unless the standard of qualification be lowered? Further, if the central college were not at Woolwich, it would be necessary to send the Royal Artillery and Royal Engineer cadets to Woolwich, in which case there must be an establishment there, and if so, I cannot see the advantage of commencing their instruction elsewhere. As to the idea of drafting the cadets from a central college to Woolwich and Chatham, as provisionally commissioned officers, however it might answer for the Artillery, it would, I think, be highly objectionable for the Engineers; the course at Chatham is already sufficiently extended. Again, the principle is contrary to that in force in all continental nations. Moreover, the effect upon parents of the uncertainty as to what arm of the service a young man might fall to, if sent to a central or combined college, might act prejudicially upon the supply of candidates.

(VII.) Several suggestions will be found in my pamphlet. I would specially wish to call attention to a proposal to keep the strength of the Woolwich cadets slightly over what is required, in order to have the power of commissioning those who showed no aptitude for the scientific corps, in other branches of the service. Some spur is required to get energetic work out of those who have no higher ambition than to just scrape through. I am not satisfied with the position and functions of the under officers and corporals. They are called upon to perform very delicate and difficult duties, which extend so far as "at all "times and in all places to notice every irregularity on the "part of any cadet, even of their own rank, reporting the "same to the officer on duty." Few, if any, can conform to this; those who try are not sufficiently rewarded, and those who do not are learning lax ideas of discipline. I should like to see the cadets, as far as the case will permit, considered and treated as soldiers. I should wish to see them under a vigorous powerful local control. The interference of parents or friends should be resolutely discountenanced. I would have the cadets to take part in all reviews and field days. The French system of *Étude libre* should form a distinct feature of the course of study.

W. J. Stuart,
Captain, Royal Engineers, and Major.

(vi.)—Answers received from Capt. C. B. Brackenbury, Royal Artillery, Assistant Director of Artillery Studies, Woolwich.

(I.) Since the main principle should, in my opinion, be to draw candidates directly from the great schools of the country, I think that—

All catch questions should be avoided.

The examination in the early part of mathematics should be deep and searching.

If the schools cannot be persuaded to teach Hindustani and the natural and experimental sciences, I would omit them.

Modern history and geography should be combined to fom one subject, and be compulsory.

One modern language should be compulsory, and a portion of the marks should be given for conversation.

Every effort should be made to ascertain the amount of knowledge a candidate can digest, not merely what he can swallow.

Open competition works well.

I should like to see military exhibitions or scholarships offered for competition at the public schools.

(II.) This involves the question of promotion. I should prefer to leave boys as long as possible untouched by military prejudices, say to 17 or 18; but the country must take care that their future promotion moves fast enough. The course should be reduced by one year.

(III.) All classes of minds should have opportunities for free developement. There should be some choice possible to cadets both of the kind and amount of study to be devoted to particular branches of education. Capability of self-denial to gain a given end is one of the most valuable of all acquisitions. Mathematics, except the working of simple artillery and engineering problems, should certainly be voluntary. By giving mathematics a proper place in the scale of values for examination, those students who have real mathematical talent will pursue the subject. It is not of the slightest avail to attempt to force it upon others.

The manufacturing part of the artillery course might be almost entirely left to be taught after a commission has been obtained. It is of no use to engineers.

On the other hand, the painful drawing of neat fortification plates is of no use to artillerymen.

The French system of lectures and verbal examinations is an excellent one. It is a test for the teachers, and keeps up the attention of the students.

The following subjects should be compulsory; all others voluntary:—

1. Artillery.
2. Fortification.
3. Military sketching and reconnaissance.

4. Practical mechanics, involving the application but not the investigation of known mathematical formulæ.
5. Military history, the art of war, and military topography.
6. Elementary chemistry. A higher course of this useful subject might be voluntary.

(IV.) I would not separate the students at the Royal Military Academy into Artillery and Engineers; but, on the other hand, I would insist on a further course in artillery for the young officers joining that corps.

(V.) As far as I can judge from outside, the educational staff is too strong numerically, too weak influentially.

So long as the cadets are fairly obedient, I think it mischievous to force upon them the temporary tone of the army. The army should take its tone from the nation, not the nation from the army.

(VI.) For the reason stated in the previous answer, I should abolish the Military College at Sandhurst altogether, or retain it merely as a help to the sons of poor officers. Entrance examinations for the Line might be made obligatory and equal for all.

(VII.) Military education should be treated as a whole, and officers should by no means be permitted to drop their studies on joining their regiments.

For the scientific corps the Royal Military Academy should be a first school of application preparatory to further and perhaps deeper studies. Provisional commissions should be given on leaving it. Permanent commissions should be won afterwards. I should like to see young officers get into the habit of studying in their rooms; it would adhere to them afterwards. I am of opinion that physical powers should count for something, both on entrance to and exit from the Royal Military Academy. It would tend towards the preservation of a sound mind in a sound body. Military scholarships to be competed for at the Royal Military Academy would be valuable.

It is a great mistake to suppose high mathematics necessary for all officers. There are two classes—

1. The born mathematician, who may be counted on always. He should be encouraged.
2. The officer who may learn to manipulate formulæ with ease, but will never be a mathematician. He need not therefore be classed as unscientific.

C. B. Brackenbury, Capt. R.A.,
Assistant Director of Artillery Studies.

(vii.)—Answers received from Captain H. Brackenbury, Royal Artillery, Professor of Military History.

(I.) "The admissions are determined by the result of "the examinations," in which, in my opinion,—

Mathematics are carried too far.

Hindustani, experimental sciences, and natural sciences, not being part of an ordinary public school course, should be omitted.

Geography and French (reading, speaking, and writing) should be compulsory.

The entrance examinations are too much a test of memory, too little a test of power to apply knowledge. In mathematics, bookwork counts for too much, and the examinations in languages feed the "cramming schools" by their quaint grammatical puzzles.

The system of admission by open competition gives, on the whole, a superior class of young men, into many of whom bad habits are ingrained by the cramming schools, which are nourished, in my opinion, more by the present style of examination than by the system of open competition. After the toil at the crammers', reaction often sets in, in the shape of idleness.

(II.) Eighteen to nineteen—the earliest age at which it is desirable, in my opinion, to leave a *liberal*, in order to commence a *special* education. I see no necessity for extending these limits.

After a good liberal education up to 18 years of age, eighteen months' practical instruction would be sufficient for the Artillery.

I think the Engineers require considerably more.

(III.) The course and method of instruction might be much improved.

Woolwich should be a practical school, a school of application.

Its compulsory subjects of instruction should be,—

Artillery.	Mechanics.
Fortification.	Chemistry.
Surveying (to a lower point than now).	Military History and Art of War.

Voluntary subjects for those who have special taste in any of those directions, should be,— Appendix III. (A.) Royal Military Academy, Woolwich.

Mathematics (higher branches).	Other modern languages.
French.	Drawing.
German.	Surveying (higher branches).
Hindustani.	

Lectures by professors, followed by verbal teaching by instructors, with bookwork done by the students at their own time, should supersede, as much as possible, the present system of instruction, which involves waste of instructional power.

More freedom to study what subject a student prefers, is most desirable.

(IV.) One year should be sufficient to teach what is common in value to both corps.

The artilleryman should then have a special course of six months.

The engineer a longer special course.

(V.) The staff appears to me unnecessarily large, and the organization not thoroughly satisfactory.

Fewer company officers would be better with increased power.

The professors have not that position nor that voice in the management of the institution which it is most important they should have.

I have very little opportunity of seeing what the state of discipline is *now*.

(VI.) I can see no reason why it should be impossible, but it seems to me far from desirable, for either the Royal Artillery or Royal Engineers, that any portion of the education of their future officers should be transferred from the Royal Military Academy to the Royal Military College; and I think it would do Woolwich harm to transfer to it an inferior class of cadets from Sandhurst.

(VII.) I think the public schools should be invited to undertake the preparation of candidates for the army, and assist in abolishing "crammers." The lowest age of admission 18—the length of course reduced—more freedom in study—fewer vexatious restrictions—should, in my opinion, form the basis of our system of military education; and I think that the abolition of the "cadet" altogether, and the grant of provisional commissions to the successful candidates, would be of great advantage in getting the best men and securing the truest discipline.

H. Brackenbury,
Captain, Royal Artillery.

SECOND SERIES.

Questions addressed to Captain T. B. Strange, Royal Artillery, Gunnery Instructor, Royal Military Repository, Woolwich.

(I.) From your acquaintance with the young officers of Artillery, are you satisfied with the results of the instruction given at the Royal Military Academy, or do you think that it is in any respects susceptible of improvment?

(II.) Will you favour the Commission with any suggestions which you may think it desirable to make in regard to the practical instruction of officers of the Artillery either before or after entering the service?

Answers received from Captain Strange.

(I.) Judging from my experience in the instruction of young artillery officers, I am of opinion that no service could possibly desire greater capabilities, mental or physical, than those of the gentlemen (in every sense of the word) who now join the Royal Artillery; but their knowledge of practical artillery is very limited, and their military discipline inclined to be lax. Capt. Strange.

They give me the impression of being, for the most part, young men who have read nothing but what they are obliged to read, or can get marks for, and consequently appear comparatively ignorant of historical or general subjects.

Though their intelligence is evidently of a very high order, and their mathematical attainments beyond my measure, the majority do not seem inclined to continue their own education from any interest they take in it, from a taste for general reading, or professional ambition, which

Appendix III. (A.)

last motive would, under existing circumstances, indicate a temperament sanguine above average.

Royal Military Academy, Woolwich.

(II.) I do not think sufficient time is devoted to the subject of practical artillery at the Royal Military Academy, and no marks are given for out-door artillery work.

I would divide the subject of artillery into four sections.

1st. The first to be studied at the Royal Military Academy.

2nd. The second to be practically learnt at the School of Gunnery, Shoeburyness, after being commissioned provisionally.

3rd. Third in the Royal Arsenal, Woolwich.

4th. Fourth in the field batteries of the depôt, and the Riding Establishment, Woolwich.

First Section.

The first to include theory (founded upon the valuable text-book compiled by the Professor of Artillery) and the ordinary out-door drills with various natures of ordnance and artillery machines. This out-door drill to be in the hands of the officers attached, who might in that case be required to go through the long course, School of Gunnery, before appointment.

Second Section, three months' School of Gunnery, Spring, Summer, or Autumn.

After being commissioned (provisionally as the Royal Engineers). Three months' course at the School of Gunnery, Shoeburyness,—to include all the various shifts, dismounts, and embarkation of siege ordnance, as well as the mechanical appliances for, and methods of mounting the heaviest garrison guns, inside, and on the top of casemates, together with firing at unserviceable guns in earth works, and at moving sea targets, from every nature of ordnance.

Third Section, three months' Royal Arsenal, Winter.

A course of three winter months in the Royal Arsenal, under the captain instructor of each department, viz.,—

Royal Laboratory.
Gun Factories.
Carriage Department.

The whole of the courses to be methodized and arranged, by the Director of Artillery Studies.

Fourth Section, Field Artillery.

Field artillery to conclude the whole; three months, (spring, summer, or autumn) attached to field batteries of instruction in the depôt, Woolwich. To learn field battery, riding, and driving drills, personally and practically. Stable management, &c.

A course of lectures at the Royal Artillery Institution on elementary veterinary knowledge. A course of military law, under the Assistant Director of Artillery Studies.

To stimulate, and in some slight manner mark approval of the most energetic, the choice of brigades, and stations, might be given according to the report of the Director of Artillery Studies, drawn from the various officers concerned in instruction.

T. B. Strange, Captain, R.A.
I. G. R. M. R.

Appendix III. (B.)

B.—MEMORANDUM BY COLONEL FIELD.

Memorandum by Colonel G. T. Field, Inspector of Studies and Second Commandant at the Royal Military Academy, on various points referred to in his evidence.

(I.)—Regulations for admission to the Academy.

Admission to the Royal Military Academy.

Col. Field.

The limits of age (16 to 19 years) allowed by the regulations for admission to the Royal Military Academy are in my opinion too wide, and the number of trials too many.

I consider that from 17 to 19 is the best period for the special military training required.

The limit of age for admission might, therefore, be from 16 to 18, or from 16½ to 18; and not more than two, or at most, three trials should be allowed.

Such an alteration in age would lead to some change in the subjects for entrance examination. These might be altered in number and somewhat modified in value. Before entrance to the Royal Military Academy, a thoroughly *sound* and *general* education is most desirable, based upon the solid foundation of mathematical and classical study.

A knowledge of freehand drawing is desirable; a fair knowledge of practical geometry, (geometrical drawing, printing, and the use of mathematical instruments) is essential.

The entrance examination should be such as would thoroughly test the amount and range of knowledge possessed by the candidates.

After admission to the Royal Military Academy the studies must be more special, and the cadet of 16 or 17 years old can fairly be expected to bring with him the ability to apply the knowledge he has already gained, to the professional subjects he is called upon to learn.

It would, in my opinion, be unwise to *discontinue* the study of pure mathematics, but I think that "Euclid," "algebra," "trigonometry," and "co-ordinate geometry," should hold quite a subordinate place among the subjects of study at the Royal Military Academy, if they could not be discontinued altogether.

Without entering into the details of the entrance examination, I would submit the following as obligatory subjects:—

		Value Marks.	Qualification.
Mathematics.	Arithmetic, Algebra, Geometry, Plane Trigonometry, Logarithms, Mensuration, Co-ordinate Geometry	2,000	·5
*Classics.	†Latin	1,000	·5
	‡Greek	1,000	.5
French or German		1,000	·5
Practical Geometry.	Geometrical Drawing, Printing, Knowledge of use of Mathematical Instruments.	500	·5

Higher mathematics (pure and mixed), ancient and modern history, geography, English language and composition, and other modern languages, to be optional subjects.

I attach no great importance to the study of chemistry, natural philosophy, geology, and mineralogy before entrance. If desirable, these could form optional subjects of examination; but the knowledge acquired would probably be so superficial, that not much real value, in an educational point of view, could be attached to it.

Open Competition.

I am no advocate for open competition among all comers, without nomination. I should prefer a competitive examination among a definite, though considerable number of

---

* Education in classics (at 16 to 18 years of age) should include the following:—

† Latin.
- Ovid.
- Cæsar.
- Virgil.
- Horace.
- Tacitus.
- Livy.
- Cicero.

‡ Greek.
- Homer's Iliad.
- Xenophon.
- Greek Plays, viz.,—
  - Euripides.
  - Sophocles, or
  - Æschylus.

candidates. There is a considerable element of chance; and while open competitive examinations test the most retentive memories, quickness of mind, and aptitude *to win easily* against more plodding (though slower) men, the service may lose excellent officers—men possessed of the most important qualities, temper, tact, subordination, and industry.

But I must confess that open competition at the Royal Military Academy has not apparently failed in its results; the system has really been in full operation for a comparatively short time (about five or six years); and while in an educational point of view I think the effect has been certainly to raise the standard, it would be difficult to show that since the principle was established there has been deterioration in social status, military aptitude, or becoming conduct in the cadets.

The result of the system is to be sought in the Royal Artillery and Royal Engineers, where the effect of the change would by this time be sensibly felt, either for improvement or deterioration.

(II.)—Organization, Discipline, &c.

My evidence before the Royal Commission shows the organization of the Royal Military Academy, and the "relations existing between the cadets and the professors "and company officers."

Discipline and Powers of Officers regarding it.

I consider the state of discipline at the Royal Military Academy to be good. The general tone is high, a considerable amount of *esprit* exists. The offences committed are trifling, and such as are incidental to all young people subjected to discipline; the cadets are respectful, subordinate, and well disposed to their officers and professors, amenable to discipline, and maintain the credit of the institution.

I think the power to inflict the penalty of temporary removal, and *rustication* should be vested in the Lieutenant-Governor, but dismissal or discharge should be reserved, as now, for the decision of His Royal Highness the Field Marshal Commanding-in-Chief. The powers of the other officers in regard to discipline do not appear to need alteration.

I have stated my opinion on this question in evidence. I may add that the *power of an officer* in whatsoever capacity employed to place a cadet in arrest at any time, and in any place, should the necessity arise, cannot in my opinion be questioned; but I think it better for the *adjudicating* power to rest, as at present, in the hands of the inspector, than that the military professors and instructors should award punishment for offences in study.

There is the guarantee of deliberate and unbiassed investigation, and impartial decision, free from personal feeling, while any fear of possibly hasty punishment is avoided, without diminishing the authority of the instructor.

The same course is adopted with the military officers; the subaltern places a cadet in arrest, but has no power to award.

Organization of a Military College.

The organization of a military college should be of the simplest character, the formation such as to habituate the cadets to military discipline, to provide for their proper instruction in drill, "interior economy," &c., to teach them in short what are the duties of non-commissioned officers and soldiers, and the nature of their life, and to ensure a watchful interest over their social and moral bearing.

For this end I think a military college should not exceed a *maximum* strength of 300 cadets; the actual strength short of that limit being governed by the number of commissions available from time to time.

The staff required for the efficient control and training of such a corps would be, under the Lieutenant-Governor,—

1 inspector and 2nd commandant,
1 assistant inspector,
1 paymaster and adjutant,
1 surgeon,
1 chaplain,
1 quartermaster,
1 1st captain,
1 2nd captain (*or the senior subaltern officer*), for the special charge of the "senior cadets" (the "commission class"), and
— subalterns (in the proportion of, say, 1 lieutenant for 50 to 70 or 75 cadets).

This would give a distinct military formation, not rigidly conforming to the unit of a battalion, a company, or a battery of artillery, but simple, effective, and capable of expansion, while within the complete control of *one* responsible executive officer, the 1st captain.

The *chain* of *responsibility*, through the means of a responsible under-officer, with subdivision under-officers and corporals in fixed proportion, should be maintained, as at present.

The appointment of assistant inspector I regard as of much importance. It is of long standing (about 27 or 28 years), and although the officer who holds it is not charged strictly with the military training, he exercises important functions in regard to discipline and control over the cadets during the hours of study, and most materially assists the inspector in the duties assigned to his office. If the close supervision of the studies, and the manner in which they are carried out which now exists, is maintained, this assistance is requisite, the more so since the Inspector now combines with his duties in respect to the studies, the charge of superintending the military training and control of the cadets.

All officers on the staff of the establishment and of the executive military branch should live either within the Royal Military Academy enclosure, or in quarters in the immediate neighbourhood.

The accommodation now provided for officers is detailed under the reply to question (IV.)

"Committee" or "Board of Improvement."

There is some degree of isolation between the different branches of study among themselves and between the educational and military branches of the Royal Military Academy. A "Committee" or "Board of Improvement," held periodically by direction of the Lieutenant-Governor, composed of the inspector and 2nd commandant, the assistant inspector, the principal professors, and one of the senior executive military officers, would, in my opinion, lead to good results and more perfect union.

Suggestions of advantage would thus be brought under the consideration of the Lieutenant-Governor, and that personal intercourse, which is so desirable between the different branches of the establishment, would be promoted. It might be of advantage to the service and to the Royal Military Academy to associate with this committee an officer of the Royal Engineer Establishment at Chatham, and an officer of the Department of Artillery Studies at Woolwich.

The association of officers employed in instruction with the executive military officers in the management of the recreation and amusements of the cadets would also, I think, be of much advantage.

Artillery Instruction.

The officers and non-commissioned officers of Royal Artillery employed for military duty might also with advantage be employed to a greater extent than now in carrying out the *Artillery instruction* of the cadets. The *drills* and *exercises* in all natures of guns and mortars, the practice, the exercise with gyns, various carriages, and in mounting and dismounting ordnance, could be taught by them. The professor of artillery having the means, by the periodical examinations and personal intercourse with the inspector and 2nd commandant, to test the accuracy of the practical instruction thus given.

Messing.

In my evidence before the Royal Commission I was questioned as to the "messing." I may add that considerable changes have been made in the system, and in carrying out the details, within the last three years. Inquiries were instituted by order of H. R. H. the Field Marshal Commanding-in-Chief in 1866, and on the report of a joint committee of officers of the War Office, the Horse Guards, and the Royal Military Academy, in that year, alterations then suggested have since been matured with great advantage. It will suffice to say that at the present time four meals are provided daily (breakfast, lunch, dinner, and tea), at three of which there is meat, with a pint of beer at dinner, *the cost being under 2s. each.* And, in addition, there is every facility to procure (under proper supervision and audit) extra supplies—meat, eggs, ham, beer, soda water, ginger beer, tea, coffee, bread and butter, biscuits, and sundry other items, at little over cost price. I think the mess establishment stands unrivalled for *economy* and *convenience.*

Chaplain and Divine Service.

The duties assigned to the chaplain are detailed in the regulations. They provide for a proper observance of reli-

APPENDIX III. (B.)

Royal Military Academy, Woolwich.

gious duties, and enjoin that relationship between the cadets and their chaplain which should lead to their conduct and general bearing being stimulated by the nature of his office and his personal influence.

But, whatever the character of the man, and the opportunities afforded him of intercourse with his charge, it seems almost impossible that, without a chapel or any place reserved wholly for Divine service, the clergyman belonging to an establishment such as the Royal Military Academy, can hope to carry out the sacred duties of his office satisfactorily. The associations of Divine service performed in the dining hall, where daily prayers are also read morning and evening just before sitting down to a meal, are not such as to create, but rather to destroy, religious impressions.

The chaplain of the Royal Military Academy has a large and *peculiarly* important charge; there are at present, including the gentlemen cadets, about 600 or 700 persons belonging to, or immediately connected with the establishment.

Chapel.

The want of a chapel where he may hope to see his congregation brought together for Divine service, where he can properly address them, and where he can administer the Holy Sacrament to those who are communicants, must surely be deeply felt by a clergyman.

If a chapel cannot be provided for the Royal Military Academy, I should prefer to see the appointment of chaplain to the establishment made for a term of years. One of the regular staff of army chaplains might be specially selected for the post, and attached to the garrison of Woolwich, where he would feel that his ministerial functions were associated with one of the most beautiful of churches.

But I should strongly deprecate any change being made in this respect which would affect the present incumbent.

(III.)—COURSE OF STUDY, EXAMINATIONS, &c.

Course of Study.

A few modifications in the carrying out of instruction appear worthy of consideration.

I advocate the time of residence being reduced *to four terms*, instead of five; the age of obtaining a commission would thus be between 18 and 20 years, or an average of 19.

The attendance in study should not exceed two hours at a time.

The *parades for study* might in part be dispensed with (when the cadets have been a certain time at the Academy). This relaxation of military routine would be a privilege, without injury to discipline. Some re-arrangement in details and re-adjustment of value of the different branches of study at the Royal Military Academy would, of course, be needed if the period of residence were altered; but this could be done without difficulty by the professors, under the superintendence of the Lieutenant-Governor and Inspector of Studies.

The professors should direct, supervise, and be responsible for the instruction in their respective branches of study, superintending the instruction in the junior classes, teaching, lecturing, and questioning in those more advanced.

But the nature of the subjects taught of necessity prevents the adoption of any general system of tuition by lectures. The tutorial and the professorial plan combined, now in operation, is best adapted to the course of study.

Classification for Study.

It would be an advantage if a separate room were available for each instructor.

With classes as at present, of 40 to 44 each, and a residence of four terms, the existing accommodation would meet this want.

The four classes to be equally distributed into eight subdivisions of 20 to 22 each. Each subdivision to have a separate room (two lecture rooms and a spare class room for special subjects being available in addition). At the age recommended, *i.e.* between 17 and 19 on an average, it is probable that one instructor in each room could, in most subjects, teach the number of cadets composing the subdivision.

Subjects of Study.

Mathematics should certainly be retained as an obligatory study at the Royal Military Academy, and should hold, as now, the chief place of importance. But, as I would insist on a sound qualification in this subject before entrance, I would if possible cease to include geometry, algebra, trigonometry, mensuration, and perhaps co-ordinate geometry, in the course of study at the Royal Military Academy. The time allotted to mathematics to be two terms, the subjects required to be co-ordinate geometry, if not learnt before entrance, spherical trigonometry, statics, dynamics, differential and integral calculus, hydrostatics, practical mechanics. The rules as to extra subjects and for conducting the examinations to remain as at present.

Fortification, artillery, surveying, and practical geometry, must be the subjects of chief importance in the curriculum of studies, the course in each being modified to meet any alteration in the time of residence.

Chemistry and natural philosophy might be taught earlier, instead of during the last two terms.

"Freehand" drawing certainly deserves careful attention, but no great importance is to be attached to *landscape drawing* as an *obligatory* branch of study; there is not time enough available.

The practical subject of mechanism (subdivided into two branches of practical and theoretical mechanics) should be pursued, as now, after the course of mathematics is ended, but I should be disposed to let the study of this part of the subject be optional, the value assigned to it being pretty high.

If it be granted that a competent knowledge of *one* modern language is required for entrance, there need be but one taught to the cadets at the Royal Military Academy. This choice should be between "French" or "German" and "Hindustani."

Whether the study of modern languages should be *optional or not*, is a question often raised. It would seem desirable to insist on a sound knowledge of *one* language, but not to require more.

Examinations. System of Credit, &c.

The present system of allotting credit at the examinations was established in 1861; the chief feature is, that an aggregate obligatory minimum is required, *not* on individual subjects, but on the total number of marks to be gained on all subjects, but the marks gained in any one do not count unless a fixed minimum in that subject be acquired.

The broad rule is, that the "*aggregate* of marks required for qualification for a commission should be equal to the sum of all the minima."

The system appears to work *fairly*, and does not lend itself to superficial knowledge of a subject, while it admits of the principle that superior excellence in one subject may compensate for deficiency in another.

It would be far better if final credit (or "permanent" marks) *only* were allowed in all subjects at the periodical examinations. The plan of allowing temporary marks to count for class promotion leads to undue complication without corresponding advantage to the cadets.

Number of Subjects taught.

A reduction in the number of subjects is desirable, but *as a rule* it is doubtful whether the plan of allowing some of those taught to be voluntary would be satisfactory. It is to be feared that such subjects would often be neglected, and a reduced standard of qualification might ultimately result from the change. To a certain extent I have recommended this system, but, exceptionally, and in a very limited degree.

The number of subjects taught should be adapted to the education needed for the service, and the time available for teaching them. And then surely a cadet who comes to the Royal Military Academy should be *required* to learn all subjects that are deemed necessary.

Staff of Professors and Instructors.

The whole staff of professors and instructors (with, perhaps, the exception of the masters in modern languages), might be composed of officers. I think it would be of advantage to introduce this change as opportunity offered.

(IV.)—ACCOMMODATION.

Barrack Accommodation.

The barrack accommodation is insufficient for the present number of cadets, at the average age of 19 years.

A statement of the accommodation and the occupation is in the hands of the Royal Commission.*

Approximately there are now—

24	rooms with	4 cadets in each.
6	„	3 „
10	„	2 „
88	„	1 „

* *See* Returns, page clvii.

The rooms occupied by four gentlemen cadets are too crowded, but there is no objection to allot these rooms to three cadets each (among the juniors), for it must be remembered they do not live altogether in the barrack rooms, excellent study rooms, halls for meals, library and reading rooms, &c., being provided for general use.

There may be enough *cubical space* on sanitary grounds, but the rooms now occupied by two cadets are small, inconvenient, and uncomfortable. It is almost superfluous to say that a single room is looked upon as a great privilege, and the possession is highly appreciated.

Dining halls, library, &c., recreation rooms.

The dining halls are commodious and very good; the library and reading rooms excellent. The school of arms and gymnasium, racquet courts, billiard room, workshops, are all that can be desired; but the smoking room is *very* incommodious.

Photography.

No accommodation has been provided for photography. The want of suitable rooms is sensibly felt by a considerable number of the cadets. Two or three small unoccupied barrack rooms on the ground floor of the "tower" are now used for the purpose, but this can be regarded only as a temporary privilege liable to be withdrawn at any time if other appropriation of the rooms is required.

Quarters for officers, &c.

With regard to the accommodation for officers, the Lieutenant-Governor, the inspector and second commandant, the medical officer, and the chaplain have official houses in the immediate neighbourhood of the enclosure.

Two captains, three lieutenants, and the quartermaster live in quarters *within* the precincts.

The assistant-inspector, one captain, one lieutenant, the paymaster, and adjutant live in *private* houses, having no quarters provided for them.

The present professor of mathematics also lives in an official house close to the Royal Military Academy.

(V.)—Amalgamation of Woolwich and Sandhurst.

Amalgamation of Royal Military Academy and Royal Military College.

I see no likelihood of advantage to be gained by either college from a complete or partial amalgamation between the Royal Military College at Sandhurst, and the Royal Military Academy at Woolwich.

The general education of an officer, for whatever branch of the service, should be acquired for the most part at school, or before he joins a military college. The special technical subjects necessary for the scientific corps are needed in but a small comparative degree for the army generally.

The almost inevitable result of amalgamation would be to lower the standard of qualification for commissions in the Royal Artillery and Royal Engineers; a standard, which, *as a whole*, is not at present higher than is desirable.

Gentlemen Cadets failing to qualify for Royal Artillery or Royal Engineers.

But an opening might be made for cadets to obtain a commission in the army, who, from unforeseen and perhaps unfortunate circumstances, have failed to qualify for commissions in the ordnance corps, provided, of course, their conduct and military aptitude were unexceptionally good. Instances may occur, and have happened, where a cadet has failed to qualify in one or other of the strictly professional subjects, or in mathematics, and has thereby, although distinguished by favourable reports of conduct, and displaying thoroughly soldierlike qualities, been of necessity withdrawn from the Royal Military Academy, and thrown upon his own or his friends' resources to begin a fresh career, after devoting perhaps three or four years, at a most important age, to the study of professional subjects.

(VI.)—Expediency of giving the same Education to Candidates for the Artillery and Engineers.

Education for Royal Artillery and Royal Engineers in common.

It seems most desirable to continue the education of candidates for the Royal Artillery and Royal Engineers together, as at present, till they leave the Royal Military Academy on obtaining their commissions. The subjects of education in common to the two services are so important that all must learn them, and no more need be taught at the Royal Military Academy in any of these subjects, than is required by the candidate for either service.

Education after leaving Royal Military Academy.

The question of education after leaving the Royal Military Academy is one of much importance. The Royal Engineer Establishment at Chatham provides for the advanced training of officers appointed to the Royal Engineers. Within the last year all young officers of Royal Artillery have been ordered to join the garrison at Woolwich, and are specially employed in professional duties, before joining their own brigades, for six months.

It must not be forgotten that during the last 10 or 12 years great facilities have been given, through the Department of Artillery Studies, and the School of Gunnery at Shoeburyness, for artillery officers to renew their scientific studies, and to perfect themselves in professional knowledge.

The various "classes" or "courses" established must prove of great advantage to the service, and every encouragement is given to officers to avail themselves of these opportunities.

An organized system of instruction now exists in the regiment, and can be applied to supplement the education given at the Royal Military Academy.

Under the auspices of the Department of Artillery Studies, the young officers on joining the Royal Artillery might obtain most useful and practical professional knowledge by spending, say, two months at Woolwich, two months at Shoeburyness, and two months at Aldershot. They need not all be at the same station together; about half the number might join at one of these stations, half at another, and relieve each other, so that all would partake in turn of the advantages of the three places.

At Woolwich an artillery officer lives in the very *atmosphere of thorough artillery training*. The Repository, the Arsenal, the riding establishment, the barracks for horse, field, and garrison artillery, afford opportunities for learning the interior economy, and all the thoroughly professional details of the Royal Artillery, such as can nowhere else be obtained.

At Shoeburyness an officer learns how to put in practice the knowledge he has acquired of his duties; he performs exercises, carries on practice, and sees experiments with guns of the heaviest natures, under conditions that are in the highest degree interesting and instructive.

At Aldershot, he has the opportunity to learn something of the use and application of the artillery in conjunction with other troops.

After six months thus spent, the officers should be required to pass an examination, by the result of which their distribution to brigades and batteries should be considerably governed. Any officer failing to pass the examinations satisfactorily, should be required to renew the course, and if again unsuccessful the commission should be forfeited. With this view provisional commissions should in the first instance be given to all.

It seems worthy of consideration to suggest further substantial advantages to a certain number of cadets, who particularly distinguish themselves at the entrance examination, and during their career at the Royal Military Academy. For instance, two or three might be admitted at each entrance at the same rate of contribution as is allowed for sons of widows of officers, or the contribution might in one or two cases be wholly dispensed with.

A substantial reward in the shape of a "scholarship" or "annuity" for a given time, or a sum of money (say 100*l.*) in aid of the "outfit" on joining, might be given to one or two of the most distinguished cadets, on obtaining their commissions.

And, in a corps where promotion is governed by seniority, it might be admissible to allow the time at the Royal Military Academy to count towards service in the army for retirement.

Geo. T. Field, Colonel,
Inspector and 2nd Commandant, R.M.A.

Royal Military Academy,
May 1869.

APPENDIX III. (C.)

Royal Military Academy, Woolwich.

C.—PAPERS HANDED IN BY COLONEL FIELD.

(1.) APPROXIMATE TOTAL STRENGTH OF THE ESTABLISHMENT OF THE ROYAL MILITARY ACADEMY.

Governor.—H.R.H. the Field Marshal Commanding-in-Chief.			
Staff.—Lieut.-Governor, Commandant		1	
Inspector and Second Commandant		1	
Assistant Inspector		1	
Medical Officer		1	
Chaplain		1	
Adjutant and Paymaster		1	
Quarter-master		1	
			7

	Lieutenants 4		
Educational Branch	Officers	15	
	Civil Professors and masters	19	
			34
Gentlemen Cadets			222
Civilians and Artificers, &c., attached			7*
Detachment Non-commissioned officers and men			36†
Servants			49
Housekeeper			1
Female servants, in kitchen, hospital, sweepers, &c.			13‡
Total			376

* This includes a turner paid by gentlemen cadets.

† Includes staff-serjeants, clerks, drill and gymnastic serjeants, instructors in field works and gunnery, hospital serjeant, military labourers, officers' servants, &c.

‡ One paid by gentlemen cadets.

(2.) NOMINAL LIST OF PROFESSORS, MILITARY INSTRUCTORS AND MASTERS OF THE ROYAL MILITARY ACADEMY.

Subjects.	Names.
Mathematics	Professor, J. J. Sylvester, Esq.
	Masters: S. Fenwick, Esq.; Rev. G. Y. Boddy.; W. Racster, Esq.; M. W. Crofton, Esq.
Fortification	Professor, Lieut.-Col. J. J. Wilson, R.E.
	Instructors: Major J. W. Stuart, R.E.; Captain C. N. Martin, R.E.; Captain E. L. Bland, R.E.; Captain H. F. C. Lewin, R.E.
Artillery	Professor, Lt.-Col. C. H. Owen, R.A.
	Instructors: Captain O. H. Goodenough, R.A.; Captain H. Briscoe, R.A.; Captain W. H. Wardell, R.A.
Surveying and Topographical Drawing.	Professor, Major A. W. Drayson, R.A.
	Instructors: Captain G. A. Crawford, R.A.; Captain A. H. Hutchinson, R.A.; Captain F. E. Pratt, R.E.; Lt. W. H. Collins, R.E.
Practical Geometry.	Professor, T. Bradley, Esq.
	Masters: G. S. Pritchard, Esq.; F. A. Bradley, Esq.
French	Professor, A. Lovey, Esq.
	Masters: T. Karcher, Esq.; E. Valentin, Esq.
German	Professor, C. A. Feiling, Esq.
	Masters: F. Schlutter, Esq.; C. H. Schaible, Esq.
Hindustani	Professor, Major Robertson.
Landscape drawing.	Masters: G. B. Campion, Esq.; A. Penley, Esq.
Mechanics and Natural Philosophy.	Professor, T. M. Goodeve, Esq.
Chemistry	Lecturer, C. L. Bloxam, Esq.
Military History.	Professor, Captain H. Brackenbury, R.A.

(8.) SCALE OF PUNISHMENTS.

Lieut.-Governor. General rules and regulations of the R.M. Academy, p. 4, para. 11.
Inspector. Not defined in regulations. The maximum limit appears to be 7 days' close arrest.
28 „ open „
Restriction from leave *ad lib.*
Assistant Inspector. 4 days' close arrest.
„ open „
Restriction from leave.
Captains of Divisions. Ditto.
Lieutenants. Arrest till further orders. (The case to be disposed of by higher authority.) 1 extra drill.
Responsible under Officers. Do. do.
Subdivision under Officers. Do. do.
Corporals. Do. do.

(9.) DESCRIPTION OF PUNISHMENT.

Close arrest. Carries with it extra drill of half an hour before breakfast, and in the afternoon; and confinement to room during all leisure hours.

Open arrest. The same extra drill as in close arrest but confinement to the enclosure only and restriction from engaging in any games or amusements.

Restriction from leave, and indulgences for a limited period.

D.—PAPERS HANDED IN BY CAPTAIN BRUCE, ASSISTANT-INSPECTOR OF STUDIES.

(1.) COMMISSIONS, COMMITTEES, &c., on ROYAL MILITARY ACADEMY, WOOLWICH, from 1835 to 1861.

Date.	Character of Inquiry.	Presidents, &c.	Object.	Result.
1835	Committee -	Lt.-Col. Anson, Principal Storekeeper of Ordnance.	To inquire into the state of the R.M. Academy.	Evening studies introduced; also surveying, plan drawing, German, and history, and geography. Additional attendances required from some professors and masters.
1839	Committee -	Lord Bloomfield - -	To inquire into irregularities of gent. cadets.	Printed regulations revised. Several cadets dismissed.
1846	Committee -	Capt. Sir T. Hastings, R.N., Principal Storekeeper of Ordnance.	To investigate the system at R.M. Academy.	Printed regulations revised; also salaries of professors and masters. Text book for mathematics adopted, compiled by professors and masters R.M.A., and edited by Capt. Harness, R.E. New scale of credits.
1856	Commission -	Members :— Lt.-Col. Yolland, R.E. Lt.-Col. Smyth, R.A. Rev. W. C. Lake.	To consider the best mode of reorganizing the education and training of officers of the scientific corps.	Report of Commissioners appointed to consider the best mode of organizing, &c., officers for scientific corps. Adoption of "open competition," and all changes connected therewith.
1861	Investigation-	Col. Bingham, D.A.G., R.A., Col. Wodehouse, A.A.G., R.A.	To inspect defaulter sheets of certain gent. cadets reported by the governor for smoking and playing at cards in their rooms.	Recommendation that six cadets be rusticated for remainder of term. Approved by H.R.H. Commanding-in-Chief.
1861	Court of Inquiry.	Gen. Knollys, V.P. Council of M. Educ., Col. Bingham, D.A.G., R.A., Col. Chapman, D.A.G., R.E.	To enquire into and report upon the regulations under which the R.M. Academy had hitherto been governed.	General rules and regulations revised. Appointment of resident Governor changed to that of Lt.-Governor. H.R.H. the Duke of Cambridge became Governor. The cadet company formed into three divisions: A. and C. under two first captains. B. under one second captain. A paymaster and office adjutant appointed. Certain indulgences granted to cadets.

(3.) Dates of Chief Alterations in Mode of Admission to Royal Military Academy. From March 1855 to June 1869.

Date of Examination.	No. admitted.	Mode of Admission.	Remained under Instruction.
March 1855 -	30	*Direct nomination* (exceptional), *without examination*, to a practical course in the Royal Arsenal.	Nearly 5 months; 4 commissioned in line, 1 withdrawn.
March 1855 -	24	*By old nomination*, from the country at large, and from Carshalton -	Different periods.
August 1855 -	30	Do. Do. Do.	Do.
August 1855 -	31	*Open competition* to a practical course in Royal Arsenal - - -	7 months, September 1855 to April 1856; 1 discharged, 1 removed, 5 failed, and allowed to study at home till June 1856, when they were re-examined and commissioned.
November 1855 -	39	*By old nomination;* part of large batch of 73 called up to clear off "old nomination list." Some from Carshalton, some from the country. Though examined together, they did not compete together; the vacancies, after providing for the Carshalton candidates, being given to the others.	Different periods.
January 1856 -	13	*Open competition* to a practical course, joined at the lower (or old Royal Engineer) barracks.	7½ months, April to December 1857; 1 had a further trial, commissioned April 1857.
April 1856 -	2	*Old nomination* from the country, and one from Carshalton.	—
June 1856 -	8	*Old nomination* from Carshalton only.	—
June 1856 -	30	*Open competition;* joined at "lower barracks," went through a separate theoretical course of two terms, and were examined with first theoretical class for practical class, June 1857; remained under practical instruction, 3, 4, and some 5 months.	13, 14, and 15 months.
July 1857 -	39	*By open competition;* joined at upper barracks, competed at the end of first term for promotion with the *two* classes above them; so shortening their stay at Royal Military Academy.	16 for about 16 months, the remainder till qualified for commissions, viz., 2 years 4 months.
October 1857 -	1	*Two cadets volunteered* from Sandhurst, and were examined (one admitted, one failed).	1 year 8 months.
December 1857 -	7	*Old nomination* from Carshalton only.	—
January 1858 -	31	*By open competition;* joined the upper barracks; got rapid promotion at the end of their first term to higher classes.	Some 13 months, 15 months, 1 year 10 months, nearly.
June 1858 - -	6	*Old nomination* from Carshalton only.	—
August 1858 - Date of transfer to Royal Military Academy.	16	*Portion of a batch of* 24 *admitted to Sandhurst* in January 1858 upon the understanding that they might eventually compete for Royal Military Academy, but were offered choice of remaining at Sandhurst, of receiving commissions in the cavalry or line, or of transfer *without examination* to Royal Military Academy, and to be allowed, if required, *one year* more than the other cadets at the Royal Military Academy.	1 year 10 months, some 2 or 3 months longer.
July 1858 - -	34	*By open competition;* joined at upper barracks; got quick promotion by extra demand for officers.	Varying from 1 year 3 months to 1 year 9 months.
November 1858 -	13	*Old nomination* from Carshalton only.	—
January 1859 -	35	*Open competition;* joined at upper barracks; got exceptionally rapid promotion.	Some 1 year 4 months to 1 year 9 months.
April 1859 - -	21	*Old nomination* from Carshalton only.	—
July 1859 - -	41	*Open competition;* joined at upper barracks; rapid promotion through examination with a higher class.	From 1 year 4 months to 2 years 4 months.
January 1860 -	64	*Open competition;* joined at upper barracks; promotion hastened by extra demand for officers.	Varying from 1 year 5 months to 2 years 7 months.
July 1860 - -	43	*Open competition;* joined at upper barracks; again promotion accelerated by extra commissions given.	Varying from 1 year 10 months to 3 years 2 months.

(3.) Dates of Chief Alterations in Mode of Admission to R.M. Academy—*continued.*

Date of Examination.	No. admitted.	Mode of Admission.	Remained under Instruction.
January 1861 -	28	*Senior Class of Addiscombe Cadets*, joined Addiscombe, August 1860, transferred without examination to Woolwich, to be commissioned in December 1861; underwent theoretical instruction by themselves from February to June 1861, and practical instruction from August to December 1861.	10½ months.
February 1861 -	81	*Open competition*, all sent to Addiscombe for want of accommodation at Royal Military Academy; 11 transferred to Woolwich after a few weeks, the rest in August 1861.	Varying from 1 year 3 months to 3½ years.
August 1861 -	65	From this date nothing but "open competition" direct to Royal Military Academy.	—

(4.) Dates of Chief Alterations in Character of Entrance Examinations by "Open Competition" as compared with Examinations by "Old Nomination" system.

From August 1855 to June 1869.

Dates.	Alterations, &c.
Aug. 1855	Examined on the "basis of the general education of the country." *Abandoned.*—Drawing and printing. *Introduced.*—English composition and literature, natural and moral sciences, fortification. *Classics: Greek—language, literature, geography, and history of Ancient Greece. Latin—Language, literature, geography, and history of Ancient Rome. Candidates to be examined in pure mathematics, and not less than two other subjects to be selected by themselves. Age by open competition, 17 to 19 years. „ nomination, 14 to 16 years.
Jan. 1856	Subjects same as previous examination, and *Additional.*—Experimental sciences. *Drawing.*—Reasonable proficiency in elementary geometrical drawing, including use of instruments, and either machinery, architectural engineering, or landscape drawing. A higher scale of marks assigned. Marks allotted to subjects made to differ more widely from one another, especially mathematics, rated higher in the scale. Marks under ⅛ in any subject not to count. *Age for admission.*—18 to 20 years.
June 1856	Differed from former examinations in that sufficient previous notice of subjects was now given to candidates. *Mathematics*, divided into - - - { pure, 2,000 / mixed, 1,500 } 3,500 *Natural sciences*, 750 instead of 500. *Age for admission.*—17 to 20 years.
Jan. 1857	No examination.
July 1857	*Drawing.*—1,000 instead of 705; ⅛ *required in mathematics*, all other subjects ⅛. Five subjects now obligatory (one must be mathematics). *Aggregate minimum* marks for qualification, 3,000 instead of 2,500. *Candidates* not selecting French and drawing must satisfy examiner that they have such knowledge of the elements of these subjects as to afford reasonable expectation that they will perfect themselves at the Royal Military Academy. *Marks in Latin and Greek* will not count unless they amount to ⅛ in each subdivision, nor in pure and mixed mathematics unless they amount to ⅛ in each subdivision.
Jan. 1858	*Mathematics.*—1,000 marks at least required, of which 700 must be in pure mathematics. The examination in arithmetic, algebra, plane geometry, logarithms, and plane trigonometry, close and searching. *Geometrical drawing.*—To satisfy examiner of knowledge of elements when the subject is not taken up.
July 1858	300 marks in mixed mathematics, compulsory.
Jan. 1859	*Aggregate minimum.*—Number of marks for qualification reverts to 2,500.
July 1859	*Classics*, subdivision Greek.—1,000 marks instead of 1,750. Total for classics 2,000 instead of 2,750. *German*, language, &c.—1,000 instead of 750. *Hindustani* introduced.—1,000 marks. *Natural sciences.*—1,000 instead of 750.
Jan. 1860	*English*, language, &c.—2,000 instead of 1,250 and redistribution of marks to subjects, English. *Classics.*—3,000 instead of 2,000 and redistribution of marks to subjects. *Drawing.*—Redistribution of marks allotted. *Mathematics.*—300 for mixed mathematics omitted. *Compulsory.*—French or German, 100 of 1,000. Geometrical drawing, 50 out of 500. Whether taken up as subjects or not.
July 1860	No alteration.
Jan. 1861	*Examination* in astronomical and surveying instruments for such of the candidates as desire to take it up; 700 marks allotted. *Hindustani* increased by 1,000 marks by the introduction of history of India as a section. Marks to count by sections, and a minimum of 100 marks required.
July 1861	*Experimental and natural sciences.*—Compulsory ⅙ marks. *Classics.*—Marks for history and geography (Rome and Greece) not allowed to count unless ⅛ marks in the corresponding languages be gained. *Mathematics.*—500 of the 2,500 allowed for pure mathematics allotted to differential and integral calculus.
Jan. 1862	*Age of admission.*—16 to 19 years. No other change.
July 1862	No change.
Jan. 1863	*Mathematics*: Pure { Sec. 1, 2,000 / „ 2, 500 } Mixed, 1,000 } 3,500. Total unaltered. *English*, separated as under, and 1,000 marks added (modern geography):— English language and composition 1,000 History of England, dependencies, and colonies - - - 1,000 Geography, modern - - 1,000 *Classics.*—Alteration in distribution of subjects. Marks the same. *Hindustani.*—Geography and history of India omitted. 1,000. *In all subjects*, except (⅛ in) mathematics, ⅛ of the marks must be gained before any are allowed to count. *In either* French, German, or Hindustani, and in geometrical drawing, ⅛ marks to be gained whether the subjects be taken up or not.
July 1863 Jan. 1864 July 1864 Jan. 1865 July 1865 Jan. 1866	No alterations.
July 1866	*Drawing*, freehand, of machinery, architectural, topographical, landscape, or figure subjects - - - } 1,000 instead of 500. Geometrical drawing; qualification necessary, 100 out of 300 nominally assigned to it. Marks so gained will not count towards the general aggregate.
Jan. 1867 July 1867 Jan. 1868 July 1868 Jan. 1869 July 1869	No alterations.

* Required under old nomination system merely to read Cæsar with parsing.

Appendix III. (D.)

Royal Military Academy, Woolwich.

(5.) Length and Nature of Course of Instruction at the Royal Military Academy.

(a.) *Under the Old Nomination System.*

Course at Royal Military Academy.	
Length.	Nature.
Outside limit of four years allowed, to qualify for a commission, exclusive of the practical course in the Royal Arsenal. Inside limit, about two years, exclusive of practical course.	Cadets were admitted on probation for two terms, when they were reported upon by a board as to whether they were entitled to remain at the institution. *Theoretical classes* (four),— Mathematics. Fortification. Descriptive geometry. French. German. Landscape drawing. Plan drawing. History and geography. Lectures on { Chemistry. Natural philosophy. *Practical class* (in two divisions). Practical artillery. Surveying and field works. French / German } for a time. Chemistry. Lectures on { Natural philosophy and practical astronomy. Practical mechanics, machinery, and metallurgy. Geology and mineralogy.

(b.) *Alterations in Subjects taught since the Abandonment of all Nominations and the Introduction of Open Competition.*

Date.	Course at Royal Military Academy.	
	Length.	Nature.
		The system of admitting cadets to the Royal Military Academy upon probation ceased with the old nomination cadets.
Aug. 1857	About 2 years, or until sufficiently advanced in scientific knowlege to pass a satisfactory examination.	No alteration in subjects of instruction.
Aug. 1859	About 2½ years, or until sufficiently qualified.	The terms "Practical" and "Theoretical" class abolished, and the classes numbered from 1 to 6, 1st and 2nd at lower, 3rd, 4th, 5th, and 6th at upper barracks.
July 1860	About 2½ years, or until sufficiently qualified.	History and geography abolished. A *professor* of mechanics appointed in place of a *lecturer* on "Practical Mechanics."
July 1861	About 2½ years. If a cadet failed "to "qualify within 3 "years in his pro- "fessional studies, "or to acquire a "sufficient profi- "ciency in Mili- "tary Exercises," he was subject to removal from Royal Military Academy.	
Aug. 1861*	- - - -	Hindustani introduced.
Oct. 1861	- - - -	Field works transferred from the professor of surveying to the professor of fortification.
July 1865	- - - -	Professor of surveying and sketching to instruct in plan drawing. Professor of plan drawing abolished.
Dec. 1867	- - - -	Lectures on geology and mineralogy abolished.
Feb. 1868	- - - -	Lectures on military history and art of war introduced.

* The increased accommodation at the upper barracks being now completed, the lower barracks were closed, and all were quartered within one building. The cadets were divided for studies into five classes.

(6.) Alterations in the "Establishment" Number of Gentlemen Cadets, Royal Military Academy.

From 1855 to 1859.

Date.	Number.	Remarks.
From 1855	188	Taken from Royal Military Academy and Army Estimates, but no authority in writing can be found.
From 1857	200	
From 1 July 1861.	300	Authority to charge messing for 300 cadets, W.O., 23 September 1861, 6851/519.
From 20 January 1863.	240	Horse Guards, 20 January 1863.
From 16 September 1864.	200	Do. 16 September 1864.

Appendix III. (E.)

E.—MEMORANDUM ON THE INTRODUCTION OF THE COMPETITIVE SYSTEM FOR ADMISSION TO THE ROYAL MILITARY ACADEMY.

(By the Secretary.)

Previously to the year 1855 admission to the Royal Military Academy could only be obtained by a nomination from the Master-General of the Ordnance. The limits of age for admission were at that time from 14 to 16, and the candidates nominated were required to pass an entrance examination before the professors of the Academy, which varied somewhat according to the age of the individual. A certain number of the candidates previously passed through the preparatory school at Carshalton, admission to which was equally obtained by nomination from the Master-General of the Ordnance, and were transferred to the Academy on passing an examination similar to that required from those who entered the latter establishment direct. The term of residence at the Academy varied, according to the progress of a cadet, from two to four years.

The inability of the Academy to meet the demand for officers for the Artillery and Engineers created by the Crimean war led to the introduction of a new system of obtaining commissions in the scientific corps. At first a limited number of nominations were placed in the hands of the head masters of the great public schools of the country, and the candidates nominated by them were appointed to provisional commissions on passing an examination at Woolwich; but after a short time the principle of

open competition for admission to the Artillery and Engineers was adopted in 1855 by Lord Panmure, when Secretary of State for War. Simultaneously with this change—the first recognition of the competitive principle in regard to military education in this country—a great alteration was made in the limits of age for admission to the scientific corps. Both direct appointments to commissions in the Artillery and Engineers, without any previous special instruction, and admissions to the senior or practical class at the Academy, without passing through the lower or theoretical classes at that institution, were thrown open to public competition among all natural-born subjects of Her Majesty. The limits of age for candidates for the direct appointments were from 19 to 21. Those who were successful were in the first instance to receive provisional commissions, and to be placed for instruction under the Director of Artillery Studies at Woolwich for a period of about six months, at the end of which they were to be permanently commissioned. Candidates for admission to the practical class at the Academy were required to be between the ages of 17 and 19; those admitted were to remain in the practical class for six or eight months, after which, on passing an examination, they were to receive commissions in the Artillery or Engineers. The first competitive examination under this system (the regulations for which will be found below) was held in August 1855, and was conducted by a body of examiners specially appointed for the purpose, under the direction of Canon Moseley. The examination for both classes of appointments thrown open to competition was the same, and was based on the general education of the country, the object being merely to compare the abilities and attainments of the candidates without reference to special professional knowledge. Two other similar examinations, both for provisional commissions and for admission to the practical class, were held in January and June 1856, the only difference being that the limits of age of the candidates were somewhat extended, and that in these later examinations no commissions in the *Engineers* were offered to competition.

On the conclusion of the Crimean war, however, the system of appointing officers directly from civil life to commissions in the scientific corps, as well as that of admitting candidates to the practical class at the Academy, which had been adopted to meet the pressure of the war, came to an end. No other examination after that in June 1856 was held for a year; but in June 1857 the first competitive examination for admission to the ordinary course of instruction at the Academy took place. The regulations under which this examination was held will be found at page lxvi. The limits of age for admission were fixed at 17 to 20, and it was announced that the successful candidates would remain under instruction at the Academy "until sufficiently advanced in scientific knowledge to pass "a satisfactory examination."

Since this period open competitive examinations have been held regularly every six months for admission to the Academy; and though various modifications in their details have been made, their general character remains little altered. The limits of age for candidates, originally placed at 17 to 20, were, however, in 1862 reduced to 16 to 19, at which they are at present fixed. The determination at one time adopted of abolishing this system of admission to Woolwich, and of requiring all candidates previously to pass through Sandhurst, is fully explained, together with the causes which led to the abandonment of the plan, in the account of the scheme proposed in 1857 for the amalgamation of Woolwich and Sandhurst.*

* *See* Appendix II. G., page xx.

Appendix III. (E.)

Royal Military Academy, Woolwich.

The examinations for admission to the Academy, like those which had previously been held for provisional commissions and for appointments to the practical class, were at first conducted by Canon Moseley and a special Board of examiners appointed by the Secretary of State for War, with whom the general management of the Academy, after the abolition of the office of Master-General of the Ordnance, remained.

In 1858, however, the superintendence of the system of instruction at Woolwich was transferred to the Council of Military Education, who since July 1859 have conducted the examinations for admission to the Academy.

Although the principle of open competition for appointments in the scientific corps was first recognized in 1855, and in 1857 was extended generally to admission to the ordinary course of instruction at the Academy, yet the system of competitive examination did not become the sole and universal means of admission to Woolwich until the year 1861. Time was required to clear off the vested interests of candidates who had been placed on the old nomination list of the Master-General of the Ordnance—of youths who had been admitted to the preparatory school at Carshalton—of cadets who, at the time of the proposed amalgamation of Sandhurst and Woolwich, had obtained admission to the former institution on the understanding that they would have the opportunity of obtaining commissions in the Artillery and Engineers—and, lastly, of cadets at the Indian Military College at Addiscombe, who, on the abolition of the local Indian army, were transferred to Woolwich before receiving commissions in the Royal Artillery and Royal Engineers. A paper handed in by Captain Bruce shows the various sources from which for several years the cadets admitted to the Academy were drawn.*

Information regarding the early history of the Royal Military Academy is contained in the Seventeenth Report of the Commissioners of Military Inquiry (1812). A full account of the establishment, from the time of its foundation in 1741 to the year 1840, is given in the "Records of the Royal Military Academy." The condition of the establishment in the year 1856 is described at length in the "Report of the Commissioners appointed to consider the "best mode of reorganizing the system for training officers "for the scientific corps."† At that time the Academy was, as already explained, in a state of transition from the system which existed in the days of admission by nomination, to that which has resulted from the adoption of the principle of open competition. The recommendations of the Commissioners were based upon the assumption, laid down in the instructions issued to them, that admission to the scientific corps would in future be obtained only by an open competitive examination, and that the age of candidates admitted to this examination would be from 17 to 20.

The changes which have since taken place in the system of instruction at the Academy have in general been the necessary result of the increased age at which cadets have been admitted. The details of the successive alterations are fully described in the papers handed in by Captain Bruce.

The regulations now in force for admission to Woolwich are printed at page lxvii. Full information regarding the present establishment and organization of the Academy, and the course of instruction pursued at it, will be found in the evidence of Major-General Napier, Colonel Field, and Captain Bruce, and in the various papers handed in by the two latter officers.‡

* *See* page lxii. † Pages xli to lxix, and 283 to 306.
‡ *See* pages lviii to lxiv.

F.—REGULATIONS FOR THE FIRST COMPETITIVE EXAMINATION FOR APPOINTMENTS IN THE ARTILLERY AND ENGINEERS.

Appendix III. (F.)

Prospectus of the examination in August 1855.

The examination for appointments to the Royal Artillery and Royal Engineers which was intended to take place on the 11th July is postponed until the 1st August.

Forty appointments will then be made to the senior practical class at Woolwich, the candidates for which must be between the ages of 17 and 19.

Twenty other appointments will at the same time be made to provisional commissions, the candidates for which must be between the ages of 19 and 21 years.

The gentlemen appointed to these commissions will be placed under the Director of Military Studies at Woolwich. The appointments will be determined by the results of the examination.

Each candidate will be examined in the elements of pure mathematics, and in any two or more of the following subjects which he may himself select:—

1. English composition, literature, and history.
2. Greek ditto.
3. Latin ditto.
4. French ditto.
5. German ditto.

Appendix III. (F.)

Royal Military Academy, Woolwich.

6. Mixed mathematics.
7. Natural sciences.
8. Moral sciences, that is logic, mental, moral, and political philosophy.

The standard of attainment expected in the candidates is that ordinarily reached in the upper classes of public schools, or in the first year of residence in the universities. To meet the case of gentlemen who have been pursuing the special studies recommended in a syllabus formerly issued by the Lieut.-General of the Ordnance, a section of questions in the paper on "mixed mathematics" will be set apart for those studies.

The examiners will be appointed by the Secretary of State for the War Department.

The examinations will be open to all natural-born subjects of Her Majesty.

The examination will be held in the hall of King's College, London, on Wednesday, the 1st August, at 10 o'clock in the morning.

Every candidate must transmit to the Secretary of State for the War Department before the 25th July,—

1. A certificate of his age within the limits above mentioned.
2. A certificate, signed by a physician or surgeon, of his having no disease, constitutional affection, or bodily infirmity unfitting him for military service.
3. A certificate of good moral character, signed by a clergyman of the persuasion to which he belongs, and by the head of the school or college at which he has last received his education, or such other proof of good moral character as will be satisfactory to the Secretary of State.
4. A statement of the branches of knowledge in which he desires to be examined.

W. Monsell.

War Department, 22nd June 1855.

Appendix III. (G.)

G.—REGULATIONS FOR THE FIRST COMPETITIVE EXAMINATION FOR ADMISSION TO THE ORDINARY COURSE AT THE ROYAL MILITARY ACADEMY.

Prospectus of the examination for admission to the Royal Military Academy at Woolwich in June 1857.

N.B.—No more direct appointments will be made to provisional commissions in the Royal Artillery.

An examination for the admission of cadets to the Royal Military Academy at Woolwich will be held in London in the month of June 1857.

Provided a sufficient number are found competent, 30 admissions will be made to that institution; candidates must be between the ages of 17 and 20 years. Those, however, who have not exceeded 20 years of age on the 1st of January next, will not be considered disqualified. The successful candidates will remain under instruction until they are sufficiently advanced in scientific knowledge to pass a satisfactory examination, and they will then receive commissions in the Royal Artillery or Royal Engineers. They will be required to pay a sum of 22*l.* 10*s.* on admission, to cover the expenses of uniform, books, &c., and a contribution of 62*l.* 10*s.* for each half year of the time during which they remain at the academy. The half-yearly contributions, however, for sons and orphans of naval and military officers will be regulated at the following rates, as heretofore:—

	£
For sons of admirals, and of generals having regiments	40
Sons of generals without regiments	35
Sons of captains and commanders of the navy, and of colonels and regimental field officers of the army	30
Sons of all officers of the army and navy under the above ranks	20
Sons of officers of the army and navy who have died in the service, and whose families are proved to be left in pecuniary distress	10

The sons of general officers paid only on their commissions as field officers will pay the same contribution as the sons of field officers.

The sons of officers on full and half-pay will pay alike; but the sons of officers who have voluntarily retired on half-pay, or *received the difference*, will only be admitted on the terms prescribed for the sons of private gentlemen, viz., 62*l.* 10*s.* for each half year.

The sons of officers of the civil departments of the army are admissible to the Academy upon the same terms as those prescribed for the sons of naval and military officers.

The admissions will be determined by the result of a competitive examination, the subjects of which will be as follows:—

	Marks.
Pure and mixed mathematics, *i.e.*, statics, dynamics, and hydrostatics	3,500
English language, literature, composition, history, and geography	1,250
Language, literature, geography, and history of ancient Rome and of ancient Greece	1,750
Ditto ditto of France	1,000
Ditto ditto of Germany	750
(The examination in French and German will be both written and *viva voce*.)	
Experimental sciences, *i.e.*, chemistry, heat, electricity, including magetism	1,000
Natural sciences, mineralogy, and geology	750
Moral and political sciences	1,000
Drawing, *i.e.*, elementary geometrical drawing, including the use of drawing instruments, and either machinery, architectural, engineering, or landscape drawing	1,000

No candidate will be allowed to be examined in more than five subjects, of which one must be mathematics, and no one who does not obtain at least one-fifth of the allotted number of marks in this subject will be eligible for an appointment.

From the other subjects of examination each candidate may select those in which he desires to be examined; but no one will be allowed to count the marks gained in any subject, unless those marks shall at least amount to one-sixth of the total number of marks allotted to that subject.

No candidate will be admitted into the Royal Military Academy, unless he obtain an aggregate of 3,000 marks at least.

Any candidate who shall not select French and drawing among the subjects of his examination will be required to satisfy the examiners that he has such knowledge, at least of the elements of those two subjects, as shall afford reasonable expectation that he will perfect himself in both during his residence at the Academy.

The following papers will be required to be transmitted by each gentleman to the War Department before the 1st June, with his application to be noted as a candidate, unless he shall notify that he has been a candidate at a previous examination, in which case the statement of subjects only need accompany the application:—

1st. An extract from the register of his baptism, or, in default of that, a certificate verified by affidavit.

2nd. A certificate of good moral character, signed by a clergyman of the parish to which he belongs, and by the tutor or the head of the school or college at which he has received his education for at least two years, or such other proof of good moral character as will be satisfactory to the Secretary of State.

3rd. A statement of the subjects of examination in which (in addition to mathematics) he may desire to be examined.

All candidates will be required to present themselves at the place of examination, hereafter to be determined, in order to be inspected by military surgeons, that it may be ascertained that they are free from any bodily defects, or ailments calculated to interfere with the performance of military duties.

Notice will be given a month previously, in the public papers, of the place and days appointed for holding the examination.

H. R. Drewry.

War Department, Pall Mall,
14th November 1856.

II.—PRESENT REGULATIONS FOR ADMISSION TO THE ROYAL MILITARY ACADEMY.

Horse Guards, 1st May 1868.

N.B.—All candidates for commissions in the Royal Artillery and Royal Engineers are required to go through a course of instruction at the Royal Military Academy.

I. Competitive examinations for admission are held in London twice a year, in January and July. They are conducted by examiners appointed for the purpose, in the presence and under the superintendence of the Council of Military Education.

The candidates must be between 16 and 19 years of age.

II. The admissions will be determined by the result of the examination, the subjects of which will be as follows, viz.:—

			Marks.
1. Mathematics	Pure	Section I. Arithmetic, algebra, Euclid, plane trigonometry	2,000
		Section II. Spherical trigonometry, elements of co-ordinate geometry, and of the differential and integral calculus*	500
	Mixed:—Statics, dynamics, and hydrostatics		1,000
			3,500
2. English language and composition			1,000
3. History of England, its dependencies and colonies			1,000
4. Geography (modern)			1,000
5. Classics	Latin language		1,500
	Greek ditto		1,500
6. French language			1,000
7. German ditto			1,000
8. Hindustani ditto			1,000

The examination in French, German, and Hindustani will include writing from dictation.

9. Experimental sciences, *i.e.*, chemistry, heat, electricity, including magnetism		1,000
10. Natural sciences, *i.e.*, mineralogy and geology		1,000
11. Drawing	Freehand drawing of machinery, architectural, topographical, landscape, or figure subjects	1,000

Every candidate must qualify in geometrical drawing; *i.e.*, drawing in ink, with accuracy, neatness, and to scale, the several problems of Euclid. The standard of qualification in this subject is 100 marks, which must be gained out of a maximum of 300 nominally assigned to it. But the marks so gained will not count towards the general aggregate.

III. No candidate will be allowed to be examined in more than five subjects, of which one must be mathematics, and no one who does not obtain at least 700 marks in section I. of pure mathematics, will be eligible for an appointment.

From the other subjects of examination, to which marks are assigned as above, each candidate may select any, not exceeding four in number, in which he desires to be examined. The rules for counting marks in such subjects are as follows:—

In all subjects carrying marks, except the 1st section of mathematics, in which 700 marks are required, one-sixth of the number allotted to each must be gained before they can be allowed to count.

In classics, the subject is divided into two sections as above, either or both of which the candidate may take up as one subject; but he will not be allowed to count the marks gained in either section unless they amount to one-sixth of the number allotted to it.

In either *French*, *German*, or *Hindustani*, every candidate will be required to obtain for qualification one-sixth of the maximum of marks, whether he takes it up as a subject in which he desires to compete or not.

It should be understood that, although only a small qualifying test has been imposed in respect to modern languages, a knowledge of them on admission will contribute greatly to a candidate's future success at the Royal Military Academy.

* See syllabus annexed.

IV. The candidates are allowed to answer as many questions as the time allotted to the subject will permit.

V. No candidate will be admitted unless he obtain an aggregate of at least 2,500 marks.

VI. The successful candidates will remain under instruction for about two years and a half, or until they are sufficiently advanced in scientific knowledge to pass a satisfactory examination, and they will then be qualified to receive commissions in the Royal Artillery or Royal Engineers. If, however, they should be found unable to qualify themselves within three* years in their professional studies, or to acquire a sufficient proficiency in military exercises, or if at any time, by failure at the half-yearly examinations, it should appear improbable that they will ultimately succeed in qualifying for a commission, they will be removed. Further, every cadet will be liable to be removed temporarily or permanently on the commission of any of those offences to which such penalty is awarded by the regulations of the Royal Military Academy.

VII. Each cadet on joining will be required to pay a sum of 25*l.* to cover the expense of uniform, books, &c., and to bring with him the articles of clothing of which he will receive notice, and which must afterwards be kept up at his own expense. He will also be required to pay a contribution of 62*l.* 10*s.*, payable in advance, for each half year of the time during which he remains under instruction; and a deposit of 5*l.* into the hands of the paymaster on account, for contingent expenses, which latter sum he will be required to make up on returning to the Royal Military Academy after each vacation, to cover any unavoidable expense that may be incurred on his account during the ensuing half year.

The annual contributions, however, for sons and orphans of naval and military officers will be regulated at the following rates, as heretofore:—

	£
For sons of admirals and of generals having regiments	80
For sons of generals without regiments	70
For sons of captains and commanders of the navy, and of colonels and regimental field officers of the army	60
For sons of all officers of the army and navy under the above ranks	40
For sons of officers of the army and navy who have died in the service, and whose families are proved to be left in pecuniary distress	20

The sons of general officers who are paid only on their commissions as field officers will pay the same contribution as the sons of field officers.

Officers who have sold their commissions are in this classification reckoned as private gentlemen.

The cases of officers who have retired voluntarily upon half pay previous to having served 25 years on full pay will be specially considered.

Officers who retire on half pay after 25 years service on full pay will be entitled to be classified for payment with the rank they last served in.

The sons of officers of the civil departments of the army and navy, of officers of the permanent Militia Staff, and of adjutants of the Volunteer Force, are admissible to the Academy upon the same terms as those prescribed for naval and military officers.

The sons of Indian naval and military officers will be admitted on the same terms as the sons of officers of the Queen's service.

	£
The sons of professors at the Staff and Royal Military Colleges, at the Royal Military Academy, and at the Royal Military College, Addiscombe	60
The sons of Masters at the above institutions	40

If a cadet be absent a whole term in consequence of sickness or rustication, a payment of 10*l.* will be required for the privilege of his name being kept on the rolls of the establishment, and for a vacancy being guaranteed at the commencement of the next term.

If a cadet be absent from sickness during a portion of the term, his pay will continue to be issued and credited to his account; but no refund of the contribution will be permitted.

If rusticated during a term, the daily pay will cease

* To be counted from the commencement of the term in which a cadet joins, and no extension of this period will be granted on account of absence from the Academy from any cause excepting illness. Cases of protracted absence on account of illness will be specially considered on the report of the medical officer of the Academy.

Appendix III. (H.)

Royal Military Academy, Woolwich.

from the date on which the cadet is sent away, and the contribution made for the half-year will be forfeited.

In the case of a cadet of the orphan class, whose annual contribution is only 20*l.*, the amount to be paid when absence extends over a whole term is to be determined by the Secretary of State.

VIII. Any gentleman who wishes to present himself at one of the half-yearly examinations must send in his name to the military secretary at the Horse Guards one month before the time of examination, forwarding with his application to be noted the following papers:—

1st. An extract from the register of his baptism,* or, in default of that, a declaration before a magistrate, taken by one of his parents, giving his exact age.

2nd. A certificate of good moral character, signed by a clergyman of the parish to which he belongs, and by the tutor or head of the school or college at which he has received his education for at least the two preceding years, or such other proof of good moral character as will be satisfactory to the Commander-in-Chief.

3rd. A statement of the subjects of examination in which (in addition to mathematics) he may desire to be examined.

A candidate who has been examined before, when he applies for leave to present himself again, will only be required to forward the list of subjects he selects, and a certificate from his tutor or the head of his school, &c., for the interval between the two examinations.

IX. The candidates will be inspected by military surgeons on the first day of the examination, in order that it may be ascertained that they are free from any bodily defects or ailments calculated to interfere with the performance of military duties.

Extreme short-sight, or any serious defect of vision, is regarded as a disqualification.

The responsible parent or guardian of every successful candidate, and the candidate himself, before he can be admitted as a cadet, will be required to sign respectively the following declarations:—

Declaration by Cadet.

I do hereby declare that I have attentively considered Article VI. above quoted, of the regulations for admission to the Royal Military Academy, and I consent to abide by the same in every particular, as well as to observe and follow all such orders and directions as I shall from time to time receive from the Lieutenant Governor or other officers or authorities of the Royal Military Academy. And I further hold myself bound to comform in every respect to Her Majesty's Regulations, and to the rules and discipline of the service.

Signature _____

Declaration by the Parent or Guardian.

I hereby declare that I consent to the admission of my (son or ward) to the Royal Military Academy on the foregoing conditions.

Signature _____

(Signed) W. F. Forster,
Military Secretary.

* Note.—When the register of baptism does not contain the date of birth it should be accompanied by a memorandum, signed by one of his parents or guardians, stating the day on which the candidate was born.

Syllabus of Examination in the differential and Integral Calculus.

Differential Calculus.

The meaning of differentiation.

The differentiation of elementary functions of one independent variable.

The theorems of Taylor and Maclaurin, with their applications.

The theory of maxima and minima, with its applications.

The equations to the tangents, normals, and asymptotes of plane curves.

The curvature of plane curves and their radii of curviture and evolutes.

The differential co-efficients of the arcs and areas of plane curves to rectangular and polar co-ordinates, and of the surfaces and volumes of solids of revolution.

Integral Calculus.

The meaning of integration.

The integration of elementary functions.

The integration of rational fractions.

The determination of the lengths and areas of plane curves, and of the surfaces and volumes of solids of revolution.

Appendix IV. (A.)

Examinations for Direct Commissions.

APPENDIX IV.—EXAMINATIONS FOR DIRECT COMMISSIONS.

A.—HISTORICAL NOTICE.

(By the Secretary.)

Previously to the year 1849 no educational qualifications were required as a condition of obtaining a commission, except from officers appointed to the scientific corps—admission to which could only be obtained by passing through the Royal Military Academy at Woolwich—and from the small proportion of officers, scarcely amounting at that time to one-sixth of the whole number annually obtaining commissions, who entered the other branches of the service from the Royal Military College at Sandhurst. Examinations for admission to the army generally were first instituted by the Duke of Wellington, when Commander-in-Chief, in 1849. A memorandum published in February of that year, announcing the points on which candidates would in future be examined before being recommended for commissions, will be found at page lxix. The examination, in addition to general subjects of elementary education, included the professional subject of fortification, in which the candidate was required to have read some easy work on the subject, and to have received some instruction in drawing. This requirement was subsequently somewhat modified; and the knowledge of fortification afterwards exacted from a candidate was "to be able to trace upon paper, in presence "of the examiners, a front of fortification according to "Vauban's first system, and also the profile of a rampart "and parapet." In other subjects modifications were also introduced, but the general character of the examinations remained much the same as originally established, and the regulations introduced by the Duke of Wellington in 1849 continued substantially in force, until the general revision of the system of military education, which took place in 1857. It appears, however, from the evidence given by Lord Panmure before the Royal Commission on the Purchase System, that during the Crimean war the stringency of the examinations was very much relaxed.*

The examinations were held at Sandhurst by the professors of the College, in the presence of the Lieutenant-Governor, and were conducted to a great extent *vivâ voce*. The Select Committee of the House of Commons on Sandhurst (1855) did not make any recommendation in regard to these examinations, but stated in their report that in the only branch of the examination which was of a military character, namely fortification, the knowledge required would easily be mastered in a week.† The character of the examination, however, appears to have been very generally regarded with dissatisfaction. Mr. Sidney Herbert, when Secretary at War in 1854, criticised it severely as being "too "technical, too limited, and within its limits too severe,"

* Reply to question 3593.
† Report, page x.

and as leading necessarily to a candidate cramming up a few books which happened to be in use at Sandhurst, without affording any test of general education.* He contemplated at that time a revision of the examinations, and the institution of a special board of examiners, in place of the Sandhurst professors, for the purpose of conducting them; and the Treasury in connexion with this subject suggested that the machinery proposed for the object in view should be combined, as far as practicable, with that about to be established for examining candidates for the Civil Service.†

The outbreak of the Crimean war prevented Mr. Sidney Herbert's proposals, which were connected with a general plan for the instruction of officers, from being carried into effect; and in 1856 Lord Panmure, before the Purchase System Commission, spoke of the defects of the existing examinations in nearly the same terms as those used by Mr. Herbert in 1854. After stating that they led to a system of cramming up particular books, he laid down the principle that the examination "should be such as young men "may be supposed capable of passing without having any "particular professional education. It ought to be upon "general subjects, such as a young man ought to become "acquainted with during his passage through any high "educational establishment in this country."‡

The various schemes for the reorganization of military education brought under the notice of Lord Panmure at the end of 1856 proposed improvements in the system of examinations for admission to the army; and nearly all the authorities consulted on the subject at that time appear to have concurred in the opinion that the examinations should be strictly non-professional, and should be confined to requiring proof on the part of the candidates of a knowledge of the ordinary subjects of liberal education. The Commissioners appointed in the same year to consider the training of officers for the scientific corps also recommended that the examination of candidates for commissions, who did not pass through a military college, should be of a general and not of a special character.

The Council of Military Education, on their appointment in April 1857, were instructed "to revise the whole system of "examination for direct appointments to the army, which is "at present very defective;"§ and this subject was in fact the first of those referred to in their instructions which they were directed to take into consideration. After consultation with the head masters of some of the chief public schools of the country, with the view of ascertaining the amount of knowledge which might fairly be expected from young men of 17,‖ the Council proposed a scheme of examination based on the fundamental principle that the examination should be entirely non-professional, and confined to subjects which form the course of ordinary liberal education at civil schools. Regulations founded upon the proposal of the Council were issued on the 1st of August 1857,¶ and it was announced that they would come into operation at the beginning of 1858. These regulations were subsequently modified in some of their details, even before the first examination was held under the new system; further modifications have been from time to time introduced in them, without, however, affecting their general character; and the scheme proposed by the Council in 1857 has, in its main principles, formed the basis of all the regulations under which examinations for direct commissions have been held to the present time.

It appears, however, from the evidence given before the present Commission, that it has been found necessary, from time to time, to diminish the difficulty of the examinations, owing to the number of failures among the candidates, and that the present standard is considerably lower than that originally established. An acquaintance with French, English history and geography, and drawing, was at first an indispensable condition of qualification, but is now no longer required; the obligatory subjects of examination have thus been reduced from five to two—mathematics and English; while at the same time the amount of mathematical knowledge formerly exacted has been reduced.

APPENDIX IV. (A.)

Examinations for Direct Commissions.

The first examination under the new system took place in February 1858. Even before this, at the end of 1857, the place of examination had been transferred from Sandhurst to London, and the method of conducting the examinations by printed papers, instead of *viva voce*, had been adopted. The examinations have ever since that period been conducted by examiners appointed by the Council of Military Education, and have as a rule been held half-yearly. By a regulation which has been for some years in force candidates for direct commissions are also permitted to be examined at foreign stations. The examination is in this case conducted in the presence of a board appointed by the officer commanding the station, but the method of examination is, in all other respects, identical with that adopted at home. The examination papers are forwarded by, and the candidates' replies are returned to, the Council of Military Education.*

The plan proposed by the Council was intended to regulate admission to the army in ordinary times of peace; but almost immediately after it had been formally approved, and before it had actually come into operation, the pressure occasioned by the outbreak of the Indian Mutiny led to an abnormal condition of circumstances. In September 1857 a circular was issued announcing that commissions would be given without examination on the condition of the applicant raising a certain number of recruits. In March, however, of the following year, this temporary measure was abolished, the pressure for troops being no longer such as to render its continuance necessary. Since that period no candidates, with the exception of graduates of the Universities, have obtained commissions without passing the regular examination.

Before 1862 candidates were eligible for commissions without purchase on passing the examination for direct appointments; since that year, however, all free commissions have been reserved for cadets at Sandhurst, and those who pass the direct examination have only obtained commissions by purchase.

The following statement shows the alterations in regard to the age of candidates for Direct Commissions since the formation of the Council of Military Education:—

1st January 1858.	
For the Army - - - -	17 to 21
2nd August 1858.	
For the Infantry - - -	17 to 23
„ Cavalry - - -	17 to 25
1st May 1863.	
For the Infantry - - -	18 to 23
„ Cavalry - - -	18 to 25
„ Colonial Corps - -	18 to 28
1st January 1864.	
For the Infantry - - -	18 to 20
„ Cavalry - - -	18 to 22
„ Colonial Corps - -	18 to 26
1st October 1866.	
For the Infantry - - -	17 to 20
„ Cavalry - - -	17 to 22
„ Colonial Corps - -	17 to 26

The regulations at present in force with regard to the examinations for direct commissions will be found at page lxxi.

* General Order, Horse Guards, 12th February 1859.

B.—ORIGINAL REGULATIONS FOR EXAMINATIONS FOR DIRECT COMMISSIONS.

APPENDIX IV. (B.)

MEMORANDUM ISSUED BY FIELD MARSHAL THE DUKE OF WELLINGTON, IN FEBRUARY 1849, INSTITUTING FOR THE FIRST TIME EXAMINATIONS FOR CANDIDATES FOR COMMISSIONS.

Memorandum of the points upon which Candidates are to be examined before they are recommended for Commissions.

IN order to have some certainty that the applicants for commissions in Her Majesty's service have been educated as gentlemen, it is proposed that each of them should be examined by persons to be appointed by the Commander-in-Chief for that purpose, particularly on the following points, before they can be recommended for commissions.

1. The candidate should read English correctly, and write it from dictation.

2. In arithmetic he should be acquainted with the four first rules (simple and compound) and proportion.

3. In languages it is desirable that he should under-

Appendix IV. (B.)

Examinations for Direct Commissions.

stand the Latin grammar, be able to construe Cæsar's Commentaries (exclusive of the portion ascribed to Hertius), and parse if required; this should include syntax and prosody. If not master of the Latin grammar, and he should not have received a good classical education, he should thoroughly understand the French or German grammar.

4. In history he should have read Hume's History of England, with Smollett's continuation, also a History of Rome and Greece, and of Modern Europe. He should moreover be able to answer such questions on the subject as may be proposed by the examiners.

5. In geography he should possess a competent knowledge of the general divisions of the world; the name of the capital of each nation in Europe; the principal rivers, seaports, and military posts in Great Britain and Ireland; Her Majesty's dominions in every part of the world.

6. In fortification he should have read some easy work on the subject, and have received some instruction in drawing.

7. If the candidate be a member of the Church of England he will have to produce a certificate of having been confirmed. If not a member of the Church of England he will be required to produce a certificate from a minister or priest, stating that he has been well instructed in the principles of the religion in which he has been brought up.

8. A medical examination will take place to ascertain that the candidate is in every point of view fit for military service.

List of the Works which are likely to facilitate the Studies of the Candidates.

Narrien's Geometry, which includes practical geometry on the ground, and the tract on proportion and the circle.

Scott's Arithmetic and Algebra.

Keightley's History of Greece and Rome.

Hume's History of England, with Smollett's continuation.

Russell's History of Modern Europe, and the continuation to 1832.

The Rev. H. L. M. Chepmell's Abridgment of the Histories of Greece, Rome, and England.

Samuel Butler's Sketch of Ancient and Modern Geography.

Captain Macaulay's Field Fortification.

The Eton Latin Grammar.

The Valpy or Delphin Editions of Cæsar, Virgil, and Livy.

Tarver's French Grammar.

Demmler's German Grammar.

Appendix IV. (C.)

C.—FIRST REGULATIONS FOR THE EXAMINATIONS FOR DIRECT COMMISSIONS ISSUED AFTER THE APPOINTMENT OF THE COUNCIL OF MILITARY EDUCATION.

Horse Guards, August 1, 1857.

The following regulations, in regard to the examination of gentlemen preparatory to receiving commissions in the army, will take effect from the 1st January 1858:—

1. The examinations of candidates for direct commissions will be held quarterly in London, and be conducted under the direction of the Council of Military Education, by examiners who will be appointed for the purpose.

2. The age of candidates examined for direct appointments will be, from the 1st January 1858, not under 17 years, and after the 1st January 1859, not under 18 years, the latest limit being in each case 21 years.

3. The candidate will be required to produce a certificate of baptism, or other satisfactory proof of his age.

The candidate will be examined by a medical board to ascertain that he is in every point of view, as regards his physical constitution, fit for military service.

He will produce a certificate from a minister of the church or other denomination to which he belongs, that he has been duly instructed in the principles of religion.

The candidate will further produce a certificate from the master or tutor under whom he has been educated of his general moral conduct for at least the two preceding years.

He will also forward, when reporting himself prepared for examination, a statement of the subjects in which he wishes to be examined, including the names of the classical authors, and, in the case of history, the course he has been reading.

4. The following will be the subjects of examination, viz.:—

The classics.
Mathematics.
English language.
French language.
Other modern languages.
History, ancient and modern, with geography.
Natural sciences, *i.e.*, mineralogy and geology.
Experimental sciences, *i.e.*, chemistry, heat, electricity, including magnetism.
Drawing.

Of the above a thorough knowledge of the following portions of subjects will be deemed indispensable, and the want of it considered a ground of disqualification, viz.:—

1. In mathematics; arithmetic, including vulgar and decimal fractions, proportion, extraction of the square and cube root, and interest.

Algebra, including fractions, simple equation, and questions producing them, and the use of logarithmic tables.

Euclid, the first four books.

2. In the English language the candidate will be required to write correctly and in a good legible hand from dictation.

To compose grammatically.

3. In the French language, to read, translate, and parse a prose author, and to write from dictation.

4. In history, that of England with its dependencies (with geography) will be required.

5. In drawing the candidate will be required to show that he has a fair use of the pencil.

To each of the subjects enumerated in paragraph 4 marks will be allotted as follows:—

	Marks.
Classics { Latin, 2,000 / Greek, 1,600 }	3,600
Mathematics (pure and mixed)	3,600
English language	1,200
French „	1,200
Any other modern language	800
History and geography, ancient and modern	1,200
Natural sciences, mineralogy and geology	600
Experimental sciences, chemistry, heat, &c.	600
Drawing	500

Out of the above, there will be allotted to the portions of subjects noted in paragraph 4 as indispensable, marks as follows, viz.:—

	Marks.
Mathematics	1,200
English	400
French	400
History, &c.	400
	2,400

And of these at least *three-fourths* in each subject will be required from all candidates, making in all 1,800 marks as a *minimum* in the subjects deemed indispensable.

In respect to the other subjects, or portions of subjects, left as voluntary for examination, it will be required that in these such a number of marks shall be obtained as shall raise the total number necessary for qualification to 3,000.

6. In estimating the marks attained at the quarterly examinations, no subjects left voluntary will be allowed to count unless one-fifth of the number allotted to them be gained.

With regard to the classics, no particular authors or portions of authors will be announced as those in which candidates will be examined, but a sufficient number of printed questions will be prepared of different degrees of difficulty, and as varied as possible, in the books usually read at schools, so as to place candidates from different educational establishments on an equal footing.

Passages will be set for translation from the classical and modern languages into English, and also from English into those languages.

No candidates will be allowed more than two trials, but the second may take place at any interval after the first, provided the limit of age be not exceeded. In the second examination no credit will be given for any subject in which the candidates may have passed in the first.

7. The result of each quarterly examination will be reported to the Commander-in-Chief, and the names of any candidates who distinguish themselves will be specially brought to his notice.

8. Commissions will at first be only granted provisionally, and will not be finally confirmed until the candidate shall have passed through a course of regimental and general professional instruction, which will be hereafter defined.

D.—PRESENT REGULATIONS FOR EXAMINATIONS FOR DIRECT COMMISSIONS.

Appendix IV. (D.) Examinations for Direct Commissions.

Horse Guards, 1st January 1867.

I. The examinations of candidates for direct commissions will be held in London at such periods as the exigencies of the service may require, and be conducted under the direction of the Council of Military Education by examiners appointed for the purpose. The number of candidates summoned to attend each examination will be limited to the requirements of the service.

II. The age of candidates examined for direct appointments will be, until further notice, from 17 to 20 years for the infantry, from 17 to 22 years for the cavalry, and from 17 to 26 years for colonial corps.

III. The candidate will be examined by a medical board, to ascertain that he is in every point of view, as regards his physical constitution, fit for military service.

He will be required to produce the following certificates, which must be forwarded to the Council of Military Education, 13, Great George Street, S.W., as soon as possible after the receipt of the Military Secretary's order to attend for examination.

a. A certificate of baptism, or other satisfactory proof of his age.

b. A certificate from a minister of the church or of the denomination to which he belongs, that he has been duly instructed in the principles of religion.

c. A certificate of good moral character, signed by a clergyman of the parish to which he belongs, or by the tutor or head of the school or college at which he has received his education, for at least the two preceding years; or such other proof of good moral character as will be satisfactory to the Commander-in-Chief.

d. A statement of the subjects in which he wishes to be examined.

IV. The following will be the subjects of examination, but no candidate will be allowed to be examined in more than *five* of these subjects.

		Marks.
The classics	Latin	2,000
	Greek	1,600
Mathematics, pure and mixed		3,600
English language		1,200
Modern languages (not including provincial dialects) each		1,200
History, ancient and modern, with geography		1,200
Natural sciences, *i.e.*, mineralogy and geology		1,200
Experimental sciences, *i.e.*, chemistry, heat, electricity, including magnetism		1,200
Drawing		600

V. Of the foregoing subjects, the elementary branches of mathematics and the English language, to the extent stated in the following paragraphs, will be considered obligatory:—

1. In mathematics, 1,200 marks will be given to the following obligatory portions, viz., arithmetic, including vulgar and decimal fractions, proportion, extraction of the square root, and simple interest.

Algebra, including fractions, simple equations, and questions producing them: Euclid, the first three books.

Of the 1,200 marks allotted to the foregoing portions of mathematics, 400 will be required for qualification, and of these at least 200 must be obtained in arithmetic.

2. In the English language, the candidate will be required to write correctly and in a good legible hand from dictation, and to compose grammatically. He will be required to obtain at least 200 marks in this subject.

3. Out of the remaining subjects the candidate may select any three.

4. No candidate will be allowed to count the marks gained in any one of the three voluntary subjects, unless amounting to one-sixth of the whole number of marks allotted to that subject; and for qualification, he will be required to obtain on his five subjects a total of 1,500 marks.

5. In the examination in classics passages will be given for translation from the books usually read at schools; grammatical questions will be set, and English passages also given for translation into the Latin and Greek languages.

VI. The result of each examination will be reported to the Commander-in-Chief, and the names of any candidates who distinguish themselves will be specially brought to his notice.

VII. An unsuccessful candidate will not be debarred from applying to the Commander-in-Chief for permission to attend a future examination. No candidate, however, will be allowed more than three trials.

Should a candidate obtain only between 700 and 1,200 marks, he will not be allowed to present himself for re-examination for at least six months. If he obtains less than 700 marks, a period of at least twelve months must elapse before he can be allowed to present himself again.

In all cases permission to be re-examined must depend upon the number of applicants on the list.

In subsequent examinations no credit will be given for the marks gained by a candidate on former occasions.

In the event of a candidate not appearing for examination at the time appointed, such candidate will not be permitted to attend on the next occasion, and he will render himself liable to have his name either erased entirely or placed at the bottom of the list of those noted for examination.

VIII. A student at either of the Universities of Oxford, Cambridge, Dublin, London, St. Andrew's, Glasgow, Aberdeen, Edinburgh, or Queen's University, Ireland, who shall have passed the examination necessary for taking a degree in arts, is qualified for a commission by purchase without being required to pass the foregoing examination, provided he is within the limits of 17 and 23 years of age if for the infantry, 17 and 25 years if for the cavalry, and of 17 and 28 years for colonial corps, and can produce the certificates marked (*a*), (*b*), and (*c*).

Such candidate must furnish a certificate of having graduated, or of having passed the examinations, signed by the Registrar of the University, and showing the date on which the examination took place.

On his application being approved, the candidate will receive an order to be medically examined as to his physical fitness for the service.

The candidate will address his application, accompanied by the necessary certificates, to the Military Secretary, Horse Guards.

W. F. Forster,
Military Secretary.

APPENDIX V.—PUBLIC SCHOOL EDUCATION AS A PREPARATION FOR THE MILITARY EXAMINATIONS.

Appendix V. (A.) Public School Education.

A.—GENERAL NOTICE.

(By the Secretary.)

In connexion with the Modern Departments at some public schools technical instruction in military subjects is actually at present given. This, for instance, is the case at Cheltenham College, the Modern Department at which appears in fact to have been originally instituted with the express object of affording means of special military education, and at the present day is officially called the "military and civil department."* At one time also, even at some schools in which Modern Departments did not exist, classes were formed, in which instruction in military subjects was given to boys intended for the army. Both at Eton and at Harrow such classes existed, and fortification and military drawing were taught in them. The object of the formation of these classes appears in both cases to have been to enable boys to go up straight from school to the examinations for admission to the army, without the necessity of having recourse to private tuition. At the time of their institution a knowledge of fortification was required in the examination for

* Evidence of Mr. Southwood, 5563, 5593.

APPENDIX V. (A.)

Public School Education.

direct commissions, and a candidate was therefore unable to present himself for this examination without some special preparation. At the commencement of 1858, however, the direct commission examinations were entirely remodelled; the small amount of fortification previously required was at that time excluded from the subjects of examination, which have ever since been of a non-professional character, and more or less such as enter into the course of ordinary liberal education. With the exclusion of technical subjects from the military examinations, the necessity for any special instruction in such subjects in candidates for admission to the army ceased. The military class at Harrow seems to have died out within a few years of its establishment; it has not been in existence during the last 10 years and more. At Eton, though the corresponding class is still maintained, the teaching of technical military subjects in it has been abandoned. Even in the Modern Department at Cheltenham the instruction appears of late years to have become of a less decidedly military character than it originally was; and fortification, which was at one time taught at Wellington College, no longer enters into the course of instruction there. In the Modern Side which has within the present year been established at Harrow, though partially intended, among other purposes, to assist the education of boys intended for the army, no attempt is made to give special military instruction.

The question of the possibility of affording an adequate military education at civil schools was fully discussed by the Commissioners appointed in 1856 to consider the training of officers for the scientific corps. "Having arrived at the "conclusion," their Report says, "that professional mili- "tary education as hitherto given in this country has been "begun at too early an age, we are met by what may be "called the extreme opposite view, which would suggest "the desirableness of giving up altogether education in "military colleges previously to entering the army, or to "entering a purely practical class or college for the special "corps of Artillery and Engineers. An opinion appears to "exist that the ordinary schools of the country are the "best means of giving nearly the whole teaching of "general and even military science which is desirable for "all classes of officers before entering the army. It seems "to be thought that not only modern languages and "mathematics, but military history and topography are "likely to be taught in such schools sufficiently for the "highest military purposes, and that even young men "intended for the special arms of the service may, on join- "ing a military academy, be absolved, or almost entirely "absolved, from any other studies than those included "under the expression '*a purely practical course.*'"*

The Commissioners expressed their unhesitating dissent from this view. After pointing out the difficulties of giving at ordinary schools a complete preparation even in studies of a general preparatory character—such as modern languages and mathematics—and the still greater difficulties of teaching special subjects like military history and topography, the Report proceeds:—"Agreeing, therefore, "as to the fact of a 'sound general education being given "'by public schools,' we are unable to draw from it the "conclusion that they will 'give a specific military educa- "'tion.' They may indeed assist our military education, "in a manner which the true sense of the terms 'sound "'general education' expresses, by encouraging prelimi- "nary tastes and studies, such as general history, mathe- "matics, and modern languages, English included, to a "greater extent than they do at present. But if there is "such a thing as a science of war at all, it stands to reason "that it can only be taught fully in cases where young "officers have the passion and the capacity to begin it "early, by its own teachers, and in its own place. The "teachers should be practical men, as well as men of mili- "tary science; the place a military college. And the "great schools of the country will perform the same "service to such an academy for young scientific officers "as they do for places which give a specific education for "other professions; they will *prepare for it*, but disclaim "any attempt to *complete it.*"†

The Report of the Public Schools Commission does not appear to have made any direct reference to the question of the possibility of giving technical military instruction at civil schools; but the disinclination shown by the Commissioners to recommend even the general institution of "Modern Departments" would lead to the conclusion that they were not disposed to view with favour the introduction of any system of special instruction into the ordinary school course.

The question has been dealt with at considerable length in the evidence taken before the present Commission. In addition to the evidence given by Dr. Barry, Mr. Southwood, Dr. Benson, and Dr. Temple, to which particular reference is made in the Report, opinions on the subject have been expressed by several military witnesses. Major-General Sir P. Herbert considers that all which is learnt at Sandhurst—all the knowledge requisite for a line officer—might equally well be acquired at a public school, if proper arrangements were made for teaching it. In his opinion fortification (including the practical construction of field-works), military drawing and surveying, military history, and drill, could all be taught by military instructors at public schools without difficulty, and without interference with the subjects of general education.* Major-General White considers that military history, modern languages, and drawing might be taught with advantage at public schools to boys intended for the army, although it would be difficult to teach the practical work of field fortification, artillery, and surveying.† Colonel Baker appears to be of opinion that at the Universities, certainly, a special preliminary education might be given to candidates for the army, on a system similar to that which it was at one time proposed to introduce at Cambridge, but which does not appear to have ever been actually adopted. At the same time, though this instruction would be of a special character, Colonel Baker does not seem to contemplate its embracing strictly technical military subjects.‡ On the other hand, His Royal Highness the Duke of Cambridge is of opinion that special military classes at public schools would fail;§ Major-General Sir F. Abbott thinks it unnecessary to establish such classes;‖ Colonel Hort is decidedly opposed to an attempt to give military instruction at any but a military college, on the ground that it could not be so effectively given at a civil establishment, and would, moreover, interfere with the acquisition of a general education;¶ and Lieut.-General Sir D. Cameron considers that it would be impossible for public schools to give a thorough or perfect knowledge of the practical subjects taught at Sandhurst, such as fortification, artillery, military drawing, and surveying.**

In connexion with the same subject suggestions have been made by some witnesses that the Government should assign a certain number of free commissions annually, as prizes to be competed for, either at particular public schools or more generally amongst candidates educated at such schools.†† The institution of military exhibitions or scholarships at civil schools, and of military degrees at the Universities, has been also suggested.‡‡ By some witnesses these proposals are advocated with the special view of inducing public schools to adopt a system of military instruction; by others with the more general object of holding out increased encouragement to enter the service to candidates who have had the advantage of a public school education.

Although the question of giving military instruction at public schools was not specially discussed by the Public School Commissioners, their attention was directed to the results of public school education in preparing candidates for the military examinations. Their Report§§ speaks as follows in reference to this subject:—

"The number of public-school boys who enter the army "is not large. Of 1,976 candidates for direct commissions "within three years, 122 only had been at any of these "schools. Of these 102 succeeded and 20 failed. It will "be observed, on reference to the returns, that this propor- "tion of failures is considerably below the average; the "public school men, therefore, were better prepared than "the general run of candidates. Of 96 who passed at "their first examination, 38 came immediately from school, "58 had had intermediate tuition. Of the 20 who failed, "14 had had such tuition.

"The public-school candidates for Sandhurst during the "same period were 23 out of 375; the proportion who "succeeded being here also above the average. Of 18 "who succeeded, 11 came straight from school; of five "who failed, only one.

"The scheme of examinations for direct commissions, "framed to meet the suggestions of the Head Masters of "public schools, is simple and easy, and requires nothing "that is beyond the reach of any boy of moderate industry "and ordinary capacity; and it is clear that no boy, who "will give himself a little trouble, needs to forego the "wholesome influences of a great school for the sake of "being 'crammed' in the house of a tutor. The Sand-

§§ Report, page 27.

hurst examination is also evidently within the reach of the schools.

"The qualifying examination for Woolwich appears, before 1862, to have required an amount of mathematical knowledge difficult of attainment for a boy educated at a public school; but it underwent in that year some changes which have made it easier for candidates who have not received a special training. The obligatory mathematics do not now go beyond plane trigonometry; and a candidate need not obtain in them, to qualify, more than 700 marks out of 3,500; with this minimum, and with a fair proficiency in Latin, Greek, French, and geometrical drawing, he is entitled to enter into the competition. This standard is certainly not so high as to be inaccessible to a boy educated at a good public scoool, and from a table showing the working of the scheme at the examination of January 1863, it appears that of the 20 successful competitors, 11 distinguished themselves in classics; the other marks were chiefly gained in mathematics and French. In three years, previous to this change, 35 public-school candidates passed and 49 failed to pass the qualifying examination, the totals being 545 and 689. Of the whole 84, two only went direct from the schools, and these failed."*

In another passage† the Commissioners say:—"The main studies of the public schools being classical, it is obvious that, unless a due amount of weight is given to the classics in the Woolwich examinations, boys from those schools will not stand a fair chance in the competition. On the other hand, as it is of importance that the examinations should comprise other subjects besides classics, it is also obvious that unless the public schools provide a due amount of instruction in those other subjects, the candidates whom they send up must compete at a disadvantage. It is certain that there has hitherto been a want of adjustment between the Woolwich standard and the teaching of the public schools. The fault, we think, lies chiefly, though not wholly, in the deficiencies in the course of education pursued at the latter; and we are convinced that when these deficiencies have been supplied the difficulty which is now complained of will speedily disappear. But it is also to be observed, with respect to the Woolwich examinations themselves, that the scale of marks has lately (as we have already stated) undergone an alteration, which diminishes the amount of mathematical attainment required, and allows greater weight to classical scholarship. It appears probable that the Modern Departments at Cheltenham and Marlborough would not have been what they are had the old Woolwich standard, which is stated to have influenced them so strongly, been the same as the present; and probable also that they will hereafter feel the effects of the change which has been made in it."

The above statements show that at the time referred to (1864) a very small proportion of boys went up to the military examinations from public schools at which Modern Departments did not exist. From the returns and evidence furnished to the present Commission it appears that there has been but little change in this respect of late years. It is an extremely rare occurrence for a candidate to go up direct from a public school which does not possess a Modern Department to the examination for admission to Woolwich; out of 855 candidates admitted to Woolwich in 10 years—from 1858 to 1867—the six public schools of Eton, Harrow, Rugby, Winchester, Westminster, and Shrewsbury only sent up five direct.‡ Colonel Addison states that at Sandhurst, out of 320 admissions during the last two years, there have been only 16 from the nine schools mentioned in the Report of the Royal Commission on Public Schools; but from Cheltenham and Wellington College the admissions have been more numerous.* Even for the direct commission examination, those who present themselves from public schools (including Cheltenham and Marlborough, where Modern Departments exist), without seeking the assistance of a private tutor, scarcely amount to five per cent. of the whole number of candidates.† At the same time, it may be observed that the proportion of failures among such candidates in the latter examination is comparatively slight, not amounting to more than 8 per cent., while the average number of failures among the candidates generally during the last four years has been very nearly 25 per cent.‡ In fact, the general tenour of the evidence goes to show that, in the case of the examinations both for direct commissions and for admission to Sandhurst, there is, or at least should be, no necessity for candidates who have had the ordinary education of a classical public school to have recourse to private tuition.§ The Woolwich examination appears generally to be regarded in a different light. Its higher and more special character, and the great importance attached to mathematics, coupled with the competition which exists for it, render it apparently doubtful whether success would generally be obtained by candidates from public schools—other than those where, like Cheltenham, instruction is given with a particular view to this examination—without going through a special course of preparatory tuition.‖

An account of the Modern Departments at Cheltenham, Wellington, and Marlborough Colleges, at the City of London School, and at King's College School, is given in the Report of the Public Schools Commission. Further information regarding the institutions at Cheltenham and Wellington Colleges will be found in the evidence given by Dr. Barry, Mr. Southwood, and Dr. Benson before the present Commission. The nature of the instruction in the "Army Class" at Eton is described in a letter from Dr. Hornby, the Head Master.¶

The general character of the "Modern Side" at Harrow, which was established in September of the present year, "for the benefit of boys for whom, from various causes, an "advanced classical training seems undesirable," is explained as follows in a circular issued by the Head Master when announcing the intention of adopting the institution:—

"The principal subjects of instruction on the 'Modern "Side' will be mathematics, French, German, Latin, "history, English literature, and physical science.

"The requirements of boys not intended for the Univer- "sities will be specially kept in view, including the case of "those who are candidates for Woolwich or the Indian "Civil Service. It is hoped that this provision may obviate "the supposed necessity for removing boys to a private "tutor's precisely at an age when the influences of public "school life are most powerful and most salutary.

"Except for purposes of instruction there will be no "distinction whatever between boys on the Modern Side "and boys on the Classical Side.

"No boy will, for the present, be admitted to the "Modern Side unless he has been in the school for at least "a year, and has hitherto shown diligence and made fair "progress."

B.—ACCOUNT OF THE ARMY CLASS AT ETON.

LETTER FROM THE REV. DR. HORNBY, HEAD MASTER OF ETON.

SIR, Eton, October 13, 1869.

IN answer to the request conveyed in your letter of October the 11th, I have the honour to give the following account of the "Army Class" at Eton.

The Army Class was established by Dr. Goodford in the year 1858. It was established in order to give Eton boys greater facilities for preparing certain subjects which were required in the army examinations, and to obviate the supposed necessity of giving Eton boys a special preparation, elsewhere than at Eton, in order to fit them for the army examinations.

At first fortification and military drawing were included in the course, and a considerable proportion of the ordinary school work (*e.g.*, Latin verse writing) was remitted. This was not found to answer. The course included more than was necessary for the ordinary army examination, and not enough for the higher examinations at Woolwich. There seemed to be a danger of the class becoming a sort of refuge for the idlest boys in the school.

Dr. Goodford subsequently altered all this and placed the class upon its present footing.

Its present constitution is as follows:—

Two lessons a week (repetition lessons) are remitted to make time for lessons in modern history. English essays, or abstracts of what has been taught in school, are written by the boys out of school (one exercise a week), and carefully looked over. No other part of the ordinary school work (except the two repetition lessons) is given up. Boys cannot join the class till they are 16 years of age. They are expected to stay at Eton till the time comes for their examination.

Appendix V. (B.)

Public School Education.

The class consists at present of 28 boys. The average number is 25.

The class has certainly been successful. No boy going up from Eton has failed yet in the army examination since the reconstitution of the class of which I have spoken. I think the class has done good in the school.

It will be seen that nothing more has been seriously attempted as yet than to secure boys from failure in the ordinary examinations. If boys are to be prepared at Eton for any higher competition, such as that at Woolwich, a very different course will obviously be necessary, and probably a system of "bifurcation" will be found indispensable.

I am not prepared to say that this may not be introduced with advantage at Eton; but the impending changes in the governing body at Eton, and the anticipated changes with regard to army examinations, make it difficult to commence any work of reconstruction at the present moment.

I have, &c.

The Secretary to the Royal Commission on Military Education. J. J. Hornby.

Appendix VI. (A.)

Examinations for Promotion.

APPENDIX VI.—EXAMINATIONS FOR PROMOTION.

A.—HISTORICAL NOTICE.

(By the Secretary.)

Examinations for promotion were for the first time instituted, shortly after the introduction of examinations for admission to the army, by the Duke of Wellington when Commander-in-Chief, in the year 1850. A circular memorandum, published on the 14th of May* of that year, announced that all officers would in future be subjected to an examination previously to promotion to the respective ranks of lieutenant and captain. The first examination was to be confined to subjects connected with the rudiments of drill, regimental duties, interior economy, and the Mutiny Act and Articles of War. The second examination for the rank of captain was in addition to extend to more general subjects, and to include geography, ancient and modern history, mathematics, and field and permanent fortification; but the examination in these subjects was not intended to affect lieutenants who had entered the service previously to 1849.

The examination for promotion to the rank of lieutenant was to be conducted regimentally by the commanding officer and the two next senior officers of the candidate's regiment. The purely professional portion of the second examination, for the rank of captain, was to be conducted in the same manner; with regard to the mode of testing the candidates' qualifications in the more general subjects required in this examination, it was stated that such orders would be given in each individual case as the Commander-in-Chief might think proper and necessary.

These regulations continued in force up to the time of the institution of the Council of Military Education in 1857, although it appears, both from official statements made by the Secretary at War,† and from numerous expressions of opinion in Parliament between the years 1854 and 1857, that, at least so far as regarded the second examination for the rank of captain, little attempt was made, even nominally, to enforce the regulations. Mr. Sidney Herbert proposed in 1854, in connexion with his general scheme of military education, to remodel the examinations and to institute a special machinery for conducting them; and though no actual steps were taken to carry out his proposal, the necessity of making the examinations real and genuine tests of professional knowledge, and of enforcing strict qualifications for promotion, was frequently recognized in the numerous discussions which took place in Parliament on the subject of military education during the course of the Crimean War.

The Council of Military Education, on their appointment in 1857, were directed to consider the question of the professional examination of officers for promotion up to the rank of captain, and in the course of the year submitted a proposal on this subject, in connexion with a scheme for providing instruction for officers after entering the service, to which further allusion will be made hereafter.‡

New regulations on the subject were issued on the 19th of July 1858, which, while introducing little change in regard to the examination of cornets and ensigns, rendered a knowledge of mathematics, history, and fortification no longer requisite in the second examination for the rank of captain. Geography, on the other hand, was still retained among the subjects, and, as a condition of promotion to a captaincy, a lieutenant was required "to be able to state the "general divisions of the world, the name of the capital of "each nation in Europe, and the principal rivers, sea-ports, "and military posts in Great Britain, Ireland, and Her "Majesty's Dominions in every part of the world." The examinations of cornets and ensigns still continued to be conducted regimentally; that of lieutenants, so far as related to matters of regimental economy, detail, or discipline, was to be made by boards of officers appointed by the commanding officer at the station, consisting, when possible, of three senior officers not belonging to the same corps as the candidate.*

In November 1858 revised regulations were issued,† which, in accordance with the recommendations of the Council of Military Education, made considerable changes in the examinations, and placed them on their present basis. The subjects of regimental and ordinary duties on which candidates were to be examined were more minutely detailed than heretofore; the examinations were made entirely professional, geography being excluded from the second examination, and at the same time it was announced that lieutenants would be required to show a sufficient knowledge of reconnaissance and of field fortification. But the most important change made at this time was in regard to the mode of conducting the examinations, which were no longer to be carried on regimentally, but by a board appointed by the commanding officer of the district, consisting (if possible) of three field officers,—with the additional provision that in no case in which it could possibly be avoided, an officer of the same regiment as the candidate was to be a member of the board. Cornets and ensigns were to be required to pass the examination before completing eight months' service; and, in order to give additional stringency to the regulations, it was announced that the Commander-in-Chief would "not "hesitate to promote (either regimentally or from other "corps) officers who may have passed the required exami- "nation, in place of the idle and incompetent." The regulations issued in November 1858 have, with some slight modifications, remained in force to the present day. The existing regulations for the examinations will be found at page lxxvi.

Lieutenants of artillery, like those of the cavalry and infantry, are required to pass an examination before promotion to the rank of captain. The subjects, a knowledge which is required from them, are detailed at page lxxvii. Officers of the Engineers pass an examination at the Royal Engineer Establishment (now the School of Military Engineering) at Chatham, before being permanently commissioned.

Appendix VI. (B.)

B.—CIRCULAR MEMORANDUM INSTITUTING FOR THE FIRST TIME A SYSTEM OF EXAMINATION PREPARATORY TO PROMOTION.

Horse Guards, May 14, 1850.

Her Majesty has been pleased to command that the candidates for commissions and for promotion in Her army should be qualified by knowledge and attainments previous to the appointment to commissions of the first named, and to the promotion to superior rank of those thus appointed.

The qualifications required of candidates for commissions

ave been made known to their friends, and the time and lace of examination will be stated in each case, so as that n examination may take place before any one is appointed o a commission.

Before officers can be recommended for promotion to the nk of lieutenant in any regiment, the commanding fficer must have them examined by a board of officers, onsisting of himself, another field officer, if there should e one present with the regiment, and the senior captain f the regiment; and if there should be no field officer resent with the regiment, the two senior captains present.

This board must report to the Military Secretary, for he information of the Commander-in-Chief, that the fficers about to be recommended for promotion to the ank of lieutenant are instructed on the following oints:—

1. They must have a perfect knowledge of the Standing Orders of the regiments in which they are serving.
2. They must have a knowledge and must give an account of the duties they have to perform as regimental orderly officers, and as officers commanding guards,—or as subaltern officers of guards under the command of officers of superior rank.
3. They must have a knowledge of the words of command for the manual and platoon exercise.
4. They must be able to put the company through the manual and platoon exercise, and be capable of exercising both a squad and company in the drill and evolutions, as prescribed in the first two parts of the Regulations for the Field Exercise of the Infantry.
5. They should know exactly the place of all the company officers in every situation of the battalion, whether in line, or in open, close, quarter or half-distance column, and whether right or left in front.
6. They must have a knowledge of the General Regulations and Orders of the Army, and of the Mutiny Act, and Articles of War.
7. They should be acquainted with The Queen's Regulations and Warrants regulating the description and qualities of the necessaries of soldiers, of the price of each article, and the regulations applicable to the same.
8. They should know the weight of the knapsack; the weight of the soldier's firelock; of his pouch, with or without the ammunition which it is calculated to carry; of his accoutrements, with or without the bayonet; the weight of the musket, with or without the bayonet, of the bayonet, with or without the scabbard.
9. In addition to such portions of the above as may apply to the Cavalry service, the cornets should be required to be well acquainted with all their stable and barrack duties; to have completed their course of instruction in the riding-school; and to be able to exercise a troop both on foot and mounted.

Lieutenants, who shall have entered the service since July 1849 will be required, before they can be recommended for promotion to the rank of captain, to have,—

10. A competent knowledge of geography.
11. Of history, ancient and modern.
12. Of the first six books of Euclid.
13. Of the properties of the circle.
14. Of algebra, to quadratic equations inclusive.
15. Of the use of logarithms.
16. Of plane trigonometry, and
17. Mensuration.
18. They must have studied permanent and field fortification, and
19. Have so far a practical knowledge of the science as to be capable of projecting a front of fortification, according to the first system of Vauban.
20. They must be perfectly acquainted with the provisions of the Mutiny Act and Articles of War.
21. And with the forms and proceedings of courts-martial.
22. They should have studied some of the standard works on courts-martial.
23. They must understand perfectly the evolutions of a battalion of infantry or regiment of cavalry, as laid down in the regulations for those services respectively.
24. They must be acquainted with the light infantry drill.
25. They must perfectly understand the interior economy of a troop or company; the regulations for the messing and subsistence of the soldiers; and the established system of keeping their accounts.
26. They must have a knowledge of the Royal Warrants which regulate the pay, provisioning, pensions, rewards, periods of service, clothing, and equipment of the soldier.
27. They must be acquainted with the General Regulations and Orders of the Army, more particularly with those for the government and management of the troops embarked in transports or convict ships.
28. And it must be ascertained that they are competent to take charge of a company or detachment in every position in which it might be placed.

Lieutenants who entered the service prior to July 1849 will, after July 1852, be required, before they can be recommended for promotion to the rank of captain, to have,—

10 (*a*). A competent knowledge of geography.
11 (*a*). Of English history.
12 (*a*). Of the first four books of Euclid.
14 (*a*). Of algebra, to simple equations inclusive.
19 (*a*). And so far a practical knowledge of the science of fortification as to be capable of projecting a front of fortification according to the first system of Vauban.
20 (*a*). They must be perfectly acquainted with the provisions of the Mutiny Act and Articles of War.
21 (*a*). And with the forms and proceedings of courts-martial.
22 (*a*). They must have studied some of the standard works on courts-martial.
23 (*a*). They must understand perfectly the evolutions of a battalion of infantry or regiment of cavalry as laid down in the regulations of those services respectively.
24 (*a*). They must be acquainted with the light infantry drill.
25 (*a*). They must perfectly understand the interior economy of a troop or company,—the regulations for the messing and subsistence of the soldiers, and the established system of keeping their accounts.
26 (*a*). They must have a knowledge of the Royal Warrants which regulate the pay, provisioning, pensions, rewards, periods of service, clothing, and equipment of the soldier.
27 (*a*). They must be acquainted with the General Regulations and Orders of the Army, more particularly with those for the government and management of the troops embarked in transports or convict ships.
28 (*a*). And it must be ascertained that they are competent, to take charge of a company or detachment in every position in which it might be placed.

It is to be distinctly understood that they are to complete the remainder of the course prescribed for the lieutenants who entered the service subsequently to July 1849 before they can be declared eligible to become field officers.

These examinations of officers for the rank of captain must be made by boards of officers, to be appointed by the commanding officer, composed of the three senior officers of the regiment, as far as relates to matters of regimental economy, detail, or discipline, and must be reported to the Military Secretary in every case of a lieutenant recommended by the commanding officer to be promoted to be captain of a troop or company.

Till the month of July 1852 officers recommended for promotion to the rank of captain in their several regiments need not be examined on the points stated in Nos. 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, of this order, unless it should be known to the Commander-in-Chief that such officers had passed one year in the United Kingdom subsequently to the 1st June 1850, in which case he will require that such officers should pass an examination as required by this order for the lieutenants who entered the service antecedently to 1849.

Any officer of the rank of lieutenant in a regiment serving within the United Kingdom, who may have entered, his name as a purchaser of a troop or company may, through his commanding officer, express his desire to be examined in respect to his required attainments, as specified in this order, upon which demand the Commander-in-Chief will give such orders as may be proper and necessary.

Orders will hereafter be given to provide for the examination of officers serving abroad, in respect to their qualifications and attainments, preparatory to their being recommended for promotion to the rank of captain.

By command of Field Marshal the Duke of Wellington, Commander-in-Chief.

G. Brown,
Adjutant-General.

N.B.—The above regulations were modified by Circular Memoranda issued on the 4th July 1851 and the 19th July 1858.

APPENDIX VI. (C.)

Examinations for Promotion.

C.—GENERAL ORDER ISSUED IN NOVEMBER 1858 ESTABLISHING THE SYSTEM OF EXAMINATIONS FOR PROMOTION ON THEIR PRESENT FOOTING.

Horse Guards, S.W., November 29, 1858.

The following regulations in regard to to the examination of officers preparatory to promotion in the army are to be substituted for those promulgated by the Circular Memoranda of the 14th May 1850, 4th July 1851, and 19th July 1858.

Before officers are recommended for promotion to the rank of lieutenant, the commanding officer will apply to the senior officer in the district or station for a board to examine and report upon their qualifications.

The board is to consist (if possible) of three field officers, but on no occasion, when it can possibly be avoided, is any officer of the same regiment as the candidate to be placed on the board.

This board is to report* to the Military Secretary, for the information of the General Commanding-in-Chief, that the officers about to be recommended for promotion to the rank of lieutenant have been instructed on the following points, viz.:—

1. They must have a thorough knowledge and must give an account of the duties they have to perform as regimental orderly officers, as officers commanding guards, or as subaltern officers of guards under officers of superior rank.
2. They must have a thorough knowledge of, and be able to put a company through the manual and platoon exercise, and be capable of exercising both a squad and company in the drill and evolutions as prescribed in the first two parts of the Regulations for the Field Exercise of the Infantry.
3. They must know exactly the place of all the company officers in every situation of the battalion, and be able to command a company in battalion exercise.
4. They must be acquainted with such parts of the Queen's Regulations and Orders for the Army as relate to the duties and conduct of a subaltern officer, and with the Mutiny Act and Articles of War, so far as is necessary for the performance of their duties as members of a court-martial.
5. They must be acquainted with the Queen's Regulations in regard to the pay and messing of the troops, and supply of necessaries.
6. They must know the weight of the knapsack; the weight of the soldier's firelock, with and without the bayonet; of his pouch, with and without ammunition; the quantity of ammunition it is calculated to carry, and the weight of his accoutrements.
7. Those who have passed through the course of instruction at Hythe must be thoroughly acquainted with the rifle drill and practice, and the theoretical principles of musketry, as defined in the authorized book of instruction.
8. In addition to such portions of the above as may apply to the Cavalry service, it is necessary, in the case of cornets,—
   1. That they shall have learnt their foot drill and sword exercise, and have been instructed in the single and double ride.
   2. That they shall be able to put a troop through the carbine, lance, and sword exercise, and to exercise both a squad and troop in the drill and evolutions prescribed in the Cavalry Exercise Book.
   3. That they shall be able to command a troop in squadron exercise.
   4. That they shall have made themselves masters of the detail of saddlery, the mode of fitting the saddle, bridle, &c., and of the whole equipment of the cavalry soldier and his horse.

Lieutenants who may have entered the service subsequently to July 1849, and all who may hereafter enter the army, will, in addition to the above, before they are recommended for promotion to the rank of captain, be required to have,—

9. A thorough knowledge of the provisions of the Mutiny Act and Articles of War, and of the forms and proceedings of courts-martial; and must give evidence of having studied some of the standard works on that subject.
10. They must understand perfectly the evolutions of a regiment of cavalry or a battalion of infantry, as laid down in the regulations for those services respectively.
11. They must be acquainted with the light infantry drill, outpost duties, patrol, escorts, advanced and rear guards.
12. They must perfectly understand the interior economy of a troop or company, and the established system of keeping their accounts.
13. They must be thoroughly acquainted with the Queen's and War Office Regulations.
14. It must be ascertained that they are competent to take charge of a troop, company, or detachment in every position in which it may be placed.
15. And they must be required to show that they have a sufficient knowledge of field fortification and reconnaissance to be enabled to fulfil the important duties detailed in the Field Exercise Book, from page 313 to 317.

The examination of officers for the rank of captain is to be made by boards of officers, to be appointed by the general or other officer commanding the district or station, one of the senior officers in each station or garrison being president, and of two field officers (if possible) not belonging to the same regiment as the candidate.

In all cases the board of examiners will ascertain by practical examination, and not by the acceptance merely of verbal or written answers to questions, whether the officer is instructed in the subjects specified in paragraphs, 2, 3, 8, 10, and 11 of this general order.

The general or other officer commanding the district or station will forward the report of the board (with the written questions and replies) to the Military Secretary, accompanied by his own observations thereon.

Every cornet or ensign is to be examined on the different points herein specified before he has completed eight months' service, and should he fail to qualify himself for promotion within that period, his commanding officer must report, for the information of the General Commanding-in-Chief, whether it is owing to a want of diligence and attention on the part of the officer, or to circumstances (such as sickness or others) over which he could have no control.

The General Commanding-in-Chief hopes that the subalterns of the army will see the necessity of using their utmost exertions to acquire a knowledge of their professional duties, as His Royal Highness will not hesitate to promote (either regimentally or from other corps) officers who may have passed the required examination, in the place of the idle and incompetent.

It is the imperative duty of all commanding officers to pay close attention to the instruction of young officers, and His Royal Highness will hold them as responsible for the performance of this duty, as for the due instruction and training of the non-commissioned officers and soldiers under their command.

By command of His Royal Highness the General Commanding-in-Chief.

G. A. WETHERALL,
Adjutant General.

*N.B.—The written questions and replies are to be sent with the report of the board.

APPENDIX VI. (D.)

D.—PRESENT REGULATIONS FOR EXAMINATIONS FOR PROMOTION.

From the Queen's Regulations for the Army, Section 4, paras. 159–170 (1868).

Infantry and Cavalry.

159. Before officers are recommended for promotion to the rank of lieutenant, the commanding officer is to apply to the senior officer of the district or station for a board to examine and report upon their qualifications as under:—

(*a.*) They must have a thorough knowledge, and must give an account, of the duties they have to perform as regimental orderly officers,—as officers commanding guards,—or as subaltern officers of guards under officers of superior rank.

(*b.*) They must have a thorough knowledge of, and be able to put a company through, the various exercises and evolutions prescribed in the first two parts of the "Field Exercises of the Infantry;" and they must be acquainted with the rifle drill and practice, and the theoretical principles of musketry, as defined in the authorized book of instruction.

(*c.*) They must know exactly the place of all the company officers in every situation of the battalion, and be able to command a company in battalion exercise.

(*d.*) They must be acquainted with such parts of the Queen's Regulations and Orders for the Army as relate to the duties and conduct of a subaltern officer, and with the Mutiny Act and Articles of War, so far as is necessary for the performance of their duties as members of a court-martial.

(*e.*) They must be acquainted with the regulations of the army in regard to the pay and messing of the troops, the supply of clothing and necessaries, and all details regarding the weight of, and mode of carrying, the various articles of the soldier's kit, arms, accoutrements, and ammunition.

160. In addition to such portions of the foregoing as may apply to the Cavalry service it is necessary in the case of cornets recommended for promotion to the rank of lieutenant,—

(*a.*) That they shall have learnt their foot drill and sword exercise, and have been instructed in the single and double ride.

(*b.*) That they shall be able to put a troop through the carbine, lance, and sword exercise, and to exercise both a squad and troop in the drill and evolutions prescribed in the Cavalry Exercise Book.

(*c.*) That they shall be able to command a troop in squadron exercise.

(*d.*) That they shall have made themselves masters of the detail of saddlery, the mode of fitting the saddle, bridle, &c., and of the whole equipment of the cavalry soldier and his horse.

161. Lieutenants in the Cavalry and Infantry will, in addition to the foregoing, before they are recommended for promotion to the rank of captain, be required to show that they are further duly qualified as follows:—

(*a.*) They must have a thorough knowledge of the provisions of the Mutiny Act and Articles of War, and of the forms and proceedings of courts-martial, and must give evidence of having studied some of the standard works on military law.

(*b.*) They must understand perfectly the evolutions of a regiment of cavalry or a battalion of infantry, as laid down in the regulations for those services respectively.

(*c.*) They must be acquainted with the light infantry drill, duties of out-posts, patrols, escorts, advanced and rear guards.

(*d.*) They must perfectly understand the interior economy of a troop or company, and the established system of keeping their accounts.

(*e.*) They must be thoroughly acquainted with the Queen's and War Office Regulations applicable to their own branch of the service.

(*f.*) They must be competent to take charge of a troop, company, or detachment, in every position in which it may be placed.

(*g.*) And they will be required to show that they have a sufficient knowledge of field fortification and reconnaissance.

162. The board of examination is to consist, if possible, of three field officers; but on no occasion, when it can be avoided, is any officer of the same regiment as the candidate to be a member. In all cases the board will ascertain by practical examination, as well as by verbal and written answers to questions, whether the officer is instructed in the subjects specified in the preceding paragraphs. The questions are to be written on half margin, and the replies inserted opposite to them. The board will mark in red ink its correction of any mistakes in the answers, and will certify in each case that "the candidate has not received any "assistance from books or other sources." The report of the board to be on a separate sheet, and when officers of different regiments are examined by the same board, the report in connexion with each regiment is to be made separately.

163. The general officer commanding will forward the report of the board and the written questions and replies to the adjutant-general, accompanied by his own observations thereon regarding the nature of the examination, the correctness of the answers, and the eligibility of the officer examined.

164. Every cornet or ensign is to be examined on the different points herein specified, before he has completed one year's service, and should he fail to qualify himself for promotion within that period his commanding officer must report, through the general officer commanding, for the information of the Commander-in-Chief, whether it is owing to a want of diligence and attention on the part of the officer, or to sickness or other circumstances over which he could have had no control.

165. No officer will be recommended for promotion to the rank either of lieutenant or captain unless his examination papers and certificate of qualification have been received by the Military Secretary; but the Commander-in-Chief will in all cases select the senior officer who may have qualified for promotion to the higher grade.

Artillery.

166. The examination of lieutenants of Artillery for the rank of captain will include all the subjects required from officers of the line of corresponding rank, except that a general knowledge only of the evolutions of cavalry and infantry will suffice. In addition to the foregoing, lieutenants of Artillery are to be examined as to their acquaintance with the more special duties of their arm of the service. The following list of subjects will serve as a guide to the nature of the examination:—

(*a.*) Field-gun drill. Exercise of heavy guns on ground and traversing platforms, mortar drill, rocket drill, Armstrong-gun drill, practice with hot shot and molten iron shells, gyn and transporting carriage drill.

(*b.*) General duties of the men, and principles involved in mounting and dismounting ordnance generally, in placing guns on towers, in embarking and disembarking ordnance, and in moving ordnance up steep inclines; also the tackle, &c. required in the above operations.

(*c.*) Different pieces of ordnance in use throughout the service at the time of examination, their weight and calibre, and the special purpose of each description of ordnance.

(*d.*) Ammunition employed with ordnance generally; ammunition employed with Armstrong guns; general construction of a Congreve rocket, and the principle of its motion; manufacture and action of fuzes and tubes; the advantages of the rifle action, and the principle upon which it depends; essential points with regard to rifling ordnance; general principles of breaching; position and employment of artillery in the field; considerations which regulate the rapidity of artillery fire; principles connected with the manufacture and construction of artillery carriages; general knowledge of laboratory duties.

(*e.*) Embarking and disembarking horses; management of horses on board ship.

(*f.*) To be able to define technical artillery terms, &c. in such a way as to make them understood by the non-commissioned officers and men under their command, such as—1, point blank; 2, point blank range; 3, dispart; 4, chambers; 5, preponderance; 6, different kinds of artillery fire; 7, how elevation gives an increase of range; 8, windage; 9, deviation, &c., &c.

(*g.*) Subalterns who have been one year or more in the horse brigade, or in a field battery, will be required, in addition to the foregoing subjects, to be thoroughly acquainted with stable duties, and horse artillery or field battery movements and details; all others will be required to have a general knowledge of these subjects.

167. Every officer on becoming the 30th on the list of lieutenants must be prepared to undergo the required examination. An officer, however, who wishes to be examined at an earlier period may, after four years' service, apply for such examination.

168. Instructions will from time to time be issued to the general or other officer commanding districts or stations to assemble a board, to consist of three officers, viz., a field officer (of the artillery, if possible), an officer of the staff, and a captain of artillery, or an officer of that corps who may have already passed the examination. Either the gunnery instructor or the fire-master should, when practicable, be selected for this duty. If it be impossible to obtain a staff officer, a captain of the line should be substituted; if a second officer of artillery cannot be had, an officer of engineers should be substituted; but either the president or one member of the board must be selected from the artillery.

169. That portion of the examination which can be best replied to in writing will be conducted by means of questions prepared by the deputy adjutant-general of artillery, and forwarded to the general officer commanding the district. The *vivâ voce* and practical examination will be conducted by the board of officers, who will satisfy themselves that the officer under examination not only possesses the requisite knowledge himself, but that he is able to impart that knowledge in a clear and satisfactory manner to the non-commissioned officers and men under his command.

170. The board will then forward, through the general officer, its report, together with the written answers, to the adjutant-general of the forces; and in returning to him the written answers, the president of the board will certify that they are the *bonâ fide* performances of the candidates, without assistance. The written papers will then be examined by the deputy adjutant-general of artillery, and the result, together with the opinion of the board, reported to the Commander-in-Chief.

APPENDIX VII.—INSTRUCTION OF OFFICERS AFTER ENTERING THE SERVICE.

Appendix VII. (A.)

Instruction of Officers.

A.—QUESTIONS AND REPLIES ON THE SUBJECT OF THE INSTRUCTION OF OFFICERS AFTER ENTERING THE SERVICE.

Questions issued by the Commission.

(I.) Would it, in your opinion, be possible to introduce any system of affording practical military instruction to officers of the cavalry and infantry after they have entered the service?

(II.) If you consider any such system possible, will you be good enough to state what you consider the nature and subjects of the instruction should be? Whether attendance at the course of instruction should be obligatory or voluntary? whether examinations should take place in connexion with it? and whether promotion should in any way be made dependent on such examinations?

(III.) Do you consider that the best means of carrying out such a system of instruction would be by having an officer-instructor in each regiment, or garrison-instructors at large military stations; or can you suggest any other plan which would in your opinion be preferable?

The above questions were addressed to the following officers:—

General Sir W. R. Mansfield, K.C.B., G.C.S.I., Commander-in-Chief in India.

Lieut.-General W. F. Forster, K.H., Military Secretary.

Lieut.-General Lord W. Paulet, K.C.B., Adjutant-General to the Forces.

Lieut.-General Sir J. Hope Grant, G.C.B., Quartermaster-General to the Forces.

Lieut.-General the Hon. Sir J. Yorke Scarlett, G.C.B., Commanding the Aldershot Division.

Major-General Sir A. H. Horsford, K.C.B., Commanding the 3rd Infantry Brigade, Aldershot.

Major-General D. Russell, C.B., Commanding the South-Eastern district.

Major-General W. C. E. Napier, Vice-President of the Council of Military Education.

Major-General the Earl De La Warr, C.B.

Colonel C. Cameron Shute, C.B., Commanding the 4th Dragoon Guards.

Colonel F. R. Elrington, Commanding the 4th Battalion, Rifle Brigade.

Colonel the Hon. H. H. Clifford, C.B., V.C., Deputy Quartermaster-General to the Forces.

Colonel J. W. Armstrong, C.B., Deputy Adjutant-General, Ireland.

Viscount Walden, late Captain and Lieut.-Colonel, Grenadier Guards.

Captain and Lieut.-Colonel H. C. Fletcher, Scots Fusilier Guards.

Major O'B. B. Woolsey, Royal Artillery, in charge of the Survey Class, Aldershot.

Sir W. Mansfield.

(i.)—Memorandum by His Excellency General Sir William Mansfield, K.C.B., G.C.S.I., in answer to the above Questions.

Before replying to these questions it may be as well for me to consider what is meant by the phrase "practical "military instruction," and how far it is imparted to officers in cavalry and infantry regiments under existing arrangements.

When the matter is duly investigated, it is, I think, found that the young officers now receive in their regiments so much of practical military instruction as is required for the performance of regimental and subordinate military duties, both in peace and war.

We also find when a campaign takes place, and when considerable casualties have occurred in the conduct of a war, that the military commanders in their several degrees, and the administrative departments are able to lay their hands on officers in the regiments, who without previous training are fairly competent at once to undertake the performance of military and civil staff duties, some of the former involving considerable scientific attainments. It is not too much to say that the careers of a majority of the men who have been distinguished in the army, whether in India or in Europe, have commenced from their being taken for staff appointment at such periods of stress and difficulty.

Of the administrative and technical ability to be found among the regimental officers we have another proof in the fact, that Government reverts to the regiments whenever it has occasion suddenly to organize or develop establishments, *e.g.* the measures of relief during the Irish famine, and the demands made on regiments to furnish officers for different kinds of employment in India and the colonies.

It has always appeared to me, when I consider these facts, which in different forms have passed constantly before my eyes during the last 30 years, that a great injustice is done to the general military arrangements by the Public, and that the depreciation of the amount of military ability and solid military instruction to be found in the regiments of the army, can only be accounted for by the popular habit of injustice in the matter concerned.

What then is the "practical military instruction," which young men of ordinary abilities and good character acquire in the ranks of a regiment? In the first place, there is the drill of the company first, and afterwards of the battalion, which, though popularly estimated as being of the first importance, has really a less weighty character than many other parts of the practical military instruction.

Secondly.—The so-called musketry instruction is now treated both as a science and an art in the ranks of every regiment of Her Majesty's service.

Thirdly.—In the infantry regiments the use of heavy guns is taught as part of drill, both to officers and soldiers.

Fourthly.—What is called the interior economy of a regiment consists of matters which are for the most part insensibly acquired, but imply an ultimate amount of instruction of a very elaborate character. Thus, in the daily business of the orderly room of the commanding officer, we see what in truth is the court of a magistrate. In this court, which is attended by the officers of companies, are tried, in the first instance, all offences against the Articles of War and Her Majesty's Regulations, whether by officer or soldier. The offenders are disposed of according to the rules of discipline, the Articles of War, and the Common Law. That is to say, after the fullest investigation, petty offences are summarily disposed of by the commanding officer, and the heavier ones are either committed for trial by courts-martial in their several degrees, or relegated to the civil magistrate. In this daily discharge of duty by the commanding officer, the young officers in general learn in a practical manner how to take evidence, and what value to attribute to it. They also learn, at a very early date, the constitutional position of the British soldier, and how absolutely necessary it is to view and treat him in his two-fold character, viz. of a British subject who can claim the protection of the law of the land, and of a British soldier who acknowledges the rule of discipline according to the Mutiny Act and Articles of War.

It will be recollected, with regard to this part of the subject, that if a commanding officer be inclined to treat this important section of his duty either with carelessness or with an oppressive intention, he is quickly called to order by the soldiers themselves. There is nothing in which a British soldier differs so much from the men in continental armies, and the sepoys of our Indian forces, as in this thorough appreciation of constitutional rights and position, according to law. Any officer who forgets these points, from the colonel of a regiment downwards, cannot command British soldiers according to the real interests of Her Majesty's service. To these points, then, is directed, in the most thorough manner, the attention of every officer who joins a regiment, and in my humble opinion they form a part of the so-called practical military instruction, outweighing all others in importance.

The interior economy of a regiment, in addition to the departments of the paymaster and quartermaster, demands personal attention to the accounts of the soldiers, and personal responsibility for them on the part of the company officers. The pay of the men is regulated by the latter, and almost in spite of themselves the young officers acquire habits of business, following on the disbursement of public monies, and a rigid responsibility and account for the same. In the interior economy are also included not only the cleanliness and smartness of the men under arms, but attention to their food, inspection of the barracks and meals, conservancy and all things affecting health in the regimental body.

The interior economy further comprehends careful consideration of the habits and dispositions of the non-commissioned officers and soldiers under the command of the officers, the personal histories of both classes, and the fitness of individuals for promotion. To the officers first does the commanding officer look for knowledge of personal character of men in the ranks; and the officers, even the youngest of them, understand that the promotion or the punishment of soldiers depends in great measure on what may be said in their favour or to their prejudice, according to the obligation of duty imposed on them as officers.

It is then impossible for any officer but the most careless and inobservant, to pass through the early years of service with a regiment without acquiring a practical knowledge, and a habit of consideration of those under his command of avaluable character. This again, according to my view, is an important point of practical military instruction, the worth of which cannot be over-estimated, generally when high command is attained, or specially when it comes to be applied in the vicissitudes of a compaign or on occasion in time of peace, when a young officer is detached from the head-quarters of his regiment in command of a company or a sub-division. It is indeed the habitual contemplation of all things affecting the movement, the quarters, the health, the discipline, and the provisioning of the troops which is the cause of that fact to which I drew attention in the early part of this paper, viz., that in times of change or difficulty, we can always find competent staff and administrative officers in the ranks of a British regiment.

What is called Military Law is more studied in the army than it used to be. Before an officer can obtain his company he is now required to pass a theoretical examination on the Articles of War and Her Majesty's Regulations, bearing on the law of the army. In the conduct of the orderly room business, he becomes acquainted with the warrants affecting enlistment, pay, clothing, &c.; and finally, in his constant attendance at courts-martial, first, as a pupil to learn the forms of procedure, and afterwards as a member, he obtains no inconsiderable acquaintance with the Articles of War and the Regulations; and he acquires a habit of weighing evidence which often distinguishes him favourably from young men of like age in civil life.

In the cavalry regiments the knowledge of horses, &c., equitation, and cavalry drill must, as a matter of course be gained by the young cavalry officer.

I think I have now shown, that although it is the fashion in some circles to attribute much ignorance and frivolity to our young officers, the accusation is unjust, and that in truth the most important part of so-called practical military instruction is already afforded to them in a sufficiently solid manner. Considerable improvements have been made of late years, this being more especially shown in the professional examination officers are required to pass before they can be recommended for the rank of captain, in the scientific musketry instruction, in the gun drill, and in the enlarged theoretical study of military law.

What then remains under the head of practical military instruction with respect to the first of the queries I am required to answer?

I presume it to include the knowledge of certain European languages, the art of field surveying with and without instruments, acquaintance with fortification, both field and permanent, the science of the artillerist, the administrative conditions of armies, the principles and art of strategy, tactics, and so forth.

With respect to the first, though doubtless of extreme utility to the individual, I do not think it would be right to make linguistic accomplishment a test of regimental efficiency.

The like may be said of the art of surveying. In all regiments many young officers are found who have taken to it as an amusement, but to others it is most distasteful. Many a sportsman who cannot sketch a line would be a better officer for reconnaissance, and would give a more useful description of a country to a general officer than a finished surveyor, who might want the quick power of observation belonging to the fox-hunter. Now the army is full of sportsmen who, without the accomplishment of surveying, are nevertheless just the officers a general officer would seek in a campaign to execute a dangerous reconnaissance, and for bringing back accounts of positions and roads, and the force of an enemy in his front, at the risk of their lives. I am most adverse to discouraging this class of English gentlemen, whom I believe to form the very marrow of the army in time of war. Some of these officers are those who may appear in time of peace to be idle and to think only of amusement, but the sterling British quality is found when they are really tried. This is infinitely valuable when we have to fall back on courage, and manhood, and quick observation, amidst the most dangerous circumstances.

A moderate acquaintance with field fortification is already made a part of the professional examination for the rank of captain.

With reference to permanent fortification, I would rather say nothing. The art, if it can be called one, is in a state of disturbance and revolution. I certainly think we must not make it obligatory on regimental infantry officers until we know something more about it, with reference to the recent improvements in gunnery, to the now acknowledged impotence of all masonry defences, to the application of iron, earthworks, &c.

I do not think it necessary to trouble infantry or cavalry officers with an obligation to acquire a theoretical insight into the administrative conditions of armies. Those who have a taste for such matters pick them up of their own accord, and in any case the subject is one which must be treated by a special administrative staff; and, as we have seen in the recents reforms of the War Department, this is now being provided for by Her Majesty's Government, as has been long the case in the military establishments of the continent.

I certainly think that all infantry officers should have a certain instruction in the theory as well as the art of gunnery, and I should like to see this encouraged by drill with field batteries, by attendance on the practice ground and in the laboratory.

It remains then to consider the questions of strategy and tactics.

The practice of brigade and division parades generally provides for the latter. The former, viz., strategy, is much considered by all educated men, and is frequently discussed in its various bearings by regimental officers, who, on the whole, do not read less about wars and other historical events than other classes of their countrymen.

I think it would be well to encourage lectures in all regiments on the application and illustration of principles with respect both to strategy and tactics.

It will be gathered from the foregoing statement, that I should deplore any step which would cause regimental promotion to hinge upon purely educational tests. I am satisfied with the professional examination as at present ordered by His Royal Highness the Duke of Cambridge, and I am convinced that, as set out above, the practical military instruction, which is now indispensable to every officer who aspires to the rank of captain in a regiment, is sufficient for regimental efficiency and for the general preparation of officers.

At the same time, while I assert this, I hold very strongly that officers destined for the quartermaster-general's department, and for other staff appointments requiring scientific attainments, should be able to show that they are properly prepared in the possession of the necessary accomplishments.

I would take this opportunity of adding, that it would conduce to the efficiency of Her Majesty's service if promotion were sternly denied to officers who have shown themselves to fail in their moral character, who have been guilty of frequent irregularities, or who have been reported by more than one inspecting officer as failing in the assertion of command, in the application of regimental professional knowledge, and in those qualities which it would take long to describe, but which may be briefly summed up in the terms, manhood and presence of mind.

The inference, therefore, is, that beyond that which is at present compulsory under the Regulations as regards professional regimental knowledge, I think it impolitic to impose compulsory theoretical study on commissioned officers in Her Majesty's British regiments.

Nothing ought to be compulsory under the rule of discipline which we should be loath to enforce by the action of the law. Thus assuming theoretical study to be obligatory, a commissioned officer should be triable, and lose his commission if he declined to apply himself to it. Such an arrangement would certainly be impolitic, and it would never be enforced.

On the other hand, as I have said in another place, I think it would be expedient to change the class of ensigns for a class of cadets, who would be in a regiment what midshipmen or naval cadets are now in a man-of-war. At ages varying from 18 to 21 they, having been *in statu pupillari* till the time of probation was passed, would either become officers, or be got rid of without noise if they were found unfit for Her Majesty's service.

I am in favour of the project of having an officer instructor in regiments, who should take charge of a class of cadets, of the adult and child's school in the ranks of the men, and give lectures on military subjects for the benefit of the officers and men generally.

I should be inclined at first to try the experiment of letting the officer instructor be one of the effective captains or lieutenants, as in the case of the musketry instructor, he receiving a staff allowance and being relieved of all garrison and regimental duty, excepting the charge of his company or troop. I am aware of the practical difficulty attendant on the fact that education is an art, requiring a special preparation of the man who exercises it. But the

APPENDIX VII. (A.)

Instruction of Officers.

office having been created, I am induced to think that this difficulty would be gradually surmounted in a satisfactory manner, and that regiments, both as respects officers and men, would gain immensely by the fact of the regimental education being guided by an officer specially selected and set apart for the purpose.

I would venture to make another suggestion. It appears to me, as indicated above, that we submit to a great loss of power in the fact that, having a separate regiment of artillery, we do not take practical measures for the instruction of our infantry officers also in the science and art of gunnery. The defect appears the more strange, if we consider the opportunity afforded for this without expense by Woolwich, and the presence of batteries in garrison with infantry regiments.

Thus infantry officers might, on voluntary application, be detached to Woolwich to go through a course of artillery instruction, as is now done with respect to musketry at Hythe, a certificate being granted by competent authority on a course being completed with fair results of proficiency. A course would last for nine months, or perhaps a year.

The like might be done with reference to military engineering, that is to say, I would arrange for the detachment of infantry officers to Chatham, for practice in the erection of field works, the construction of military bridges, in field sketching, &c. &c.; certificates being ultimately granted by the director of studies according to the merits of the officers concerned.

It is my belief that these practical studies would be much appreciated by many young officers in every regiment in the army, and that if such a system were encouraged, but conducted on a purely voluntary principle, there would be no lack of applicants to avail themselves of the privilege.

W. R. MANSFIELD, General,
Commander-in-Chief in India.

Simla, 30th May 1869.

Lieut.-Gen. Forster.

(ii.)—ANSWERS received from LIEUT.-GENERAL W. F. FORSTER, K.H., Military Secretary.

(I.) It appears to me to be quite practicable to extend to officers of cavalry and infantry the option of acquiring practical military instruction after they have entered the service.

(II.) I would propose the following subjects of instruction:—

- Mutiny Act and Articles of War.
- Theory and practice of courts-martial.
- Everything connected with the interior economy of a battalion.
- Military sketching.
- Military history.
- Field fortification and knowledge to improve the defence of a post.
- Report upon the nature and features of a country in a military point of view.
- The French language, and, if possible, German.

The attendance of officers should be compulsory as regards the three first-named of these subjects; and with regard to the remainder, attendance should be voluntary.

(III.) I would recommend a military instructor, not under the rank of captain, to be established in large garrisons, such as Dublin, Portsmouth, Plymouth, Chatham, Gibraltar, and Malta, during time of peace, and, if possible, a military instructor to each battalion or regiment, who should not be independent of the commanding officer.

There would be no doubt very considerable difficulty in finding officers capable of teaching French and German. This is a matter for much consideration.

I think that examinations should necessarily be held in connexion with the system.

The examinations at present in force for promotion to the rank of lieutenant and captain are, in my opinion, quite sufficient if properly carried out. There might be an improvement in the constitution of the boards held for the examination of these officers, for whereas many of them enter minutely into the qualifications of officers for promotion, on some occasions the examinations are very limited and insignificant, and I would advise that a regular set of questions should be made out, to be put forward on such occasions, to be satisfactorily answered; and I think it desirable that the military instructor should be a member of such boards.

W. F. FORSTER,
Military Secretary.

(iii.)—ANSWERS received from LIEUT.-GENERAL LORD WILLIAM PAULET, K.C.B., Adjutant-General to the Forces.

(I.) If it is not intended to render the previous education of the candidates for the army at a military college indispensable, then it would be highly desirable (and quite possible) to introduce a system of affording practical instruction.

(II.) Strategy and military tactics, military history and geography, surveying, field sketching and reconnaissance, permanent and field fortification, and modern languages,—of these, surveying, field sketching and reconnaissance, and fortification to be obligatory for all subalterns under five years' service, unless they have attained at an earlier time a sufficient degree of proficiency, to be ascertained at periodical examinations. A greater amount of *professional* knowledge should be required than at present before promotion to the rank of captain, if the system suggested is carried into effect.

But all officers to be permitted to receive instruction in any of the subjects above detailed if so disposed.

(III.) An instructor or instructors to be appointed to all garrisons and large military stations, and a qualified officer (if any) in each detached regiment to undertake the duties of instructor in his corps, receiving a small addition to his pay while so employed, and being exempted from other duties.

W. PAULET,
Adjutant-General.

(iv.)—ANSWERS received from LIEUT.-GENERAL SIR J. HOPE GRANT, G.C.B., Quartermaster-General to the Forces.

It would not be advisable, in my opinion, to introduce a system of affording practical military instruction in *regiments* to officers of the cavalry and infantry after they have entered the service.

It would be difficult, without making it obligatory (a course in my opinion much to be avoided), to induce officers to attend the classes, and it would be very expensive having instructors to so many corps. But I would cause *all* young gentlemen who wish to enter the army to be educated from the age of 16 to 18 at the military college of Sandhurst, where every facility should be, and I believe is, given for acquiring the knowledge which it is necessary for a soldier to learn.

I am of opinion, however, that *voluntary* instruction in garrisons would be very advantageous, where, if they wished it, officers could carry on their previous instruction in the branches of military education, and especially in modern languages; and should they desire to study the higher branches of education, such as geometry, geology, trigonometry, &c., this would afford them an opportunity of doing so.

The present method of examination for officers for their promotion is, however, not quite satisfactory, as it must be unequal; viz., some officers have a very strict examination, while others may have the very reverse.

I would therefore cause all officers to repair to the nearest garrison town, where the examination for promotion should take place before a committee, of which the officer instructor should always be the president, or a member of the Board.

To all these garrisons an officer instructor should be permanently appointed.

J. HOPE GRANT,
Quartermaster-General.

(v.)—ANSWERS received from LIEUT.-GENERAL the Hon. SIR J. YORKE SCARLETT, G.C.B.

(I.) I believe it would be practicable to give practical military instruction to officers of cavalry and infantry after they have joined the service beyond what they acquire of the drill of their respective branches.

(II.) The nature and subject of the instruction should be military surveying and field fortification. Young officers joining from Sandhurst come ready instructed in the above. all they require is practical work to keep their knowledge alive and improve it.

This should be done by making them teach their men to throw up field fortifications practically, and they should be required to bring in military sketches of the vicinity of their quarters.

Those who join without that instruction should not be dismissed from drill till they have acquired it; it should form portion of their elementary regimental drill.

Theoretical instruction might be given; but when dismissed from drill no theoretical instruction should be compulsory,—the practical part should be a duty by roster.

Examinations in which these subjects are included should be held. No abstruse knowledge should be required, and gross ignorance or idleness should alone stand in the way of promotion.

(III.) The lieut.-colonel and majors are the proper instructors, with the aid of captains; but a supernumerary captain well qualified as an instructor should be on the establishment of every regiment. He might be selected from Staff College pupils.

He should be charged with the educational department of the regiment, including the children, and have sub-instructors under him.

To make the above practical and palatable, it should be as little compulsory as possible; nor should officers who are under-paid be over-worked. The instruction in field fortification and drawing should be instead of, and not in addition to, ordinary parades, many of which, as in the Guards, might be left to the adjutants and non-commissioned officers.

At large military stations, I think, military instructors in the above-named subjects and some others should be maintained. Attendance at their instruction should not be compulsory, and every examination should be voluntary. Those who offer themselves should receive certificates of proficiency, and be considered eligible for the Staff, and for promotion which it might be in the power of the authorities to bestow, but not establishing a right to it.

I should consider the adoption of some such plan as I have sketched out merely experimental; if successful, it might be improved on.

J. Yorke Scarlett,
Lieut.-General.

(vi.)—Answers received from Major-General Sir Alfred Horsford, K.C.B.

(I.) I consider it possible to introduce a system by which, at a comparatively small expenditure, the efficiency of the officers might be materially increased.

(II.) The subjects of instruction should be—

1stly. Outpost duty.
2ndly. Field fortification, including attack and defence of posts.
3rdly. Military history.
4thly. Tactics and strategy.
5thly. Military sketching and reconnaissance.
6thly. Inventions and current subjects of interest, such as telegraphy as applied to armies in the field, &c.
7thly. Continental languages.

The submission to the course should be perfectly optional, but the attendance at any one course of lectures once commenced should be obligatory.

Half-yearly examinations would be useful, both to test the progress of the students and the efficiency of the instructors.

Under the present system I consider regimental promotion should not in any way depend on the results of the examinations, though ultimately perhaps they may be allowed to influence and control it. Many opportunities would arise to encourage the zealous and deserving officers who should have passed good examinations, such as by appointing them to fill temporary Staff offices at camps of instruction, by sending them to observe and report on the camps formed every autumn on the Continent, and in other ways too numerous to mention.

(III.) In regard to the method of imparting instruction,—I am of opinion that the question of expense must mainly determine this point.

For some years there would be ample employment for an instructor on military subjects in every regiment, assuming, as I should suggest, that they continued to perform their regimental duties. The position might be filled by a major or any captain of experience who should qualify for the office. I believe that officers would learn, and especially when commencing their studies, more readily from one in constant daily communication with them, than they would from a divisional or brigade instructor.

After four or five years, however, we must expect that the regimental classes would be small, composed probably of the last joined officers, since a time must come when all the zealous officers now serving would have completed any reasonable course.

It is necessary then to organise an elastic system. I would suggest, therefore, as a beginning, that when it is practicable a major or captain of experience should be allowed to qualify in each regiment. That to do so he should be sent to the Staff College to undergo a short course, and obtain a 1st, 2nd, or 3rd class certificate according to his acquirements, unless he had passed through the Staff College, which might, with the approval of the Council of Military Education, be accepted as a diploma or degree.

Appendix VII. (A.) Instruction of Officers.

This officer, when four or more students are under his tuition, might receive an extra rate of pay as does an adjutant.

When there are not sufficient students to occupy the time of regimental instructors, or where for other reasons, and possibly in addition, a brigade or divisional instructor is required, he might receive an increased rate of pay similarly to a Staff officer of the army, and be like him exempted from all regimental duties.

Though I have delayed to refer to the study of languages spoken on the Continent, I consider for an English officer they are most useful. I would suggest, therefore, that at large stations, provision should be made for imparting instruction to officers in such continental languages as may be thought essential, by properly qualified professors.

A. H. Horsford,
Major-General.

(vii.)—Answers received from Major-General D. Russell, C.B., Commanding the South Eastern District. Maj.-Gen. Russell.

(I.) Yes.

(II.) Science and art of war. Military history and law. Topography.

Attendance obligatory as relates to the following subjects:—

Surveying and study of ground generally.
Reconnaissance.
Occupation, Defence, Attack } of positions, villages, &c.
Construction of field works.
Flying sap, rifle pits, fascines, gabions, &c.
Passages, and defence of passages, of rivers, &c.
Charge of outposts, convoys, foraging parties, &c.
Combination of the three arms.
Law applicable to courts-martial and general rules of evidence.

As many gentlemen join the army for a few years, and with no intention of making it their profession, instruction in what may be termed "*grande tactique*" might be voluntary, unless they aspire to the rank and responsibilities of field officers; but in the operations of "*petite guerre*" all should be instructed.

Most will profit—Some will not—All cannot become scientific officers—Some may be good soldiers nevertheless.

Any officer wilfully neglecting the opportunity of gaining professional knowledge thus afforded him, to be reported; and it would be a question with the military authorities whether he is to be promoted or not.

All recommendations for promotion to specify the qualifications of the officer, and to go through the general officer commanding the station, who should record his opinion in each individual case.

Examinations do not afford a fair test.

To counteract the existing silly and pernicious system of cramming, each officer should be called upon yearly for—a military treatise—a translation from or into a foreign language—or a plan or sketch, as he may himself select—to show that he is profiting by instruction, or, at least, keeping up what was required from him previous to entering the service.

(III.) Regimental instructors.

A captain with a certificate from the Council of Military Education.

The officers at present turned out by the Staff College are, as a rule, more fitted for instructors than for staff duties.

A small military library, models, &c., should be established in each regiment.

The expense of these might, in the first instance, be met by suspending the grant for billiard tables, until these libraries have been provided. The regimental messes might keep them up out of the Prince Regent's Allowance.

All matters connected with military science, experiments in gunnery, fortification, and events occurring in foreign wars, at present only gleaned from "our own correspondent," to be brought before the officers by the instructor.

Officers anxious to instruct to be encouraged to do so.

APPENDIX VII. (A.)

Instruction of Officers.

Each regiment might thus on a small scale become a "United Service Institution," and conversation on professional matters would be no longer tabooed at mess.

D. RUSSELL,
Major-General.

Maj.-Gen. Napier.

(viii.)—ANSWERS received from MAJOR-GENERAL W. C. E. NAPIER, Vice-President of the Council of Military Education.

(I.) I think it would be quite practicable to introduce a system which would give to officers of the cavalry and infantry the *opportunity* of gaining practical military instruction after they have entered the service.

(II.) The subjects of instruction which I would propose are—

Military Sketching.
Field Fortification.
Military History.
Military Administration and Legislation.

The attendance at the course of instruction in the above subjects should in my opinion be entirely voluntary; no examinations beyond those held by the instructors should be required; but the military drawings and fortification plates should be forwarded at stated intervals through the military authorities for the inspection of the Council of Military Education, as is now done with respect to the Survey Class at Aldershot.

The several instructors should also send in reports at stated periods, showing the number and detailing the progress of their classes and the amount of work accomplished. Some such check would be necessary for the careful watching of the results of the system.

I am not of opinion that promotion should be made in any way dependent on successful attendance at these classes; because, although I am fully sensible of the advantage that the knowledge of these subjects must be to an officer, I am not prepared to maintain that such knowledge is absolutely necessary for all officers in the army; and I would therefore make their promotion depend alone upon what *is* absolutely necessary, namely, a full acquaintance with, and a zealous discharge of, their military duties.

If it should be thought that some inducement beyond that of self-improvement would be necessary to engage officers to attend these voluntary classes, such inducement might be afforded by the prospect of these educated officers being selected in time of war to fill appointments on the Staff for which there might not be, on the spot, a sufficient number of officers who had passed through the Staff College.

(III.) I think that the best way of carrying out such a system of instruction would be to appoint officer-instructors, selected mainly from officers who have passed through the Staff College, to such large garrisons as Aldershot, Portsmouth, Dublin, Gibraltar, and Malta,—the system to be extended hereafter to other stations should the experiment prove successful. This would, in my opinion, be preferable to the plan of appointing an officer-instructor to each regiment, the results of which would probably fall far short of the expense.

I would here observe that we must not be too sanguine of success in a system which is entirely voluntary; but I am convinced that in every regiment there must be a certain number of young officers who would be glad to avail themselves of instruction in military science, and that it is not too much to ask the State to incur a moderate expense in placing the means of such instruction within their reach.

In conclusion I may mention that in the third General Report on Military Education which the Council are now passing through the press, they have advocated the establishment of the system I have here described; and that they consider that one of its advantages would be the making use (pending their employment on the Staff) of the services of officers who have passed through the Staff College.

WILLIAM NAPIER,
Major-General.

Earl De La Warr.

(ix.)—ANSWERS received from MAJOR-GENERAL the EARL DE LA WARR, C.B.

(I.) A system of affording practical military instruction to officers of the cavalry and infantry after they have entered the service might undoubtedly be introduced.

It would, however, in my opinion, bear no fruit proportionately in any degree to the expense and difficulty of maintaining it in thoroughly working and efficient order.

I understand the terms of the question to mean such instruction as smacks somewhat of the military school, with the practical application out of doors, on suitable ground, of problems of which a knowledge by previous study shall be acquired.

I cannot but affix this meaning to the question, because our present field exercises and manœuvres, especially in camps, do to a certain extent afford practical military instruction, and might, if properly conducted, without any additional expense or additional staff whatever, afford a great deal more. For instance, troops of the Line should be constantly practised in throwing up breastworks and covering field batteries and guns of position by epaulements, and thus the simple rudiments of field engineering might be usefully taught.

(II.) It would certainly be possible to make all the officers of a regiment attend school, and learn in the lecture room and in the field all those rudiments of professional instruction which ought to have been imparted to them, in a greater or less degree, according to circumstances, before commissions were bestowed upon them. The subjects of such instruction are various, too numerous to be specified here in full; I will mention only some:—The elements of geometry; trigonometry applied to the measuring of heights and distances; the tracing of field works on the ground; reconnoitering; field sketching; the attack and defence of outposts; mensuration, with the various calculations of the number of men required to construct a given work in a given time, and the area it should have to hold a specified number of men. All this course, with many other subjects besides, I went through at the Senior Department at Sandhurst, which corresponded then to the Staff College as it now is. I hold this sort of schooling for *all* the officers of the unscientific branches to be wholly unnecessary. The attempt to impart it to all would fail; and, moreover, capable and useful commanding officers of regiments would rise up without it, and many would be found to possess all these qualifications, and much higher professional knowledge besides, as some of them now do; but the whole body of average men would, I venture to think, be improved were the system adopted which I recommended in a paper drawn up and sent to a member of the Royal Commission, the contents of which I will not repeat here; but of one thing I am certain,—that attendance at such military schools, if they are established, must be obligatory.

Instruction for which the public will have to pay will in my opinion be perfectly useless unless examinations be held.

I am entirely averse from any such examinations previous to promotion. A certain preparation should be imposed upon every candidate for a commission before he gets it confirmed.

The instances are not numerous, though they do occur, in which subsequent practice, observation, and experience will not justify the trial, for a time at least, of an officer in the command of a regiment who has risen through the several inferior grades.

The power of removal for proved incapacity should be more frequently exercised than it now is.

The only test (because it is the only really practical working test) that can be applied in time of peace is that of requiring a field officer, before he gets command of a regiment, to show that he can manœuvre it with celerity, fluency, self-possession, and ease; that he has sufficient command of language to explain the several manœuvres, and the distinct parts of each of them, with precision and readiness to the battalion under arms.

This trial should take place under the eye of a superior officer, and a special report be made thereupon.

(III.) It follows from what I have said that I consider regimental instructors or garrison instructors, with all their inevitable adjuncts, wholly unnecessary and vain.

To minds of the average stamp "stuffing and cramming" will do little good. Those of a higher order will search for knowledge, and apply it when found to good and useful account.

Military education, like all other, is twofold, that which is taught in youth, and that which minds above the average level, by a process of self-instruction, afterwards carry on.

It is not difficult to discover in the British army the men who have made the most of the opportunities they have enjoyed. From the ranks of full colonels selections can now be made; and ere this grade be reached, perhaps long before, a man's fitness and capacity must be well known to those who by position are called upon to judge.

DE LA WARR,
Major-General,
Late 21st Fusiliers.

(x.)—Answer received from Colonel Cameron Shute, Commanding 4th Dragoon Guards.

Sir, Brighton, April 6, 1869.

I have taken some days to consider your communication of the 29th March, feeling the great importance of the subject, and how very desirable it would be if the suggestions implied in the questions submitted by the Commission on Military Education could be carried out.

But I regret to say, in reply to question No. (I.), I know of no mode of introducing any system of regimental practical military instruction other than is now available to zealous, good officers.

(II.) If any system as suggested in the first question could be adopted, the instruction should decidedly, in my opinion, be obligatory; to the same extent as is now the case in regard to musketry.

(III.) Garrison instructors at large military stations would be more feasible than regimental instructors, though in cases where a colonel may have some captain specially qualified, it may be desirable to sanction a trial.

The chief want I have found amongst the officers of the two cavalry regiments I for some years commanded, is a knowledge of military drawing; but nearly all have a knowledge, or partial knowledge, of some one foreign language.

In mounted corps instruction in reconnaissance and outpost duty is best given with a regiment; but as regards the former in particular, a facility for quick military sketching, however rough, is most desirable; and on service abroad a knowledge of the language of the country in which the troops are campaigning is most valuable.

Being of opinion, then, that there would be a difficulty in carrying out the proposal of district and regimental instructors, I would suggest that, as regards troops quartered in the United Kingdom, one officer of a regiment should be in succession selected by Commanding Officers, and sent to the Staff College, as was for a considerable time the case with reference to Hythe and Fleetwood.

No officer to remain absent from his regiment on this account for above four months, at the termination of which period he should, with his class, be examined in military drawing, practical field fortification, and one modern language, taking a first or second class certificate, or none, according to his merits.

That a first-class certificate should qualify, without further examination, for the Personal Staff of a General Officer, and carry with it any further advantage which may hereafter be thought desirable.

Now that I am glad to say military subjects are frequently discussed in the mess room, it would tend much to the improvement of officers, and add to their interest in their profession, if in every ante-room there was a small library of military maps and books of reference, not to be taken out of that room, and seen, damages assessed, &c. &c., at each monthly barrack inspection.

I attach an order issued by Lord Strathnairn in Ireland, with the forms, &c. connected with it; which when properly carried out monthly, as it was in my regiment, I am satisfied did much towards obliging officers to improve themselves.

I have, &c.,
C. C. Shute,
Colonel, Commanding 4th Dragoon Guards.

The Secretary,
Military Education Commission.

Enclosure in Colonel Shute's Letter.

Adjutant-General's Office,
Dublin, Feb. 15, 1866.

Memorandum.

The Commander of the Forces desires that General Officers commanding divisions will cause the officers of corps to be examined weekly in all matters relating to drill, interior economy, &c., in accordance with paragraph 4, page 119 of the Queen's Regulations.

A monthly report will be made by commanding officers of the knowledge possessed by the individual officers of their battalions of the various subjects on which they are examined for the information of Sir Hugh Rose.

By order,
(Signed) Graham Hay, D.A.A.G.

The General Officer
Commanding Cork Division,
Cork.

Appendix VII. (A.)

Instruction of Officers.

Regiment.

Return of Examination of Officers.

Date.

Rank and Names.	Drill.	Military Law.	Queen's Regulations.	Interior Economy.	Mutiny Act and Articles of War.	Remarks.	Date of last Examination.

Commanding Regiment.

(xi.)—Answers received from Colonel F. R. Elrington, Commanding 4th Battalion Rifle Brigade. Col. Elrington.

(I.) Yes; I think it would.

(II.) Military history and drawing, strategy and tactics, field sketching, use of the prismatic compass, field fortification, attack and defence of outposts, &c. &c.

Attendance voluntary.

Examinations to take place, but so long as the present system of promotion by purchase and seniority exists, together with the inadequate rate of pay of officers, I do not think promotion should depend on their examinations.

(III.) Garrison instructors at large military stations.

Having submitted the questions put to me to five officers of the battalion under my command, with a view to elicit the opinions of some younger men, I beg to forward their papers, as I think some of their suggestions are worthy of consideration, especially that of Captain Moorsom, with regard to libraries and an elementary class at the Staff College.

F. R. Elrington,
Colonel, Commanding 4th Battalion,
Rifle Brigade.

(xii.)—Answers received from Colonel the Honourable H. H. Clifford, V.C., Deputy Quartermaster-General to the Forces. Col. Clifford.

(I.) Yes.

(II.) Fortification, military history, surveying, military and other drawing, foreign languages, mathematics.

The attendance should be quite voluntary.

I am of opinion that examinations should take place in connexion with it, with a view to ascertaining the abilities of the Officers, but these examinations should be quite voluntary. Any Officer should be allowed to attend the military classes without being required to pass any examination. An Officer should not be exempted from any military duty to enable him to attend the classes, but should devote his spare time to his own instruction.

Promotion should not be made dependent on such examinations, but they should be taken into consideration.

(III.) I do not think that an Instructor to each regiment should be appointed, but one or more, as might be found necessary, should be provided at all large military stations; and I would advise that a trial of this system should first be made at one or two large military stations, such as Aldershot.

H. H. Clifford,
Colonel.

(xiii.)—Answers received from Colonel J. W. Armstrong, C.B., Deputy Adjutant-General in Ireland. Col. Armstrong.

(I.) Such a system in my opinion would be quite possible.

(II.) Thorough acquaintance with the Mutiny Act and Articles of War. The practice of courts-martial. The duties of piquets, outposts, and patrolling. Surveying. Field fortification, not only theoretically but practically. The defence of villages, buildings, &c. The construction of abattis and other obstacles to impede the attack of an enemy.

Attendance at the course of instruction should be obligatory.

Appendix VII. (A.)

Instruction of Officers.

There should be periodical examinations to test the progress.

An officer should be debarred from promotion until he had proved himself competent in the above-named subjects.

(III.) There might be an officer instructor in each regiment; in nearly every corps there is an officer who has passed through the Staff College.

At large military stations, such as Aldershot, Dublin at home, Malta, Gibraltar abroad, there might be a garrison instructor, not under the rank of field officer; or the officers and men of the Royal Engineers might be made available for imparting practical instruction in field fortification, &c.

At Aldershot there is, or used to be, an officers' surveying class, but the attendance was entirely voluntary.

J. W. Armstrong,
Colonel, D.A.G.

Viscount Walden.

(xiv.)—Answers received from Viscount Walden, late Captain and Lieut.-Colonel, Grenadier Guards.

(I.) Yes; it would be possible, and it is most desirable, to require all officers after entering the service to instruct themselves in all branches of military knowledge applicable to the special service they have joined.

(II. and III.) For infantry, field fortification in the widest sense. The attack and defence of posts; out-post duties; leading an advance; covering a retreat; reconnoitring; construction of bridges by pontoons, boats, or other means, with all the incidents of passing a river or preventing its passage; defence of a defile, pass, or street; in short, all that is included under the French term of "La petite guerre." The making of roads, encampments, bivouacs, with all that concerns the welfare of troops in repose, such as the pitching of tents, construction of huts and shelter of all kinds; the draining of ground, procuring of fuel, finding of water, distribution and cooking of food, and baking of bread. A practical acquaintance should be required with the construction of the clothing of the troops, of the accoutrements, and the materials of which they are formed. For instance, an infantry officer should be able to tell from his personal knowledge a good from a bad shoe, and, unaided, point out its merits or defects. In fact, an officer should be instructed in all those details which contribute to secure health and comfort to the soldier and to promote his efficiency in the field. An infantry officer should possess a knowledge of permanent fortification, sufficient to enable him to render intelligent assistance, when with working parties, to the Engineers; to understand the nature and object of offensive and defensive siege operations, and to make him feel at home when engaged in the trenches, and from his knowledge of their principles of construction, defend his ground against sorties and find his way about with ease during the day or night. For reasons of a kindred character, he should be instructed in the nature of the cavalry and artillery services so as to understand their movements, and thus be able to either co-operate with friends or protect himself if in the presence of the enemy. He should possess an intimate and practical knowledge of the nature of siege ordnance; and he should be able to assist at the working of guns of all kinds.

The principles of tactics, that is, those principles which ought to influence the selection of positions, their defence or attack, guide the movements and dictate the objects to be attained by troops in actual presence of the enemy. Examples of the adherence to, or infringement of, tactical principles should be required from the history of well-known battles.

The elementary principles of strategy, that is, of the stationing, concentrating and moving of troops not in actual contact with an enemy. Illustrations from the campaigns of great captains should be demanded. But any other examination in military history I consider unnecessary.

The military law of the army and its administration. An officer should possess a complete knowledge of the duties and powers of Courts-martial, and of all regulations and orders in force.

These subjects of instruction are divisible into two classes:—Firstly, those which require the instruction to be given by another; secondly, those in which an officer can instruct himself by study alone.

A great portion of the instruction belonging to the first head might, even now, be obtained within the officer's own battalion, while practical instruction in field fortification and allied subjects might be given wherever officers of the Engineers are quartered. I therefore am not of opinion that it is necessary to appoint Battalion Instructors. The duties of superintending instructors or examiners might be assigned to senior Engineer, Artillery or Staff officers—and even to regimental officers, if senior, and holding certificates of qualification—wherever bodies of troops are permanently assembled, as in garrison towns or in camps.

These officers while officiating might receive an increased allowance; but any arrangement it now might be deemed necessary to make for the purpose of starting the new system, need only be regarded as temporary, as was the case with musketry instruction.

Gradually, as a higher standard of knowledge in professional subjects became the rule in the army, every battalion would come to possess within its ranks officers competent to impart all necessary instruction to their junior comrades.

I have indicated the foregoing as the subjects in which it is essential an infantry officer should be required to be proficient, to entitle him to promotion to the rank of captain; and although it might not be possible from the first to attain so high a standard—but only high when compared with what has hitherto been deemed sufficient—yet I believe that, by degrees, a class of officers, fully qualified in all that pertains to their branch of the profession, and such as are now to be found in the Artillery and Engineers, would soon predominate in the army generally, and promotion to the drones or incompetent might then be refused without incurring any difficulty in finding others, perfectly competent, to fill the vacancies.

I am, therefore, decidedly of opinion that the promotion of an officer to the ranks of lieutenant and captain should depend upon his proficiency in all matters connected with the knowledge and performance of his military duties. What is required of an engineer or artillery officer, as far as regards his branch of the service, should be exacted of an officer of infantry or cavalry in relation to those special branches. It has been found possible to create highly trained engineer and artillery corps, and I see no reason why it should not be practicable to officer the infantry and cavalry with men equally proficient in the area they have selected for a profession.

Walden.

(xv.)—Answers received from Lieut.-Colonel H. C. Fletcher, Scots Fusilier Guards.

In reply to question (I.), I would answer, Yes, certainly.

In reply to question (II.),—

1. I would suggest that, in a modified form, the instruction afforded to the young officers of the Royal Engineers at Chatham should be applied to the officers of the infantry generally. Of the cavalry I do not feel competent to speak.

2. That this instruction should, as far as possible, be practical rather than theoretical.

3. That the simple operations of field engineering, for instance, the telling off of working parties, the throwing up of field works, the operations of a siege, in so far as infantry are concerned, and the method of preparing bridges for the passage of narrow streams, should be taught. The elements of field sketching, which would comprise an explanation of military maps, would also be useful, together with a few simple rules for the preservation of the health of troops under various circumstances. The instruction would be comparatively valueless unless some means were afforded of carrying it into practice. The sheds at Chatham, where models of field works are raised on a diminished scale, appear to afford a fair substitute for work in the open when such work is impossible, but it would be most desirable that officers should be taught by actual experience in throwing up field works.

4. The attendance at the course of instruction should be obligatory, as I cannot but consider that a slight but not superficial knowledge of field engineering is equally important for an officer under the present conditions of warfare, as a knowledge of drill. I also think that examinations are necessary to test the acquirements of the officer, but that such examinations should, in regard to promotion, be qualifying rather than competitive. No examination will really test the qualities of an officer, but a fair amount of knowledge should be obligatory.

In reply to question (III.), with regard to the best method of carrying out instruction, I cannot but think that more use might be made of the musketry instructors. The teaching of the art of shooting is not sufficient work for an officer set apart for that especial duty. He might be employed as the regimental instructor for field engineering, to which might be added the supervision of the musketry instruction. He should be trained for this duty on a system somewhat

similar to that of Hythe. The young officers might receive rudimentary teaching in field engineering, etc., at the head-quarters of their regiments from the regimental instructors during the winter months, and practical instruction at the large camps under the district and regimental instructors during summer. By adopting this system, little additional expense would be thrown on the country, and a far higher position would be given to the musketry instructors, who might consequently be selected from a higher grade than that of subaltern.

H. C. Fletcher,
Captain and Lieut.-Colonel, Scots Fusilier Guards.

(xvi.)—Answers received from Major Woolsey, Royal Artillery, in charge of the Survey Class at Aldershot.

(I.) Yes.

(II.) As by paragraph 161 (*g*), Queen's Regulations, all subaltern officers are required to show that they have a "sufficient knowledge of field fortification and reconnaissance" prior to promotion, I consider that instruction might be given in those subjects, and that it seems worthy of consideration whether the study, to a limited extent, of military history and military administration might not be added.

I consider the attendance should be purely voluntary.

I feel satisfied that obligatory attendance would be not only useless, but mischievous; it would inevitably disgust all the best officers, *i.e.*, those who have good abilities and who are capable of instructing themselves, while it would, be difficult to introduce any uniform system of instruction as officers join the service with such varied acquirements and degrees of ability.

By the Queen's Regulations examinations do take place in field fortification and reconnaissance for promotion, and promotion is dependent on such examinations; but as they are conducted by officers who have themselves frequently but a very slight knowledge of these subjects, and as it does not appear to have been laid down what amount of knowledge should be deemed sufficient, I suspect that the regulations on this head are practically a dead letter.

I would suggest that a higher standard should be adopted as a sufficiency of knowledge, that the examinations be conducted on a uniform system, and the regulations strictly enforced.

(III.) No system of instruction will ever succeed until officers are made to feel that it is to their interest to study. If satisfied on that point they will learn much without any system of instruction.

Having regard to the peculiar customs of our service I do not think that an officer instructor in each regiment would answer. I believe that it would be advantageous to the service to appoint garrison instructors at certain large military stations.

I feel confident that a great advance in the required direction might be made without introducing any decidedly novel custom into the service.

I would suggest that it be decided what is to be considered a sufficient amount of knowledge in the different subjects named, that the names of the works to be studied in each subject be published in general orders, and a certain number of copies provided at every military station for the use of the officers. Appendix VII. (A.) Instruction of Officers.

That examinations for promotion be held at certain regular periods, say half-yearly or quarterly, in each command, that an officer on the staff of each command be charged under the general officer commanding with the superintendence of these examinations, the questions to be drawn out by him and forwarded to the boards of examination, and the replies returned to him, in the same manner as the questions in artillery are now forwarded from the Horse Guards through the general officers commanding to the boards who examine subalterns of artillery.

By this means each candidate for promotion would be made to give evidence that he had studied the standard work laid down for each subject, a principle enjoined by the Queen's Regulations, paragraph 161 (*a*), so far as regards military law in the existing examinations.

Thus, without affording means of instruction a great improvement might be effected; and if in addition to this system, means of practical instruction were provided at certain large military stations in the actual construction in the field of simple intrenchments, and in gabion and fascine making, &c., as well as in military sketching and reconnaissance, for a limited proportion of officers at a time, a still further improvement might be reckoned on; and the instruction would be sought for as a boon by those who needed it, in proportion as the regulations respecting the examinations for promotions were rigidly enforced.

Officers desirous of passing the examinations for the Staff, or for entrance to the Staff College, occasionally join the Survey Class here with a view of qualifying themselves.

But this office is small, is in no way fitted up as a class room for drawing or any other purpose should be, no books of reference are supplied, nor any means provided of affording practical instruction in the field in the actual construction of intrenchments, or in gabion and fascine making, &c.

A great improvement might be made by establishing it under the same roof as the Prince Consort's library, which would entail but a slight addition to the building (now scarcely used). The officers could have access to the books of reference in it, and would assuredly derive more benefit from the time devoted to instruction than is possible at present.

With reference to the examinations which I have suggested I would observe that certain discretionary powers might be left to the general officers commanding, as to varying, within certain limits, the amount of knowledge to be shown by the candidates for promotion in each subject, taking into consideration the means of instruction afforded at each station, and allowing superior knowledge of one subject to compensate for limited knowledge of another, thus encouraging officers to pursue the study of any subjects for which they feel themselves to have an aptitude.

O'B. B. Woolsey,
Major, R.A.

B.—MISCELLANEOUS QUESTIONS RELATING TO THE INSTRUCTION OF OFFICERS, AND OTHER SUBJECTS. Appendix VII. (B.)

(i.)—Questions addressed to Colonel Baker, Commanding the 10th Hussars.

(I.) What is your opinion regarding the present regulations as to the age of admission to the army and the examination for direct commissions? Are you disposed to suggest any alterations in the existing regulations?

(II.) What is the opinion which your experience as a commanding officer has led you to form of Sandhurst cadets as officers, more especially as compared with officers who have been educated at public schools and universities?

Have you been led to believe that they prove in any respects, as officers, superior or inferior to those who have had no previous military education?

(III.) Is it, in your opinion, desirable that *all* officers of the army should have a special military education; or do you consider it sufficient that, as at present, a *proportion only* of officers of the line should have such an education?

In either case, what do you consider should form the subjects of this special instruction; and would you propose that the instruction should be given before entering the service, as at Sandhurst, or after entering it, as is the case in Prussia?

(IV.) What is your opinion regarding the present system of examinations for promotion in the cavalry and infantry?

Can you suggest any improvements in the mode of conducting these examinations?

(V.) What is your opinion regarding the educational and other qualifications necessary for staff employment?

(VI.) Will you favour the Commission with any other suggestions which it may appear to you desirable to make in regard to military education, so far as the officers of the cavalry and infantry are concerned?

Answers received from Colonel Baker. Col. Baker.

(I.) I can suggest no alteration in the age for entering the army.

The examinations for direct commissions effect little real good, and the usual system of preparing for them often produces great evil.

Young men go through a system of "cramming" at army tutors, and forget what they have thus superficially learnt as quickly as they attain it.

APPENDIX VII. (B.)

Instruction of Officers.

They associate together in numbers at a most dangerous age without any decided control, and often acquire bad and desultory habits which affect the whole character of their after lives.

I would suggest as an alteration of this system, that all candidates for the army should either remain one year at Sandhurst and pass an examination there before receiving commissions, or should take a degree at one of the universities. The university education is the better, but it now has the disadvantage of bringing officers into the army at rather a late age; but this might probably be obviated by adopting some such system as was proposed at Cambridge in 1861, and I believe agreed to by all the universities. A copy of this proposal is appended.

(II.) I consider that the education of officers coming from Sandhurst is superior to that of officers passing for direct commissions, but it comprises much that is unnecessary before joining the army. Military details are better taught afterwards. Young officers on joining their regiments learn their duties more readily, and are generally more zealous, if they have not received a preparatory, partial, and often imperfect training.

(III.) I consider that all officers should have a special education before entering the army, but that their military education should be commenced after joining. The special education should comprise subjects likely to be afterwards useful in promoting military education, such as:—

Modern languages.	Military drawing.
Mathematics.	Military history.
Geography.	Mechanics.

I think that in every regiment there should be a military instructor, just as in ships of war there is a naval instructor.

He might carry on a system of education by lectures on all useful and interesting military subjects and by voluntary classes. A quarterly return might be sent in showing the number of lectures and classes that each officer had attended, and their degrees of efficiency.

Such a system would, in my opinion, raise the whole tone and standard of military knowledge in the army, and would make officers much more zealous and interested in their profession than they are at present.

(IV.) The present system of examination for promotion has effected some good, but it is very variable in its character, depending much upon the composition of the board. It might evidently be much improved and assisted by the previous proposal.

(V.) The system of education and examination for the staff is good, and the rule of subsequently attaching the officers who have passed, to the different branches of the service, works well. The objection to the present system lies in the class of officers who as a rule qualify at the Staff College.

There can be no doubt that a staff officer, besides having a good military education, should be a man of active habits, a bold and good rider, of intuitive military genius, and a strong love for his profession. A number of officers who go to the Staff College are the very reverse of this. They often enter there to escape regimental duty, or because they are going to be married, or for some such reason. Men of a studious, quiet turn of mind prefer the hard mental work of the Staff College to the active habits of real military life.

The only remedy for this defect would lie in a more careful selection of the officers allowed to qualify for the staff; and Sandhurst is so close to Aldershot that they might be attached to the staff of general officers during the summer months, and a special report be made by those general officers before the final examination at the Staff College.

(VI.) Nothing is more difficult in my opinion than to carry out any sound system of military education in the British army. Military education has for its object the fitting of an officer for a state of war; but in time of peace in our service there is little that in any way represents war.

The most perfect regiment fresh from long campaigning would be considered slovenly, and have much to unlearn, if sent straight to one of our camps of instruction. The knowledge of all that is useful in war which it had acquired would rarely, if ever, be brought into action. In foreign armies at the present time the officers have very superior advantages. During the comparatively short time their camps are formed, war is as nearly represented as it can be in time of peace. Bodies of men are moved as in a campaign, and on ground not perfectly well known to them; combinations and strategical movement are practised, and consequently, the powers of staff and other officers are more or less tested, and their theoretical military education is brought into practical use.

With us, from the nature of the ground selected, its limited extent, and certain routine customs which apply only to peace, officers have little chance of acquiring or utilizing any real military education.

V. BAKER,
Colonel, Commanding 10th Hussars.

Enclosure to Colonel Baker's Answers.

Cambridge, May 6th, 1861.

The Council of the Senate having taken into consideration the subject of military education, are of opinion that the preparation of students who intend to become candidates for commissions in the army might, with the co-operation of the Government, be advantageously undertaken by the university.

For this purpose they are prepared to recommend the Senate of the university to sanction a scheme which they submit in the first instance in outline to the Secretary of State for War, in order that it may receive such amendments as may appear to be expedient before they propose it for adoption by the Senate.

They recommend that the title of licentiate in military science should be conferred by the university on students who have resided in the university six terms (*i. e.* from October in one year to June in the year next but one following), and who have passed the examinations and performed the exercises which the university may require.

They recommend that each of such students should pass two examinations, one of a more elementary character at the end of the first three terms of residence, and another at the end of the sixth term; and that those examinations should include the following subjects:—

English composition.	Arithmetic.
Latin.	Algebra.
French or German.	Trigonometry.
History.	Mechanics (Elementary).
Geography.	Dynamics (Elementary).
Euclid.	

The Council are of opinion that it would be necessary for the Government to appoint, and provide stipends for two military instructors in the following subjects:—

Fortification,	Military administration,
Military surveying,	Military tactics,

and it is suggested that the examination in the purely military subjects should be conducted separately from the remainder of the examination, and should be confided to persons specially appointed by Government.

It is believed that there would be no difficulty in providing for regimental drill and instruction, such instruction being already given to university volunteers under the direction of an adjutant appointed and paid by the Government.

If it were determined that all who pass the above-mentioned examinations and obtain the title of licentiate in military science should be deemed eligible for commissions without further examination; and if some commissions, without purchase, were awarded to the most distinguished students, it is thought that many promising young men would be induced, with benefit to the service, to avail themselves of the advantages which the university affords.

The Council desire to add that the necessary expenses of undergraduate students in the university may be assumed to be 85*l.* per annum, and that many students are known to pass through their academic course for a sum (including every item of expense) not exceeding 140*l.* per annum.

In many cases these expenses are very materially reduced by scholarships, sizarships, and exhibitions, and it is suggested that the sons of meritorious officers and other students of special qualifications might be similarly assisted by the grant of exhibitions on the part of Her Majesty's Government.

(ii.) QUESTIONS ADDRESSED TO COLONEL ROBERTSON, COMMANDING 2ND BATTALION, 8TH (THE KING'S) REGIMENT.

(I.) What is your opinion regarding the present regulations as to the age of admission to the army, and the examination for direct commissions? Are you disposed to suggest any alterations in the existing regulations?

(II.) What do you consider the educational requirements, either of a general or of a professional character, which should be exacted from subaltern officers of the cavalry and infantry?

(III.) Is it, in your opinion, desirable that all officers of the army should have a special military education? Or do you consider it sufficient that, as at present, only a certain proportion of officers of the line should have such an education?

In either case, what do you consider should form the subjects of this special instruction; and would you propose that the instruction should be given before or after entering the service?

(IV.) What is the opinion which your experience as a commanding officer has led you to form of Sandhurst cadets as officers, more especially as compared with officers educated at public schools and universities? Do you find that they join with such an amount of knowledge of drill and regimental work as to be capable of performing the ordinary duties of subaltern officers? Have you been led to believe that they prove in any respects, as officers, superior or inferior to those who have had no previous military education?

(V.) In your experience as an examiner at the Royal Military College, what opinion have you formed as to the attainments of the cadets and the system of instruction at the College?

(VI.) What is your opinion regarding the present system of examinations for promotion in the cavalry and infantry? Can you suggest any improvements in the mode of conducting these examinations?

(VII.) Will you favour the Commission with any other suggestions which it may appear to you desirable to make in regard to military education, so far as the officers of the cavalry and infantry are concerned?

ANSWERS received from COLONEL ROBERTSON.

(I.) I think that officers receive commissions at too early an age. Consequently they are unable to obtain the advantage of an education finished at a university or other institution where instruction is given in the highest departments of science and literature, without sacrificing several years' standing in the service.

This general defect in the education of officers is a disadvantage not merely to the individual officers themselves, but also to the general interests of military service, the duties of which would be more efficiently performed if the faculties of officers were fully developed, and the tone of their minds braced and elevated by giving them opportunities of a more complete and higher culture than that which it is possible for them to receive if they enter the service between 17 and 20 years of age.

In time of peace, when the supply of candidates for commissions is abundant, no candidate should, I think, be eligible until he has completed his 20th year.

Between that age and 23, ensigns, who before their appointment have gained a university degree, or who have passed a prescribed examination of an equivalent character, should take rank and precedence in the regiments to which they are posted, not according to the date of their commissions, but according to their relative ages, the eldest senior, the youngest junior.

While the present regulations as to age remain in force I would not require a candidate for a direct commission by purchase to pass any test examination if he could produce a certificate that he had passed the six years between the ages of 12 and 17.

(*a.*) At a public school, or

(*b.*) That he had passed one or two of three years at a French *lycée* or a German gymnasium, and the remaining four at an English public school.

I should define the term public school to mean not only Eton, Harrow, Westminster, Winchester, Rugby, Charterhouse, but also Cheltenham, Marlboro', Rossal, and any other school of a similar character now existing, or that might hereafter be established.

I think some day schools of acknowledged merit, such as King's College School, London, the Edinburgh High School, and the Edinburgh Academy might also be classed as public schools.

Young men educated at home or at small private schools, or altogether abroad, should be required to pass a test examination framed on the same principle as the Indian Civil Service examination, that is to say, admitting great latitude in the choice of subjects, but exacting a high standard of proficiency in the subjects chosen.

(II.) What I have written above contains my answer to this question.

Below the rank of field officer I think that, provided the animal, emotional, and moral faculties be vigorous and well developed, military efficiency is quite compatible with a very limited capacity for intellectual training.

APPENDIX VII (B.)

Instruction of Officers.

The moral and social effects of six years spent at a public school may render a young man an excellent company officer, although as regards scholastic attainments the result of the six years' training may be almost a total failure. For the perfect performance of all the duties of a company officer, under no circumstances are any scholastic attainments ever required, except reading, writing, expertness in computation, and a knowledge of the simple rules of arithmetic and of the methods of keeping books and auditing accounts.

(III.) I do not consider it necessary, or even desirable, that a cavalry or infantry officer should receive any special instruction in the military arts and sciences until he has joined his regiment and become thoroughly acquainted with all the drills and field exercises of the branch of the service to which he belongs, and also with all the details of ordinary regimental duties. As soon as a complete practical knowledge of these exercises and duties has been acquired (say 18 months or two years after joining), the young officer should be encouraged by pecuniary rewards, and also by honorary distinctions, to devote his leisure time to the acquisition of—

a. Any modern language.
b. Skill in military drawing and surveying.
c. Skill in free-hand drawing, and in painting either in oil or water colours.
d. Knowledge of the elements of fortification.
e. Knowledge of theoretical and of practical gunnery.
f. Knowledge of military history and geography in connexion with the theory of strategy and of tactics.
g. Geology.
h. Chemistry.
i. Mathematics.

The present system of selecting by competitive examination a certain number of officers for a special course of instruction at the Staff College, should, I think, be, if possible, extended so as to provide for the instruction of a much larger number of officers.

(IV.) As a class, I cannot say that I have observed any marked difference between young officers educated at Sandhurst and young officers educated at the great classical public schools.

A young man of good abilities and steady habits educated at Sandhurst turns out a better officer than a stupid or idle young man educated at Eton or Harrow, and *vice versâ*.

Sandhurst cadets before they are fit to perform the duties of subalterns always require the same amount of instruction in drill and regimental work as officers who receive direct commissions. The only special professional knowledge which Sandhurst cadets always possess, and other officers, generallyspeaking, do not, is some acquaintance (often very superficial) with the elements of fortification, and with the simpler processes for making military surveys and sketches of ground.

Good data for judging of the general result of Sandhurst training in producing efficient officers would be obtained if a return were ordered to be made out, showing the school at which every officer who now holds the appointment of adjutant was educated. It so happens that within my own personal experience the best adjutants I have known were not educated either at Sandhurst, or at any of the great classical public schools; but I should feel surprised, if the result of inquiries extending to every regiment in the service were to show, that in this respect my individual experience coincided with that of the majority of officers commanding regiments.

There are so few officers who have had the advantage of a university education that I cannot speak generally of the effect of this training, as being either favourable or adverse to military efficiency.

I know one instance of an officer educated at a public school and a university, who, although a fair scholar, seems quite incapable of commanding men on parade, or maintaining discipline and performing the ordinary duties incidental to the management of a company. I mention this as a rare exception, the only one which has fallen under my own observation, to the general result of my experience, which is, that when an officer is distinguished for superior scholarship and mental cultivation, he is also distinguished for the efficient manner in which he performs his military duties.

In the report of the Royal Commission on public schools, one of the reasons given for the low standard of average scholastic attainments, resulting from the lavish expenditure of time and money required to purchase instruction at

Appendix VII. (B.)

Instruction of Officers.

these celebrated schools is, that the mass of the pupils being sons of wealthy parents, with prospects of future maintenance and advancement in life, in a great measure independent of their assiduity and attention to school work, the general tone of feeling among the boys is adverse to study.

I believe that at Sandhurst the influence of public opinion among the cadets is even more adverse to the formation of studious habits than at Eton or Harrow, and that, mainly in consequence of this adverse influence, the result of the instruction given at the Military College is even less satisfactory than that given at our great classical schools. It is no doubt a libel, or at least a gross exaggeration, to say, "that an officer is always the dunce of the family;" but it is certainly quite true that applicants for commissions are seldom young men of studious dispositions. Now if a number of young men of exceptionally idle dispositions be collected at the same school, then however great may be the zeal and ability of the teachers, it seems quite inevitable that the results of the instruction given should be less satisfactory than if the same young men, instead of being educated together, had been distributed among several public schools, in each of which a considerable proportion of the pupils were boys of studious habits. This is one of the chief reasons why I think that the education of young men previous to their entering the army should not be given at a special military school.

If a cadet college be maintained at all, I think its function should be, not to educate the mass of applicants for commissions, but to complete the education of a limited number of young men of superior intelligence and studious dispositions, specially selected to fill non-purchase vacancies by a competitive examination similar in character to that by which candidates are selected for the Indian Civil Service.

(V.) I have been twice appointed examiner in military history of the cadet commission class. On both occasions, but especially in the first, my impression was, that the papers prepared for me, in answer to the questions I set, indicated very careful and fairly successful teaching. I do not, however, think that I have had sufficient experience as an examiner to render my opinion on this point of any value. I have had no opportunity of comparing the results of the Sandhurst teaching with the results of the teaching of the same or a similar subject given at other schools.

(VI.) I consider the present system of examinations for promotion most unsatisfactory both to the senior officers appointed to perform the duty of examiners and to the young officers who appear before them to have the amount of their acquirements ascertained and tested. It is at least as difficult to ask questions as to answer them. I have never been able when a member of an examination board, with the time at my disposal, to prepare a list of questions which satisfied myself, and I have frequently seen questions proposed which I considered most unsuitable, sometimes because much too easy, and very often because much too difficult. Under the present system it is not possible that the result of these examinations should indicate, even in the roughest manner, any uniform standard of attainment. It not unfrequently happens that an officer who is well known in his regiment to be incompetent and ill-prepared succeeds in passing an examination, while another who is painstaking, intelligent, and fairly prepared fails to pass. In such instances had both officers been examined in the same set of questions of course the result would have been uniform, but whether both failed or whether both passed, in neither case would the result obtained have afforded even an approximate indication of the merits of the candidates as referred to a fixed standard of attainment.

I think much better and more reliable results would be obtained if some system similar to the following were adopted:—

1. Let classified lists of questions be prepared embracing all the subjects of examinations, and let a numerical value be affixed to each question. Class A. should contain questions relative to general principles and important regulations with which it is essential that all officers should be perfectly familiar. Any mistake in answering a question selected from this list should involve failure. Class B. should consist of questions relating to those prescribed exercises and ordinary routine duties with which it is important that every officer should be thoroughly instructed, but with all the details of which exercises and duties it is not to be expected that any but the most intelligent young officers should be perfectly acquainted. In the answers to this class of questions a certain per-centage of error should therefore be allowed say from 10 to 15 per cent. Class C. should consist of questions relating to administrative details and to special services not falling within the routine duties of a regimental officer, and respecting which, therefore, complete and accurate knowledge need not be required of him. In the answers to questions taken from this class a large per-centage of error should be allowed, say 75 per cent. A small per-centage of error, say 10 per cent., coupled with good answers to the questions from lists A. and B., should entitle the officer examined to a certificate of extra proficiency; and to encourage careful preparation for examinations, I think it would be good policy to reward officers who obtain extra certificates by one or two months leave of absence.

2. These classified lists of questions should be printed and published, as a guide to young officers in their studies and to field officers in superintending the instruction of captains and subalterns, and in conducting the periodical regimental examinations.

3. Examinations to ascertain that officers are qualified for promotion should be held at all military stations once a quarter on the same day.

4. At each examination the same questions should be proposed to every candidate examined. The questions for each examination should be selected by the Council of Military Education. Each set should consist of the same number of questions, and the proportion taken from each of the classes A., B., and C. should always be the same.

5. Papers of questions should be transmitted to general officers commanding districts to be distributed to committees appointed by the generals to assemble at the different stations within their command.

6. The duties of these station committees should be purely administrative. They should be required to certify that the answers to the questions were prepared in their presence, in a given number of hours, and without assistance from notes, books of reference, or verbal communications of any kind.

7. The answers so prepared should be transmitted to the Council of Military Education through the officers commanding districts. Each set being distinguished by a number, but having no signature affixed.

8. The Council of Military Education, or examiners appointed by it, should adjudicate on each set of answers, noting their decision on each. The papers should then be returned to the general officers commanding districts, by whom the names of the successful candidates would be published in division orders, lists of their names being also transmitted to the adjutant-general of the army.

In addition to the subjects at present prescribed by regulation for the examination of officers previous to their being reported qualified for promotion, I think it would be a great advantage if a manual were prepared explaining the method of keeping cash accounts, preparing balance sheets, posting ledgers, and also giving directions for auditing accounts, and if officers were required to be thoroughly acquainted with this manual before reported qualified for promotion to the rank of captains.

(VII.) Number XVI., June 1861, of the Journal of the Royal United Service Institution is herewith transmitted, and the suggestions contained in the following paragraphs on a paper containing some observations on military training, contributed by me to the Journal, are respectfully submitted for the consideration of the Commission.

"The efficiency of the training of an army depends,—

"1st. Upon its comprehending provisions for the attainment of every species of knowledge and of every species of skill susceptible of a useful military application.

"2nd. Upon the excellence of the methods of instruction made use of.

"3rd. Upon the amount of time and energy which the officers and soldiers composing the army can be compelled or induced to devote to the work of instruction.

"It is principally to the third of these three essential conditions of a complete system of military training that I am at present anxious to direct your attention."

* * * * * *

"Firmnesss, energy of character, equanimity of temper, skill in horsemanship, a thorough familiarity with the principles and special provisions of military law, and with the rules and regulations of military service, together with an elementary knowledge of the sciences of artillery, fortification, military history, military geography, and tactics, are the qualifications necessary to constitute an accomplished regimental officer.

"Attainments, the same in kind, but superior in degree, are those which it is desirable should be possessed by staff officers and officers of the corps of engineers.

"An officer selected for either of these special services should be thoroughly acquainted with the principles and familiar with the practical applications of the sciences of artillery, fortification, and military engineering.

"He should have attentively studied the history of the principal modern campaigns, and should be well acquainted with the military geography of the countries which were the theatres of those campaigns. He should be master of the special tactics of cavalry, infantry, and artillery, and of

e theory of strategy and general tactics. He should be a ver draughtsman, an expert surveyor, and so good a lin-ist as to be able to speak and write fluently the principal odern languages, and to be able to acquire with facility colloquial knowledge of any other dialect which may be oken in the country in which he is serving.

" Finally, let us suppose an officer who, possessing many the attainments and all the qualities desirable for the rformance of all the duties of the staff with perfect effi-ncy, shall also be pre-eminent for the firmness, the energy, e self-reliance, and the resolute boldness of his character; r a penetrating sagacity quick to detect the designs of an emy, and for inventive faculties ever ready to devise ilful combinations, and to arrange well-digested plans. a word, let us suppose military genius to be united to ilitary science, and we have the perfect model, the *beau éal* of an accomplished general.

" All the particulars of this detailed enumeration of the ualifications desirable for the perfect performance of the ties of the different military grades are comprehended in he general statement, that the two great objects of military aining, are—

" First. To impart to the individual officer, and to the ndividual soldier, whatever qualities, whatever kinds of nowledge, and whatever species of skill, are necessary to nable him to fulfil every function of his grade in a perfect anner.

" Second. To instruct soldiers and officers collectively a regular systematic modes of performing all exercises, perations, and processes which are necessary for the pur-oses of offensive or defensive warfare, or which are con-ucive to the comfort and efficiency of troops employed in eld service.

" The objects of the processes of individual and of collec-ive training, though perfectly compatible with one another, re essentially different in their nature.

" Each object requires for its attainment the use of certain pecific means, and, as will be afterwards shown, the means ppropriate for the attainment of the object of individual raining are radically different in principle and in their anner of operation from those appropriate for the attain-nent of the object of the processes of collective training.

" In a perfect system of training, suitable provision will be nade for the attainment of both objects; and if either be neglected, the troops will, in certain respects, be inefficient nd imperfectly fitted for the purposes of war."

* * * * * * *

" In addition to all that is taught the private soldier, the raining of officers ought to include regular and systematic nstruction—

" 1st. In the regulations of military service.

" 2nd. In military law.

" 3rd. In the method of tracing field works, and of distributing working parties.

" 4th. In the method of attacking and defending posts, nd of conducting the various minor operations of war-fare."

* * * * * *

" Officers who had passed through the Staff College, when not holding staff appointments, might also be ad-vantageously employed as agents for carrying out any system that might be devised for exercising infantry soldiers in some of those processes which at present form part of the specialities of the training of the sappers."

* * * * * *

" I have now stated what I conceive ought to be the bjects of military training. The means available for the attainment of these objects are,—

" 1st. Systematic collective instruction.

" 2nd. The independent prosecution of military studies, and practice of military exercises by individuals.

" Whatever kinds of knowledge and whatever kinds of skill it is essential that every officer or every soldier should possess for the efficient performance of the ordinary func-tions of his grade, ought to be communicated by regular systematic instruction.

" The acquisition of those kinds of knowledge and skill which are only applicable in special circumstances, and which it is only necessary that a certain proportion of the officers or soldiers of an army should possess, need not be made imperative on any one.

" It is not necessary to make the acquisition of reading and writing imperative on every soldier, or the acquisition of mathematics and of the military sciences imperative on every officer of an army.

" Provided some special emolument or distinction be con-ferred on all who possess special attainments, it may be left to the discretion of each individual to determine both the number and degree of the acquirements of this kind which he shall possess, and also to determine what particular means and what amount of exertion are necessary for the attainment of his object."

* * * * * * *

" The next point to be considered is the means by which the officers and privates of an army may be induced to devote their time and energies to the work of instruction.

" These means are,—

" 1st. The infliction of penalties.

" 2nd. The distribution of rewards.

" Either of these means may be employed by itself, or the two may be combined.

" In the category of penalties must be included not only the ordinary punishments inflicted on soldiers for the care-less performance of prescribed exercises, but also all regu-lations making the promotion of officers and non-commis-sioned officers contingent on their possessing certain prescribed qualifications.

" In order to form a correct opinion as to whether it is sufficient to enforce the use of any particular training pro-cess by compulsory means, or whether, either instead of or in addition to such means, those inducements should be also employed which are adapted to stimulate voluntary exertion, regard must be had to the nature of the result which that particular process is intended to produce.

" In some training processes the result sought is that all who are instructed should attain precisely the same uniform degree of average proficiency. In others, that each separate individual should attain the highest degree of excellence of which he is capable.

" If only 10 men of a company 100 strong can be trained to become first-rate marksmen it is very desirable that these 10 men should be made as perfect as possible, without any reference whatever to the degree of skill which it may be practicable to impart to the remaining 90. But if 100 men of a regiment 1,000 strong could be taught to execute six manœuvres, while the remaining 900 could only be made to comprehend the method of executing four, the superior knowledge of the first 100 would be of no use until the same amount of instruction could be conveyed to all the other sol-diers. Nor, in performing field exercises, would any advan-tage whatever be gained by training a certain per-centage of the men of a regiment to march at a rate considerably quicker than that of the regulation pace, unless it were found practicable to train every other soldier of the battalion to march steadily at the same accelerated rate.

" These illustrations will suffice to show what I mean when I say that the objects of individual and of collective training are different; that in the one, excellence—in the other, uniformity—is the result sought.

" In those processes in which uniformity is the essential object to be attained, it is obvious that all differences of in-dividual power are injurious, and that the use of those means which are calculated to stimulate voluntary exertion and to develope individual excellence can have no place.

" In those processes, on the other hand, in which the utmost possible degree of individual excellence is the result which we desire to obtain, it is essential that the methods of instruction should be rendered as attractive as possible, and that by the use of appropriate means the desire to excel should be generally diffused among those who are to be instructed.

" As a necessary condition for the general diffusion of a desire to excel provision must be made for discriminating different degrees of acquirement, and for making special advantages contingent on the attainment of the higher degrees.

" The efficiency and fitness of any system of training for the development of individual excellence will, therefore, mainly depend on the efficacy of the means employed to excite and diffuse the desire to excel."

* * * * *

" These considerations seem to me sufficient to show that the old system of training by methods exclusively compul-sory was defective, and to render it extremely probable that the efficiency of the training of the army might be greatly increased by the adoption of measures based on this funda-mental principle, *that it is expedient to confer some special advantage, either pecuniary or honorary, on every individual, whether officer or soldier, who attains a certain degree of proficiency in any art, exercise, or science susceptible of a useful military application, and in which it is desirable that each individual should endeavour to excel.*"

* * * * * *

" I now pass on to the consideration of the measures suitable for promoting among officers the acquisition of those special attainments which require a certain degree of intellectual exertion, and which must be acquired by study in the closet.

" The general principle to be observed in framing measures intended to promote voluntary study is to leave as much latitude as possible to the exercise of individual inclination

in the selection of the particular subjects to be studied—not to estimate merit solely by reference to one exclusive standard, requiring the combination of a certain number of particular attainments, but to admit of as many different standards of merit as there are different kinds of attainments.

"The value of that superior merit which consists in the union of many different attainments, is exaggerated when the circumstance of union is constituted the essential condition on which the entire value of each particular attainment exclusively depends, without the existence of which condition any particular attainment, however perfect in degree, is to be reckoned altogether valueless. The true principle is to assign to each particular attainment a certain specific value, and, where two or more are combined, to assign to their union a cumulative value proportioned to their number.

"Let the first place be assigned to him who is ignorant of nothing which an officer ought to know; but do not overlook the merit of any one who excels in a single useful speciality. Do not insist on a good linguist being also a good mathematician. Do not refuse to reward a skilful draughtsman because he is a bad artillerist, or because he is ignorant of military history.

"In addition to the provisions which at present exist for the admission of officers to the Staff College, and for the selection of officers for staff appointments from among those who have passed satisfactory examinations in the prescribed course of college studies, it therefore seems to me that it would be highly desirable to provide : that any regimental officer, under the rank of a field officer, adjudged by a central board of examiners to be proficient in any extensively spoken living language, whether Oriental or European, or to possess in an eminent degree any other species of knowledge or skill susceptible of a useful military application, should receive increments to his daily pay, and have distinguishing letters attached to his name in the army list, corresponding to the number and degree of his attainments.

"These increments might vary from 6*d.* to 1*s.* per diem, according to the relative difficulty and importance of the attainments to be rewarded; 4*s.* or 5*s.* per diem might be fixed as the maximum of the aggregate increments to be awarded to any one individual.*

"The maximum rate should be added to the pay of all officers under the rank of field officer, and not actually holding a staff appointment, who obtain a Staff College certificate.

"All such officers should also be registered in the army list as staff supernumeraries, and when not on parade they might be permitted to wear the uniform of the staff.

"I think it quite certain that measures like these, putting it in the power of every individual officer to earn a large addition to his pay, and also to secure for himself the distinction of being affiliated with the staff of the army, and the contingent advantage of being nominated to honourable and lucrative appointments, would have the effect of inducing a large number of young officers to devote their leisure time to the assiduous study of some one or more of those branches of knowledge the possession of which would increase their efficiency as officers. In the course of a few years the average standard of attainment would be considerably raised, and the number of thoroughly accomplished officers qualified to perform in the most efficient manner the varied duties which devolve on the staff would be greatly increased.

"In order to obtain these results it would of course be necessary so to regulate the standard of attainment as to place the rewards of proficiency within the reach of a considerable proportion of the regimental officers of the army.

"This condition I think would be completely fulfilled, were the standard of attainment so regulated as to render it probable that on an average six officers per regiment would be able to earn an addition of 1*s.* per day to the pay of their rank; three officers an addition of 2*s.*, and one officer of 3*s.* Extra rates of pay granted on this scale would cause an expenditure of 15*s.* a day per battalion, which is a little less than the pay of three ensigns, and little more than the pay of fourteen privates.

"In endeavouring to estimate the effect of introducing a new measure into an established system, the probability of its combining harmoniously with the other parts of the system is a consideration to which it is most important that due attention should be given.

"In the British army, as in all other armies, conspicuous bravery and conspicuous military talent, when serving in the field affords opportunities for their display, always secure distinction and reward. But in time of peace money is the only qualification recognised as giving a prior claim to promotion. Distinguished abilities or superior attainments in no way contribute to professional advancement.

"Among those who hold commissions in the army are many who, beyond that amount of knowledge necessary to carry on the routine duties of the arm to which they belong, know little and care less about military matters; many who, finding ignorance and want of zeal no impediment to their rising to the highest rank in the army, are utterly averse to sacrifice their ease, or to interrupt their favourite pursuits, in order to devote their time and their energies to the acquisition of knowledge which they consider as not likely to be productive of any practical benefit. Not a few of these officers, by long habits of idleness and self-indulgence, have rendered themselves unfit for any intellectual exertion. They have become quite incapable of making that effort of will necessary to keep the attention steadily fixed on any object for a considerable length of time. Officers of this character form a very numerous class in the senior as well as in the junior ranks of the army; and such being the case, it is obvious that any attempt to raise the standard of attainment by means of a compulsory character would have to contend with many obstacles. Not only would such an attempt be very unpopular, it would meet with much practical opposition of a very effective kind.

"In many corps, the feeling of the commanding officers would be hostile to compulsory measures; and if the officers commanding those corps did not dare actually to oppose such measures, they would use no exertions to carry them out.

"In other corps, where the commanding officers might be well disposed to carry them out, it might sometimes happen that they were not qualified to do so. Not being themselves sufficiently instructed, they would fail in their efforts to instruct others. In other cases it might happen that a zealous and thoroughly instructed commanding officer, by carrying out his measures with too great stringency, would create so much disgust as to defeat his own object.

"These are some of the considerations which seem to render it inexpedient, if not altogether impracticable, to enforce the possession of any high degree of educational attainment as an indispensable qualification for promotion. Measures based on the principle of offering inducements to voluntary exertion would have no difficulties of this kind to contend with; no extra duties, no compulsory labours, would be imposed upon any one; there would therefore be no motive for opposition. On the contrary, every individual in every rank of the army would be interested in the success of measures which, without coercing idleness or imposing penalties on incapacity, recognized the claims of zeal, of industry, and of talent, and which offered a sure reward to every species of military acquirement.

"Any measures framed in accordance with this principle would not only disarm opposition, they could not fail of conciliating a large amount of active support; nor would such measures be liable to the risk of failure from the negligence, the incapacity, or hostility of the agents employed to carry them out.

"The most perfect system of compulsory training, unless administered with energy, intelligence, and zeal, will soon degenerate into a formal routine; but there is no danger that the voluntary exertions of those who strive for a promised reward will relax, however incompetent or indifferent the persons may be who are appointed to decide who is to receive that reward."

* * * * * *

"The want of any motive to stimulate individual exertion is in time of peace the great disadvantage of a military career. This is the defect. The obvious remedy is to devise expedients for making each individual officer feel that some special distinction or advantage may be produced by his own exertions.

"Those particular measures which I have discussed in detail, and which I have endeavoured to show are fitted to accomplish this purpose, are as follows :—

"1st. The grant to officers of extra rates of pay for special attainments.

"2nd. The affiliation with the staff of the army of all officers who reach a certain standard of attainment.

"3rd. The selection for appointment on the staff of those officers who are the most distinguished for their abilities, for their attainments, and for their services.

"It will be perceived that in the third of these proposed measures, namely, that which relates to the selection of officers for staff appointments, the principle by which

* These increments of pay, like the extra penny granted to marksmen, should, I think, only be awarded for a limited period, say two years, at the end of which time they should cease, unless the continued possession of the special qualifications for which the increments were granted were again tested and certified by a fresh examination. This provision would ensure whatever knowledge an officer might acquire being kept up.

merit is estimated and rewards distributed is competitive, and has reference to a variable standard. The nature of this principle is to restrict within fixed limit the number of individuals who can derive direct benefit from this measure.

"In the other measures the principle of estimate and distribution is absolute; it has reference to a fixed standard, and admits of an unlimited number of individuals participating in the benefits of each of the different measures.

"The practical effect of these measures would, therefore, be to render a certain addition to the allowances of officers contingent on successful exertion, to make each individual feel that whatever may be his rank, and whatever the nature of his duties, if zealous and efficient he will receive more, if careless and inefficient he will receive less."

The following extract from a paper on the appointment and promotion of regimental officers, read at the United Service Institution on the 11th May 1868, is submitted as an attempt to explain how it is that, as a general rule, successful students generally prove themselves good officers, and therefore tending to show that the ability to pass a good examination may be accepted as a criterion of military efficiency sufficiently reliable for practical purposes:—

"The connexion between the endowments necessary to pass a successful examination, and the endowments necessary to command a regiment with energy and discretion, is certainly not so obvious as is the connexion between the qualities which procure an officer brevet rank for distinguished service in the field, or obtain for him the appointment of adjutant, and the qualities which fit him for the command of a regiment.

"It is very possible that some of the officers I am addressing may say, the moral and intellectual qualities usually possessed by distinguished students are entirely different in kind from those usually possessed by officers who have the reputation of having been most successful in the command of their regiments. This I admit to be true, but I reply that practically it will be found that those officers who succeed in competitive examinations, and in attaining proficiency in the course of study prescribed at the Staff College, are, generally speaking, by no means men of those devotedly studious habits and strong natural inclination for abstract speculations which indicate peculiar aptitude for obtaining distinction as a student. They are generally men not by any means particularly addicted to studious pursuits, but merely men endowed with more than average intellectual power, and more than average energy of will, who, believing that certain acquirements are necessary to their professional advancement and efficiency, devote themselves with strenuous and persevering efforts to the studies necessary for obtaining possession of these acquirements. The moral and intellectual qualities which enable men of this stamp to excel in an examination, are, it appears to me, the very same in kind as those which are required for the successful command of a regiment."

Instruction of Officers.

N.B.—The opinions of Colonel Addison, Major and Superintendent of Studies at the Royal Military College, on the subject of the instruction of officers after entering the service, are embodied in his second memorandum on the Royal Military College (*See* Appendix II., C., p. xiii). A letter from Colonel Beauchamp Walker, C.B., Military Attaché at Berlin, which is printed in the Appendix to the Account of the systems of Military Education in France and Prussia, also bears upon the same subject.

C.—HISTORICAL NOTICE OF PLANS FOR THE INSTRUCTION OF OFFICERS.

Appendix VII. (C.)

(By the Secretary.)

Although examinations preparatory to promotion had, as previously stated, been instituted by the Duke of Wellington in 1850, no attempt was made to provide any general machinery for affording to officers of the army means of instruction, even in those subjects a knowledge of which was by the regulations of the service required of them. The Department of Artillery Studies at Woolwich, originally instituted on a small scale in 1850, and the Royal Engineer Establishment at Chatham, supplied to the officers of the scientific corps, though to a much more limited extent than at the present day, opportunities of carrying on their professional studies after entering the army. But to officers of other branches of the service no means of instruction were afforded in any subjects beyond the mere routine of drill and regimental duties, except by the Senior Department at Sandhurst and the School of Musketry at Hythe. The state of the former institution, the advantages of which extended only to a very small proportion of the officers of the army, is described in the accounts of the Royal Military College and of the Staff College.* The school at Hythe was first established in the year 1853, for the purpose of training a certain number of officers and soldiers in the new system of musketry, which was adopted on the introduction of rifled arms into the service.†

The first official suggestion, with the object of remedying the deficiency of professional knowledge among the officers of the army, was made by Mr. Sidney Herbert, when Secretary at War, in 1854. The outline of the plan proposed by him at this time was sketched out in a letter addressed to Lord Hardinge, then Commander-in-Chief,‡ and its details were subsequently more fully explained in speeches in the House of Commons.§ The scheme contemplated a general reorganization of the system of military education—the improvement of the examinations instituted by the Duke of Wellington for admission to the army and for promotion—the conversion of the Senior Department at Sandhurst into a special school for the staff—and the introduction of a system of professional instruction for officers after entering the service. With the view of carrying out the latter part of the scheme, it was proposed in 1854 to appoint garrison instructors at certain large stations both at home and in the colonies. It was not intended to make attendance at the instruction thus given compulsory, but a stringent examination in the subjects which entered into the course was to be a necessary condition of promotion to the ranks of lieutenant and captain respectively.

The scheme of garrison instruction proposed by Mr. Sidney Herbert met with the aproval of Lord Hardinge, and obtained the sanction of the Treasury. A sum of 2,000*l.* for the purpose of making a commencement in carrying it out was inserted in the estimates for 1854–5, and the plan, as explained by Mr. Herbert in moving the army estimates, met with the entire approval of the House of Commons.*

The outbreak of the Crimean war, however, in the first instance, interfered with the practical realization of the scheme, although it appears that some of the instructors had been actually selected for their posts, and that it was intended to send them out to the Crimea to acquire a practical acquaintance with such of the minor operations of war as would fall within the intended course of instruction. This latter intention was not carried out, and after the resignation of Mr. Sidney Herbert, which took place in the beginning of 1855, no further steps appear to have been taken in the matter. At the same time money continued to be voted for the purpose of carrying out the scheme (although no application of the funds was made), until the general reduction in the estimates which took place on the conclusion of peace in 1856; it appears also, from statements made by the Under Secretary at War in the House of Commons. that the Government had never abandoned the idea of adopting some measure for the professional instruction of officers.†

In the debates in both Houses of Parliament during the Crimean war numerous discussions took place on the subject of military education; the failure of the existing examinations for promotion, the lax mode in which they were carried out, the want of acquaintance with many of the mere rudiments of military science displayed by the majority of officers, and the necessity of supplying them with some means of instruction in the practical duties devolving upon them on active service, formed frequent subjects of remark. On the 5th of June 1856, after the termination of the war, Mr. Sidney Herbert, then a private member, again brought his proposal for the appointment of garrison instructors before the notice of the House of Commons, in connexion with his more general scheme for the improvement of the education of officers; but, although the proposal again met with the approval of nearly every speaker who took part in the discussion, the Government declined to pledge themselves to the adoption of the scheme in its details, as the question of the reorganization of the whole system of military education was then under consideration.

During the latter part of the year 1856, as has been elsewhere stated, the attention of the military authorities

Appendix VII. (C.)

Instruction of Officers.

was seriously directed to the question of improving the education of the army. Nearly all the plans submitted to Lord Panmure with this object included, as an essential feature, the adoption of some means of professional instruction for officers after entering the service; and the machinery suggested was, in almost every case, based in its general principles on Mr. Sidney Herbert's original proposal for the establishment of garrison instructors. The Commissioners appointed in the same year to visit the military schools of the continent, while their inquiries were chiefly confined to the improvement of the education of the scientific corps, recommended in their Report that young officers of all branches of the service should, after entering the army, go through some course of professional study; at the same time they suggested no machinery for carrying their recommendation into effect. The military witnesses examined during the years 1856 and 1857 before the Royal Commission on the Purchase System very generally concurred in the opinion that higher professional acquirements should be demanded from officers, and that means of instruction should be afforded to them; and the Commissioners in their Report endorsed this view in the following terms:—"Nor can it be fairly said that the purchase system "is the obstacle to introducing a better system of military "education. A stricter examination before granting the "first commission, an improved training afterwards, and a "further examination on promotion from ensign to lieu-"tenant, are measures perfectly compatible with the system "of purchase."*

The system of garrison instruction suggested by Mr. Sidney Herbert appears to have found general favour at this period. The instructions issued to the Council of Military Education, on their appointment in 1857, directed them, in connexion with the subject of the professional examination of officers up to the rank of captain, to consider the question "of the establishment of instructors at the large stations." A full account of the scheme proposed by the Council in the course of the year 1857, in accordance with these instructions, will be found in the extracts from the Council's first General Report (printed at page xcv). The plan did not contemplate the general appointment of either garrison or regimental instructors; its main feature was the establishment of officers' schools at depôt battalion stations, through which all young officers, who were in the first instance to receive provisional commissions, should pass before joining their regiments and being permanently commissioned. This recommendation was supplemented by one for the partial establishment of district instructors at stations where classes of ten officers could be formed, for the more advanced instruction of those who had been some years in the service.

The great demand for officers occasioned by the Indian mutiny, combined with practical objections which were made to the Council's scheme, prevented their proposals from being carried into effect. The only immediate result of their recommendations was the establishment in 1857 of a class at Aldershot, for the instruction of officers quartered at the camp in military sketching. A full account of this institution, which has since been considerably developed, and is now called the Survey Class, will be found at page c.

At a subsequent period the attention of the Council appears to have been directed more to the question of securing the professional competence of officers by a special military education before entering the service, than by compulsory instruction at a later period. The proposal, originally made in 1858, for requiring all candidates for commissions in the line to pass through Sandhurst, has been already described in connexion with the Royal Military College.† The Council have, however, never ceased to urge the expediency of providing officers, after they have entered the service, with facilities for instruction in the higher branches of military science; and in their last General Report, published in the present year, they recommended the establishment of institutions similar to the Aldershot Survey Class at other large stations.‡

Although no general machinery has been introduced for affording instruction to officers of the cavalry and infantry after entering the service, various steps have, from time to time, been taken with the object of extending their professional knowledge to subjects beyond the mere routine duties of their own arms. In January 1859 commanding officers were directed to require from the officers of their regiments reports, and, if possible, sketches of the roads traversed when route marching in winter;§ and later in the same year an order was issued that officers of infantry should, whenever practicable, be instructed in great gun drill.* In the present year a system of instruction in military signalling has been introduced at the School of Engineering at Chatham, to which detachments of officers are periodically sent.† In addition to the recommendations of the present Royal Commission for the introduction of a system of garrison and regimental instruction, the Royal Commission on Courts-martial, in their recent Report, recommended that more attention should be paid to the education of officers in military law, and that stricter examinations in the subject should be enforced.‡

The necessity of an improvement in the professional acquirements of officers appears to have been almost universally recognized from the time when Mr. Sidney Herbert brought the subject to public notice in 1854. Various opinions, however, have been entertained as to the means by which the desired object could best be effected.

The different plans which have from time to time been suggested may be classified under two main divisions:—

(1.) Those which propose a special military education for all candidates for commissions before entering the service.

(2.) Those which advocate, in preference, the postponement of professional instruction, at least for the majority of the officers of the army, until a later period, after the service has been entered, and the rank of officer been attained.

Under the former head comes the scheme suggested by the Council of Military Education in 1858, the adoption of which was at one time determined upon by the military authorities, for requiring all candidates for commissions in the cavalry and infantry to pass through Sandhurst. An account of this scheme, and of the causes which led to its abandonment, has already been given. A similar proposal has been advocated by many eminent authorities; it was suggested by some witnesses to the Royal Commission on the Purchase System in 1856; it was supported by the authority of the Duke of Cambridge and Mr. Sidney Herbert (who had originally been opposed to it) before the Select Committee of the House of Commons on Military Organization in 1860; and the Committee in their Report, though declining to pronounce any decided opinion on the subject, stated that they considered the measure "well worthy of the most careful consideration."§ Of late years the same principle has been publicly advocated by Sir C. Trevelyan,‖ who considers that there should be but two modes of admission to the rank of officer—one through a military college, and the other by serving in the ranks; and the advantages which would result from passing all candidates for commissions through a military college have been urged by several witnesses, including His Royal Highness the Duke of Cambridge, before the present Royal Commission.¶ On the other hand, opponents of this view have in their evidence pointed out the objections entertained by them to any such measure.**

Allied to the plan for making a military college the sole channel of admission to the commissioned ranks of the army is one for requiring all candidates for commissions to serve as cadets, in order to acquire a practical acquaintance with their duties, before obtaining the rank of officer. This proposal, originally suggested by Lord Clyde before the Royal Commission on the Purchase System, has more recently been supported by the authority of Sir W. Mansfield and Lord De la Warr; the latter officer, however, appears of late to have somewhat modified his views, and to advocate at present, for all young men who obtain direct commissions by purchase, a probationary course of six or twelve months' instruction in military subjects and drill, at their parents' expense, prior to joining their regiments, in accordance with a plan submitted to the Commission.

¶ *See* Evidence of the Duke of Cambridge (5348–9, and 6447–50), Sir Hope Grant (5990, and 6012–14), Colonel Hallewell (3363), Colonel Clifford (Answers to Questions, Appendix XI., A.), Captain Walker (2754–57), Captain Hozier (6227). General Peel, while stating objection to the proposal, expressed his opinion that "it might be a desirable "plan if you could do away with the purchase of first commissions" (9432). Lord Walden would advocate compulsory education at a military school before entering the army, if proper discipline could be maintained at such a school, the possibility of which, however, he considers doubtful in this country (Evidence 6409–6414).
** *See* Evidence of Major-General Napier (1110–15, and 1134–36), Sir F. Abbott (1776–78), Sir P. Herbert (5033, 5084).

The cadet system has also been advocated by Lord Walden before the present Commission.*

To the class of plans which advocate the postponement of professional instruction for the majority of the officers of the army until after the service has been entered, belong Mr. Sidney Herbert's original proposal in 1854, for the introduction of a system of garrison instruction—the recommendation of the Commissioners of 1856 "that young "officers after entering the army should go through some "course of professional study,"—the suggestion made by the Royal Commission on the Purchase System for "an "improved system of training after the first commission is "granted,"—and the proposal of the Council of Military Education in 1857 for the establishment of depôt battalion schools for young officers. Opinions founded on the same principle have been expressed by several witnesses before the present Commission.* The system of garrison instructors at large stations, that of regimental instructors in each corps, and, lastly, a combination of both systems, have been respectively advocated by various authorities as the machinery by which the later instruction of officers should be carried out. Even those who advocate a special education at a military college as the universal condition of obtaining a commission do not, in the majority of cases, contemplate the cessation of all instruction on the commission being obtained; at the same time, in many instances, they do not consider that this later instruction should be made compulsory on officers, and, while recommending that facilities should be afforded for it, they maintain the superior efficacy of a system of preliminary military education at an earlier age.

D.—SYSTEM OF GARRISON INSTRUCTION FOR OFFICERS PROPOSED BY THE RIGHT HON. SIDNEY HERBERT.

(i.)—LETTER from the RIGHT HON. SIDNEY HERBERT to GENERAL VISCOUNT HARDINGE, G.C.B., on Military Education.*

MY LORD, War Office, January 1854.

IN the year 1849 the Duke of Wellington took up the question of military education as applied to officers, and laid down two principles:

1st. That no one should receive a commission, unless he should prove on examination to be possessed of good average abilities, and to have received the education of a gentleman.

2nd. That no ensign or cornet should be promoted to a lieutenancy, nor lieutenant to a captaincy, until he had satisfied a competent tribunal of his professional and general acquirements and fitness.

A machinery was established to carry out the first proposition, and no candidate for a commission obtains one without passing a previous examination. Whether the machinery is a good one is very doubtful: my own belief is that the examination is too technical, too limited, and within its limits too severe. It does not test the boy's general education, nor his habits of mind; but he crams up a few books which happen to be in use at Sandhurst, and by his familiarity with these he is entirely judged. So completely is this recognized, that the parents of boys intended for the army, as soon as they receive the announcement that their sons will have a commission at a certain date, forthwith remove them from the school, where they may be receiving an excellent education, both as to intellect and character, and send them to a class of men known by the name of "coaches," who undertake to cram them in the text books required for the examination at Sandhurst, but who, in some cases, do not even profess to superintend their general or moral conduct.

No attempt, however, has yet been made to carry out the second portion, and the most important portion, of the Duke's plan. No tribunal has been composed, no examiners named, no means of instruction given, nor any course of study even recommended.

It appears to me that a board of examiners might be appointed, to meet at specified periods, at head-quarters, and who might conduct not only the examination for promotion, but the first examination for commissions likewise. From the engineers and the army it would not, I think, be difficult to select fit and competent men. At any rate, they ought not to be connected with Sandhurst, or conduct their examinations upon the assumption that the course used, or the formulas received at any particular place of instruction, are the only course, or the only formulas, which can be recognized.

This board might meet, say six times a year, either in London alone, or in London, Dublin, and Edinburgh, and examine candidates for commissions, both *vivâ voce*, and on paper (so as to give to all as fair a chance as possible), in history, sacred and profane, geography, and the elements of geometry, Latin, French, or any other foreign language a boy may know, English, writing, and grammar, so as to establish that the candidate has a fair familiarity for his years with these subjects.

Having obtained his commission as ensign or cornet, we ought to provide him with means and opportunities of further study, in order to acquire a good knowledge of the theory of his profession.

Here, then, will arise necessarily a considerable difficulty, owing to the dispersion of our troops all over the world, and their want of concentration at fixed points at home, as well as abroad, which must give very unequal opportunities of study to different officers; and though the concentration of the troops, which your Lordship is now gradually effecting, will in some degree diminish the difficulty, yet we cannot get over it entirely without some expense and some inconvenience to the service, against which must be set the advantage of having officers well acquainted with the scientific portion of their profession, and more accurately instructed in its ordinary duties, and who will not have adopted the army merely as an amusement for a few years.

I think that at the head-quarters of every general's command a military instructor might be stationed, say with the rank of captain; masters, a class-room, a library of reference, would have to be provided for them at the public expense; and if the same text-books were selected for all these military schools, the officer, on being removed from one station to another, would resume his duties as if they had never been interrupted.

Those subalterns who are at head-quarters could, of course, avail themselves of these facilities without disturbing their regimental duties; but of those at out-stations, one-fourth might be spared at a time to repair to head-quarters for the purpose of study and preparation for examination before promotion.

Attendance of course would not be compulsory, though the ultimate examination would be so; but leave would be granted in the proportion I have mentioned, or any other which may be thought better, for the purpose of attending.

The course would consist of two terms: one for ensigns, candidates for lieutenancies, and a second for lieutenants, candidates for captaincies.

They would pay a fee for the use of the library, and the advantage of the instruction they obtain; which fees would go towards the expenditure incurred for the maintenance of this machinery.

The course for the ensign ought not to be too high. A air progress in mathematics, French or German, geography, especially the military geography of Europe, with some knowledge of the theory of field fortification, plan drawing and surveying, should qualify him for a lieutenancy, accompanied, of course, by a practical acquaintance with the duties of a regimental orderly officer, the command of a guard, &c.; nor should he be allowed to attend the district military school at all until he has been dismissed from drill, and has satisfied his commanding officer of his competence as to putting a company through manual and platoon exercise, &c. The same rule will, of course, apply, *mutatis mutandis*, to cavalry officers.

The course for a captaincy would be of a higher character, including military history and strategy, military law, th practice of courts-martial, geometry, mensuration, field and permanent fortification, outpost duty, attack and defence of military posts, gunnery, surveying, bridge making, &c. For the purpose of subsequently facilitating the pursuit of higher and more scientific study, some changes might be made in the senior department at Sandhurst.

The examination clearly, for obvious reasons, should not be entrusted to the instructors; but the same board that examines for first commissions should conduct the subsequent examinations. The examinations, if conducted on

* Reprinted from the Appendix to the Report of the Select Committee of the House of Commons on Sandhurst, 1855.

APPENDIX VII. (D.)

Instruction of Officers.

paper, would be applicable to all stations, abroad as well as at home.

It might be thus effected: once a year, or once in six months, officers, whether studying under the military instructor or not, might be invited to send in their names as candidates for examination, through the commanding officers to the general commanding the district, who would report the number to the Commander-in-Chief.

The examining board will be informed of the numbers of candidates in each district, and shall prepare and transmit to the general in command a corresponding number of papers, containing questions on each subject. These questions shall be handed over to the military instructor, who will at once assemble the candidates, and set them to work, without book or assistance, or communication of any kind, to answer the questions then and there in writing in his presence. This will be continued day by day, till all the questions have been submitted to, and answered well or ill by the candidates, who will affix to their papers a motto or cypher. The answers so marked will be sent to the board in London. The key to these cyphers will be sent under a separate cover to the Commander-in-Chief or the Secretary-at-War, and will only be opened when the answers shall have been examined, and numbers or marks having been given to each in proportion to the proficiency shown by his answers on each subject. The successful cyphers shall be then announced. The Commander-in-Chief or the Secretary-at-War will then publicly open the keys, and ascertain what names correspond with the papers of answers which have succeeded or failed.

Those who have obtained very high numbers should be noted for staff or other appointments, subject, perhaps, to a subsequent course in the senior department at Sandhurst.

To carry out this plan fully, we should want, say nine districts, in which a military instructor should be placed.

For the London District - -	Chatham.
„ Northern and Midland -	York or Manchester.
„ Southern, including the Channel Islands - -	Portsmouth.
„ Western - - -	Plymouth.
„ Scotland - - -	Edinburgh.
„ Dublin - - - -	Dublin.
„ Kilkenny, Cork, and Limerick - -	Either Kilkenny, Cork, or Limerick.
„ Belfast - - - -	Belfast.
„ South Wales - - -	Bristol.

Kilkenny, Cork, and Limerick, if thought too large to be joined together, might be divided into two.

The attendance should not be compulsory. Great inducements might be held out by reserving appointments on the staff to those who distinguished themselves. None else should be admitted to the senior department at Sandhurst, which might thus become what the Ecole d'Etat Major is in France.

There is much detail which I omit, and which must be the subject of future arrangement, if your Lordship approves of the outline of this plan.

The military instructors might require assistance for foreign languages.

This would not be difficult to obtain.

The expense of the whole plan would no doubt be serious. The examining board would consist of, say, three members, whose salaries and lodging money could not, together, cost less than 2,000*l.* a year; nor could we give to the military instructor less than 400*l.* a year, in addition to his half-pay, which, with nine instructors for Great Britain and Ireland, will cost 3,600*l.*; making a total of 5,600*l.*; add, ultimately, eight abroad, and you would not do the whole much under 9,000*l.* a year. I could turn these gentlemen to account, likewise, as inspectors of regimental schools, which will soon be too numerous to be inspected by one man. Those abroad are not now inspected at all.

This is the general outline of the plan, which will require to be filled up with much detail. Your Lordship will observe I have not said one word as to the advantage of our having our officers properly instructed, and possessing sound professional knowledge. I have assumed that to be admitted, and that the principle has been conclusively laid down by the Duke of Wellington.

Indeed, the popular arguments against examination and against scientific professional instruction in the army, founded, as they have been, on an entire misconception of the object and of the mode of carrying it out, have ceased to have any influence on the public mind. It is not intended to convert the officers of the army into pedants or bookworms, still less to substitute a different class of mere learned recluses, and the like, for the handy, active, and daring men by whom the British army is now officered. That a very scientific man may make a very bad officer no one denies; and that very many uninstructed men may, and do often, make efficient and trustworthy regimental officers is also true; but the scientific man fails, not because he is scientific, but because he is wanting in other qualities which are still more necessary to constitute an effective soldier; and it is not shown that the uninstructed officer, who is efficient in other respects, would be less decided, ready, and active, if he were acquainted with the reasons upon which he is really acting, and his resources were strengthened by a knowledge of what has been, and can be done on any given emergency.

It must be shown that the officers of artillery and engineers are unfit for their duties in the field, if it is to be maintained that instructed officers in the line would be unfit for military purposes.

No change would therefore be made in the *personnel* of the officers of the army by the system contemplated by the Duke of Wellington for making, in time of peace, a certain acquaintance with the theory as well as the practice of the profession a *sine quâ non* proposition. In war, obviously, no test can be so good as that of proved efficiency in the field.

Care ought to be taken not to place the standard of examination too high at first; it can always be raised subsequently, if necessary. The course of study, no doubt, would, on experience, be considerably varied and modified before the standard shall be ultimately fixed. No doubt there will be some difficulty in introducing the system at first, and much allowance must be made in the earlier stages.

As I before stated, this is but an outline, and much care and time must be bestowed upon the elaboration of its details before any practical commencement can be made. But if the general principle meets, as I hope it will, with your Lordship's approval, I propose at once to request the sanction of the Treasury to take a sum on account which will enable us, in the course of the next financial year, to make a practical commencement. I would propose to ask for 4,000*l.* or 5,000*l.* for this purpose.

Ample time would thus be given to arrange all the details necessary to ensure the well-working of the scheme.

I would be glad, as the time for closing the estimates is at hand, to have your Lordship's opinion on the subject as soon as can conveniently be given.

I have, &c.
(Signed) SIDNEY HERBERT.

Reply from Lord Hardinge to the above letter.

Horse Guards,
SIR, February 2, 1854.

I HAVE the honour to state, in reply to your letter of January 1854, that I concur in the general outline of the plan for the examination of candidates entering the army, the existing one being susceptible of considerable improvement, as well as in that for the further examination of subaltern officers, preceding their advancement to the rank of captain.

The success of the actual working of any such plan must greatly depend upon its details, and the comparative investigation of the system adopted in other European armies would be beneficial.

I would propose to you to have a committee named of officers from the military and civil departments, who should at once set to work to lay down the leading points by which the proposed measure and its machinery can best be put in motion; but as you are anxious at this moment of closing the army estimates to have an official answer, I have the honour to express my opinion that the general outline of the plan seems well adapted to effect the object we all have in view—the improvement in the professional education of the officers of the army—observing, however, with reference to that passage in your letter in which you advert to Sandhurst becoming what the *Ecole d'Etat Major* is in France, that the French establishment is a copy from High Wycombe, having been introduced by a Monsieur St. Denis, in 1818, when he was residing in Paris, one of the French emigrant professors on the pension list of the Royal Military College.

I have, &c.
The Right Hon. Sidney Herbert. (Signed) HARDINGE.

Reply from the Treasury on the same subject.

Treasury Chambers,
SIR, February 3, 1854.

IN reply to your letter of the — ultimo, I am commanded by the Lords Commissioners of Her Majesty's

reasury to acquaint you that my Lords entirely concur in
ie general view taken by you of the measures required for
ie preliminary examination and subsequent instruction of
ilitary officers; but they are of opinion that many advan-
es would be obtained from combining, as far as may be
racticable, the official machinery for this object with that
hich will shortly have to be established for the examina-
n of candidates for the civil service; and they therefore
ggest that the sum to be included in the army estimates
r 1854–55 should be confined to the moderate amount
kely to be required within that financial year (after the
cessary arrangements have been made with the assis-
nce of the united board of examiners) for the purpose
commencing the syatem of providing professional in-
ruction for officers who have passed their preliminary
xamination.

I have, &c.
(Signed) C. E. Trevelyan.

he Secretary at War,
&c. &c.

.)—Extract from a Speech of the Right Hon. Sidney Herbert in the House of Commons, June 5, 1856, on Military Education.

Having got the officer into the army, then comes the uestion how we are to deal with him afterwards. At this oment, you have for promotion a certain, or rather an ncertain, examination. It is an examination, for example, an officer whether he knows the different duties of a mpany, the places of officers in a battalion, and so on; ut whatever examination there is, it is a defective one. It an examination which some captain in the regiment is dered to make; but it does not at all follow that the ptain is very much more instructed than the officer who to be examined. That may not be, but at all events the haracter of the examination must vary very much in each giment. The Duke of Wellington, in his confidential emorandum,* contemplated one universal system of ex-nination throughout the army. Many persons are apt suppose that, because little was apparently done in this rection during the time the Duke was at the Horse uards, therefore he was opposed to a system of examina-ons; but that is not so. He began by proposing first of l that all candidates for commissions in the army should examined in a certain manner, and that was done; but ie rest of his plan fell to the ground. The examination hich he established was not a high one. The East India ompany have adopted identically the same plan of exami-ation, and it has now been in operation for some years, it it has not been found that the standard is too high, r during the whole time that it has been in operation iere have been only four rejections. The Duke proposed iat the officer who had obtained his commission should terwards undergo an examination for promotion in certain ubjects of which he gave a list. A lieutenant who had ntered the service subsequently to July 1849, was to be quired, before his promotion to a captaincy, to pass an xamination in geography, history, the first six books of uclid, the properties of the circle, algebra, logarithms, trigonometry, mensuration, and fortification—with the principles of which latter science he was to be sufficiently well acquainted to project a plan on the system of Vauban—the provisions of the Mutiny Act, the Articles of War, and so on, besides of course the evolutions of a battalion.

In January 1854 I proposed a plan which will be found in the Appendix to the Sandhurst Report.* That plan obtained the sanction of the Horse Guards. I then applied to the Treasury for money to enable me to carry it out; and the Treasury having given me permission to take a sum in the estimates for the purpose, I explained my plan to this House, and the House approved it.† That was before the war. Now, that is the plan which I lament to see is dropped out from the estimates of the present year. My proposition was that there should be a board of examiners for the purpose of conducting all examinations, whether for commissions or promotion; and I believe these examinations would give employment to at least three persons. In the year ending in March 1853, that is before the war, there were 441 ensigns and cornets who received commissions, and 365 lieutenants and 282 captains were promoted; so that there were 1,088 persons in all who would have been subject to examination. The examiners should be men of weight, and the President ought to be the Director-General of Military Education. They would go down to Sandhurst to examine for commissions, and they would also examine at London, Edinburgh, and Dublin. Questions would be sent out to every station, which officers, being candidates for promotion, would have to answer in the presence of an officer of the staff specially appointed for the purpose. I am aware that objections have been urged to this plan. In the navy, it is said, an officer can study his profession, because he is always on board ship, he has his books with him, and he has his naval instructors always at his elbow; but that is not so in the army. There are no such instructors in the army, and the officer who is on a foreign station has no facility for procuring books or instruction. I would propose to station an officer at the head-quarters of each division to act as military instructor, of whose services, for the purpose of passing through a course of military education, every officer who chose might avail himself. In the Colonies, and in outlying stations, it is said, it would be impossible for officers to avail themselves of the services of this military instructor; but field operations are generally carried on in the summer, and in the winter there is inaction, so that there would not be much difficulty in an officer obtaining leave to repair to head-quarters to place himself under the military instructor of the division. In cases where even this was impossible, promotion might be given, as in the navy, subject to the condition of passing the requisite examination at a future opportunity. The instructors should all be military men, who had passed through the senior department at Sandhurst, and I would give them good pay, and the rank of staff officers while they held their appointment. The advantages derivable from a position on the staff would stimulate the ambition of officers to qualify themselves for it. I would also give them the duty of inspecting regimental schools.

E.—PLANS PROPOSED BY THE COUNCIL OF MILITARY EDUCATION FOR THE INSTRUCTION OF OFFICERS IN THE SERVICE.

Appendix VII. (E.)

.)—Extract from the First General Report of the Council, published in 1860.

Having thus provided a sufficient test of the qualifica-on, in an educational point of view, of candidates for ie military profession, the next object of the Council as to suggest some system for supplying the deficiences ordinary education by a suplementary course of in-uction in professional subjects. The first scheme iggested is explained in Part II. of the Council's eports, dated July 8th, 1857.*

In consideration of the difficulties which would attend ie establishment of instructors either at the head-quarters f districts and commands or in connection with regiments, nd still more of attempting to carry on any systematic rofessional instruction with an independent body of nstructors scattered over so wide a space as that occupied the British Army, the Council proposed to combine struction in the principles and details of the most essential professional subjects with the ordinary training in regimental tactics and duties, to which every officer on first joining is necessarily subjected. The several branches of instruction under each of these heads are detailed in the Report.* It is manifest that such a combined system would have gained the desired object with the least expenditure of time, but to render it efficient the Council considered it necessary to recommend that officers should in the first instance be appointed provisional ensigns only, and that their rank should be confirmed when they had been reported perfect in their regimental and general professional instruction. Such an arrangement would have made it the interest of every provisional ensign to exert himself in order to pass through the course of instruction and training as quickly as possible.

Unfortunately, however, the great demand for officers consequent upon the Indian mutiny rendered it impossible, in the opinion of the authorities, to carry into effect this measure at that time, as in many instances young officers

* *See* "Detailed Scheme," below.

* *See* "Detailed Scheme," below.

Appendix VII. (E.)

Instruction of Officers.

were sent out to their regiments in India only a few weeks after they had first joined their depôts; and the only mode of meeting this difficulty, viz., by an addition of two or even three ensigns to each battalion, was considered too expensive to be entertained.

Now, however, that it may be presumed the extraordinary demand for officers in India has ceased, and that officers will probably be at least one year at their depôts before they are sent out to join the head-quarters of their regiments, the preceding or some equally efficacious measure for ensuring to every officer a sound course of elementary professional instruction, in addition to a careful regimental training, again demands very serious consideration.

The value of such instruction can hardly be overestimated, as there cannot be a doubt that whilst advancing the professional acquirements of the great body of officers, it would be the means of inducing many to carry on their study of military science during their subsequent service who are now deterred from making the attempt to do so by a want of acquaintance with its elementary principles. Indeed, until some such system shall have been adopted it cannot be said that any provision has been made for the professional education of those officers who have not passed through the Military College, or, in fact, of the great majority of the officers of the army.

The Council cannot therefore but deeply regret that, owing to adverse circumstances, nothing of this kind has yet been done, but it is not without hope that the repeated efforts it has made to attain so desirable an object will yet be crowned with success, whether by the adoption or the project detailed in the paper above referred to, or of some one of the projects detailed in the Appendix; finally (as has been subsequently proposed by the Council), by enlarging and adapting the Royal Military College at Sandhurst for the reception and professional instruction of all candidates for the army who shall have passed their examination for commissions, and during the period they would otherwise have to wait for their appointment without any useful occupation of their time.

Reference has been already made in a general manner to the several schemes of instruction proposed by the Council and detailed in the Memoranda contained in the Appendix; but the following brief *résumé* will be useful, as being calculated to explain the objects of the Council in its successive proposals.

Supposing the plan suggested by the Council had been adopted, the junior officers of the army would have formed two groups,—the first, those holding provisional rank only, but ready at the termination of their preparatory training and professional instruction to commence their duties as officers of the army; and the second, those who had already been some time in the service, and yet required to be instructed in several of the most simple branches of military science.

To meet the first object, namely, the instruction of the first group, or the provisional officers, the Council proposed the institution of officers' schools at the principal depôt stations, to which the young officers appointed provisionally were to be attached. The machinery for this purpose is detailed in the report of the Council.* To meet the second object, or the instruction of officers who had been some time in the service, the Council proposed the appointment of subsidiary instructors in camps or garrisons for that special purpose, the scheme itself being fully detailed in the same report.*

Wherever, in fact, a class of 10 officers could have been formed, an instructor would have been appointed, and the necessary accommodation for teaching provided; the instruction comprehending surveying, military sketching, and reconnoitring during the summer months, the winter months being devoted to the necessary preliminary instruction in practical geometry, plan drawing, &c.

It was further recommended that all officers of or below the rank of captain should be required to make a certain number of military sketches, accompanied by reports, of any localities in the neighbourhood of their camp or quarters that might be selected by the general or other commanding officer, that these sketches and reports should be examined by boards of officers appointed by the general commanding, and that those of particular merit should be transmitted to the Commander-in-Chief.

The principle of the latter recommendation has been partly carried out in a recent Memorandum issued by His Royal Highness the General Commanding-in-chief, in which it is suggested to commanding officers of regiments, that they should require from their officers notes, and, if possible, sketches of the roads and country they pass over when performing the "marching out" duty during the winter months.

But the Council regrets to say that the previous portion of its recommendation, which proposed that officers should be appointed to act as instructors wherever a class of 10 could be formed, has not been carried into effect; and this is more especially a matter of regret, as it appears only just and prudent that every possible aid should be afforded to officers (who have had no previous opportunities of obtaining instruction) to prepare themselves, should they desire it, for future admission to the Staff College; and it cannot be doubted that the assistance of such instructors would have an important effect in sending officers to the Staff College better prepared, and consequently more able to profit by the instruction there afforded.

Detailed Scheme referred to in the above Extract.

On the Instruction of Officers and Examinations for Promotion.

July 8, 1857.

1. In its report upon examinations for direct appointments, the Council recommended that no other knowledge should be required from candidates than that usually included in the course of instruction at the ordinary schools of the country. It may be assumed, therefore, that every officer on entering the army will possess the liberal education of a gentleman, and it will now be necessary to provide that he shall acquire, after joining, the professional knowledge which is essential to his efficiency as an officer.

2. With this view the Council recommended, at the close of the first part of its report, that gentlemen, on passing their examination for entrance to the army, should be appointed to commissions only provisionally in the first instance, and the Council now repeats that recommendation, and suggests that the officer's commission should not be confirmed until he shall have passed through the courses of regimental and general professional instruction, to be presently defined.

3. With regard to the more general professional instruction here adverted to, the Council would have much desired that the period of imparting it could have been postponed until the young officer had been prepared by service to appreciate the value of its principles and its practical bearings, but this the peculiar character of the British service appears to preclude. At all times more than half of the infantry of the line is on foreign service. India and the Cape, comprising nearly one-third of that force, have hitherto been subject to periodical wars, and even in peace cannot be said to be favourable stations for the purposes of military education. Australia is, perhaps, equally unfavourable. If, therefore, such instruction, and the consequent examination, were deferred until required as a qualification for promotion, the exigencies of the service would in many cases interfere with its efficiency or entirely stop its progress.

Again, there would appear to be no means of imparting the professional information required, on such a system, but by the establishment of instructors at head-quarters of districts and commands, or of an instructor in each regiment. The Council cannot recommend either of these plans, from the difficulty and expense of providing so many instructors, as well as from the impossibility of maintaining an uniform system among so many scattered establishments.

It is evident, therefore, that the only practicable mode of ensuring that every officer, without exception, shall be instructed in the principles and details of those professional subjects with which it is essential he should be acquainted, is by giving such instruction simultaneously with the instruction in his regimental duties; and this system the Council accordingly recommends.

4. The following are the courses of regimental and general instruction referred to in par. 2:—

In his regimental instruction it will be required, if an infantry officer,—

1. That he shall have a thorough knowledge of the duties of a regimental orderly officer, and of an officer commanding a guard.
2. That he shall be able to put a company through the manual and platoon exercise, and to exercise both a squad and company in the drill and evolutions as prescribed in the first two parts of the regulations for the field exercise of the infantry.
3. That he shall be able to command a company at battalion exercise.
4. That he shall be acquainted with such parts of the Queen's Regulations and Orders of the Army as relate to the duties and conduct of a subaltern officer, and with the Mutiny Act and Articles of War, so far as it is necessary for the performance of his duties as member of a court-martial.

* *See* "Detailed Scheme," below.

5. That he shall be acquainted with the Regulations relative to the pay, subsistence, and clothing of the soldier, with the method of keeping the soldiers' accounts, and with the price of each article of regimental necessaries.
6. That he shall know the nature and weight of each article of a soldier's equipment.
7. That he shall be thoroughly instructed in rifle drill and practice, and in the theoretical principles of musketry, as defined in the authorized book of instruction.

The more general professional instruction of the provisional ensign will comprise,—

1. The principles of fortification, so far as necessary for the attack and defence of small posts, and for the construction of simple intrenchments, redoubts, and field forts; profiling and tracing on the ground; gabion and fascine making, &c.
2. Camping, hutting, the construction of field ovens and cook-houses, and other simple camp and field engineering.
3. Military reports on roads, villages, &c.; reconnaissance on a small scale; out-post duties.
4. Instruction in gun drill.

Instruction will also be given in field sketching with instruments to such officers as may desire it.

The study of these subjects would be greatly facilitated by text books of a simple character, which might be prepared for the purpose.

5. To carry out the general professional instruction above detailed, the Council proposes,—

That one principal instructor should be appointed to each depôt battalion station, and that assistant instructors should be appointed wherever necessary.

The principal instructors to be officers not under the substantive rank of captain, with the usual staff pay of 9*s.* 6*d.* a day; and the assistants to be subalterns with such additional pay as may be considered proper.

6. The discipline of officers' schools should, it is recommended, be under the supervision of the officer commanding at the station.

In matters relating to education the military instructor will report, through the officer commanding, to the Council of Military Education.

Students at the officers' schools, after having completed their regimental course of instruction, will continue to attend one parade a day, orderly duty, regimental courts-martial as supernumeraries, and such other duties as may not interfere with their course of professional instruction.

7. It is computed that the courses of regimental and general professional instruction will together last about 12 months; and that the number of provisional ensigns under instruction will average three per regiment of infantry.

8. With regard to the regimental instruction, the Council recommends that the candidate shall be examined, whenever prepared, by a board of field officers appointed under the direction of the Commander-in-Chief.

And as respects the general professional instruction above described, it is recommended that examinations therein be held quarterly, by one or more members of the Council of Military Education, at the several depôt battalion stations; and that on the provisional ensign satisfactorily passing the same, his rank shall be confirmed.

9. In respect to officers receiving their first appointments to the Guards, the course proposed will be the same.

One officers' school will be required for the division of Guards; it will average from 10 to 12 students, and it is suggested that it might be established at Croydon.

10. With respect to the Cavalry, it will be necessary, as there are no depôts (with exception of Maidstone and Canterbury) for that service, that the regimental, as well as the more general professional instruction, shall be imparted at officers' schools, which it is proposed shall be established at two or more stations which are the head-quarters of cavalry regiments.

The cornet on receiving his provisional appointment, will at once join one of these schools, being attached to the cavalry regiment at the station, in which he will learn his regimental duties. He will be examined, when prepared, in the course of regimental instruction to be presently defined by a board of field officers to be appointed by the Commander-in-Chief; and in his more general professional instruction by the Council of Military Education; on successfully passing which examinations his provisional rank will be confirmed.

The following are the respective courses of instruction that will be required of the provisional cornet for the confirmation of his rank:—

In the regimental course of instruction it will be required,—

1. That the cornet shall have acquired a thorough knowledge of the duties of a regimental orderly officer and of an officer commanding a guard.
2. That he shall have learnt his foot drill and sword exercise, and have been instructed in the single and double ride; that he shall be able to put a troop through the carbine, lance, and sword exercise, and to exercise both a squad and troop in the drill and evolutions prescribed in the Cavalry Exercise Book.
3. That he shall be able to command a troop in squadron exercise.
4. That he shall be acquainted with such parts of the Queen's Regulations and Orders for the Army as relate to the duties and conduct of a subaltern officer; and with the Mutiny Act and Articles of War, so far as is necessary for the performance of his duties as member of a court-martial.
5. That he shall be acquainted with the regulations relating to the pay, subsistence, and clothing of the soldier, with the method of keeping the soldiers' accounts, and with the price of each article of regimental necessaries.
6. That he shall make himself master of the detail of saddlery, the mode of fitting the saddle, bridle, &c., and of the whole equipment of the cavalry soldier and his horse.
7. That he shall be thoroughly instructed in carbine drill and practice, and in the theoretical principles of the same.

The general professional instruction at the cavalry officers' school will comprise,—

1. The principles of fortification so far as necessary for the attack and defence of posts and for the construction of simple intrenchments, redoubts, and field forts.
2. Camping, hutting, picketing horses, and general management of horses in camp; the construction of field ovens and cook-houses, and other simple camp and field engineering.
3. Military reports on roads, villages, &c.; reconnaissance on a small scale; picket and out-post duties.
4. Instruction in gun drill.

Instruction will also be given to such officers as shall desire it in field sketching with instruments.

To carry out the above course of instruction, the Council recommends that three officers' schools shall be established for the cavalry, which it is computed would comprise about 20 students each, under a principal instructor, as before suggested.

For each cavalry officers' school there would be required an additional instructor for lectures in the veterinary art.

11. *Examination for Promotion.*—The Council does not propose any further examination for officers of either arm, with exception of that which is to qualify them for their troop or company, in which it will be required,—

1. That the officer shall show a thorough knowledge of the provisions of the Mutiny Act and Articles of War, and of the forms and proceedings of courts-martial, and shall give evidence of having studied some of the standard works on that subject.
2. That the officer shall prove himself thoroughly acquainted with the Queen's and the War Office Regulations.
3. That he shall understand perfectly the evolutions of a battalion of infantry or regiment of cavalry, as laid down in the regulations for those services respectively.
4. That he shall be acquainted with the light infantry drill, out-post duties, patrols, escorts, advanced and rear guards.
5. That he shall perfectly understand the interior economy of a troop or company, the regulations for the messing and subsistence of the soldiers, and the established system of keeping the troop or company accounts.
6. That the officer shall show evidence of competency to take charge of a troop, company, or detachment in every position in which it may be placed.

Lastly, as soon as the necessary text books can be prepared, the Council will propose, agreeably to the recommendations of the late Lord Hardinge, that the duties of the Commissariat in relation to the troops, the arrangements for field hospitals, the ambulance, the land transport, the conveyance of reserve ammunition, with other subjects of an entirely professional and practical character, shall be required at the officer's examination for his troop or company.

The Council recommends that such examination be conducted by a Board consisting, where practicable, of a general officer as president, with two staff or regimental

APPENDIX VII. (E.)

Instruction of Officers.

field officers as members, who will report confidentially to the Military Secretary their opinion of the fitness of the candidate for promotion. They will transmit at the same time to the Council of Military Education their written questions and the answers of the candidate at his examination.

12. With respect to ensigns already appointed who will not have had the opportunity of attending the officers' schools, the Council recommends that they be examined for promotion to the rank of lieutenant in the subjects at present prescribed; but that this examination also be conducted, where practicable, by the Board and in the manner named in the last paragraph.

In addition to the system above recommended as adapted to provide regular instruction to future officers entering the army, the Council deems it most desirable that those of all ranks now serving should have the means placed within their reach of obtaining that general professional knowledge which has been considered an indispensable part of an officer's education, and also of preparing themselves for competing as candidates for the Staff College.

To effect this object the Council considers that it will be expedient to make the instruction depend on the number of officers who desire to receive it; and for this purpose it recommends that,—

1. Returns should be required periodically from general officers commanding districts, divisions, or brigades, of all officers within their command who are desirous of obtaining professional instruction. These returns to be forwarded, at home stations, on the 1st April and 1st October, so that classes may be formed and instructors appointed on the 1st May and 1st November; it being proposed that there shall be a winter and a summer course of instruction.

In summer it will be desirable that the instruction be principally out of doors, as surveying, sketching, reconnoitring, &c.; and as these subjects require a preliminary knowledge of practical geometry, plan drawing, and the use of instruments, which subjects will form the winter course, it is recommended that no officer who has not received the previous winter instruction shall be admitted to the summer class.

For stations abroad other arrangements will of course be made suitable to the climate.

2. That an instructor be appointed whenever a class of, say, 10 officers can be formed. It is suggested that in many cases the instructor might be found among the officers serving at the station, he receiving a reasonable addition to his pay whilst so employed.

3. That a room or hut be set apart for the accommodation of the class.

4. That though the attendance is considered voluntary, no officer should be allowed to enter his name for a class without being warned that he is expected to be regular in his attendance; and to ensure that he is so, a monthly return of attendances should be made to the Council of Military Education.

5. Should the attendances fall off, the instructor may be removed to another station, or his appointment be cancelled.

6. The success of the instruction thus proposed to be given would, in the opinion of the Council, be much promoted, and the value of that hereafter imparted at the provisional officers' schools tested, should an order be issued to the effect that every officer of or below the rank of captain should be required each year to reconnoitre and report upon some object or locality in the neighbourhood, considered in reference to a definite military duty or operation in the field named by the general or other commanding officer.

7. The subject of the required report should be adapted to the special arm of the service to which the officer belongs, and should in the first instance be simple in character, and increase progressively in difficulty.

8. That every report be accompanied by a sketch, however rough.

9. That the number of such sketches and reports to be made annually by each officer should be regulated by authority; that they shall be examined by boards of officers appointed by the general commanding, who should certify that every captain and subaltern under his command had sent in his report and sketch; and finally that those of particular merit should be selected from the rest and transmitted to the Commander-in-Chief, with the names of the officers who had made them, as well as with a general report of the value of all the sketches, &c.

10. In making the instruction, at the occasional classes above described, contingent on the number of persons actually desirous of obtaining it, the Council has conformed itself to the present wants of the army, though it hopes that the time may come when it may be desirable to establish more settled places of instruction, such as military institutions, where lectures might be given, and where an officer at any period of his service would be sure to find the means of improving himself.

D. A. CAMERON, Major-General.
J. E. PORTLOCK, Colonel.
J. E. ADDISON, Lieut.-Colonel.

(ii.)—EXTRACT from the THIRD GENERAL REPORT of the COUNCIL, published in 1869.

Instruction of Officers in Professional Subjects after they have received their Commissions.

IN their First General Report the Council entered at considerable length into the question of providing young officers with the means of acquiring knowledge of professional subjects after joining their regiments, observing that the value of such instruction can hardly be over-estimated, and that it would be the means of inducing and enabling many to pursue the study of military science during their subsequent service.

To effect this object a detailed scheme had been drawn up by the Council immediately after their first appointment in 1857, but various circumstances combined to render its execution impracticable.

Without adopting all the features of that scheme the Council are still of opinion that much might be effected for the young officer at that period of his military career when he is most capable of acquiring information, and when it is most important that his mind should be provided with wholesome occupation.

It is true that officers are now required, as recommended by the Council in 1857, to pass a certain examination in military science for promotion to the rank of captain; but the Council have no precise information as to the manner in which this examination is carried out. They are, however, impressed with the belief that owing to the great variety of officers composing the examining boards at different stations, great diversity exists in the system, and that some officers are, or may be, subjected to a much more severe test than others.

In the examination for a troop or company some knowledge is required of field fortification and reconnaissance; but these subjects are entirely new to the great majority of young officers who enter the army by the direct examination, nor do they possess any means of becoming acquainted with them without seeking the aid of a private tutor, unless they happen to be quartered at Aldershot, where some instruction is provided for a limited number of officers by what is termed the survey class. This has now been in operation for several years, and as the sketches and surveys made by the students are forwarded periodically for the inspection of the Council they have had frequent opportunities of judging of the results attained; and they are of opinion that the system is capable of being extended with advantage to the service.

The class at Aldershot is at present under the immediate superintendence of an officer of the Royal Artillery who passed the Final Examination at the Staff College in 1860, and has since served on the general staff of the army. Only two officers from each regiment at the camp are permitted to attend the class at the same time, and the instruction is usually suspended for two or three months during the leave season. There are two courses of instruction; the first an elementary one, comprising practical geometry, so far as is necessary for the understanding of the principles of surveying and fortification, plan drawing, the construction and use of scales, and military stretching, and it is attended on an average by seven or eight officers who are relieved from all duty during the two months which it occupies.

The second course embraces surveying in its more advanced branches, military reconnaissances and road reports, field fortification, including the attack and defence of small posts, the construction of simple intrenchments, redoubts, and field-works, profiling and tracing on the ground, gabion and fascine making, camping and the construction of field ovens and cook-houses; and this course is understood to extend over four months. But owing to the press of duty consequent on the assemblage of a large force, no officer appears to have been able to complete this course.

Accommodation at Aldershot for a larger class (i. Course I.) appears to be wanting at the survey office, which is in no way fitted up as a class-room for drawing or any other purpose, and is destitute of works of reference. It has been suggested that the Prince Consort's library, which is now scarcely used, might be made available for this purpose with great advantage to such officers of the division as are desirous of improving themselves in professional subjects.

In a private communication the officer superintending the class has recently remarked:—"It is believed by many

people that officers attend the survey class merely to escape duty, and without any idea of improving themselves; but I can only name two instances in which I have had reason to suspect that this was the case. Generally speaking, I have been surprised at the anxiety to learn, and at the pains taken, when there is no immediate object to be gained."

The Council, therefore, consider themselves justified in saying that the experiment made at Aldershot has been successful in an appreciable degree; and with a view to provide young officers with the means of preparing themselves to pass the required examination for promotion, the Council are of opinion that the system upon which they have been commenting should be extended so as to embrace military history, administration, and legislation, and that such facilities as local circumstances will admit of should be given to the officers who wish to attend the lectures on these subjects, as well as to those who are desirous of going through the present second or higher course of surveying and fortification. The Council would recommend that the proposed instruction should be extended to certain large stations besides Aldershot, namely, Portsmouth, Dublin, Gibraltar, and Malta, and that officers who have passed through the Staff College be selected to lecture upon the additional subjects they have named.

Appendix VII. (E.) Instruction of Officers.

Independently of the advantages to be derived by young officers from the system here advocated, the Council consider that it is very desirable to employ those officers who have passed through the Staff College, and are waiting for appointment to the staff of the army, in imparting instruction to others. Such employment would tend more than any other to keep up the knowledge available for the public service whenever those officers found themselves placed in positions of responsibility on the general staff.

F.—REGULATIONS BEARING ON THE INSTRUCTION OF OFFICERS.

Appendix VII. (F.)

(i.)—Instruction of Officers in the preparation of Military Reports.

Horse Guards, 19th January 1859.

Suggestions for performing the marching out duty.

In marching out during the winter season, commanding officers should profit as much as possible by the opportunities afforded to them for instructing their battalions (especially the young officers) on those subjects which can be more particularly and more practically explained on occasions of this kind, than at the regular daily parades in the barrack square, or at the orderly room examinations.

A great many officers are not even aware that it is their duty to be provided with a map of the district in which they are quartered, to study it, and to compare it with the country it embraces, so as to acquire a practical knowledge of its military features, roads, rivers, woods, hills, plains, canals, bridges, and villages, and whatsoever in fact is calculated to assist or impede troops in offensive or defensive warfare. (See Field Exercise and Evolutions, page 313, and following.)

In order to ensure the officers acquiring as much as possible of this kind of information, and for the sake of practising them in committing to writing their observations and opinions, every subaltern officer should take out with him a pencil and memorandum book, to enable him to make the necessary rough notes, from which he should afterwards frame a report of all the before mentioned subjects, and of the many others that will occur to him in the course of his march; the details of these reports will greatly depend on what is done on the march, and the above are only a few of the common place particulars which are sure to be required under the most ordinary circumstances.

When battalions practise the posting of pickets and placing of sentries, or any such kind of instruction, the whole is to be described; and whenever an officer can illustrate any part of his report by making a rough sketch, even in the margin, he is recommended to do so.

A report of this kind cannot be too distinctly and too simply worded; at the same time it should give all possible information, the more minute and exact the better. For example the *condition* and *width* of roads should be stated, and whether practicable for artillery; whether the country is close, open, flat, or hilly; the prevailing crops should be named, also the towns and villages, and their size, manufactures, and situation. All rivers, bridges, and canals, forts, towers, and every strong ground capable of being made good military posts, should be alluded to.

These reports should be sent to the commanding officer of the battalion on the morning after the march, for examination by himself, or by one of his majors. All errors and omissions are to be pointed out and corrected, after which the reports are to be filed, and kept in the battalion orderly room for inspection, if asked for at any future time; and those that have particular merit, either from the talent they show, or the pains bestowed upon them, are to be sent to the brigade office.

On these occasions of marching out, the officers commanding companies are to practise their men in judging distance whenever the battalion halts, and each halt may be a little prolonged for this purpose if necessary. The names of the best judges of distances are to be taken down, and delivered to the adjutant on the return to barracks, and such of them as deserve it may be permitted to be absent from the afternoon parade, or receive some trifling indulgence. All companies in turn are to form advanced and rear guards.

If commanding officers will take an interest in these little matters, the exercise of marching out may be made both amusing and instructive, in addition to being very conducive to the health and physical condition of the men.

In order to give the officers as much practice as possible, commanding officers are requested to march by a different route every time they go out.

On all occasions care must be taken that there is no trespassing on property.

W. F. Forster, D.A.G.

(ii.)—Instruction of Infantry Officers in Artillery Drill.

General Order.

Horse Guards, S.W., 10th August 1859.

His Royal Highness the General Commanding-in-Chief deeming it expedient that officers and soldiers of infantry should be instructed in the great gun exercise, desires that general officers commanding districts and stations will make the necessary arrangements, in concert with the commanding officers of Artillery in forts and garrisons, for carrying out that measure wherever practicable.

By command,

G. A. Wetherall,
Adjutant-General.
